# THE JENKINS REPORT

# Profit and Loss Accounts

VIME was when the accounts provisions of the Companies Act made a cinderella of the profit and loss account, the emphasis being on the balance sheet. The Cohen Committee of 1945 changed that, and the Jenkins Committee is now giving some impetus to the change. One modern phenomenon is the selling of a company's premises to insurance and other investing companies, and taking a lease back at a full rack-rent. A company carrying out this device is able to charge the full rent in arriving at its taxable profit, while the proceeds of sale of the freehold are, of course, tax free. On the other hand, the profits become more vulnerable, since the rent has to be met regardless of profitability. The Committee thinks that shareholders should know how much of the company's gross earnings are committed in this way. To a lesser extent a similar process takes place with plant and machinery. Instead of buying such expensive things outright, a company may rent them, and here again the rent becomes a first charge on the company's gross earnings. The Committee makes the points that these charges are the equivalent, economically speaking, of interest on debentures and other fixed loans or, in the case of plant and machinery, depreciation. Since these latter items have to appear on the profit and loss account, the rents ought also to appear. The Report of the Committee recommends that rents paid for land and buildings be shown separately from rents paid for plant and machinery.

Bank overdrafts figure prominently in the balance sheets of many companies. The Committee thinks that the debits for bank overdraft interest, and interest on other 'short-term' loans, ought to appear in the profit and loss account just as much as debenture interest; five years or less being envisaged as 'short-term'.

It is a trite saying that the State is the senior partner in every business. With the present rates, the charge for taxation must inevitably be one of the major items of expenditure. The preceding-year basis of assessment obtaining in the United Kingdom means that the tax of one year is based on the profit of the preceding year. Where there are violent fluctuations of profit, particularly a sharp increase, it would be misleading to show in the profit and loss account the legal tax liability actually incurred. Thus it has become the general practice to debit tax which will be computed on the profit shown by the accounts, i.e. to debit next year's tax before it has been imposed. This gave rise to controversy as to whether such a debit was a provision or a reserve: the general

consensus of opinion being that it was the latter. As a compromise, the practice is widespread of showing separately an item for 'future income tax'. The Committee thinks that if future income tax of this kind is debited in the profit and loss account, there should be a legal liability to show it separately in the balance sheet.

The comparatively generous income tax and profits tax provisions for investment and initial allowances can produce a wide variation between profits as computed for tax and profits as computed on ordinary accounting principles, where the depreciation charge is computed on a more uniform basis. To even out the tax it has become common to charge, to profit and loss, tax on the excess of the income tax capital allowances over the depreciation allowances debited in the accounts. This reserve can be utilized later when the position is reversed. Such a reserve is, of course, another example of future tax, although possibly on a longer-term basis, and should be shown separately. If such reserves are not created, or are inadequate, then in the Committee's opinion the accounts should contain a note of explanation.

Events may prove that a reserve for future taxation is excessive. Until that happens, it is not considered that the reserve, once made, should be used for the purpose of paying dividends. If it is used for any other purpose, the accounts should reveal the fact. Sometimes a company revalues its assets and writes them up. It should then charge depreciation on the new value, whereas the income tax allowances will continue to be based on the old value. The Committee gives a warning that a situation may be arrived at where the general requirement to give a true and fair view may make it necessary to include some explanation in the accounts.

There are other problems thrown up by the vagaries of income tax. A heavy debit balance to profit and loss account may be accompanied by extensive past losses which have been agreed with the Revenue for carry forward, so that the company may be in a position to make large profits which for some years will effectively be tax free. The Committee recommends, in a general way, that the Companies Act should require a company's accounts to disclose any special circumstances significantly affecting its current and

future liability to tax, in so far as this information is not already given through the items of future tax.

Some disputes with the Revenue go on for a long time. Presumably if the Revenue were threatening to raise heavy additional assessments on a back duty basis, or because they had changed their mind about the chargeability of certain items (e.g. receipts for the sale of 'know-how') or the deductibility of other items, it might be misleading merely to show the future tax on a basis which assumed that the Revenue were going to be proved wrong.

In its submissions to the Committee, The Institute of Chartered Accountants in England and Wales drew attention to paragraph 12 (1) (c) of the Eighth Schedule to the Companies Act, 1948, which requires the charge for United Kingdom income tax on profits to include 'as United Kingdom income tax any taxation imposed elsewhere to the extent of the relief, if any, from United Kingdom income tax'. The Institute made two very pertinent comments on this. First, it has the effect of requiring overseas tax to be described, wrongly, as United Kingdom income tax. Secondly, the reference to relief from 'United Kingdom income tax' does not recognize that under present law any relief from overseas taxation is given primarily against profits tax. The Institute submitted that the provisions should be amended to require, in the case of companies subject to overseas tax, the disclosure of

- (a) the amount, before double tax relief, of United Kingdom tax, distinguishing profits tax from income tax;
- (b) the amount of double tax relief;
- (c) the amount of overseas tax.

The Committee has accepted this suggestion *in toto* and has put it forward as a recommendation.

When first reviewing the Jenkins Report we expatiated on the problems concerned with the pre-acquisition profits of subsidiary companies. For the reasons we have already given, the taxation figures of the subsidiary greatly affect the measure of these pre-acquisition profits. The controversy we mentioned, as to whether future tax was a provision or a reserve, gave rise to difficulty where a subsidiary was acquired. The

Committee recommends that unless the contract of acquisition of a subsidiary otherwise specifies, the acquiring company should treat the subsidiary's 'future tax' as a provision, for the purpose of determining the amount of the preand post-acquisition profits of the acquired company.

In its submissions, the Institute criticized paragraph 17 of the Eighth Schedule, which requires a consolidated profit and loss account to combine the information contained in the individual profit and loss accounts. It pointed out that auditors' remuneration appears in an individual profit and loss account only if it is not fixed by the company in general meeting (paragraph 13) so that an aggregation of such remuneration as happened to be shown is really valueless. It suggested that consolidated profit and loss accounts should not be required to show auditors' remuneration. The Committee criticizes paragraph 13 itself, pointing out that it seems to rest on the assumption that shareholders attend company meetings. The Committee's solution of both problems, therefore, is to recommend that auditors' remuneration should always be shown in the profit and loss account. A combination of the separate figures would then no longer be misleading.

The Committee declines to adopt a suggestion that legislation be introduced to make it compulsory for accounts to show, by geographical area and by industry, how the profits are derived and their relationship to assets employed. It does not deny that such information would be useful to shareholders. It would welcome an extension of the practice, which some companies already follow, of providing information of this kind. Obviously, much will depend on the personalities of the particular directors, but the alternative of drafting legislation which met the demand, without imposing intolerable burdens, would present almost insuperable obstacles.

On the general aspect of showing a company's profit, the Committee quotes an observation of the Institute that opinions may legitimately vary as to what may be shown for a specific year, and in particular as to how items relating to the results of the operations of past years should be shown. The Committee thinks that it should be made clear in the Act that exceptional credits or charges, in respect of earlier years, should be

required to be passed through the profit and loss account but that they need not necessarily be included in the amount shown as the profit or loss of that year.

Both the English Institute and The Association of Certified and Corporate Accountants, in their separate memoranda of evidence to the Committee, expressed the view that the time had come to require companies to disclose their turnover, with an exemption where the directors were prepared to certify that disclosure would be harmful to the company. The Committee endorses this suggestion. It points out that a company's turnover, used in conjunction with other information, can provide investors with a useful guide to the progress of the business. Even where a company or group carries on diversified activities, so that the aggregate figure of turnover for one year does not convey very much, the trend of the turnover figure, measured over a number of years, could be of great value. Naturally there has been opposition to this change, but American witnesses who gave evidence to the Committee were unanimous in their opinion that disclosure of turnover in the United States (where it has for some years been a statutory obligation in respect of quoted stocks) had not caused material harm. As regards difficulties of definition, it could be left with the directors to decide what gave a true and fair view of turnover. The Committee's own broad definition was the total amount receivable, in the ordinary course of business, for goods sold or supplied by the company as principal, and for services provided by it. Whatever method is chosen should, of course, be revealed. Companies which are not quoted companies would not be required to include the information in accounts filed with the Registrar.

The Committee recommends that the annual accounts should include a five-year summary of the issued capital, reserves, and profit and loss account balances; the annual profits before and after tax; the annual dividend; and the turnover. It also welcomes the growing practice of giving interim statements of profit (or loss).

It is difficult to see what objection could be made to these very modest proposals of the Committee and it is to be hoped that they will not be whittled down by the Government.

# A Corporation Tax Considered

by H. S. A. MACNAIR, F.C.A.

In his Budget speech on April 9th, the Chancellor of the Exchequer said that the Inland Revenue had gone a considerable way toward framing a single corporation tax to replace income tax and profits tax on companies. Some complex technical problems were involved, however, and he had asked the Revenue to discuss the draft scheme with the professional bodies concerned. This article considers some of the issues which arise.

HE Royal Commission on the Taxation of Profits and Income, whose activities extended from 1951 to 1955, gave serious consideration to the desirability of a single corporation tax which would replace income tax and profits tax. In this the Commission was encouraged by the opportunity such a change would present for the substitution of the current year basis of assessment in place of the existing system. It was felt that when the latter question had been considered on previous occasions in relation to Schedule D assessments generally, an overwhelming obstacle had been found to lie in the very large number of adjustments that would be required to bring the tax liabilities of the individual or a partnership from provisional to final ascertainment.

The problems of adjusting provisional liability in the case of 200,000 companies taxed at a uniform rate would, however, be on a much smaller scale than the problems that would arise in dealing with  $1\frac{1}{2}$  million individuals and partners liable at varying rates and having differing personal circumstances. Moreover, the differences between the two systems of taxation applicable to companies and individuals, with profits tax on the one side and surtax or personal reliefs on the other, make it no anomaly that the profits of one group should be based on the current year and those of the other on a preceding year.

# Objection to Existing System

One objection to the existing system is that many companies have a double charge on the same profits in the early years of their business, while a corresponding period is omitted from assessment when they go out of business. Certain problems arising in this connection have been obviated by section 17 of the Finance Act, 1954, in relation to succession and 'hiving-off' operations, while double taxation relief anomalies received attention in section 18 of the Finance Act, 1961. Neverthe-

less, many problems remain. It not infrequently happens that a company has occasion to change its accounting date and the resulting complications may be appreciated from the fact that the official explanatory memorandum requires six foolscap pages to explain the simpler cases while more complex circumstances have to be made the subject of special solutions.

Again, in relation to opening years, The Institute of Chartered Accountants in England and Wales has recommended that new companies should set aside from profits, amounts additional to the charge for the accounting year towards the balance of the tax payable for the current and following income tax years, until all income tax based on profits to date has been set aside. In the meantime, the accounts should disclose the amount of the deficiency. It is manifestly unsatisfactory that distribution of profits by a new company should be inhibited in this manner and a change to the current year basis would bring the weight of tax more immediately into relation with the income that is being taxed.

# Corporation Tax Modus Operandi

What might be the *modus operandi* of a corporation tax? One method would require a provisional assessment to be made at the commencement of a company's accounting year and a statutory basis laid down for enforcement of provisional payments, perhaps at quarterly intervals. Tax which proved on final assessment to have been overpaid could be repaid at a commercial rate of interest or, if the interest were to be tax-free, at the rates currently applicable to Tax Reserve Certificates. In either case it would be necessary to reconsider the rate of interest exacted on overdue tax under section 495 of the Income Tax Act, 1952.

From the point of view of the Government, it is desirable that the pattern of tax collections should not be disturbed by the introduction of a

# ACCOUNTANT

corporation tax. At present, company income tax is due on January 1st, while profits tax collections are scattered irregularly over the year. Bearing in mind the wide preference for the calendar year as the accounting period, it would probably be satisfactory to relate the bulk of the collections to the terminal date of a company's accounting period. Since the ascertainment of the precise liabilities could not be finalized until after the end of that period and probably not until after the end of the Government's financial year on March 31st following, some arrangements would be required to ensure collection of tax on a satisfactory scale.

# **Australian System**

It may be helpful to consider the system in force in Australia as laid down by the Commonwealth Income Tax and Social Services Contribution Assessment Act, 1936–1961 (Part VI, Division 3). Briefly this system postulates a 'provisional income' upon which a provisional tax is levied. The provisional income is normally measured by reference to the ascertained results of the preceding year, but rules are set out which enable either the company or the Revenue to substitute a revised measure by reference to the facts available at a date not later than three-quarters of the way through the accounting year. Under the Australian system inaccurate forecasts are penalized and it would appear that the prompt notification of material variations in the trend of profits would lead to more accurate Budget estimates than are possible from the present random sample inquiries.

The Australian 'provisional tax' is provisional in name only, being invested with the dignity of what is virtually a distinct tax so that the measures for its assessment and collection appear more efficient than the arrangement predicated by the Royal Commission. The latter requires the making of premature, estimated assessments, all of which would have to be appealed against, and in respect of which the collection of payments on account would be likely to prove an uncertain and haphazard process. Assessments in respect of 'provisional tax', however, would not require to be made the subject of appeals except where there had been a material change of circumstances, since they would regulate the scale of collection and not the final liability. The provisional tax paid would, of course, be credited against the corporation tax ultimately due. It is interesting to note that what is, in effect, a 'provisional tax' is already in operation in the United Kingdom in certain instances in accordance with the procedure detailed in paragraph 56 of the Income Tax (Employments) Regulations, 1962.

# **Transitional Assessments**

Another point of interest concerns the transition from assessments representing the liability for the fiscal year ending at April 5th to assessments coterminous with a company's accounting period. Assuming that the appointed day is April 6th, 1963, it would be necessary to arrange for the corporation tax to be charged in respect of the broken period from that date to the end of the first accounting period in which the appointed day falls. The problem would then arise as to what adjustment should be made in respect of the profits for the 'interval' between the end of the basis period for 1962-63 and April 6th, 1963. To take the case of a company whose accounts are made up for calendar years, the interval would extend from January 1st, 1962, to April 5th, 1963, i.e. some fifteen months. The Royal Commission favoured the averaging of the three final years but having regard to the difficulties experienced in computing such averages under the change of accounting date rule referred to above, and the undesirability of the general uncertainty that this would entail in regard to the scale of transitional liabilities, it would appear preferable for the penultimate year's assessment to be allowed to stand, only the final year being adjusted to actual. The examples below indicate that this suggestion need not produce a result materially different from that which would have resulted from averag-

A compan for the cal December lows:	endar yea	ar to	Example I L	Example II £	Example III £
1960			15,000	6,000	24,000
1961			15,000	12,000	18,000
1962			15,000	18,000	12,000
1963	••	• •	15,000	24,000	6,000
			60,000	60,000	60,000
Corporationable for the to December	e nine mo	nths			
would be:	• •	• •	11,250	18,000	4,500
Leaving	a balance	of:	£48,750	£42,000	£55,500.

The latter figures represent the actual profits of the thirty-nine months making up the basis period for the two last years of assessment 1961-62 and 1962-63, together with the profits of the 'interval'. In accordance with the usual

practice on a change of accounting date, these profits are averaged to produce a figure for the total assessments required for the two final years of assessment, the revised assessment for 1961-62, the penultimate year, being obtained by deducting the 1962-63 assessment computed on the actual basis.

Average profits for twenty-four months	or £ 30,000	£ 25,846	£ 34,154
Less 1962-63 on 'actual'	. 15,000	19,500	10,500
1961-62 (Revised) .	£15,000	£6,346	£23,654
The revised assessment for the penultimat year thus obtaine compare with the orig inal assessments a	e d :-	£6,000	£24,000.
follows:			~

The Board of Inland Revenue could be empowered to grant discretionary relief to meet any hard cases that might transpire. However, in accordance with the existing practice where a change of accounting date is concerned, it is suggested that relatively small differences such as occur in the example above should be ignored. 'Small' for this purpose would apply to a difference that did not exceed 10 per cent of the average of the current and preceding years' assessments and was less than £1,000.

With regard to capital allowances which, strictly speaking, should be adjusted on a change of basis periods, it is not certain that the Revenue insist on revision of the claims in connection with a change of accounting date. On the introduction of a corporation tax it would be necessary to decide on the treatment of acquisitions and disposals of fixed assets occurring in the 'interval' which in the foregoing example extends from January 1st, 1961, to April 5th, 1963. It seems desirable that the taxpayer should be given the option of treating all such events as having taken place at April 6th, 1963, or whatever may be the appointed day, as an alternative to revision of claims for the final and penultimate periods.

# **Treatment of Company Dividends**

A problem of some importance concerns the treatment of company dividends. The recent House of Lords decision in *Cenlon Finance Co Ltd v. Ellwood* ([1962] T.R. 1), reaffirms the rule that dividends are not to be subjected to income tax in the hands of investors, apparently on the basis of an equitable principle derived from partnership law whereby the fund of profits from

which dividends are paid may only be charged once with income tax (as opposed to surtax).

In the report of the Royal Commission on Taxation (Cmd 9474) a minority view was expressed that the treatment of dividends should be assimilated to that of debenture interest and other annual charges. It seems, however, that this solution would involve injustice to shareholders, since credit would be denied for income tax paid on profits accumulated prior to the appointed day. Instead, it could be arranged that profits which have borne corporation tax at a rate not less than the standard rate of income tax should be regarded as 'franked' when declared as dividends.

Presumably it would continue to be necessary for such dividends to be grossed up for surtax purposes in order to avoid loss of revenue. It is not clear, however, why the system of grossing up should be retained for income tax purposes since this aspect of the existing law is the cause of endless difficulties over dividend stripping, while the fact that many important companies have low net United Kingdom rates gives rise to confusion and annoyance on the part of the smaller investors for whose benefit, apparently, the system has been kept in being since their anticipated repayments are often diminished or nullified by the provisions of section 350 of the Income Tax Act, 1952.

These difficulties could, it is suggested, be overcome if the treatment of dividends in the hands of individual taxpayers was assimilated to that of building society interest. In the case of corporate recipients it would be sufficient to extend the 'franked investment income' rules of profits tax to cover the income tax element also.

# **Annual Payments**

It remains to consider what treatment should be accorded to annual payments and other charges on the income of companies. It could be provided that these should be regarded as 'franked' (covered) to the extent of retained profits and other income of the accounting period. In this connection, only a minor change in the law is required in order that section 170 assessments should become competent in respect of accounting periods where reference to the fiscal year is inappropriate.

In conclusion it may be noted that the deduction of net annual values in Case I computations will not give rise to difficulty if the proposed elimination of Schedule A tax for owner occupiers were to be put into effect at the same date that a corporation tax was introduced.

# ACCOUNTANT

# Materials and Labour Variances in Standard Costing

# A NEW APPROACH

by R. H. PARKER, B.Sc.(Econ.), A.C.A., Senior Lecturer in Commerce University of Western Australia

OST accounting textbooks usually recognize the following variances as likely to arise from accounting for materials and labour in a standard costing system:

(1) Materials price variance which arises from paying more or less than standard price for materials and is conventionally calculated as:

Actual quantity ×

(actual unit cost—standard unit cost)

(2) Materials usage variance which arises from using more or fewer materials than standard and is conventionally calculated as:

Standard unit price×

(actual quantity-standard quantity)

(3) Labour rate variance which arises from paying more or less than the standard rate and is conventionally calculated as:

Actual hours ×

(actual rate—standard rate)

(4) Labour efficiency variance which arises from working more or fewer labour hours than standard and is conventionally calculated as: Standard rate × (actual hours—standard hours)

# Joint Variance

But is the conventional analysis in fact valid? Let us consider the following example in which the word 'unit' may be taken to refer to either units of material or labour hours.

	Units	Unit	Total
		cost	cost
		s	£
Actual	 1,100	21	1,155
Standard	 1,000	20	1,000
Variance	 100	I	£155
		===	

The total variance is £155. Consider first of all the price (or rate) variance. Such a variance would arise if price (or rate) alone varied, i.e. in this case:

Price (or Rate) Variance =
Price (or Rate) Variation ×Standard Quantity
= 1s × 1,000
=£50

A usage (or efficiency) variation would arise if the number of units used (or hours worked) alone varied, i.e. in this case:

Usage (or efficiency) variance =

Usage (or efficiency) variation x standard price

$$=100 \times 208$$
  
= $f_{100}$ 

There is still £5 of the total variance to be explained. This is the product of the price (or rate) variation and the usage (or efficiency) variation and may be termed the joint variance.

The conventional analysis would give the following results:

Price (or rate) variance 
$$=1,100 \times 1s$$
  
 $=£55$   
Usage (or efficiency) variance  $=20s \times 100$   
 $=£100$ 

Such an analysis implicitly assumes, in the case of materials, that not only is the buying department to be held accountable for the rise in the unit price of materials but also in some measure for more materials being used than the standards set allow. It is suggested, therefore, that the segregation of the joint variance is more useful for purposes of cost control.

# Resolving a Problem

One further problem arises. It is usual to record a materials price variance at the point of purchase rather than the point of usage. This enables the materials control account and subsidiary stock records to be kept entirely in terms of standard costs with a consequent saving in the amount of clerical work needed. In this case, the price variance is necessarily calculated as:

Price variation × actual quantity purchased and thus includes the joint variance, which cannot be calculated until the usage variation is known.

A possible solution is to calculate the joint variance at the end of the reporting period. Suppose, for example, we have the following data:

Materials purchased January 1st to 6th - 1,160 units at 21s each

Materials put into production - 1,100 units Standard usage of materials - 1,000 units Standard price - 20s per unit

The accounts would then be as follows:

Jan. 1st to 6th Accounts payable	Materials f 1,160	Control  Jan. 1st to 6th Materials in process Jan. 1st Materials usage vari- to 6th ance Jan. 6th Balance c/d	1,000 1,000
* .	£1,160	-	£1,160
Jan. 7th Balance b/d	60	•	
Ma	terials Pr	ice Variance	
Jan. 1st to 6th Accounts payable	£58	Jan. 6th Materials joint variance (100×1s)	£
	terials Use	ige Variance	
Jan. 1st to 6th Materials control	£100		
Ma Ma	țerials Joi	nt Variance	
Jan. 6th Materials price var	. £5	•	

The materials price variance is £53. It should be noted that this represents:

Price variation ×(Standard material usage + materials in stock at standard price)
i.e. 1s×(1,000+60)

It must be admitted that this method can become complicated. If the variances are usually small, then it may be preferable to use the conventional analysis – always provided, of course, that its theoretical weaknesses are clearly understood.

No such problem arises with labour variances, since nothing is gained by keeping the labour control account in terms of standard rates. The variances can just as easily be segregated through the labour-in-process account.

# What to do with Joint Variance?

What should be done with the joint variance once it has been calculated? The answer depends on the reasons for the main variances. If, in the example given above, it were decided that the price variance was due to external causes beyond the control of the firm, whilst the usage variance was due to inefficiency, then the following journal entry could be made:

Cost of goods sold (and/or materials in process and finished goods stock) Loss from inefficiency	£ 53 105	£
. Materials price variance	J	53
Materials usage variance		100
Materials joint variance		5

If, on the other hand, it were decided that the price variance arose from bad buying and the usage variance from a faulty standard then the entry could be:

	£	£
Cost of goods sold etc	 100	
Loss from inefficiency	 58	
Materials price variance	 -	53
Materials usage variance		100
Materials joint variance		. 5

Conventional analysis would have produced the following entry under the first assumption:

		£.	£.
Cost of goods sold etc.		 58	~
Loss from inefficiency		 100	
Materials price variance	•		58
Materials usage variance			100

and the entry below under the second assumption:

	£	£
Cost of goods sold etc	 100	
Loss from inefficiency	 58	
Materials price variance	 Ū	58
Materials usage variance		100

It is clear that both these entries are incorrect.

Note: The existence of the joint variance can be shown algebraically as follows:

Let:

PS be the standard price of one unit
be the actual price of one unit
US be the standard usage in units
UA be the actual usage in units  $\Delta P = PA - PS = price \text{ variation}$   $\Delta U = UA - US = \text{usage variation}$ 

Then the total variance will be:

 $\begin{array}{l} (P_A \times U_A) - (P_S \times U_S) \\ = (P_S + \Delta P) (U_S + \Delta U) - (P_S \times U_S) \\ = (\Delta P \times U_S) + (\Delta U \times P_S) + (\Delta P \times \Delta U) \end{array}$ 

The three variances can be shown graphically as below, where AB=standard usage, AC= actual usage, AD=standard price and AE= actual price.

E	Price or Rate Variance		Joint Variance	
	•		Usage or Efficiency Variance	
A .		В		C

# The Accounting World

# TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

# **NEW ZEALAND**

# **Incentive Budget**

THE National Party Government's second Budget delivered on June 28th offers to the New Zealand exporter the right to deduct 150 per cent of the actual amount spent by him on the promotion of exports. There will be a general reduction of 5 per cent in income tax and a small reduction in company tax, while the land tax will be subject to a 50 per cent rebate and estate duty exemptions will be liberalized. The tax changes will cost some £14 million. Most of the severe controls on capital issues are being abolished, although the control of overseas capital will remain in order to guard against domination by foreign enterprise.

# **GERMANY**

# Scale Fees for Wirtschaftsprüfer

IT is of interest to note the following scale of fees which has recently been laid down for Wirtschaftsprüfer in Germany: DM.

(1) Compulsory audits (i.e. required by	per day
law) in addition to the ad valorem fee	
mentioned below:	
Wirtschaftsprüfer	150-200
Qualified assistants	120-150
Other assistants	100-120

(2) For other types of work, including cost investigations, where no ad valorem fee is chargeable:

Wirtschaftsprüfer		 200-300
Qualified assistants		 150-200
Other assistants	• •	 120-150

The ad valorem fee is based on balance sheet totals, as follows:

tuio, uo tomo i		
DM.50,000 or less	 	 DM.360
DM.1 million	 	 660
DM.10 million	 	 1,800
DM.100 million	 	 7,200
DM.1,000 million	 	 34,500

Note.  $-f_{i} = DM.11$ .

# Regulation of Tax Consultants

S a result of a series of legal enactments from 1919 Anwards, two classes of persons practising as tax advisers have been recognized as competent to represent clients in German tax litigation. These are the Steuerberater and the Steuerbevollmächtigten. During the occupation of Western Germany by the British, French and Americans these tax advisers strengthened their position, as the complexity of the legal situation made specialization necessary. In order

to restore the unity of Western German laws, the Steuerberatungsgesetz was passed on August 16th, 1961, which may also be noted as the first law passed in the European Common Market area which took cognizance of the provision of the Rome Treaty which calls for uniformity of legislation on tax advisers.

Under the new law, both Steuerberater and Steuerbevollmächtigten are recognized as practising liberal professions and not engaged in commercial occupations. Admission to the former profession is restricted to university graduates in law or economics who have taken a special examination in tax law and practice; there are transitional arrangements for existing practitioners. Admission as a Steuerbevollmächtigten is also regulated, but not restricted to graduates. Both can represent clients before courts of law, but it seems that only Steuerberater may appear before the Bundesfinanzhof (Federal Tax Court).

Both titles are protected and their unauthorized use is an offence. Steuerberater may practise alone or as members of a firm, and the corporate title must include the word Steuerberatungsgesellschaft. Members • 1 of these two professions may not have any business occupations, or be employed by anyone other than a Steuerberater. Partnership between these two classes of tax adviser is not allowed, unless it existed prior to November 1961.

# UNITED STATES

# **Financial Reports of Carriers**

T is reported that the Interstate Commerce Com-Imission, which regulates transportation enterprises in the United States, has authorized the publication of financial statements differing from those filed with the Commission, provided that any variance is clearly disclosed in the footnotes.

The ruling has resulted from a petition from the firm of Arthur Andersen & Co, Certified Public Accountants, filed in 1960. After the filing of the petition the I.C.C. issued a proposed rule which would have prohibited carriers from including in their annual reports to stockholders, financial statements inconsistent with the regulated accounts in the books, and interested parties were asked for

The American Institute of Certified Public Accountants said the proposed rule would deny to the investing public significant financial information which they ought reasonably to have. There seemed to be no good reason why the managements of regulated carriers should not have the same responsibility and freedom to make reports as the manage-

# ACCOUNTANT

ments of private enterprises, in conformity with generally accepted accounting principles.

Many other bodies have taken the same line and The American Trucking Associations Inc. pointed out that some of its members, under the jurisdiction of the New York Stock Exchange, would be unable to comply with both the proposed I.C.C. ruling and the prescribed regulations of the Stock Exchange.

Since 1956 a committee of the American Institute has been exploring differences of the I.C.C. regulations from generally accepted accounting principles. The only point now remaining unsettled is said to be the accounting treatment of deferred taxes.

# **Education for Accounting**

A LETTER from the Association of Certified Public Accountant Examiners to the members of faculties and departments of Business Administration in the universities appeared recently in *The Journal of Accountancy*. It stated the opinion of the C.P.A. examiners that, in view of the technical requirements of the accounting profession and the demands made on the young university graduates who enter the profession, the necessary minimum technical proficiency cannot be obtained unless at least 25 per cent of the total time in a four- or five-year programme is given to accounting and closely related subject areas. An additional 25 per cent should be devoted, in their view, to the broader functional areas of business administration.

The letter makes a strong plea for students to be given enough opportunity to acquire adequate specialization in accounting to enable the profession to meet the social and economic challenges of today.

# Reform in Tax Administration

THE Inland Revenue Commissioner, seeking to remedy weaknesses of the federal income tax system, has announced the abandonment of quantitative goals and statistical records as to case and dollar production by individual agents and groups. This is aimed at removing incentives for agents to extract the last dollar, regardless of equity. He is determined to stamp out corruption and has met with groups of lawyers and certified public accountants, stressing the need for good faith on both sides.

From a recent speech, the Commissioner seems to be studying the possibility of accepting the taxpayer's records without examination, where supported by qualified practitioners, as is effectively the case in the United Kingdom.

#### Stricter Rules for Auditors

MEMBERS of the American Institute of Certified Public Accountants have voted by mail in favour of a tighter rule on independence, which prohibits members from having any direct financial interest in companies which they serve as independent auditors, or from serving as officers or directors of such companies. The rule becomes effective from

January 1st, 1964. A leading article in the April issue of *The Journal of Accountancy* comments that public reaction to allegations of 'conflict of interest', in business as well as in Government, has become much more critical in recent years. The new rule will end the 'double standard' by which the Securities and Exchange Commission requirements as to independence were more restrictive than those of the Institute.

Members also voted for the outright banning of competitive bidding. The previous rule precluded it only in States that prohibited it.

# OVERSEAS TAX DEVELOPMENTS

THE following notes have been made available by the Inland Revenue Library (Foreign Section).

# Argentina

It is understood that the rate of income tax charged on resident companies will be increased from 33 per cent to 38.36 per cent, that a capital levy at the rate-of 2 per cent is to be introduced, and that the excess profits tax will be replaced by a new emergency tax on incomes exceeding one million pesos.

# Italy

The following rates apply as from January 1st, 1962:

Movable Wealth Tax		F	Per cent
Category A	.,		26

# Weekly Notes

# SCOTTISH INSTITUTE'S EXAMINATIONS

THERE were 323 candidates for Part V of the examinations of The Institute of Chartered Accountants of Scotland held last May and 147

(45.5 per cent) were successful.

The Institute's Gold Medal for the candidate whose performance over Parts IV and V was the most meritorious was awarded to Mr Harry Stephen, of Aberdeen, who also received a distinction in respect of his performance in both these parts and in addition won the Institute's Prize for the most meritorious performance in Part V alone. Mr Martin Gardiner Adamson, of Edinburgh, also received a distinction for meritorious performance in Parts IV and V and was awarded the John Munn Ross Prize in respect of Paper I of Part V. The J. C. Burleigh Prize for the successful London candidate whose performance in Part V was the most, and sufficiently, meritorious was won by Mr David Jeremy Horton.

A full list of the successful candidates appears

elsewhere in this issue.

# LANGUAGES IN INDUSTRY

BOOKLET has been published by the AFederation of British Industries called Foreign Languages in Industry (10s net). It points out that the fluent use of foreign languages is one of the outstanding advantages which foreign competitors enjoy. In the future, British industry will need more linguists at all levels and for the time being it recommends that companies should make better use of the linguistic capabilities of their employees than they do. The authors think that this will involve a revision of remuneration which fits the linguistic qualifications of those who have the job of drafting letters and preparing trade literature, and go so far as to recommend a national institute of languages to set higher standards, and stimulation of teaching of foreign languages in primary schools.

The booklet is timely. There is little doubt that the habit of preparing sales literature for export markets in the local language has not recommended itself so far to a large number of British companies. The nineteenth century attitude that the foreigner must either learn English or do without British products dies hard. The fact that this country may shortly join the European Economic Community adds force to this insistence of selling in the language of the market to which the goods are directed.

There is no doubt that British industry has a good deal to learn yet about the damage which a well mounted export sales drive can suffer from carelessly drafted communications in a foreign language or a complete disregard of the fact that those in the market being approached have a language of their own.

# GROWTH IN GOVERNMENT POLICY

IT is now generally known that the National Economic Development Council is undertaking a study of what is involved in reaching a growth target for the economy of 4 per cent a year over 1961 to 1966. The latest issue of *The Bulletin for Industry* deals with the N.E.D.C.s approach to this problem.

One way it is to be tackled is by a discussion with a cross-section of public and private industry of their forward plans for output, sales, investment and employment including the implications of these plans on a 4 per cent rate of growth. The other method is to assess over a wide field the conditions likely to be favourable to a faster rate of growth than has been

achieved in the recent past.

The Bulletin goes on to say that it is quite clear already that the acceleration of the rate of growth cannot be accomplished merely by changes in Government economic measures or by changes in industrial attitudes. Whatever the theoretical possibilities may be for a quicker rate of growth, in the event there will have to be not only a removal of obstacles but positive changes which may be both hard and painful.

Meanwhile, certain Government policies are being examined for their relevance to these problems of growth. These include promotion of exports, approach to income policy, the maintenance of an appropriate pressure of demand, and the control and financing of public expenditure. This last alone is now equal to two-fifths of all domestic expansion and it is therefore vital to establish a sound relationship between the growth of public spending and the growth of total output. Undue emphasis on public expenditure could switch resources which might be better employed in private expenditure and vice versa.

# FIRST QUARTER'S FISCAL RETURN

AN overall deficit in the Exchequer returns of £280 million is recorded for the first quarter of the current fiscal year. This compares with a figure of £268 million for the corresponding quarter of 1961-62. The deficit on ordinary account was £214 million, a sharp increase on the figure for the same time last year, but the big increase was offset to some extent by a drop in the deficit below-the-line.

The higher deficit on ordinary account in the quarter just ended was due mainly to higher expenditure on the supply services which went up by £83 million to £1,305 million. On the other hand, total receipts were £15 million, lower than a year ago at £1,302 million, mainly as a result of a fall in miscel-

laneous receipts.

The reduced deficit below-the-line has been brought about by loan repayments by the nationalized industries and other public bodies which were £22 million higher than a year ago, while the National Coal Board repaid an extra £14 million. There were also smaller new loans to public bodies.

# TAX ON CAPITAL PROFITS DIVIDEND

THE Judicial Committee of the Privy Council has L upheld a decision of the Federal Supreme Court of the West Indies that a capital profits dividend paid by a company in British Guiana is chargeable to British Guiana tax in the hands of the recipient, according to The Guardian of June 20th (Bicher Ltd v. The Commissioners of Income Tax (British Guiana)). The appellant was domiciled in the United Kingdom but carried on business in British Guiana, where income tax is imposed on, inter alia, income of any person accruing in or derived from the colony or elsewhere, in respect of dividends, interest, or discount. It owned 600 shares in a British Guiana company which sold a capital asset at a profit and distributed two dollars a share in respect of it. The appellant company appealed against an assessment on the 1,200 dollars to the Commissioners, then to Mr Justice Date, and then to the Full Court of the Supreme Court, who allowed the appeal. However, this Court was reversed by the Federal Supreme Court of the West Indies which, like the Privy Council, held that the dividend was taxable. The House of Lords decision in C.I.R. v. Reid's Trustees (28 A.T.C. 65) was applied.

# FINANCIAL CHANGES IN PILKINGTON

IMPORTANT changes in the financing of independent television are recommended by the 'Report of the Committee on Broadcasting, 1960'1 under the chairmanship of Sir Harry Pilkington. The committee suggests that the Independent Television Authority should plan the programming and sell advertising time. Programme companies should produce and sell to the Authority programme items for inclusion in the Authority's planned programme. The Authority should also make provision for reserves and should then pay any surplus revenue to the Exchequer.

The committee think that the main ideas put forward for reducing the profits made by the companies (among these ideas were some submitted as evidence) would leave the constitution and organization of independent television essentially unchanged. They have considered many alternatives and some of these have been turned down on grounds of taxation principle and practice. Some would require so complicated a system of controls as to probably make them unworkable.

The committee are satisfied that the Authority has conducted its internal affairs efficiently and have applied the necessary financial controls to achieve this. The Authority has said that it would like to have powers to require the companies to provide detailed information about their costs. If the present constitution and organization of independent television are preserved, the Pilkington Committee thinks that this wish should be accepted. If, however, the major recommendations outlined above for the future

financial operation of the Authority are accepted, the relationship between the Authority and the companies would be entirely commercial and it would not be necessary for the Authority to call for details on costs.

As regards the accumulation of financial reserves, the committee think that the Authority's first duty should be to give the best possible service, and this requires financial reserves up to a certain level. It emphasizes, however, that the Authority must not become a body whose primary aim is to raise revenue for the Exchequer. In deciding a reasonable upper limit to reserves, regard would have to be paid to the fact that the Authority's revenue is obtained from commercial sources and that these would not be so secure as the licence income of the B.B.C. They would be liable to fluctuate with the state of trade and the advertising expenditure of the big advertisers.

#### THE T.U.C.

THE booklet What the T.U.C. is Doing published by the T.U.C. Publications Department<sup>1</sup> outlines the main activities of the General Council of the T.U.C. since September 1961, and, in effect, is a preview of the more detailed account which will be presented when the Congress meets again next September. Of the five chapters into which the booklet is divided two, namely, 'Welfare of the workers' and 'Questions in industry' are concerned with specific trade union problems, while the remainder deal with 'The rising generation', 'The international scene', and 'Britain's economic future'.

The attitude of the T.U.C. to the country's economic future and particularly to N.E.D.C. and the pay pause has, of course, been widely publicized as have their views on the international situation and most of the outstanding problems relating to conditions of employment. The work of the T.U.C. to secure a widening of the range and improvement in the quality of education and training in Britain, as well as to provide higher educational facilities for trade unionists themselves, is probably less widely known. In their evidence to the Robbins Committee the T.U.C. have been emphatic that there is far too little higher education, whether provided in universities, in advanced courses in technical colleges, or in teacher training colleges.

In the field of technical skills the joint efforts of the T.U.C., the British Employers' Confederation and the nationalized industries through the Industrial Training Council have resulted in the number of boys obtaining apprenticeships growing faster over the period 1959 to 1961 than the number of boys starting work. The T.U.C. has also been active in promoting the education of young office workers and it is hoped that the Ministry of Education will introduce a new national education award for young office workers whose needs are not met by the present Ordinary National Certificate in Business Studies.

# Tales of a Tax Man

by HAROLD E. COX

Our 'Industrious Accountant' is taking a holiday until August 4th; meanwhile Mr Cox continues from last July with anecdotes from his former days as an Inspector of Taxes.

# FORMS AND FIGURES

ALAS! no - this is not to be a dissertation on those intimate mysteries intriguingly described as foundation garments. But these two words do have secondary (or maybe, primary) meanings which have, from time to time, brought me some amusement.

Take first, as a simple example, a letter from an employer to the Inspector of Taxes which began: 'My new typist informs me that there is some adjustment to be made in her figure.'

A more elaborate effort, but equally as authentic, sounds almost incredible. A bewildered lady wrote:

'I would draw your attention to my form which does not seem to be quite right. I spent some time last evening trying to straighten it out, but this morning it looked as crooked as ever. If I could call at your office could you do anything for me as I think my figure is all wrong and could be altered at an interview.'

Another innocent lady, in a letter enclosed with her tax return, explained:

'I was unemployed for several weeks last year as you can see by my form.'

Those fascinating words 'forms' and 'figures' bring to mind a letter from a cabaret dancer in which she detailed the various expenses she wished to claim:

'I have provided one of my own costumes,' she wrote, 'a black leotard £5 15s, 9,000 sequins and beads £5, one pair nylon tights £6 10s, one pair black shoes £4 15s. I hope this covers all that is required.'

In my brash young days as an assistant inspector in a London district, I interviewed a teacher of dancing to discuss with her a lengthy list of expenses she had submitted with her appeal. I was extremely curious about the numerous entries for stockings priced at amounts which (so my typist informed me) were exorbitant.

She was pert and pretty; I was titillated and tentative. I dealt with the minor items first and then mentioned the stockings. She calmly explained how they were made of a special material, how they were of extra length, and why her work took heavy toll of them. I must have looked stupid (or dazed) because she got up, placed her foot on the chair, displayed the stocking, slowly raising her skirt to show me the extra length. 'And now, are you quite satisfied?' she

asked. 'Well - hardly', I replied slowly, 'how can I be; you've only produced half the evidence'.

Oscar Wilde provides the apt quotation at this moment: "The tragedy of old age is not that one is old, but that one is young."

But back to forms and figures. An accountant wrote explaining the delay in submitting the accounts for one of his clients, a lady fashion expert: 'I have spoken to my client who has got rather much behind in her work. She is now embarking on a month's tour showing her new lines.'

Tax forms are not models of clarity or of conciseness, and it is little wonder they bedevil the ordinary person quite frequently. An exasperated ex-Marine returned his tax form to his inspector remarking: 'I can't understand this form. Please appreciate I was a serviceman pure and simple.' While an irritated lady wrote: 'When you send me another tax form to fill in, please send me one that a woman can answer and not one with men's questions.'

This note enclosed with an annual return possibly sums up the problem: 'I have made out the enclosed form to the best of my ambiguity.' But he must have been a bleary-eyed optimist who wrote: 'So far I have not had an income tax form to fill up this year. Does this mean that you have finished with me?'

A care-free optimist lost his income tax form and so he called at the local tax office for another. He apologized to the young lady at the counter for his carelessness and asked her to show him what forms she had, so that he could pick one out 'like he had before'. A similarly simple soul also called at his tax office and asked for a repayment claim form. The counter clerk inquired: 'What kind of a repayment claim do you wish to make?' The unexpected reply was: 'I don't rightly know. What kind have you got?'

Tax returns have frequently to be sent back because of some omission or ambiguity. Often it is impossible to decide whether the form-filler is Mr, Mrs or Miss. One reply to an inquiry about personal status was exceptionally odd: 'I am not married. I am a spinster. I am called 'Mrs' at work by the youngsters as my being eighteen stone it's more respectful.'

The inspector had sent a reminder for the tax form addressed to "The Present Occupier'. A delightful reply was the result:

Someone wrote: 'I look upon anecdotes as debts due to the public which every man, when he has that kind of cash by him, ought to pay.' This is another of my instalment payments.

# Finance and Commerce

# **Daily Mirror Newspapers**

THE first accounts of The Daily Mirror Newspapers since the Odhams Press take-over provide the subject of this week's reprint. The result is seen in the consolidated balance sheet total of £102,386,840 which is rather more than double the previous figure. Truly a colossus of printing and publishing!

The last three pages of the report list the newspapers, periodicals, trade and technical journals, directories and year-books, and the printing, bookbinding and engraving companies in such number and covering such wide interests that one could almost say it has to be seen to be believed. No less than ten have 'woman' in the title; but in numbers, at least, the trade and technical journals dominate the list. And then, of course, there is the Daily Mirror and the Sunday Pictorial, the Daily Herald and The People and the other newspaper interests that extend to West Africa and the West Indies.

There are the problem publications. The Odhams Press's *Daily Herald* 'continued to trade at a substantial loss' but this was more than offset by the profit on its companion paper, *The People*, with its second largest net sale in the Sunday newspaper field. The women's weekly magazine field has been 'rationalized'. Four of them have become two by 'successful mergers'.

# **Earnings**

Profits in total are affected in their comparison by the events of the year. Group net profit attributable to the company is £4,940,317, an increase of £2,379,126. The controlling interest in Odhams was acquired at the beginning of the financial year and the accounts include a full twelve months from that source. The Imperial Paper Mills Ltd was sold to Albert E. Reed & Co Ltd on March 31st, 1961, in exchange for shares, so that only one month of Imperial trading profit comes in plus the Reed interim dividend for its year to March 31st, 1962.

To relate these events to the figures of the previous year, the directors state in their report, a truer comparison is an increase in trading profit, after depreciation of £2,467,000 from £6,645,000 to £9,112,000. Special mention is made of the increase to 3d in the price of the Daily Mirror newspaper on March 6th, 1961, so that 'profit has risen materially while the fall in its net sale has been of the order of

only 2 per cent'. Higher dividend income was received from the holdings in Sunday Pictorial Newspapers Ltd, Associated Television Ltd and Reveille Newspapers Ltd.

The reprint of the *Daily Mirror* accounts and the notes on them is complete and there is more than enough general and instructional interest in them to keep readers well occupied.

# Marks & Spencer

NE interesting passage in the speech of Lord Marks, the chairman of Marks & Spencer Ltd, at the annual meeting, referred to simplification of management and administration methods for which the company has made a name. In this subject, in which all accountants in practice and administration have a deep interest, Marks & Spencer has now had some five years' experience in cutting paper-work and simplifying methods.

Parkinson, of course, was right and as Lord Marks said at the meeting, 'there is a constant tendency in business as in Government for costs of administration to rise, for procedures to become complicated and for paper-work to become burdensome and wasteful. Unless it can be checked, it can become a heavy burden on business'.

'We', said Lord Marks, 'subject all our procedures to constant scrutiny in order to eliminate useless paper-work, with results that have again contributed substantially to the year's profits.'

Some of the things done by Marks & Spencer are positively alarming – if seen from the wrong angle. The keeping of detailed stock records at each store – some 250 of them – with stock movements in and out has been swept away. That, in itself, was a tremendous decision, but experience has proved its worth.

# Simplification Exhibition

Store assistants no longer clock in and out which has been found to be not only good for their 'ego' but a great saving in cards, statistics, etc., at head office. If a branch manager wants some simple requisite for his office that can be obtained locally, he buys locally instead of indenting on a central store. In sum total, it adds up to tremendous figures. Lord Marks reckons to have cut out some twenty-six million pieces of paper, cards, forms, etc., previously handled – and the queries that are inseparable from 'paper-work'. Internal audit staff has been cut by a third; other work has been found for them. The number of employees has been substantially reduced despite increased business done.

A point of particular interest in Lord Marks' speech for those who have efficiency at heart is the company's Simplification Exhibition at its head office where some of the Marks & Spencer simplification methods are illustrated. 'It continues to attract a regular stream of visitors who have been troubled by the same problem and hope they may learn

# ACCOUNTANT

something from our experience.' During the year, over 1,000 business men and administrators from Government departments and local authorities visited the exhibition, bringing the total since it was opened six years ago to over 6,000.

For readers interested, the company's address is in Baker Street, London W1.

# **New Capital Issues**

CTATISTICS compiled by the Midland Bank Show that the amount of 'new money' raised in the United Kingdom by the issue of marketable securities in June was £144.1 million. This brings the total for the first six months of 1962 to £349.4 million which compares with £339.8 million in the first half of 1961 and £271.8 million in the first half of 1960.

Among the issues included in the total for June were those for General Accident and Life Assurance (£13.0 million), Lloyds Bank (£12.2 million), London County Council (£28.2 million net), National Provincial Bank (£10.3 million) and Thorn Electrical Industries ( $f,g \cdot g$  million).

# Stockbrokers to be allowed Overseas Offices

"HE Council of the London Stock Exchange have passed, subject to confirmation on July 23rd, a new Rule 57E and Appendix 46c which will permit brokers under certain conditions to establish branch offices overseas. A broker wishing to open a branch office, which must be situated outside the United Kingdom and the Republic of Ireland, will be required to obtain the prior consent of the Council.

NOTES ON THE CONSOLIDATED PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 28th FEBRUARY, 1962

I. CHANGES IN GROUP INTERESTS

I. CHANGES IN GROUP INTERESTS
The consolidated profit and loss account for the year ended 28th February, 1962 includes the profit for the year of the Odhams Press Group acquired on the 3rd March, 1961 and the profit for one month only of The Imperial Paper Mills Limited (the controlling interest of which was sold on the 31st March, 1961) together with the interim dividend in respect of the year ended 31st March, 1962 received on the shares issued in exchange by Albert E. Reed & Company Limited. If these changed circumstances had prevailed in the previous year the trading profit after depreciation for that year would have been £6,645,000 on the basis of including a year's profit for the Odhams Press Group to 31st December, 1960.

Other income

·	unsecured loan	1986	6	3,267,321
£1,322,682				£7,145,455

#### 4. PROVISION FOR PENSIONS

The Group pension provision which formerly only included the liability for employees eligible for membership of pension schemes has now been enlarged to cover the past service of other employees and persons already in receipt of pensions by the transfer of £994,000 by subsidiary companies from their revenue reserves. The provision is the estimated amount required, after deducting anticipated future taxation relief including relief due on lump sum payments already made, and relates to all companies within the Group including newly acquired subsidiaries.

# 5. SUBSIDIARIES

#### NOT CONSOLIDATED

The consolidated accounts do not include the accounts of The Publishers and General Insurance Company Limited as, in the opinion of the directors, the business of the Group and that of the subsidiary are so different that they cannot reasonably be treated as a single undertaking. So far as it concerns members of The Daily Mirror Newspapers Limited the subsidiary has made neither profit nor loss on revenue account since date of acquisition.

# SOLD DURING THIS YEAR

The Group's holding of ordinary and preference shares in The Imperial Paper Mills Limited and its Canadian subsidiary, Gulf Pulp and Paper Company, were exchanged on the 1st April, 1961 for shares in Albert E. Reed & Company Limited. These shares are included in trade Investments at the amount attributed to the interests sold as shown in the consolidated balance sheet at 28th February, 1961. Albert E. Reed & Company Limited has an option to acquire, at any time before June 1966, 120,000 deferred shares of £1 each in The Imperial Paper Mills Limited which have been retained and to which to book walle has been ascribed. to which no book value has been ascribed.

# SOLD SINCE END OF YEAR

The Group's interest in the Empire Printing Ink Company Limited, was acquired by Ault & Wiborg Limited on the 1st March, 1962 in exchange for cash and shares having a value of about £400,000, which is in excess of the amount at which that interest is Included In the consolidated balance sheet.

# 6. CONTRACTS FOR CAPITAL EXPENDITURE

The outstanding commitments on contracts for capital expenditure not provided for in the accounts amounted to approximately:

ACCOUNTANT

Such offices must be wholly under the control of the London firm and must be used solely for the conduct of Stock Exchange business. Contract notes relating to transactions done by the branch office will have to be rendered in London. It will be necessary for the branch office to comply with Stock Exchange Rules (including those restricting advertising) and with the laws of the country in which the branch office is situated.

# Barclays Bank

A NEW local head office of Barclays Bank was set up last Monday. Controlling forty-five branches, most of them in Surrey, it will operate at first from Dorking, moving in a few months to its permanent centre at Guildford. The branches have formerly been part of the London, Brighton, Reading and Windsor districts.

The new local head office is the latest development in the Barclays system of decentralization, under which all the branches of the bank are administered in districts; there are now eight London district controls and twenty-nine local head offices. The system originated in the fact that Barclays was first formed as an amalgamation of private bankers, who wished to preserve the personal relationship between banker and customer. Later, as joint-stock banks as well as further private banks were absorbed, the local head office plan was extended to include them also, and Barclays finds it operating as satisfactorily now as when it was first devised.

# CITY NOTES

THE City is on the eve of Festival Week but there is singularly little festivity in the stock-market. After a largely technical rally at the end of last week the market has eased back into a mood of uncertainty.

Mid-year reviews by leading stockbroking firms hardly suggest that brokers are advising their clients that the fall in equity prices of the past few months has led to levels at which buying can be confidently considered.

One firm admits 'we cannot yet say with any confidence that a safe buying level has been reached and some of the still relatively low yielding shares could be particularly vulnerable in any renewed setback, having regard to the drastic readjustment of similar stocks which has already taken place both in America and on the Continent'.

'In a month's time', another firm suggests, 'the market could possibly look in a healthier state than it is now, although for the time being any tentative rally should not be trusted too far.'

Another suggests that 'for the long-term investor there are and will be bargains in the United Kingdom ordinary share market', but having said that hastens to add, 'but we would ourselves, in present circumstances, prefer to miss the bottom rather than plunge in too eagerly and too early'.

The broad conclusion is that the worst of the fall may be over but that there is as yet no reliably firm basis on which recovery can be built.

# Current Law

# **Duties of Attorney-administrator**

THE applicant in In the Estate of Weiss ([1962] 1 All E.R. 308) was a beneficiary who sought an order assigning to her the administration bond given for the due administration of the deceased's estate by B., who had been appointed by W., the administrator, to obtain letters of administration in England in respect of the deceased's estate. W. had been appointed by the Czechoslovakian court. B. met or provided for all claims and expenses incurred in England and at W.'s request handed over to K., who was resident in Switzerland, the net proceeds of the administration.

Scarman, J., took the view that an attorneyadministrator would ordinarily be justified in paying over the balance to his foreign principal after paying the English debts, other debts of which he had notice, and the expenses of his administration; distribution to the beneficiaries, though it might in special circumstances become the duty of the attorneyadministrator, was better left in most cases to the principal administrator in the country of the deceased's domicil. His lordship found no reason in the case before him why the English attorney-administrator should not hand over his balance to the Czechoslovakian administrator. Nor, in the instant case, did his lordship see any objection to the transfer by B., at W.'s request, to K.; though he said that if an attorney-administrator had notice of any limitation on the power of his principal to instruct him to deliver the balance of the estate to a third person, or had any reason to believe that compliance with the instruction would be to deprive creditors or beneficiaries of their respective entitlements or otherwise cause loss to the estate, he might be failing in his duty if he did not seek the directions of the Court, which might decide to keep the administration under its control. As the applicant failed to establish a prima facie case of failure by B. to administer according to law the estate coming into his hands, the application failed.

# Claim against Petitioning Creditor

THE petitioner in Re Douglas (Griggs) Engineering Ltd ([1962] 1 All E.R. 498) obtained judgment against the company in the sum of £380 with costs and sought the winding-up of the company on the ground that it was insolvent and unable to pay its debts. The company resistant debts. The company resisted the petition on the ground that in 1961 an action was brought against it in which the plaintiff recovered judgment for £3,167 os 9d and third-party proceedings by the company against the petitioning creditor were pending, in which proceedings the company claimed £2,559 (part of the sum of £3,167 os 8d) a sum much larger than the judgment debt on which the petition was founded. In a letter from the company's solicitors to the petitioner's solicitors the admission was made that there were no assets on which execution could be levied, either at the solicitors' own office or at the

company's place of business.

Pennycuick, J., ordered the company to be wound up, holding, first, that the petitioner's prima facie right to an order had not been displaced merely by showing that the company had a disputed claim against the petitioner in other proceedings; and, secondly, that, having regard to the letter referred to, the company should be deemed to be unable to pay its debts within section 223 (b) of the Companies Act, 1948.

# Application by Trustees to Vary Trusts

'N Re Druce's Settlement Trusts ([1962] 1 All E.R. .563) an application was made to the Court by trustees under section 1 of the Variation of Trusts Act, 1958, for approval of the variation of a settlement so as to convert it into a discretionary settlement with certain powers, the trustees being given non-binding directions as to how to exercise their discretion over income.

Russell, J. (as he then was), having observed that any arrangement was capable of being regarded as beneficial under the Act if it could, on balancing probabilities, be regarded as a good bargain, and that it was not necessarily deprived of that quality by the fact that, in improbable circumstances, no benefit, or even some loss, was possible, found that the arrangement proposed would be for the benefit of all potential beneficiaries who were not parties to the application (and whose interests were therefore the special concern of the Court), and that it was a proper case for the exercise of the Court's discretion under the Act. His lordship said that he was at one time exercised in his mind as to the propriety of conferring discretionary powers which were in fact intended to be exercised in particular ways and with indications short of effective command that they should be so exercised; but, bearing in mind that the jurisdiction in effect enabled the Court to contract on behalf of certain beneficiaries, or possible beneficiaries, he concluded that it was open to him to agree to that which the beneficiaries, if sui juris and ascertained, might have agreed for themselves.

His lordship observed that, in general, beneficiaries, and not trustees, should be the applicants under the Act, and that trustees should not be the applicants unless they were satisfied that the proposals were beneficial to the persons interested and had a good prospect of being approved by the Court, and further that if they did not make the application no one would. In particular, it would not be right if it became the general practice for trustees to make application on the supposition that if the application should fail it would be more probable (though not certain) that the costs of all parties would be directed to be met out of the

trust funds.

# **Stabilizing Share Prices**

SIR, — In a recent letter to *The Times*, Mr Colin Perry pointed out that it was virtually impossible for a fall in stock exchange prices to be restricted to the level of a 'technical adjustment'. This is because, as share prices fall, jobbers are forced to buy some shares as a hedge against a subsequent rise and, given the capitalization of the London Stock Exchange securities today, they quickly arrive at a point where their funds are fully committed. Should the public abstain from buying at this stage, then the jobbers must accentuate the drop in buying prices, thus changing a fall into an avalanche.

In Mr Perry's letter it was claimed that the jobber system affords the London Stock Exchange some protection in this situation, but Mr Frederick Ellis has shown (in the *Daily Express*) that the declines in prices have been sharper in London than in New York. This is a point which I have also made in my book *How to Make Money on the Stock Exchange*.

Whatever merit the jobber system may have (and there are some advantages which informed people in the U.S.A. have pointed out) it cannot work as a share price stabilization scheme. This is because it lacks two vital elements, namely, a capital related in size to the magnitude of the work to be done, and a pricing policy which makes its intervention necessary and not voluntary. We thus arrive at the ridiculous situation of a market with no bottom to it, where the least wind can blow away the whole superstructure of credit and confidence upon which it is built, causing ruin to millions of people who have invested their savings in it, and eventually bringing the whole economy to a standstill.

If it is accepted that some sort of price stabilization scheme is needed, then it seems to me a very simple matter for accountants to devise one. My own suggestion would be to arrive at a 'lowest value' for every share dealt in, using the information disclosed by the annual accounts and applying a formula to take into consideration special risks in relation to the probability of maintaining or increasing profits. This 'lowest value', which would be published, would be the price at which the share price stabilization fund manager would intervene and purchase all shares on offer. At the end of the crisis, when share prices became again subject to the laws of supply and demand under normal conditions, the fund manager would sell at a price high enough to recreate the fund

and provide a small contribution towards operating expenses – say, 5 per cent above purchase price.

Where would the fund come from and how big would it need to be? The answer to this can be found by asking what happens to the proceeds of sale of securities. They are credited to the investors' bank accounts. Very well then - let the banks constitute the fund as an unlimited amount of credit which they would allow its manager to draw upon for this purpose. They would never be called upon to pay out more than they would receive as deposits, and they would be reimbursed by the fund manager as he liquidated the fund by sales to their customers.

This is a most important field for accountants to show the contribution which they are capable of making to the creation of a just and ordered society. Is it not possible for us to sponsor a share price stabilization scheme of the type I have attempted to outline?

Yours faithfully,

KENNETH S. MOST, LL.B., F.C.A.

London SW7.

# **Deposit Account Interest**

SIR, – In connection with the recent correspondence on the above subject, may I refer the Public Relations Officer of Lloyds Bank Ltd to the following extract from the judgment of Lord Goddard in *Hart v. Sangster* (36 A.T.C. 63; 37 T.C. 237):

'there was no special arrangement at the time that he (Sangster) opened his deposit account entered into between him and the banker. The Commissioners have found, therefore, that the contract between them was the ordinary contract common between English bankers and their customers in respect of deposit accounts. They have set their reasons out in the case and they find that

"interest on deposit accounts was calculated on the principal on a day-to-day basis and was credited on half-yearly rest dates, June 20th and December 20th, in each year. When it was so credited the interest became principal and then (and not before) began itself to earn interest".

Yours faithfully, London EC2. A. F. CHICK.

# **Professional Fees**

SIR, - I see that in the June 30th issue of *The Accountant* you report the President of the Scottish Institute as asking members in industry to give preferential treatment to members in practice when the question of fees for professional services arises.

I believe that this view is quite unreasonable, and that it is the duty of members of the Institute in commerce to put first their loyalty to the firm that employs them and to obtain what their suppliers have to offer, whether it be professional services or raw materials, as cheaply as possible.

Yours faithfully, D. J. BENNINGTON, A.C.A.

Ruislip, Middx.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

# ANNUAL SERVICE

The annual service of The Institute of Chartered Accountants in England and Wales was held at the Church of St Margaret's, Lothbury, London EC2, last Wednesday. The President and members of the Council together with a good number of other members of the Institute, attended.

The service, conducted by the Rector, the Rev. A. John Drewett, M.A., B.SC., commenced with the hymn 'Glorious things of thee are spoken'. After the singing of Psalm 148, the lesson from St John, chapter 6, verses 1-14, was read by the President, Mr P. F. Carpenter, F.C.A.

The other hymns were 'Immortal, invisible, God only wise' and 'Now thank we all our God'. The collection for the Chartered Accountants' Benevolent Association amounted to £45 178 6d.

The Rector delivered the following sermon:

#### The Sermon .

Whence shall we buy bread, that these may eat? (John 6, 5)

Economics is often called the dismal science. It is not clear why it has earned this rather depressing reputation but one possible explanation is that it has always been difficult to make both ends meet; the gap between demand and supply seems ever to be widening.

Economics has its origins in housekeeping and perhaps we should keep closer to reality if we thought of it in these simple and homely terms. No doubt the science itself, now immensely complicated by obscure mathematics, can only be understood by the expert; but its subject-matter is our common experience. The great Alfred Marshall begins his classic treatise with the words 'Political economy or economics is a study of mankind in the ordinary business of life'. He goes on to state that 'the two great forming agencies of the world's history have been the religious and the economic'. Theoretical economics may be difficult, beyond the understanding of the ordinary man, but the day-to-day business of feeding the millions of people who make up the human family is something which presses heavily upon statesmen, farmers and business men the world over and is a matter of life and death for all of us.

If then we turn from abstract theory and see economics in terms of people and their needs we are at once faced with the real problems of the modern world. Affairs have been so ordered that the natural wealth of the world is not evenly distributed. Some areas are provided with an abundance of good things, others are unproductive and can only support human life at a bare subsistence level. Some parts of the world are grossly overcrowded; others, by comparison, are almost empty. The result of this is that some nations have an increasingly high standard of living whilst others are always on the edge of the starvation line.

For Christians these conditions pose fundamental questions of conscience and morality from which they cannot escape. Christianity, by its very nature, believes

in the dignity of the individual person and his right to a standard of life which will enable him to live in freedom from ignorance, poverty and disease. A condition of affairs in which the rich nations are increasing their wealth at the expense of the poor nations offends against the Christian belief in justice and brotherhood. The Christian community in the world contains people of all races and nationalities and, as the Church increasingly realizes its mission to the world, it becomes more urgently aware that an important part of this mission is the creation of a world order in which every man can make his own contribution to the common good and receive, in return, the due reward of his labour.

Christians, unless they have undergone the appropriate training, do not profess to be experts in international affairs, economics or technology. But they do claim the right to ask the experts to give their attention to the solution of the basic problems which face mankind. It is the function of religion to hold a worthy vision before men's eyes so that their activities may be directed to purposes beyond themselves and their lives made worth living in the deepest sense of the word. There can be no future for the human race at all if each one of us is satisfied with the world as it is and is only concerned with his own share of the spoils. There is surely something wrong with a world which is squandering its wealth on weapons of destruction while millions are living at starvation level. If it is true, to quote the American Secretary of State, that 'neither the United States nor the U.S.S.R. has so many schools hospitals, and highways, or so many scientists, engineers, scholars and artists, that we could not put to better use the funds and energies and talents which go to make our warships and tanks and missiles', it is equally true of all countries, including our own.

And yet we know why this frightful misuse of the world's resources is allowed to go on. It is caused by a bankruptcy of spirit. Lack of any real conviction about the purpose of life; fear of other men; an unwillingness to make new political and economic experiments; too great a preoccupation with trivialities; these and many other symptoms of spiritual poverty find expression in the breakdown of human community and in preparation for mass destruction.

# Hope and Sanity

Can anything be done to reverse this trend and to bring hope and sanity to the world? The first essential would seem to be a new awakening of faith in the future of man's life on this earth. This would lead, in turn, to a constructive and creative attitude in place of the present negative and destructive one. There are too many people who, when faced with the kind of problem described in our text, are helpless and despondent. There is a lad here with five barley loaves and two small fishes, but what are they among so many? Jesus decides to do what he can with what is available and so he brings a new spirit to bear upon the

problem. The hopes of the multitude are raised; they sense that someone who knows what he is doing is in charge of the situation. The available food is shared amongst them and there is enough to go round.

24

The poverty of the world may not be man-made but men are now responsible for its continuance. We now have the knowledge and the power to work the miracle of feeding the hungry millions of the under-privileged countries. What we need is the compassion to put this task at the top of our priorities. At the recent Assembly of the World Council of Churches at New Delhi, the leaders of the churches called for such constructive action. "To share the benefits of civilization with the whole of humanity is a noble and attainable objective. To press the war against poverty, disease, exploitation and ignorance calls for greater sacrifice and for a far greater commitment of scientific, educational and material resources than hitherto. In this common task, let the peoples find a positive programme for peace, a moral equivalent for war.'

# New World

There is some evidence that we are at the point of departure for the new world opening up before us. The Freedom from Hunger Campaign has recently been launched in this country by the Duke of Edinburgh. A call is going out to the western world to bring all its resources to bear upon this most urgent problem. At the present time only 10 per cent of the earth's surface is food producing; it is estimated that this can be raised to 30 per cent. But at the same time the population of the world is shooting up. It is now 3,000 million; by 1975 it will be almost 4,000 million. Unless great efforts are made, the gap between supply and demand will continue to widen. In many parts of the world, greater productivity depends upon the spread of education. Here again, a beginning is being made. The call has gone out to young teachers in America and Britain to spend some years in Africa and Asia. New schools and universities are being built in

the newly independent countries. All this is a constructive answer to the question, 'Whence shall we buy bread that they may eat?'

Bread for men's bodies is an urgent need, but is this enough? In the worthy endeavour to satisfy our need for material things, there is often the danger that we may forget that man cannot live by bread alone. He may be kept alive, but this is not the same as living. The Lord himself was afraid that men would be content with the bread that perishes and would scorn the living bread which he had come to bring. 'I am come that they might have life and have it more abundantly.' It is this abundant life which it is the business of the Church to supply.

And let us not become vague and otherworldly when we think of this life of the spirit. Without justice, compassion, patience, joy, freedom and peace, no amount of material comforts will satisfy men's needs. All these are imponderables; they cannot be weighed or measured; they are not susceptible to scientific analysis. But they are real and without them life becomes an unlovely struggle for mere survival, a rat-race in which the weak are sacrificed to the strong and the honest to the unscrupulous.

Amongst the first to recognize the need for these spiritual goods are the deprived people themselves. They do not wish to be thrown the crumbs from the rich man's table; they bitterly resent any suggestion that they are the recipients of charity. What they need is help to get on to their own feet and to become selfsupporting. When they are independent in the fullest sense of the word, politically, economically and spiritually, then and only then will they be able to take their place as full and creative members of the world community. And when each nation and race is in a position to make its contribution to the whole; human family, then shall we all be enriched and a new world will have arrived. It will not be in our time, but history is now being made and the decisions of today will help or hinder the day of its arrival.

# Notes and Notices

#### THE ACCOUNTANT

# Index to Vol. CXLVI: January – June 1962

The general index to Vol. CXLVI – January to June 1962 – is published with the present issue. The parts of this volume, with the index, can now be sent for binding.

# PROFESSIONAL NOTICES

MESSRS ALLEN, BALDRY, HOLMAN & BEST announce that Mr P. W. SIMKINS, A.C.A., has been taken into partnership in their Guildford firm from July 1st, 1962.

Messrs Ashley, Wallace & Co, Chartered Accountants, of Brighton, and Messrs Thornton Baker & Co, Chartered Accountants, of London and elsewhere, jointly announce that as from July 1st, 1962, there has been a fusion of their interests and that in future the practices will be carried on under the styles of Ashley, Wallace & Co, Thornton Baker & Co, and Edmonds & Co.

Messrs Bryce Hanner & Co and Messrs E. M.

OWEN & Co, Chartered Accountants, of Liverpool, announce that they have amalgamated their practices as from July 2nd, 1962, and that as from the same date there has been a fusion of their interests with Messrs Thornton Baker & Co, Chartered Accountants, of London and elsewhere. In future the practices will be carried on under the style of Bryce Hanmer & Co, E. M. Owen & Co, and Thornton Baker & Co.

Messrs Caldwell & Braham, Chartered Accountants, of St Stephen's House, London SW1, announce that they have admitted into partnership Mr David A. Tate, A.C.A., who has been a member of their staff for a number of years.

Messrs Camm Metcalfe, Best & Co, Chartered Accountants, of Sheffield and Chesterfield, and Messrs Thornton Baker & Co, Chartered Accountants, of London and elsewhere, jointly announce that as from July 1st, 1962, there has been a fusion of their interests and that in future the practices will be carried on under the styles of Camm Metcalfe, Best & Co, and Thornton Baker & Co.

Messrs Cooper Brothers & Co and Coopers & LYBRAND of Northern Rhodesia announce that they have amalgamated their practice with that of W. D. WALKER & Co, of Kitwe, Northern Rhodesia.

MESSRS GERALD KREDITOR & Co, Chartered

Accountants, announce that they have moved their offices to Martin House, 68 Upper Thames Street, London EC4. Telephone: Central 1971/9622.

Messrs Newton, Armstrong & Co, Chartered Accountants, of 11 Grocers' Hall Court, London EC2, announce that Mr Ronald John Cody, A.C.A. (also of Messrs Smallfield, Fitzhugh, Tillett & Co, Chartered Accountants), and Mr Guy William TYRWHITT-DRAKE, F.C.A. (also of Messrs Josolyne, MILES & Co, Chartered Accountants), have joined them as partners. The practice otherwise continues unchanged.

Messrs E. M. Owen & Co, Chartered Accountants, of Liverpool, announce that they have amalgamated their practice with that of Messrs Bryce Hanner & Co. as from July 2nd, 1962, and that also from the same date there has been a fusion of their interests with Messrs Thornton Baker & Co. Chartered Accountants, of London and elsewhere. In future the practices will be carried on under the styles of E. M. OWEN & Co, Bryce Hanmer & Co, and Thornton Baker & Co. ~ Mr REGINALD PEARCE, Chartered Accountant, of Yeovil, announces that Mr B. A. Collins, A.C.A., has joined him in partnership as from July 1st, 1962. The style of the practice has been changed to Pearce, COLLINS & CO.

MESSRS PETTITT, MADDOX & Co, Chartered Accountants, of Bournemouth, and Messrs Thornton Baker & Co, Chartered Accountants, of London and elsewhere, jointly announce that there has been a fusion of their interests and that as from July 1st, 1962, the practices are being continued under the styles of Pettitt, Maddox & Co and Thornton Baker & Co.

Messrs Price Waterhouse & Co, announce that Mr C. Collett, A.C.A., was admitted to partnership in their Newcastle firm on July 1st, 1962. They also announce the establishment of a firm at Manchester, the partners in that firm being the partners in the London firm and Mr A. D. Copley, f.c.a.

Messrs Robson, Morrow & Co announce that Mr John P. Hough, A.C.A., and Mr Peter G. Targett, A.C.A., both of whom are members of their staff, have been admitted to the partnership as from July 1st, 1962.

Messrs Thornton Baker & Co, Chartered Accountants, announce that they have admitted into partnership as from July 1st, 1962, Messrs F. R. FLOWERS, A.C.A., E. C. GODFREY, A.C.A., and T. PITTOM, A.C.A., of the Leicester office, Messrs E. A. Fern, A.C.A., and J. F. JEE, A.C.A. of their Coventry office and Mr J. Brown, A.C.A., of their Aylesbury office.

Messrs Joshua Wortley & Sons, Chartered Accountants, of Sheffield, and Messrs Thornton Baker & Co, Chartered Accountants, of London and

elsewhere, jointly announce that as from July 1st, 1962, there has been a fusion of their interests and that in future the practices will be carried on under the styles of Joshua Wortley & Sons and Thornton Baker

### IN PARLIAMENT **Bankruptcy Petitions**

Mr Talbot asked the Chancellor of the Exchequer how many petitions in bankruptcy were presented by the Commissioners of Inland Revenue in the years ended April 5th, 1960, and April 5th, 1961, respectively.

Sir E. Boyle: 203 and 259. Hansard, June 26th, 1962. Written Ans. Col. 123.

### Income Tax and Surtax

Mr Talbot asked the Chancellor of the Exchequer how much income tax and surtax were lost in the years ended April 5th, 1960, and April 5th, 1961, by reason of individuals leaving the country to avoid payment; and what was the number of individual cases concerned.

Sir E. Boyle: The total of the income tax and surtax written off as irrecoverable in the accounting years 1959 and 1960 because the taxpayers had gone abroad was £139,190 and £281,106 respectively: of these amounts surtax accounted for £69,809 and £147,182 respectively. There were in all 683 individual cases in 1959 and 794 in 1960.

Hansard, June 26th, 1962. Written Ans. Col. 123.

### THE COMPANIES (FORMS) (AMENDMENT. No. 3) ORDER, 1962

A company incorporated under the laws of a foreign country and with a place of business in Great Britain is required to deliver to the Registrar of Companies a certified copy of the document which defines its constitution. The certification has to be authenticated by a British official in the country of incorporation.

The Board of Trade have made the Companies (Forms) (Amendment No. 3) Order, 1962, amending the Companies (Forms) Order, 1949. The new Order, which came into operation on July 2nd, removes the necessity for this authentication. This brings the requirements in respect of foreign companies in line with those in respect of companies incorporated in Commonwealth countries.

Copies of the Order, S.I. 1962, No. 1302, may be obtained from H.M. Stationery Office, price 3d.

### **HOTELS AND RESTAURANTS**

HAMMERSLEY KENNEDY & CO, 19 Hanover Square, London WI, have since 1899 specialized in the sale and valuation of hotels and catering businesses to the exclusion of any other branch of estate agency. The partners are members of the leading professional bodies.

### OMPANY

Telephone: Victoria 2002 (3 lines)

#### REVALUATION OF **ASSETS**

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

## DOUBLE TAXATION Republic of South Africa

The Double Taxation Convention between the United Kingdom and South Africa, which was signed in Cape Town on May 28th, was published last week as a

Schedule to a draft Order in Council.

The Convention provides for the avoidance of double taxation of income and profits and is expressed to take effect in the United Kingdom for income tax from April 6th, 1962, and for profits tax from January 1st, 1962. It replaces the agreement signed on October 14th, 1946, and the Supplementary Protocol signed on November 5th, 1954.

### BOARD OF TRADE Removal from Lacon House

All those departments of the Board of Trade at present located in Lacon House, Theobald's Road, London WC2, are being removed during this month to Hillgate House, 35 Old Bailey, London EC4. (Telephone: City 5757) except for the Registry of Business Names which, as already announced (*The Accountant*, May 26th issue), will remove during the week-end of July 7th-8th, to the new Companies House, 55/71 City Road, London EC1. (Telephone: Clerkenwell 9393.)

All mail and telegrams dispatched up to and including July 19th, should be addressed to Lacon

House, and after that to Hillgate House.

### MANAGEMENT ACCOUNTING CONFERENCE

Members of The Institute of Cost and Works Accountants holding senior positions in industry met for a management accounting conference last week-end at the Worcestershire Brine Baths Hotel, Droitwich.

Two papers were discussed. In the first, entitled 'Controlling the return on capital employed', Mr J. L. Hilton, F.C.W.A., M.B.I.M., financial director of General Refractories Ltd, discussed the declining return on capital employed brought about in many industries by

social and economic pressures.

The second paper, entitled 'Reporting for profit', was presented by Mr A. I. G. Farquharson, c.A., A.C.W.A., chief accountant of Storey Brothers & Co Ltd. The author discussed some of the factors involved in ensuring that sales management is kept informed of the implications of its sales policy on the prosperity of the concern.

## ACCOUNTANCY AS A CAREER 'At Home' Meetings at Moorgate Place

A series of 'At Home' meetings for pupils and parents is being held this month by the London and District Society of Chartered Accountants. The meetings will take place in the Oak Hall of the Institute at Moorgate Place, from Tuesday to Friday, July 17th-20th, commencing at 4 p.m., when tea will be served. Visitors will then hear a talk about the work of the chartered accountant and the opportunities offered by the profession; a question time period will follow and the meetings will end at about 6 p.m.

Some 500 headmistresses, headmasters and careers masters in the London and District Society's area have been advised of the 'At Home' meetings and it seems likely that a considerable number of pupils, their parents and teachers will be attending.

### SEVENTY-FIVE YEARS AGO

FROM The Accountant of July 2ND, 1887

The Institute of Chartered Accountants

The Jubilee meeting of the Institute held last week, reported elsewhere, afforded country members an opportunity, which was largely utilised, of joining in the enthusiasm which has characterised the proceedings of Her Majesty's subjects during the past week, and the Institute may certainly be congratulated on the happy idea of so arranging their proceedings as to enable accountants to view the regal festivities, and also to be present and participate in the attractive programme arranged by the Institute. The President, Mr. Frederick Whinney, entertained his hearers at the meeting, in that lucid manner which characterises his utterances, to an exhaustive address which treated with the origin and development of the profession, and also showed to some extent how the immense changes in locomotion, navigation, &c., that the Victorian era had witnessed had, by influencing commerce, been instrumental in building up the profession of Accountants to its present proportions. This was followed by an important paper on Company Law Amendment, by Mr. T. A. Welton, which we may have an opportunity of commenting on in a subsequent issue. The discussion was somewhat discursive and we fear that impromptu discussions will always partake either of meagreness or unsoundness, unless the plan is adopted, which has been several times suggested in these columns, and was warmly advocated by Mr. Jackson, of distributing proofs of the paper beforehand . . .

The dinner which was held at the Criterion the same day, was, as far as numbers and guests were concerned, one of the most successful in the annals of the Institute, and eminent members of Parliament, as well as prominent members of the Bar, bore testimony both to the esteem in which members of the Institute were held, as also to the high functions accountants are called upon to

fulfil.

The Conversazione on the following evening was extremely well attended, and members were blasé in the extreme who failed to appreciate either the excellent pictures which adorn the walls of the Grosvenor Gallery, or the attractive programme of music performed by the band.

The happy memories of the river trip, and the affability of Colonel Du Plat Taylor, C.B., who was good enough to personally conduct the company through a portion of the gigantic docks at Tilbury, will long linger in the minds of those accountants who were fortunate enough to be present at the last of the festivities. The pleasure of the trip was enhanced by the presence of the lady friends of members. The luncheon was excellent, and admirably served, and Mr. A. Murray gave utterance to the feelings of all concerned, when, in returning thanks for the country members, he referred to the extremely successful manner in which the Jubilee programme of the Institute had been carried out.

## THE INSTITUTE OF CHARTERED ACCOUNTANTS OF SCOTLAND

Spring Diet of Examination, May 1962

### PART V

Of the 323 candidates who sat Part V of the Institute's examination on May 15th, 16th, 17th and 18th, 1962, the undernoted 147 (45.5 per cent) candidates passed. Their names appear in alphabetical order and are followed by the names of the firms of the masters to whom they were indentured or assigned.

The Institute's Gold Medal (for the candidate whose performance over Parts IV and V is the most meritorious)
Stephen, H. (Flockhart & Grant), Aberdeen

Distinction (for each candidate whose performance over Parts IV and V is sufficiently meritorious)
Stephen, H. (Flockhart & Grant), Aberdeen
Adamson, M. G. (Graham, Smart & Annan), Edinburgh

The Institute's Prize (for the candidate whose performance in Part V is the most meritorious)
Stephen, H. (Flockhart & Grant), Aberdeen

The John Munn Ross Prize (for the candidate whose performance in Paper 1, of Part V is the most meritorious)
Adamson, M. G. (Graham, Smart & Annan), Edinburgh

The J. C. Burleigh Prize (for the successful London candidate whose performance in Part V is the most (and sufficiently) meritorious)

Horton, D. J. (McClelland, Moores & Co), London

Adamson, M. G. (Graham, Smart & Annan), Edinburgh Adamson, R. W. (Taylor & Ireland), Glasgow Allison, I. S. (McLay, McAllister & McGibbon), Glasgow Anderson, L. W. (Mackie & Clark), Glasgow Armour, H. (S. Easton Simmers & Co), Glasgow

Baird, J. (Russ, Ferguson & MacLennan), Glasgow Barrie, H. (Rogerson & Goldie), Kilmarnock Barron, I. R. (J. G. Williamson & Smellie), Glasgow Bickerton, J. (J. W. Jarvie & Co), Glasgow Birnie, A. J. ## Short-term Gains - I

### CHARGEABLE ASSETS

In this and subsequent articles we propose to expound the principal features of the new tax under Case VII of Schedule D on short-term gains, imposed by Chapter II of Part II of the Finance Bill, as amended. The Bill received its third reading in the House of Commons on July 6th, very shortly after receiving copious Government additions at the recommital and report stage.

Before dealing with chargeable assets, as such, it may be helpful if we consider the transactions in them which attract tax. Clause 10 (1) provides that Schedule D income tax for 1962-63 and subsequent years shall be charged in respect of all gains accruing to any person, resident and ordinarily resident for the year in the United Kingdom, from his acquisition and disposal of any chargeable assets, not being gains which accrue as profits of a trade, profession, vocation, office or employment. A proviso excludes the sub-clause where either the acquisition or the disposal occurred before April 10th, 1962. This exclusion is modified by clause 14 which deals with transactions in shares of a land-owning company which itself has had transactions in land after April 9th, 1962.

'Person' includes persons in the plural, and also bodies corporate. However, it is a sine qua non of liability that the person who acquires and disposes shall be both resident and ordinarily resident in the United Kingdom 'for the year'. The rules for determining residence and ordinary residence are too complex to be reviewed here. However, it is worth observing that in practice, 'ordinary residence' and 'residence' can be regarded as commencing or ceasing at some date within the income tax year. Presumably if either acquisition or disposal occurs while the person is not both resident and ordinarily resident, then the fact that the complementary transaction occurs while he is both resident and ordinarily resident will not by itself attract tax, even though the income is deemed to accrue in the ordinary case on the date of the disposal. Where the chargeable person is not domiciled in any part of the United Kingdom, there are special rules for computing the income, i.e. on the remittance basis.

In excluding gains which accrue as profits of a trade etc., the draftsman was no doubt thinking of profits which are chargeable to British income tax, but he has not said so. A person resident and domiciled in the United Kingdom may carry on a trade wholly abroad, so that British tax is chargeable only under Case V of Schedule D, on actual remittances to this country. On a strict

construction of the Bill he could resist liability under the new Case VII, on the ground that the gains were part of the profits, even though there was no prospect of any remittance, and therefore no prospect of such gains suffering British tax.

Before dealing with the question of what is meant by 'acquisition' and 'disposal', it is useful to examine the meaning of 'chargeable assets' which are the subject of such acquisition and disposal. Clause 11 first lays down a very comprehensive definition, then it makes certain exceptions, and exceptions from the exceptions and so on. All forms of property whether situated in the United Kingdom or not are chargeable assets. Such property includes options, debts and incorporeal property generally. However, 'tangible movable property' is excluded, unless it falls within one of the following exceptions:

- (a) in relation to any acquisition and disposal by a person (i) dealing on a futures market or (ii) dealing with or through a person ordinarily engaged in dealing on a futures market, commodities of any description shall be charge-
- (b) currency of any description is chargeable assets. except in relation to an acquisition and disposal by an individual for the personal expenditure outside the United Kingdom of himself or his family or dependants (including expenditure on the provision or maintenance of any residence outside the United Kingdom);
- (c) tangible movable property of any description shall be chargeable assets in relation to any acquisition and disposal by a person acquiring it with a view to its employment in a trade or business carried on or to be carried on by him, but disposing of it without its being employed in that trade or business

Perhaps it is stressing the obvious to say that 'tangible movable property' is property which can be both touched and moved. Debts can be moved but not touched; land can be touched but not moved. No doubt in fixing on the phrase the draftsman had in mind the kind of goods which it is difficult to buy and sell without thereby being held to carry on a trade or an adventure in the nature of trade. In this connection paper, linen, immature whisky, and plant and machinery have all figured in litigation where the Inland Revenue have successfully argued that there was a trade. What the draftsman has probably not thought of is the fact that there is a strong body of opinion in favour of the principle that negotiable instruments are tangible movable property.

These would include share warrants, letters of allotment, and similar documents, the property in which can be transferred by mere hand to hand delivery. On the other hand, the definition of 'shares' in clause 16 (1) now provides that 'shares' or debentures comprised in any letter of allotment or similar instrument shall be treated as issued unless the right to the shares or debentures thereby conferred remains provisional until accepted and there has been no acceptance'.

Exception (a) is obviously designed to hit speculators in tin, coffee, cotton and similar commodities where there is an organized market. It would not hit acquisitions and disposals of negotiable instruments, since these are hardly 'commodities'. It is interesting to recall that in Cooper v. Stubbs (4 A.T.C. 373), a majority of the Court of Appeal held that transactions of this kind, if not constituting a trade, attracted tax under Case VI of Schedule D. Clause 10 (1) of the Bill does not expressly exclude Case VII liability where the gains are also caught by Case VI, but the Revenue cannot collect tax twice over.

Whereas the Inland Revenue have been successful in imposing Case I liability on gains from dealings in tangible movable property of the categories already mentioned, they have been very much less successful in the case of foreign currencies; hence exception (b). The exception is not confined to foreign currency, however, for obviously a person could buy and sell United Kingdom currency abroad and make a profit expressed in foreign currency, which would represent money's worth capable of being expressed in terms of United Kingdom money. No definition of 'currency' is given. It obviously includes bank-notes, which gives further point to the argument that negotiable instruments are tangible movables. Articles which are not currency in one place may well be currency in another: cowrie shells, Maria Theresa dollars, English sovereigns, not to mention more outlandish articles, are currency in some territories.

One can say little good of exception (c). It begins by repeating, unnecessarily, the phrase 'tangible movable property'. Then it provides for liability which depends on motive. Moreover it does not provide for the case where the person acquires the property with a view to employing it in one trade but in the event employs it in another trade. In that event it seems that there

will be double taxation. Finally, it is difficult to see just why there should be liability in this special case.

So much for tangible movable property. The Government's desire to encourage individuals to own their own houses leads it into strange channels; for instance, the reliefs from stamp duties on all conveyances under £6,000. Clause 11 (3) allows an individual a ration of one main residence which he can buy and sell without attracting Case VII liability, provided that he does not acquire it 'wholly or partly for the purpose of realizing a gain from the disposal of it' (clause 11 (7)). Clause 11 (3) provides that the dwelling-house or part of a dwelling-house which is an individual's only or main residence shall not be chargeable assets in relation to any acquisition and disposal of it by him. The same applies to land which he has for his own occupation and enjoyment with the residence as its garden or grounds. Bearing in mind the well-known proclivity of some astute persons to acquire residences surrounded by large areas of garden and park land which is dead-ripe for development, clause 11 (3) restricts the size of the land (including the site of the dwelling-house) to one acre. However, the Appeal Commissioners are given a discretion to enlarge this limit if they are satisfied that the larger area is required for the reasonable enjoyment of the residence, regard being had to the size of the dwelling-house. Thus, if an individual acquires a mansion which is divided into flats, occupies one flat, and retains for himself the whole of the grounds, it is open to the Appeal Commissioners to say that all the grounds are exempt from being chargeable assets.

It will be seen that the Appeal Commissioners merely decide how much more than an acre is to be treated as not being chargeable assets; it is not given to them to pre-select the precise tract of ground. Clause 11 (3) contains what appears to be an afterthought on this topic. Given that only a specific area of the land qualifies for exemption (normally one acre including the site) then for the purpose of identifying this 'permitted area' one has to take the part of the land which 'if the remainder were separately occupied, would be the most suitable for occupation and enjoyment with the residence'. This seems to be going round in a circle; obviously, if the excess land is identified and is assumed to be separately occupied, then necessarily the remaining one acre, or whatever it is, will be the most suitable to enjoy with the house. The words 'if the remainder were separately occupied' seem to be superfluous.

We have already mentioned clause II (7) which withholds the exemption unless the individual acquired the property for the purpose of residing there and not wholly or partly for the purpose of realizing a gain from the disposal of it. It seems that if he intended to realize a gain from the disposal of part of the property he will not be caught by clause II (7). Accordingly the individual postulated above who acquired a mansion with the intention of disposing of the grounds, but not the mansion itself, would seem to be outside clause II (7). This is a curious lacuna particularly in view of THE ATTORNEY-GENERAL's following observation in the House of Commons on May 22nd (our italics):

'one of the frequent means of securing large speculative gains now is to buy a property with extensive grounds and, while retaining the property, to sell part of the grounds for development'.

Clause 10 (6) has its own proviso:

'but where a person acquires land as a site for a building or structure, and disposes of it after the erection of the building or structure, subsection (3) or (4) above shall not be prevented from applying by reason of his not having acquired the land with the building or structure on it'.

By this afterthought the draftsman seems to be grappling with the really insoluble problem that hardly anybody buys any house without some hope of reselling it at a profit. The first part of clause 11 (7) does not confine itself to the case of a person intending to resell within the statutory three years, and therefore it would seem very difficult for anyone to satisfy the Appeal Commissioners that he is not caught. The afterthought does not really solve the problem; it is setting fact against motive, which is rather like deducting peas from beans.

Clause 11 (3) gave rise to a good deal of discussion at the Committee stage on May 22nd. The Attorney-General confirmed that cottages occupied by, e.g. domestic servants, and outbuildings such as coach-houses, stables and garages would not enjoy the exemption. He added that he thought it very improbable that the sale of outbuildings would bring any real liability. One wonders, therefore, why they should not be treated in the same way as the house itself.

(To be continued.)

### THE JENKINS REPORT

## Accounting Exemptions for Banks

of opinion inside the Committee on the question of the exemptions granted to banks and discount houses. The majority was for the full retention of these exemptions, but a strong minority of five, including Mr W. H. LAWSON, C.B.E., B.A., F.C.A., Mr K. W. MACKINNON, Q.C., M.B.E., T.D., and Professor L. C. B. GOWER, M.B.E., was for severely cutting them down.

It is helpful to put the matter into some historical perspective. The Companies Act, 1929, did impose some obligation to publish accounts of a sort but the accounts which were in practice published were somewhat rudimentary. In particular, there was practically carte blanche to make undisclosed transfers between reserves and profit and loss accounts. A cause célèbre in 1931 focused the limelight on this practice. The Royal Mail Steam Packet Co issued a prospectus relating to an issue of £2 million 5 per cent debenture stock, which was said to be required for the new freehold building of the company and for the general purposes of the company. After mentioning the depression which the Royal Mail and other shipping companies had gone through the prospectus said that:

'the audited accounts... show that during the past ten years the average annual balance available (including profits of the insurance fund), after providing for depreciation and interest on existing debenture stocks, has been sufficient to pay the interest on the present issue more than five times over.

'After providing for all taxation, depreciation of the fleet, etc., adding to the reserves and payment of dividends on the preference stocks, the dividends on the ordinary stock during the last seventeen years have been as follows:'

A table followed showing the varying dividends for the seventeen years to 1927.

Although all these statements were admitted to be true, the fact remained that the company incurred substantial trading losses in every one of the years 1921 to 1927 inclusive. The 'balance available' each year had been created by non-recurring adventitious items like excess profits duty repayments, and the reduction of tax re-

serves. This misleading announcement, besides giving rise to a criminal prosecution, showed up the deficiencies of company accounts as then published.

When the Cohen Committee reported in 1945, it called attention to the problem of undisclosed reserves and made its now well-known recommendations on accounting requirements, which were incorporated in the 1948 Act. However, it made exceptions in favour of banks and discount companies and of insurance companies. These exceptions appear in Part III of the Eighth Schedule to the 1948 Act.

The Institute of Chartered Accountants of Scotland included in its written submissions to the Jenkins Committee the observation that there could be no adequate reason on purely accountancy grounds for the exemptions afforded by Part III, which placed the auditor in a somewhat invidious position. Although his certificate as to the true and fair view is by statute 'subject to the non-disclosure of any matters (to be indicated in the report) which are not required to be disclosed', the Scottish Institute made the point that it is difficult to see how in *any* sense a 'true and fair view' can be produced where, for example:

- (i) the disclosed results are distorted by exceptional items and changes in the basis of accounting;
- (ii) profits have been arrived at after the transfer of unspecified sums to or from reserve.

The Institute submitted that if the exemptions continued, then the auditor's report ought to be redrawn so as to be more in keeping with reality.

The Trades Union Congress attacked the exemptions both in writing and orally. One of the T.U.C. witnesses asked the blunt rhetorical question: Should a bank be allowed to publish misleading accounts? However, defenders of the exemptions were not lacking, notably the Committee of London Clearing Bankers, whose chief spokesman, Sir Oliver Franks, G.C.M.G., K.C.B., G.B.E., had to answer some searching questions from Lord Jenkins and from Mr Lawson. The banks grounded their submissions on the Cohen Committee's own proviso to its attack on un-

disclosed reserves, namely, that the interests of depositors and policy holders outweighed those of the shareholders. The reputation for stability of these companies, at home and abroad, was a national asset of first importance. From time to time the values of their assets, particularly large holdings of gilt-edged, were affected by political and economic conditions and 'in such circumstances it is desirable that their financial strength should be even greater than may appear'. The Cohen Committee, therefore, considered that such companies be absolved from the obligation of showing separately reserves and provisions and transfers to and from such accounts, but that their balance sheets should indicate the existence of reserves and provisions and their profit and loss accounts should be appropriately worded to show whether any such transfers had been made during the accounting period. The Cohen Committee did not expressly deal with the necessary corollary to this recommendation, namely, that banks etc. should be allowed to publish accounts showing them to be in a better position than they in fact were: which was such a feature of the Royal Mail case. The Committee of London Clearing Bankers nevertheless supported this aspect of the matter in the following words:

'the spectacle of heavy drafts on those reserves at other times [i.e. bad times] might undermine that unquestioning confidence in the stability of the banks which is acknowledged to be a national asset of the first importance'.

To this it was said that in 1956 four of the London clearing banks voluntarily indicated by notes on their balance sheets that their investment reserves had been more than exhausted, and this had no perceptible effect on confidence either at home or abroad. The banks' reply was that this disclosure in the accounts did not by any means necessarily indicate the full extent of the losses suffered and that in different circumstances a full disclosure might have had a far more serious effect on public confidence. This was the reply which carried the day with the majority of the Jenkins Committee. Everyone seems to have admitted the obvious criticisms of the exemptions, and no one suggested that a run on the banks was at all probable, but Sir OLIVER FRANKS argued that the Committee would have to be sure that it could not happen, if it was to recommend withdrawal of the exemption. There was another

knight, the White Knight, who no doubt recognized the inconvenience of keeping a mouse trap on his horse, and certainly admitted that mice on a horse's back were not very likely. Nevertheless, if they *did* come, he didn't choose to have them running all about.

We prefer the reasoning in the note of dissent by the minority of the Jenkins Committee. It agrees that it is essential to maintain confidence in the banking system, but is not convinced of the necessity, for this purpose, of withholding information about the banks' operations from the public or from the shareholders. Still less is it convinced of the necessity of withholding all the information that the law at present permits to be withheld. The minority is not satisfied that all classes of banks need be treated alike, and it believes that such exemptions as are shown to be necessary should be granted, not by the Act, but by the exercise by the Board of Trade of their discretionary powers (widened if necessary) under paragraph 25 of the Eighth Schedule. It is wrong in principle that exceptions should be made from the 'true and fair view' test, a test which is imposed as part of the price paid for incorporation under the Companies Act. The banks have not argued their case on grounds of principle, but of expediency.

One of the effects of the wide exemptions, according to the dissenting note, is to freeze the published accounts of all banks into a rigid pattern, in a form widely used for public companies many years ago, and which ignores the great changes in accounting practice since then. Investment analysts already make their own estimates of the true profits of the clearing banks; estimates which are given wide publicity. The minority doubts whether in modern conditions it would be practicable for a particular bank, or for banks generally, to conceal any serious weakness which had developed. It is thus arguable that these exemptions, when put to the test, might prove in any case useless. The minority's main point, however, is an independent one, namely, that on the evidence available, many of the exemptions now granted are unnecessary, except perhaps for banks operating mainly overseas. Of course, the banks say that all the exemptions hang together; if one were withdrawn the rest would be of little or no value. Inner reserves must remain secret in order that drafts on them may be made

to meet exceptional losses without disclosure. Annual profits must be concealed so that transfers from them may build up secret reserves. Taxation, if disclosed, would indicate the true level of profits; and so on. The minority's short answer is that it is not convinced that any of the exemptions is necessary. But if there is to be some concealment, some of the exemptions are more objectionable (and less useful) than others. Moreover, it would be practicable to maintain some of the exemptions while withdrawing others.

The minority does not greatly cavil at undisclosed reserves as such, but it is not satisfied that any real harm would result from disclosing realized losses after they have been incurred, even if potential losses were kept secret. Losses on investments can be explained; large bad debts usually become public in any case, when the bank appoints a receiver or petitions for winding up. A compromise would be to give bank directors power to defer for a limited period the disclosure of realized losses, provided they were covered by inner reserves.

When concealed transfers are made from inner reserves to bolster up the published profit, the minority think it quite wrong that a bank should accept deposits on the footing of such published accounts. Certainly it is not easy to distinguish such a practice from what was done in the Royal Mail case. As to concealed transfers from profit to inner contingency reserves, the minority thinks that this is a breach of the essential requirement that the accounts give a true and fair view of the profit. It has the impression that undisclosed transfers to inner reserves are made not so much to strengthen those reserves as to reduce consistently the real profits of the banks. True, a year is a very short period for many businesses, and particularly for banks which have to take the long view. If there is a real objection to showing the true profit of a particular year, this could be got over by a requirement to state the true profit over a longer period, say three or five years. This is better than an untrue statement every year. As to taxation, the minority sees no objection to nondisclosure of a tax equalization account or of movements through it, so that the taxation charge is in line with the published profit. As to market value of investments, the banks have already agreed that this be shown when it is below cost, and the only objection to showing it when above

cost is that this puts up an unreal paper profit. In this respect there is no reason why banks should have any privilege. The same applies to the disclosure of the cost of bank premises and the depreciation charged on it.

The Committee did not ask to see the banks' full accounts, because of the publicity of its inquiry. Nor, apparently, did the banks volunteer this information, either for current periods or for the past. The minority suggests that the banks be invited to submit their full accounts in confidence to the Board of Trade, showing over, say, the last ten or twenty years (a) the transfers to inner contingency account and the sources from which they came, and (b) the amounts debited to inner reserves, their nature, and the reason why they were not charged openly. Some of the accounts so submitted could be reconstructed on the basis of the limitation of the exemptions as suggested by the minority. In our view, unless the banks are prepared to submit their full accounts in this way, over a long period, to some impartial body (as they already submit them to the Inland Revenue) they cannot be said to have made out their case for any exemptions at all.

Insurance companies enjoy the exemption accorded to banks from the provisions of the Eighth Schedule to the Companies Act, 1948, but the Insurance Companies Act, 1958, which replaced a similar Act, requires such companies to deposit with the Board of Trade accounts which in many respects are even more informative than those required by the Companies Act. The Committee accepts the view of the British Insurance Association that 'there is a strong case for the statutory control of the contents of the profit and loss accounts and balance sheets of an insurance company being based on the requirements of the Insurance Companies Act, 1958, rather than on those of the Eighth Schedule of the Companies Act, 1948'.

The Committee suggests that the precise form of accounts should be worked out between the industry and the Board of Trade and that all the requirements as to insurance company accounts be contained in one set of regulations. These would impose the obligation to give a true and fair view, but subject to exemption from disclosure of the market value (if above balance sheet value) of investments or of the profits on sales of investments and other assets.

## Taxation of Lloyd's Underwriters

by ARTHUR REZ, B.Com.(Lond.), F.A.C.C.A.

O mention the name 'Lloyd's' is immediately to conjure up in one's mind that worldrenowned organization, born in a City coffeeshop over two hundred years ago, engaged in the insurance of ships and their cargoes. As is universally acknowledged, Lloyd's of London is preeminent, with its global sources of information, for undertaking the insurance of all hazards that may be encountered by those venturing on the high seas. But, of course, Lloyd's does not confine itself to the insurance of ships and merchandise but also undertakes to indemnify anybody against losses arising from almost every kind of risk, usual and unusual, business and personal, and even from eventualities which are in essence hardly more than wagers against the occurrence of any conceivable contingency.

Tremendous sums may be involved in a single insurance, such as the foundering of a liner, the destruction by earthquake of large buildings, or the loss of valuable stocks or cargoes. The spreading of risk is therefore an essential element in the day-to-day business of Lloyd's. Consequently, the indemnities are normally underwritten by a large number of members of Lloyd's, who form themselves into syndicates, each of which usually confines itself to specific types of insurance. This, of course, does not preclude a person from becoming a member of more than one syndicate, thus engaging in the insurance of many kinds of risk, for each of which he bears a minute fraction of the liability.

### **Unlimited Liability**

Of course, it would not be practicable for each individual member of Lloyd's, or even each syndicate, to carry out the actual work of underwriting. There has, therefore, developed the system whereby the task of managing a syndicate is entrusted to insurance specialists who have the advantage of long and extensive experience of the business.

Obviously, the receipt of premiums is only one facet of insurance activity. The agreement and settlement of claims is of necessity a major preoccupation. And as claims may at certain times exceed the premiums, it is necessary not only to organize the syndicates so that sums are placed to reserve against unprofitable eventualities

but to enlist as members persons who, in the unfortunate occurrence of a major disaster, are in possession of adequate private resources to satisfy the tremendous amount of the claims which would have to be met. For it must be stressed, Lloyd's underwriters must face the fact that their liability is unlimited.

The consequence is that there is a considerable number of members of Lloyd's syndicates who obviously can only assume the role of sleeping partners and whose sole qualification consists of the wealth which they possess. In fact, there are members who reside permanently overseas. The wide spread of risk removes the probability of results contributing to an underwriter's financial ruin, for undoubtedly over a long period the business of a Lloyd's underwriter can be very profitable. If this were not so, there would not be the attraction which produces a continuing flow of wealthy aspirants for membership of Lloyd's.

The measure of the fortune which a prospective Lloyd's underwriter must possess can be gauged by the fact that he must satisfy the committee of the corporation that he is worth something like £75,000. Once this hurdle is overcome, he must place in the name of the corporation a considerable sum which is invested or may be represented by investments he already holds. The income on this deposit continues, however, to be received by the underwriter. This is in reality. an immediate cash guarantee. In addition, he must make available to the syndicates he joins a sum which is placed to a premiums trust fund, also destined to meet commitments in case of necessity. These conditions for entry apply to non-working underwriters. For others, the only requirement is to provide the Lloyd's deposit and the sum for the premiums trust fund.

### Tax Assessment of Underwriters

Although each syndicate is composed of a number of underwriters, it is not treated for tax purposes as a partnership. Each member is assessable individually under Case I, Schedule D. For this purpose, the underwriter's shares of the profits and losses of all the syndicates of which he is a member are aggregated. A non-resident of the United Kingdom is liable in the same way as a resident, and there is no freedom from tax

on income from investments held by a syndicate on behalf of a non-resident which would be otherwise exempt (Owen v. Sassoon (30 A.T.C. 41; 32 T.C. 101).

Owing to the unavoidable delay in closing underwriting accounts due to the settlement of claims relating to a particular year not being ascertained until some considerable time afterwards, the profits of a year cannot be agreed for assessment until two years have elapsed. The tax assessments, therefore, are usually made two years in arrear.

The underwriting profits are treated as earned income only in the case of those members who are in daily attendance at Lloyd's, i.e. persons who are engaged in underwriting business. Thus the majority of such underwriters do not enjoy this relief. This is an important factor, the more so since the enactment of section 14, Finance Act, 1961, giving surtax relief for earned income.

### Loss Relief

Relief for losses under sections 341 and 342, Income Tax Act, 1952, as well as section 15, Finance Act, 1953, can be claimed in the ordinary way, but in the first four years, section 341 claims must be based on the apportioned figures to coincide with the respective fiscal years. The underwriting year is the calendar year but after these opening years, such relief, given against any taxed income, may by concession be based on the loss of the underwriting year.

The first three years' assessments are, in the normal way, based on the profits of the initial twelve months' results, with the consequence that two and one-quarter years' tax is calculated by reference to the first year's profits. If, therefore, the underwriter intends to join a number of syndicates, it is advisable for his opening membership to be limited to one syndicate, so as to restrict the first year's profits. It is, however, possible to invoke the provisions of section 129, Income Tax Act, 1952, so that the second and third years' assessments are based on the profits of those fiscal years. The year of cessation is based in the ordinary way on the last period from April 6th, and the assessment of the penultimate year remains undisturbed unless the apportioned profits of that fiscal year are higher, in which event an additional assessment arises.

As only British subjects may at present become Lloyd's underwriters, members who are resident outside the United Kingdom are entitled to proportionate allowances and reliefs under section 227 of the 1952 Act.

The underwriting profits are treated as a part of the total income for surtax, and as already indicated only those members of Lloyd's who are working underwriters will enjoy the benefit of the earned income relief under section 14, 7 Finance Act, 1961.

An underwriter is normally expected by the syndicate to permit a part of the profits to be placed to reserve in addition to the premiums trust fund. These reserves, which are invested and produce taxable income, do not, however, reduce the adjusted profits for taxation. In view of the fact that underwriting profits, aggregated with other income, may give rise to high rates of surtax and in years when losses are incurred the reduction in surtax would, assuming the other income remains stable, be at lower rates, there are special provisions (section 480 and the Twentyfirst Schedule, Income Tax Act, 1952) enabling underwriters to postpone the impact of surtax on that part of the profits retained in the business for the purpose of meeting future commitments.

### Special Reserve Funds

While it is reasonable for the incidence of taxation on underwriters to be modified to give due recognition to the fact that they do not enjoy their profits to the full when sums placed to reserve are swallowed up by claims, nevertheless the Twenty-first Schedule imposes certain restrictive conditions which must be observed. In the first place, arrangements must be made by Lloyd's for the institution of special reserve funds, and the scheme of the arrangements must not only be approved by the Commissioners of Inland Revenue but must also be certified by the Board of Trade as being in the public interest.

Although an arrangement may be instituted, it is not obligatory on an underwriter to take advantage of it. This is entirely optional; but even if he does so, he may nevertheless withdraw at any time. In this event, however, he will not be entitled to associate himself again with the scheme. An underwriter must signify his intention of becoming a party to the arrangement by giving a 'notice of adherence' to the Inspector of Taxes and to Lloyd's. Such a notice is first effective for the year of assessment subsequent to the fiscal year in which it is given.

As already mentioned, it is necessary under the arrangements to establish a special reserve fund, vested in trustees, the capital and income of which must be held for the benefit of the adhering underwriters. To this fund, the member has the right to transfer within six months (ex-

tended by concession to nine months) after the date on which the accounts of an underwriting year are closed, a limited sum out of his underwriting income. The amount is restricted to such a sum which, grossed up at the standard rate of income tax, is equivalent to the lesser of £5,000 or 35 per cent of the profits, computed on the basis of Case I, Schedule D, but including all investment income in any underwriting fund which the member is required to maintain. The original limit was £1,500 or 25 per cent, but this was increased to the figures mentioned by section 67 (1), Finance Act, 1952, and subsequently section 3, Finance (No. 2) Act, 1955, permitted a supplementary increase of £2,000 and 15 per cent, making a total of £7,000 and 50 per cent.

For reasons given below, it is expedient, however, to keep a separate record of this supplementary transfer. The gross payment to the special reserve fund is then treated, in calculating the underwriter's surtax liability, as an annual payment made by the underwriter in the year of assessment for which the particular year's profits are assessed. In the case of the commencing years, the first year of assessment to which the transfer is attributed is the third year. The consequence is that the surtax liability is thereby reduced. It should be noted that the amount transferred to the special reserve fund is, subject to the limitation referred to, entirely within the discretion of the underwriter.

As recourse is expected to be had to the special. reserve fund when claims give rise to a loss for any underwriting year, if the loss is incurred for any year after the first year for which a notice of adherence was given, there must be transferred out of the special reserve fund to the underwriter's premiums trust fund a sum which, grossed up at the standard rate of income tax, is equivalent to the loss. The amount will, of course, be limited to the capital available in the special reserve fund at the end of the year in which the loss arises. The amount thus withdrawn is treated as income for surtax of the year of assessment preceding the fiscal year for which the underwriting profits would have been assessed if there had been a profit. Thus, the application of amounts paid into the special reserve fund to cover subsequent losses will render them liable to the taxation from which they were previously exempt, and the fact that a notice of adherence is then no longer in force will not affect this result.

Bearing in mind that the underwriting loss itself will diminish the surtax liability, the ultimate effect of the scheme is to spread the tax, where losses are incurred, over a number of years by obviating the incidence of the higher rates of surtax. Where, therefore, the underwriter's other income for surtax is more or less unchanged and the rates of surtax remain constant, the net result will be favourable to the underwriter.

### Cessation of Notice of Adherence

A notice of adherence ceases to be effective on the happening of any of the following events:

- (i) termination of the business;
- (ii) death of the underwriter;
- (iii) withdrawal of the notice of adherence;
- (iv) cancellation of the arrangements by the Commissioners of Inland Revenue or the Board of Trade.

In the case of withdrawal, the last year to which the scheme will apply will be the year of assessment two years previous to the fiscal year in which the withdrawal is notified.

Should an underwriter resign as a member of Lloyd's and thus terminate his underwriting business, the available capital of the special reserve fund must be paid to him, this sum being assessable to surtax as if the payment were made at the date of cessation. This is irrespective of whether a notice of adherence is then in force. The consequence is that, if there has been a considerable accumulation in the special reserve fund the whole amount, grossed up at the standard rate of income tax, is added to the total income for surtax with possible devastating results. It is therefore a matter of prudence not to transfer annually more than would reasonably be expected to meet future losses. Furthermore, if the member's statutory income in any year is very low, expedience dictates that no transfer be made for that year, since the immediate surtax advantage would be negligible while a deferred liability to surtax may be created.

On the other hand, if cessation is occasioned by death of the member, the repayment of the accumulated special reserve fund represented by the transfers of £5,000 or 35 per cent of the annual profits (or such lesser sums) does not have to be included for surtax. This, however, is not the case in connection with the supplementary transfer of £2,000 or 15 per cent already referred to, since the special reserve fund comprised of these amounts are, even in the case of death, liable to surtax. Section 3, Finance (No. 2) Act, 1955, indicates the manner in which, where withdrawals for losses have been made from the

special reserve fund, the amounts attributable to the 35 per cent and 15 per cent are to be calculated.

### **Profits Tax**

To sum up, an underwriter can obtain the benefits of surtax relief on the limited amounts which he transfers to a special reserve fund so long as a notice of adherence is in force, but even after such notice ceases to be effective, surtax becomes payable on the fund being utilized to meet underwriting losses or repaid when he ceases to be an underwriter, other than by death, subject to the proviso regarding the supplementary transfer.

As an underwriter who adheres to the scheme is partially exempt from surtax on the underwriting profits, paragraph 10, Twenty-first Schedule, imposes profits tax. This tax is calculated on the underwriting profits, increased by all underwriting investment income (except franked investment income) but ignoring payments into or out of the special reserve fund. However, a deduction is allowed in all cases of £3,000 or 15 per cent of the profits, restricted to

£15,000 (as for a director-controlled company), so that the impact is not severe. In fact, there are probably many cases where this will eliminate the liability to profits tax. Losses carried forward are restricted to those of years for which a notice of adherence was in force. The profits tax arises for those underwriting years ending in a year of assessment for which there was a notice of adherence. Under section 67 (2), Finance Act, 1952, the profits tax, grossed up at the standard rate of income tax of the year of assessment based on the underwriting year, is allowed as a deduction for surtax.

In conclusion, it may be added that, if the syndicate undertakes insurance business in the United States of America, the underwriter is required to make a tax return in that country which must include all his other income arising in the U.S.A.

From the foregoing description of the impact of taxation on Lloyd's underwriters, it will be obvious that accountants acting on behalf of such clients are obliged to bear a special responsibility.

# The Profession Abroad

### III-FRANCE

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

DURING the early part of this century, any person could establish himself as an expert comptable without training, qualification or experience. At that time, commercial pursuits were considered by educated French people to be unsuitable fields of activity. There were some accounting societies which had the character of mutual benefit societies, but one, founded in 1881, held examinations and awarded diplomas. This was the Société Académique de Comptabilité, whose members enjoyed no official privileges and whose diplomas were not recognized.

The French Courts employed people known as syndics de faillites on bankruptcies and liquidations. As specialists in this work, they acquired not only considerable skill but a quasi-public status. Their task was to examine and report on disputed accounts which had given rise to legal proceedings. Although regarded as experts comptables, they were not required to pass any examination before being entered on a list officially maintained by magistrates. By 1929, however, there were nineteen associations of accountants.

### **Protected Designation**

Since 1945, the title of expert comptable, meaning one who in his own name and in his own responsibility engages professionally in the preparation, auditing and interpretation of accounts, has been protected by law. Foreigners having resided in France for five years and having met other requirements, are eligible for this title. A comptable agréé is a person who in his own name and in his own responsibility engages professionally in the keeping, ordering, opening, checking, and supervising of accounts of all kinds.

Since the Second World War, L'Ordre des Experts Comptables et des Comptables Agréés has become the officially recognized body of French accountants. Its rules and regulations for examinations, membership and administration have been completely revised, and both classes of members are subject to stringent disciplinary codes. Candidates for membership must pass a preliminary examination, complete three years' apprenticeship with an expert comptable, pass a more advanced examination of the organization, and be at least 25 years of age. He is not permitted to advertise. To become a comptable agréé, one must pass a technical examination in accountancy, law and taxation, and be at least 22 years of age.

Members of the Ordre must practise independently or in association with members, and must not accept salaried employment. They must practice with the names of all partners listed. However, a firm may be incorporated as a limited company with a

capital of not less than 500,000 francs. At least three of the shareholders, holding a majority of the shares, must be members of the *Ordre* and must occupy the principal administrative positions in the company. A member of the *Ordre* must not employ more than ten salaried employees, but he may employ any number of apprentices who must be trained and remunerated. He is not permitted to engage a salaried employee without also employing one or more apprentices.

Both the preliminary and advanced examinations are composed of oral and written tests. The two principal training establishments for the profession are located in Paris: L'Ecole Nationale d'Organization Economique et Sociale (a private institution), and L'Institut de Technique Comptable (a Government-sponsored body under the sponsorship of Le Conservatoire des Arts et Métiers). The Paris Chamber of Commerce finances L'Ecole des Hautes Etudes Commerciales, which grants a degree equivalent to that of a university.

### **Auditing Requirements**

The public limited company - société anonyme must maintain certain books of account and prepare annual inventories containing lists of all assets and liabilities. The books and inventories must be stamped by a judge of the Tribunal of Commerce or by a mayor, and maintained for ten years. A company must hold a general meeting once a year at which the financial statements are submitted. The accounts must be audited. When a company intends to sell shares or debentures to the public, at least one of the auditors (commissaires aux comptes) must be chosen from a list drawn up by a special committee of the Court of Appeal. In general, the law contains no requirements as to their proficiency but, in practice, the commissaires of important companies are experts comptables. French law requires. that the auditor be independent. Individuals who have passed a special examination are recognized as commissaires of banks, life insurance companies and similar ventures. This category of practitioner forms a special group with a special disciplinary jurisdiction.

The certificate to be issued by the *commissaires* at the general meeting does not observe the same form as the certificate used on annual financial statements. It is a report which must contain an opinion on the correctness of each financial statement. An opinion on acts of management is not required but one on the distribution of proposed profits must be included.

In 1925, French law was altered to permit the organization of private limited companies. As one practitioner stated at the 1952 International Congress in London: "The role of the accountant in corporations is compulsory concerning his mandate as auditor and optional regarding the economic and accounting missions which are freely entrusted to the public accountant".

A standardized scheme of accounting (Plan General) was introduced in all French nationalized

industries in 1947. Although it was optional for other companies, it has been introduced in private industry as well. The standardized system uses a method of coding the ledger account by numbers based on a decimal system of working down from the ten basic classifications in the final accounts to which the primary numbers are given:

- (1) Permanent capital.
- (2) Permanent assets.
- (3) Stocks.
- (4) Third parties.
- (5) Financial accounts.
- (6) Expenditure accounts.
- (7) Income accounts.
- (8) Profit and loss accounts.
- (9) Industrial accounts.
- (10) Statistical accounts and data.

From 1945, a system of complementary depreciation arising from the revaluation of assets has operated in France. The maximum value of each revalued fixed asset is obtained by multiplying the cost or purchase price by one of the coefficients fixed by the Government department, the coefficient being the one corresponding to the year of acquisition of the asset in question. Yearly additions to the depreciation reserve are revalued by applying appropriate coefficients taken from the same schedule. The difference between the two above-mentioned accounts provides the net written-up value on which new sums for depreciation are based.

### Revaluation of Assets

Rules applicable to the revaluation of balance sheets were introduced by an Ordinance dated August 15th, 1945. At first, they applied only to the balance sheets for the financial year ending before January 1st, 1947, but the possibility of revaluation was extended to later periods. The plan had as its object the establishment of a national solidarity tax - designed to enable businesses subject to exceptionally heavy fiscal burdens to apply, free of tax, more substantial depreciation amounts than previously calculated. The revaluation is optional, with companies revaluing only if they find it profitable. They may limit the revaluation to certain assets, generally chosen from the following groups: fixed assets, both tangible and intangible, and the depreciation provided in the past on these assets; investments, including participations in other businesses and shares held in other companies; and balances receivable and payable in foreign currencies.

Revaluation, however, does not apply to accounts receivable and payable in francs or to inventories of stocks and unfinished goods. Share capital is not altered to the revaluation, unless a company decides to capitalize the revaluation reserve. This reserve for each asset is equal to the difference between the accounting value of the asset before and after revalua-

tion. The aim of the rule is to fix maximum values, but it does not preclude the use of values lower than the maximum. These fiscal provisions have been accompanied by others of an accounting nature, which include definitions and a form of balance sheet stimulated by the standard plan of accounts of 1947.

Some French accounting societies argue that operating results should be determined by sound accounting rules and that fiscal considerations should not be a part of accounting. They suggest that the general revaluation of balance sheets is probably desirable and possibly unavoidable.

The complexity of Governmental regulations affecting public accountancy has tended to retard the full development of the French profession. In 1954, for instance, there were only about 2,000 experts comptables practising as principals. At the present time, it is difficult to maintain a large accounting firm in France and even to convince the public of the professional standards and competence of auditors. However, deriving from further association with overseas accountants and general elevation of standards, the French profession should gradually enjoy greater recognition and public confidence.

## Weekly Notes

### CAMBRIDGE SUMMER COURSE

LAST year, for the first time, two summer courses were arranged by The Institute of Chartered Accountants in England and Wales, one at Oxford—where they have been held annually since 1947—and the other at Cambridge.

The formula, so successful in 1961, is being repeated this year, but on this occasion Cambridge has the honour of opening the 'season'. Nearly one hundred and fifty members, including intrepid Miss G. E. M. Dodsworth, F.C.A., of York, the sole representative of the Institute's lady members, will assemble next Wednesday evening at Emmanuel and Sidney Sussex Colleges.

Three papers are to be presented. The first, on Thursday morning, will be given by Mr David Williamson, F.C.A., on the subject of 'Insurance and the accountant'; on Friday, Mr D. O. Bailey, F.C.A., will address members on 'Taxation aspects of amalgamations and reconstructions', and on Saturday morning Mr R. D. S. Shrimpton, F.C.A., will present a paper on 'Service to management'. Group discussions have always held an important place in summer course programmes and at Cambridge the course will be divided into seven groups for the purpose of discussion after each address and for general discussion periods. The afternoons will be free for members to use as they wish for private study, mutual discussion or recreation, and among the arrangements made for these free sessions are a conducted tour of Cambridge, a visit to Spicers' stationery factory at Sawston, a visit to Ely Cathedral and a golf competition to be played over the course of the Gog-Magog Golf Club.

The President of the Institute, Mr P. F. Carpenter, F.C.A., will preside at the Guest Night Dinner on Saturday evening, when the guests will include Mr E. Welbourne, M.C., M.A., Master, Emmanuel College, Dr D. Thomson, M.A., Master, Sidney Sussex College, and Mr W. A. Barker, M.A., Headmaster, The Leys School.

### IRISH INSTITUTE'S EXAMINATIONS

UNDER the new syllabus of The Institute of Chartered Accountants in Ireland, five annual examinations replace the former Intermediate and Final. Examinations in each of the five parts were held in May and the results are now announced.

In Part V the First Place and the Incorporated Society Jubilee Prize were won by Mr D. A. K. McCabe, of Dublin, and Second Place was awarded jointly to Mr John Millar, of Newtownabbey, Co. Antrim, and Mr Michael Sythes, of Belfast.

In Part IV, Mr D. A. A. Fleetwood, of Dublin, won First Place and the Samuel Smyth Memorial Prize; Mr T. A. W. Patterson, of Belfast, won Second Place, and the Third Place was won by Mr N. W. M. May, of Holywood, Co. Down.

The First Place and the Arthur H. Muir Memorial Prize in Part III of the examinations was won by Mr G. A. Nixon, of Newtownards, Co. Down; Second Place was won by Mr G. C. Bland, of Belfast, and Third Place by Mr D. A. G. Murphy, of Mallow, Co. Cork.

Mr D. P. McCrossan, of Dublin, won First Place and the John Mackie Memorial Prize in Part II; Mr P. J. Hanlon of Dublin, won Second Place and Third Place was won by Mr C. S. Maybury, of Dublin. In Part I, Mr Brendan O'Brien, of Dublin, won First Place; Mr W. R. McDowell, of Armagh, Second Place, and Mr D. R. Mayberry, of Dublin, Third Place. The full results appear on other pages.

### LUNCHEON TO MR ALAN S. MACIVER

R ALAN S. MacIVER, C.B.E., M.C., B.A., who retires as Secretary of The Institute of Chartered Accountants in England and Wales in the autumn, was entertained to luncheon at the City Livery Club on Thursday of last week by the secretaries of professional bodies and other professional colleagues. During the luncheon Mr MacIver was presented with a set of onyx ashtrays.

Making the presentation, Mr C. G. Garratt-Holden, c.B.E., T.D., B.A., M.COM., Secretary of the Building Societies Association, referred to the high regard in which Mr •MacIver was held and

expressed the feeling of all those present when he said that Mr MacIver, with whom they had all been associated for so long, had proved to be one from whom guidance could always be obtained and who could be regarded as a friend.

In his reply, Mr MacIver expressed his appreciation of the presentation and of the cordial relations which he enjoyed with the secretaries of other professional bodies; he deeply valued the friendship of those whose guest he was honoured to be.

### Those present were:

Messrs W. G. Agnew, c.v.o. (Clerk of the Privy Council); H. A. L. Cockerell, B.A. (Secretary, Chartered Insurance Institute); Sir George Coldstream, K.C.B., Q.C. (Clerk of the Crown in Chancery, Lord Chancellor's Office); Messrs C. A. Evan-Jones, M.B.E. (Under-Secretary, The Institute of Chartered Accountants in England and Wales); Derek du Pré (Secretary, The Institute of Cost and Works Accountants); C. G. Garratt-Holden, C.B.E., T.D., B.A., M.COM. (Secretary, Building Societies Association); Sir Alexander Killick, C.B.E., D.S.O., M.C., M.A. (formerly Secretary of The Royal Institution of Chartered Surveyors); Messrs E. H. V. McDougall (Secretary, The Institute of Chartered Accountants of Scotland); C. D. Morley (Secretary to the Council, The Stock Exchange); W. Stuart Orr, B.A., LL.B., A.C.A. (Secretary, The Institute of Chartered Accountants in Ireland); J. F. Phillips, O.B.E., LL.M., F.C.I.S. (Secretary, The Chartered Institute of Secretaries); G. R. Ricketts, M.A. (Secretary, The Royal Institute of British Architects); and C. D. Spragg, C.B.E. (formerly Secretary of The Royal Institute of British Architects).

Others who were unavoidably absent, but who wished to be associated with the presentation were:

Rear-Admiral P. W. Burnett, C.B., D.S.O., D.S.C. (Secretary, The Royal Institution of Chartered Surveyors); Messrs L. F. Cheyney, O.B.E. (Secretary, The Institute of Municipal Treasurers and Accountants); H. Eason (Secretary, The Institute of Bankers); Sir Thomas Lund, C.B.E. (Secretary, The Law Society); and Mr F. C. Osbourn, M.B.E., B.A., LL.B., A.C.I.S. (Secretary, The Association of Certified and Corporate Accountants).

Mr C. G. Garratt-Holden (left) presenting the set of onyx ashtrays to Mr MacIver.

At the luncheon (left to right): Mr Garratt-Holden, Mr Derek du Pré, Mr W. Stuart Orr, Mr MacIver, Mr C. A. Evan-Jones, Sir Alexander Killick, and Mr C. D. Morley.

### NORTHERN IRELAND BUDGET

THE Northern Ireland Government is to issue a new Ulster Development Bond carrying interest at 5 per cent per annum. Announcing this when he presented his Budget in the Northern Ireland Commons recently, the Minister of Finance, Captain Terence O'Neill, said that proceeds of the issue would be available to speed development of the economy in all its aspects – factories, plant, harbours, trunk roads and the whole range of services which support a modern State.

Interest will be paid half-yearly without deduction of income tax, and the bonds will be repayable at the rate of £103 for each £100 of bonds if they are held for seven years. The 3 per cent premium will be free of United Kingdom income tax and surtax.

The Budget estimates that Northern Ireland's total revenue in 1962-63 will be £126,941,000 and the total expenditure on reserved and transferred services, £119,387,800. The Imperial Contribution (Northern Ireland's contribution towards United Kingdom expenditure on defence, foreign affairs and the national debt) has been provisionally assessed at £7½ million, leaving a surplus of £53,200.

The Minister announced two small changes in taxation. The exemption limit for estate duty is to be raised from £3,000 to £4,000, and rates payable on small estates of up to £6,000 will be reduced by r per cent. The changes will apply to deaths occurring on or after July 4th. A minor alteration is to be made in stamp duty by repealing the settlement duty, except in relation to unit trusts, and to remove an anomaly in case of unit trusts.

Dealing with the special consideration given to Northern Ireland's position when anti-inflationary measures were taken by the Chancellor of the Exchequer in his July Budget, Captain O'Neill said the proceeds in Northern Ireland of the surcharge on customs and excise duties were placed at the disposal of the Government and yielded £2,735,000.

## HIRE-PURCHASE COMPANY PRECEPTS

AN article by Mr P. J. Greaves, F.C.A., in the June issue of *Credit*, a quarterly review issued by the Finance Houses Association, pin-points the three essential factors to be noted when scrutinizing the published accounts of hire-purchase companies. The first of these is the amount of deferred revenue carried forward at the end of each year, expressed as a percentage of the gross amount receivable under hire-purchase and other instalment credit accounts. In the absence of any special circumstances, Mr Greaves expects the percentage to be not less than 10 and he states firmly that if a hire-purchase company carries

forward much less than 8 per cent of its gross receivables, he considers that it is not preparing its accounts on sound lines and that its future profits, in consequence, may be affected.

The second factor is the adequacy of the provision for bad and doubtful debts. Mr Greaves emphasizes that this can be done accurately only by examining and classifying all individual accounts and he sets down seven excellent rules to be followed in making a realistic assessment of the position.

Mr Greaves's third factor is the quality of the management. The virtual cessation of hire-purchase business during the last war caused a scarcity of experienced personnel but, until 1958, many companies were protected from their own innocence by the shortage of goods, inflationary conditions in general and by the various Hire-purchase Control Orders in operation. Under the present more open trading conditions, however, many companies have come to grief and it is significant that some of the companies to expand most rapidly are among the heaviest casualties - due, mainly, to lack of proper control. Mr Greaves insists that directors and executives of hire-purchase concerns must be constantly on the alert and must possess a scrupulous sense of individual responsibility for the policy and actions of their companies.

### MACHINE TOOL DIRECTORY

"HE development of the machine tool industry I in the United Kingdom from its inception nearly two hundred years ago down to the present day is outlined in a useful new directory compiled for private circulation by a firm of City stockbrokers. Understandably, the main emphasis is placed on the present-day structure and conditions of the industry and, in particular, how its output compares with those of other great industrial nations and how it will have to have an 'agonizing re-appraisal' of designs, performance and prices if Great Britain joins the Common Market. The compilers are nothing if not forthright in their comments and submissions and they recommend, among other things, a more intensive research programme, greater co-operation between makers and users of tools and the introduction of a more generous scale of Government capital allowances to encourage the continuous modernization of plant.

The greater part of the directory – which has in all 280 pages – is devoted to a series of financial analyses of the principal constituent companies in the machine tool industry and from these able summaries both investors and industrialists may derive much useful information. This is a pleasing example of the kind of specialized research at which the larger stockbroking firms so often excel and it is a pity that, being a private publication, the directory will not have the extended readership it certainly merits.

## Tales of a Tax Man

by HAROLD E. COX

THE FARMER AND THE INSPECTOR

Y telephone rang. 'There's a Mr Williams asking Mto see the head man. He won't tell me what he wants; he insists he must see the head one!' This was from the inquiry room in the tax office where I was the District Inspector. 'All right, please get his papers

and bring him up.'

A few minutes later Mr Williams was shown into my room and into my life. He was a short, slightlybuilt man, dressed completely in black - 'bible-black' Dylan Thomas has it. On his head a buttoned black cap with an outsize peak overhanging his brows like a visor. Black overcoat almost reaching to the tops of his black, clump-soled boots. Underneath, a black suit with the coat buttoned up to the knot of his black tie. I asked him to sit down and tell me his troubles. His Christian name was John and so we'll call him John. It seems too remote and unfriendly to refer to him as Mr Williams.

'I am not entitled to pay income tax.' His voice was surprisingly mellow. 'There's no sense in it at all.' He threw down on to my table a crushed handful of papers. I sorted them and found that John had been hoarding them for many months. 'You've seriously neglected these letters and demand notes.'

John sat bolt upright on the edge of his chair. He dismissed the whole thing with an abrupt wave of the hand. 'I don't make any profits on my farm - only losses. I don't know what they're bothering about

income tax for.'

'But', I submitted tentatively, 'farmers do manage to keep alive and bring up families. They couldn't do this on losses. Have you kept any books?'

'Books! What for!'

'Well - how can you show me that your farm is making losses; I must have some evidence.' I went on to explain that he should have filled up a tax. return; he should have appealed against his assessment within twenty-one days; he should have, etc., etc. I knew this was mere thistle-fluff so far as John was concerned, but I had to try to impress him. I went on. 'Other farmers have to do these. . . .

'Other farmers' - John stopped my lecture -'haven't had foot and mouth like me.' He halted so I encouraged him to talk. What followed made the plagues of Egypt seem like a coffee morning in the

vicarage gardens.

John had lost all his sheep from foot and mouth disease and his pigs from swine fever. Some of his cows had mastitis, some aborted, the rest went dry. He had bought a young bull to cheer them up but John's farm reduced him to impotent senility in about three days. Once he had two horses; one caught

his foot in a rabbit-hole and had to be destroyed - the other ripped his belly on some barbed-wire and never recovered. His wife had some chickens but they all succumbed to fowl-pest.

I was almost prostrate but I managed to ask: "Tell me, then, when did all this happen?'

'Since I've been farming - of course.'

'How long is that?'

'Well - now - let me think a moment. My father died about forty years back, then my mother ran the farm with us boys - working for nothing, of course. Then she died and the farm came to me. Let me see,

that would be about thirty-three years ago.'

I became the official once more. 'Look Mr Williams, I am prepared to stretch a point or two in order to help you but you must do as I ask, or pay the tax.' John's eyes saddened. 'Pay fi-fty-one pounds four-teen shill-ings?' He gave each syllable its full value. There followed several seconds withdrawal and then: 'All right, I am ready to help you.' I asked him to bring me all his bank sheets, Milk Marketing Board statements, mart receipts, etc. I repeated as much of this as I could in my book-fresh Welsh. He was to call to see me the following Tuesday without fail.

John did so, again looking like an escapee from an old-time processional funeral. 'Have you brought everything I asked for, Mr Williams?' 'Yes,' he said, but he made no move to hand anything to me. 'May

I have them please?'

A blackened roll of papers was handed to me and I opened it out. My eye was caught by the red figures in the bank account as I turned over the dozen or so sheets. The account had been frequently overdrawn and I had a guilty feeling I had doubted him without justification. Then I looked more closely and discovered John was trying another subterfuge. The sheets were for 1935 and 1936; it was now 1948! Some of the bills were nine and ten years old!

There was an appealing look in his eyes: 'There was no profits, Inspector; it's there plain to see.' I had to tackle John quite firmly. I made it clear I could waste no more time trying to help him. He would have to pay that fif-ty-one pounds four-teen shill-ings and

I gave each syllable full value.

The following Monday morning John called again. "This is your last chance, Mr Williams. Have you

brought all your papers this time?'

'Well, it's like this - you see' ... John got up, brought his chair around my table and placed it close alongside mine. I waited. He put his hand carefully into his overcoat pocket and brought out an egg, which he placed, quite slowly, on the table. I looked on silently. He did the same again. There were now two eggs but I made no comment. John then repeated the operation with greater deliberation, and, as he was gently and furtively extracting the third egg from out the depths of his pocket he leaned over and whispered confidentially, 'I help you, Mr Cox you help me?' Three eggs equal fifty-one pounds fourteen shillings!

The rest of the story is routine and humdrum.

# Finance and Commerce

### Mecca

THIS week's reprint features the accounts of Mecca Ltd presented in the original in novel—even startling—form. The name hardly needs introduction. Whether it is catering or cafeterias, bingo or beauty competitions, dancing or ice skating, or social recreation centres with the facilities for a 'little flutter', Mecca is decidedly 'in the business'. And there is no sitting still: new establishments are opened; others taken over and given the Mecca treatment; local theatres are acquired for transformation and use in accord with the popular trend.

This year, with profits at over a million for the first time, the accounts are tucked away at the end of what might be described as the Mecca handbook – a 'flash' affair, pocket-size with spiral wire binding, profusely illustrated with Mecca scenes in colour as well as black and white, including 'Miss World 1961'.

In the various sections, catering, dancing, etc., each establishment is identified with address and phone number. New branches under construction are listed, including the Empire, Leicester Square, which should be opened by the end of this year or early next.

Shareholders are welcomed in their hundreds to the annual meeting; this year's was at the Hammersmith Palais on June 28th. Some might call it a 'romp', but it was all good fun combining 'the business of the meeting' with a social and entertainment element.

### Depreciation

With these accounts is introduced a new basis for depreciation. Negotiations have been concluded with the Revenue as a consequence of which a more favourable basis for the taxation treatment of depreciation of furniture, fittings and equipment has been adopted with effect from January 1st, 1959. The accounting treatment of these assets has therefore been changed to bring it into conformity with the basis now adopted for taxation purposes. Hitherto, it has been the practice to charge against revenue each year, the expenditure incurred on renewals, but for 1961 a depreciation provision based on a twenty-year life has taken the place of such expendi-

ture, which has been capitalized. It is intended to continue this practice in future years.

A note explains that as a result of this change in basis, the 1961 trading profits, before tax, has borne an increased charge of £58,924, equivalent to

£27,621 net after taxation.

There has been charged against revenue surplus a net amount of £35,647, representing additional depreciation less the applicable taxation relief, in respect of the transitional period from January 1st, 1959, to December 31st, 1960. In addition, £97,295 written off furniture, fittings, etc., has been charged against surplus on revaluation of fixed assets.

### Early Days

An interesting chapter in the 'handbook' is a brief history of Mecca development in its seventy-seven years from 1884; most of it really from 1921 onwards. Some of the more elderly members of the profession may remember the pre-1914. Ye Mecca Smoking Cafés in the City of London. That business evolved from the manufacture of coffee roasting and grinding machines for the sale of coffee to the public, and by 1914 there were thirty-two cafés for coffee, cigars and dominoes – for men. 'No women came into these cafés'. It was really the last of the 'coffee-house era'

in the City from the earlier days of which has emerged Lloyd's and the London Stock Exchange.

Mr C. L. Heimann, one of the present joint chairmen, joined the company in 1924 with his late wife as manager and manageress in charge of the catering at the Poeple's Palace in the Mile End Road. Their joint salary was £8 a week plus 10 per cent of any branch profit.

Mr Heimann linked up with Mr Alan B. Fairley, the other joint chairman, in 1935 in a partnership to open dance halls throughout the country, the first being the Locarno in Glasgow. The Heimann-Fairley dance hall group merged with Mecca in 1947 – and the rest is summed up in the present £8 million balance sheet.

### The Annual Meeting

Lest any take umbrage at the use of the word 'romp' in connection with the annual meeting, let it be stated that Mecca's meeting, in its way, is one of the most business-like in the company world. For well over an hour, the two joint chairmen and the two managing directors told shareholders how things were going; with bingo, it was said, 'we walked into success from the word go'. There were 3,571 functions last year from weddings to the Law Society's gathering at

Norwich; seventy bands under contract; no teen-age problem at Mecca Halls. The bank debt is mainly in connection with the Mecca reconstruction of the Empire, Leicester Square, where it is hoped to hold next year's annual meeting. The board has a profit and loss sheet for every branch every week. These are a few of the points which emerged. There were no set speeches – and none that seemed prepared. Just a 'get together' of board, shareholders and guests.

Mr Heimann paid a special tribute to Mr John H. Senior, F.C.A. He was the only 'outsider' on the board in the sense that all the other directors were Mecca specialists: some caterers, some entertainment executives, with the more senior having the widest Mecca experience. Mr Senior's usefulness, apart from his professional knowledge, said Mr Heimann, was that he was an outsider; it was this 'outside view' which he brought to the board which was something the others hadn't got.

It was almost inevitable that the question of voting rights for the 'A' shares should be raised by a shareholder. Mr Heimann's attitude was co-operative. It was, he said, a matter for negotiation; with an implication that it was for voters and non-voters to come to terms and that he would do his best to bring the two sections together.

### Novel Bonus'

MR H. Scott Thompson, F.C.A., chairman of Mount Charlotte Investments Ltd, has hit upon a novel way of introducing shareholders to the hotels that have come into the group through the acquisition, as at January 1st, 1961, of Nuthalls (Caterers) Ltd. The hotels are in the Channel Islands, Wales, Devon and Cornwall.

With this year's report and accounts an invitation is conveyed to shareholders to stay, with a guest, at any of the hotels between September 14th, 1962, and March 31st, 1963. Presentation of the invitation card when the bill comes to be settled gives the shareholder the benefit of two nights (accommodation and breakfast) from the total due.

Before its Nuthall acquisition, the company (once a mining concern in Australia) was known for its catering enterprises under the name of Bettafoods. Bettafoods restaurants will be known to readers in the City of London, and previous reports have contained an invitation to shareholders and guests to accept the company's hospitality at its establishments.

Not all businesses can provide such 'bonuses' for shareholders; not all shareholders can accept them when offered. But despite the limitations, there is much to be said for this fostering of shareholder relations.

Since 31st December, 1960, negotiations have been concluded with H.M. Inspector of Taxes as a consequence of which a more favourable basis for the taxation treatment of depreciation of Furniture, Fittings and Equipment has been adopted with effect from 1st January, 1959.

The accounting treatment of these assets has therefore been changed to bring it into conformity with the basis now adopted for taxation purposes. Hitherto it has been the practice to charge against revenue each year, the expenditure incurred on renewals, but for 1961 a depreciation provision based on agreementy year life has taken the place of such expenditure, which has been capitalised; it is intended to continue this practice in future years.

As a result of this change in basis:

- (a) The trading profit of 1961, before taxation, has borne an increased charge of £58,924, equivalent to £27,621 net, after taxation.
- (b) There has been charged against Revenue Surplus a net amount of £35,647, representing additional depreciation, less taxation relief applicable thereto, in respect of the transitional period from 1st January, 1959 to 31st December, 1960; in addition £97,295 written off Furniture, Fittings, etc., has been charged against Surplus on Revaluation of Fixed Assets.

### Note 6

Outstanding Capital Commitments of Mecca Ltd. amounted to approximately £375,000.

### Note 7.

Under arrangements in force with its Bankers, Mecca Ltd. is contingently liable to allow the balance on its Accounts to be applied against overdrafts to any other Member of the Group which is a party to these arrangements.

### CITY NOTES

TANCIES rather than facts provide the basis for the price rise in the two outside ends of the stockmarkets – gilt-edged and gold shares. In the former case the theory is that if the Government is to indulge in a pre-election bout of economic pump priming on 1958–59 lines, then considerably lower interest rates than those dictated by the current  $4\frac{1}{2}$  per cent level of Bank rate may play a major part.

That view has been fostered by suggestions that lower house mortgage rates are considered to be a vital pre-election factor. Although building society rates are not necessarily tied to Bank rate there is a long-term and, to an extent, a psychological connection.

Further than that there is the view that Common Market membership may be accompanied by a move on to a Common Market interest rate basis.

As for gold shares, the higher United States gold price theory is still uppermost in the gold share buyer's calculations. The United States is acknowledged to be dead set against raising the gold price since that would be tantamount to devaluing the dollar.

The international liquidity theorists none the less argue that the United States could be persuaded into raising the gold price if the move could be disguised as American generosity towards the restricted liquidity of the western world in general. Hope springs eternal in the gold share buyer's contract notes and the hope is currently being pinned on next September's I.M.F. meetings.

### **Professional Fees**

SIR, - I think your correspondent, Mr Bennington (July 7th issue), has misunderstood the President of the Scottish Institute. He was not, I am sure, asking for any 'preferential treatment', but was reminding chartered accountants in industry that they are among the few people through whom shareholders

can get any idea of the volume of work and the responsibility involved in the audit. The President did the members in industry the courtesy of tacitly assuming that they knew the difference between the ethical considerations that arise when arranging a fair fee for an audit and the purchasing of coals or cabbages. Your correspondent apparently does not.

It is a lamentable fact, sir, that many people in industry do not yet understand that the cheapest auditor is often the most expensive. A member of the Institute has no excuse for similar ignorance. Happily most of our members who are officials of public companies do not hold Mr Bennington's views and have a high sense of their duty both to their companies and to their profession.

Yours faithfully,

D. E. F. GREEN, M.B.E., F.C.A.

London EC2.

SIR, -I was both appalled and dismayed, to say the least, to read the letter headed 'Professional fees' in your last issue.

Why should there be need for anyone to give us preferential treatment? Surely we should live by right, not on sufferance, and the client should pay our fees gratefully, providing he is getting prompt and efficient service.

I cannot understand the apparent indifference in the profession to this all-important question of fees. I think that a committee of, say, ten practitioners should be set up from areas all over the country, comprised almost wholly of representatives of medium-sized firms and small firms, which must constitute the great majority of the practising members of the Institute, and they should sit full-time for a period of six months (or longer if necessary) in order to formulate a plan to put the profession on a modern basis; the other members of the profession should pay an increased subscription in order to recompense the members of this committee adequately for their work.

Unless we get adequate fees we cannot get and keep efficient staff or the machinery required for modern working, or properly laid out offices and the fittings, etc., in connection therewith; and something must break down in the near future unless this question is firmly and soundly resolved. I regard the position as serious and something really drastic will have to be done about it.

In line with the question of adequate fees there must, of course, be the ability to provide prompt and adequate service in return.

Yours faithfully, ISAAC BARTFIELD, F.C.A.

Leeds.

[It may be as well to repeat the remarks of the President of the Scottish Institute, as reported in our issue of June 30th (page 837). The President said:

'I would ask our own members employed in industry and commerce, who are so often involved in considering fees charged by practising members to bear in mind that they should be willing to pay rates for outside professional accounting services which would enable the practising accountant to employ staff at the same level of remuneration as these members in industry are obviously willing to pay their full-time assistants.'

It seems to us that there is no suggestion of 'preferential treatment' in these words. – Editor.]

## Taxation Case

A full report of the case summarized in this column will be published, with Notes on the Judgment, in the 'Annotated Tax Cases'.

### Binns Ltd v. C.I.R.

In the High Court of Justice (Chancery Division)
June 8th, 1962

(Before Mr Justice PENNYCUICK)

Profits tax – Gross relevant distribution – Dividend for specific period – Company becoming subsidiary within the period – Grouping notice for period – Direction splitting accounting period into two chargeable accounting periods – Whether dividend apportionable – Finance Act, 1937, section 22 – Finance Act, 1947, sections 35 (2), 37, 38 – Finance Act, 1956, section 30.

The company, which carried on business as a draper, became a wholly-owned subsidiary of House of Fraser Ltd on April 28th, 1953. The accounting periods of the company ended on January 26th each year. On January 6th, 1954, House of Fraser Ltd gave a grouping notice under section 22 of the Finance Act, 1937, in relation to the appellant for the chargeable accounting period ending on January 26th, 1954, and for all subsequent chargeable accounting periods.

On January 27th, 1954, the appellant paid to House of Fraser Ltd an ordinary dividend of £320,000 gross, and the dividend was declared as an interim dividend

for the period from April 28th, 1953, to January 26th, 1954. On October 28th, 1958, the Commissioners of Inland Revenue gave a direction, under section 38 of the Finance Act, 1947, that the accounting period of twelve months to January 26th, 1954, should not be a chargeable accounting period of the appellant, but should be divided into two chargeable accounting periods at April 28th, 1953.

It was contended on behalf of the appellant that as the grouping notice operated from April 28th, 1953, and having regard to the period for which the dividend was declared, the dividend of £320,000 should be ignored in computing gross relevant distributions of the appellant for profits tax purposes. It was contended on behalf of the respondents that, pursuant to section 37 of the Finance Act, 1947, the gross relevant distribution in question had to be computed in relation to the appellant's accounting period ended January 26th, 1954, and apportioned on a time basis over the two chargeable accounting periods comprised therein, with the result that the earlier portion attracted profits tax. The Special Commissioners decided in favour of the respondents.

Held: the Special Commissioners' decision was correct.

## THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

### SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, July 4th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr Percy F. Carpenter, President, in the chair; Mr Robert P. Winter, C.B.E., M.C., Vice-President; Messrs J. Ainsworth, C.B.E., J. F. Allan, C. Percy Barrowcliff, W. L. Barrows, T. A. Hamilton Baynes, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay Davison, W. G. Densem, S. Dixon, W. W. Fea, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, L. C. Hawkins, J. S. Heaton, J. A. Jackson, H. O. Johnson, Sir William Lawson, C.B.E., Messrs H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, C. U. Peat, M.C., F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, D. Steele, J. E. Talbot, A. G. Thomas, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, E. K. Wright, Sir Richard Yeabsley, C.B.E.

### **Appointments to Committees**

The Council has appointed Mr Paul F. Granger to the Disciplinary Committee.

### Chairmen and Vice-Chairmen of Committees

The Secretary reported the appointment of the following chairmen and vice-chairmen of committees for the ensuing year:

### **Applications**

Chairman, Mr R. McNeil; Vice-Chairman, Mr R. B. Leech.

### Articled Clerks

Chairman, Mr M. Wheatley Jones; Vice-Chairman, Mr T. A. Hamilton Baynes.

### District Societies

Chairman, Mr C. Croxton-Smith; Vice-Chairman, Mr J. C. Montgomery Williams.

### Examination

Chairman, Mr W. G. Densem; Vice-Chairman, Mr J. A. Jackson.

### Finance

Chairman, Sir Harold Gillett; Vice-Chairman, Mr D. A. Clarke.

### General Purposes

Chairman, Mr W. L. Barrows; Vice-Chairman, Mr P. F. Granger.

### Investigation

Chairman, Mr S. J. Pears; Vice-Chairman, Mr J. E. Talbot.

### Parliamentary and Law

Chairman, Mr W. E. Parker; Vice-Chairman, Mr J. E. Talbot.

### Public Relations

Chairman, Sir Harold Gillett; Vice-Chairman, Mr E. K. Wright.

### Report of the Company Law Committee

The Council has requested the Taxation and Research Committee to consider the report of the Company Law Committee and to make a report thereon for consideration by the Parliamentary and Law Committee. Any member who wishes to make any comments on the report of the Company Law Committee is invited to send them to the Secretary of the Institute for consideration by the Taxation and Research Committee.

### The Small Practitioner Inquiry

In the annual report for 1961 it was reported that at the request of the President district societies had undertaken an inquiry into the problems and difficulties of the small practitioner and that district societies, branches and groups had held meetings and the views expressed were being examined in committee and would in due course be considered by the Council.

The extent of the interest which has been evoked among members may be judged from the fact that the submissions received have exceeded 200 pages of evidence and proposals. These submissions related to a variety of matters, some of which appeared more frequently than others among the representations. The District Societies Committee reported to the Council that it had therefore appointed three sub-committees to give special consideration to the representations received on subjects which seemed to be of greatest concern to members and had decided to make its own inquiries into the numerous other matters raised. The sub-committees have now made their reports to which the Committee is giving close consideration, as well as continuing its own inquiries into the other matters with a view to the submission of recommendations to the Council.

### Registration of Articles

The Secretary reported the registration of 92 articles of clerkship during the last month, the total number since January 1st, 1962, being 1,114.

### Admissions to Membership

The following were admitted to membership of the Institute:

Agballah, Hyacinth Okoli Petrus, A.C.A., a1962; P.O. Box 18, Udi, Nigeria.

Astbury, Ivor Charles, A.C.A., a1962; 234A High Street,

Eastleigh, Hants. Freeman, Nicholas Donald James, A.C.A., a1962; c/o John Hunter, Morris & Elkan Ltd, 12/16 Dane Street, London

§Hay, Robert Lawson, A.S.A.A., a1962; 7 Old Park Ridings, London N21.

Hudson, John, A.C.A., a1962; 10 Pretoria Row, Easy Road, Leeds 9.

Miller, Terry John, A.C.A., a1962; 23 Norfolk Mansions, Prince of Wales Drive, London SW11.

§Nelson, Byron Bernard, A.S.A.A., a1962; P.O. Box 1783,

Tehran, Iran. Nesbitt, Robert Anthony Ellis, B.A., A.C.A., a1962; 43 Gordon Place, London W8.

### Fellowship

The Council acceded to applications from three associates to become fellows under Clause 6 of the supplemental Royal Charter.

### **Members Commencing to Practise**

The Council received notice that the following members had commenced to practise:

Adeyemo, Michael Adepoju, B.Sc. (ECON.), A.C.A., a1962; M. Ade Adeyemo & Co, 14 Montpelier Road, London W5. Beardsell, Kenneth, F.C.A., aS1932; †Armitage & Norton, Martins Bank Chambers, Tyrrel Street, Bradford 1.

Beldham, Henry Bailey Bryant, F.C.A., aS1927; Levy, Hyams & Co, Central House, 36 Oxford Street, London

Bowling, John Greenwood, F.C.A., aS1948; Bowling, Jenkins & Co, First Floor, 17 Custom House Street, Cardiff.

Brodie, Maurice Harvey, A.C.A., a1962; Maurice H. Brodie & Co, 9 Alderton Crescent, London NW4.

Casey, Martin Patrick, F.C.A., a1934; †Kennedy, Crowley & Co, 4/5 Westmoreland Street, Dublin.

Chapman, Barry David, A.C.A., a1961; Barron, Rowles & Co, Chansitor House, 37/38 Chancery Lane, London WCo

Charity, William Brian, A.C.A., a1958; Parker, Edwards & Co, 102 Scotch Street, Whitehaven, and at Preston and Worcester.

Chissell, John Gordon, A.C.A., 21957; Plummer, Parsons, Harrap & Chissell, 18 Hyde Gardens, Eastbourne.

Crawford (Miss), Emily, F.C.A., aS1931; Roy Kendall &

Partners, 47 Park Square Chambers East, Leeds 1. Dayer, Frederick George, F.C.A., a1948; 4 Baugh Road, Downend, Bristol.

Emanuel, Peter Moss, A.C.A., a1961; G.02, Du Cane Court, Balham, London SW17.

a indicates the year of admission to the Institute.

aS indicates the year of admission to The Society of Incorporated Accountants.

§ Means 'incorporated accountant member'.

Firms not marked † or \* are composed wholly of members of the Institute.

† against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

Todman, Archibald Ian, F.C.A., a1927; 5 Priory Close, Chislehurst, Kent.

While, Peter Graham, A.C.A., a1955; Ronald L. Thursz & Co, 314 Church Street, Blackpool.

### Re-admission to Membership

One application under clause 23 of the supplemental Royal Charter for revocation of exclusion from membership was refused.

It was reported to the Council that the following re-admission, made at the Council meeting on June 6th, 1962, subject to payment of the amount required, had become effective:

Cohen, David Solomon, B.Sc. (ECON.), A.C.A., Rhov Abba Hilkiya 2, Katamon, Jerusalem, Israel.

52

## ACCOUNTANT

### Resignation

The Council accepted the resignation from membership of the Institute of:

Ball, Norman Sidney Robertson, F.C.A., 40 Tubbenden Lane, Orpington, Kent.

### **Deaths of Members**

The Council received with regret the Secretary's report of the deaths of the following members:

Boucher, James, F.S.A.A., Wallasey. Challands, Robert Sydney, M.A., F.C.A., Darlington. Clark, Howard Summers, F.C.A., Victoria, B.C. Connerton, Thomas Raymond, F.C.A., Ipswich. Denman, Arthur Bernard Crossland, F.C.A., Norwich. Gill, Walter Percy, F.C.A., Lowestoft. Hillman, Tom Edward James, F.C.A., London. Keighley, Clifford, F.C.A., Mold. Kemp, Ernest Thomas, F.C.A., Southampton. Mallinson, Joseph Harrison, F.C.A., Manchester. Petrie, Henry, F.C.A., London. Pomfret, Walter, F.C.A., Preston. Porter, Reginald, F.C.A., London. Spencer, Charles Alfred, F.C.A., Kettering. Tarr, Frank Williams, F.C.A., Bridgwater. Townend, Clarence Edward, M.C., F.C.A., Doncaster. Walkden, Eric, B.COM., F.C.A., Bolton. Wrigley, Harold, F.C.A., Poole.

### FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on June 6th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that a Fellow of the Institute practising with other persons as a firm had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that the firm acted as professional accountants to a limited company without first communicating with the then auditors and professional accountants, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint had been proved and ordered that the member be reprimanded, but directed that in the special circumstances of this case the name of the member should not be published.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Ian Kenneth Johnstone, A.C.A., was at the Assizes held at Liverpool in and for the West Derby Division of Lancaster on September 21st, 1961, tried and convicted upon indictment of burglary, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Ian Kenneth Johnstone, A.C.A., had been proved and the Committee ordered that Ian Kenneth Johnstone, A.C.A., formerly of 17 Croxteth Road, Liverpool 8, be excluded from membership of the Institute.

### FINDING AND DECISION OF THE APPEAL COMMITTEE

Finding and Decision of the Appeal Committee of the Council of the Institute appointed pursuant to bye-law 108 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on June 15th, 1962.

The Appeal Committee heard an appeal against the Finding and Decision of the Disciplinary Committee of the Council of the Institute upon a formal complaint preferred by the Investigation Committee of the Council to the Disciplinary Committee that John Duncan King, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that (a) he failed within a reasonable time or at all to deal with or answer repeated requests made to him by a creditor in relation

to the liquidation of a company; (b) he failed to reply or take any action in response to four letters written to him by an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Appeal Committee affirmed the Finding of the Disciplinary Committee that the formal complaint against John Duncan King, F.C.A., had been proved under both headings and the Appeal Committee, varying the decision of the Disciplinary Committee, ordered that John Duncan King, F.C.A., of 137 Victoria Street, London SW1, be reprimanded.

### MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Accountants' Legal Responsibility . . . with a collection of leading cases . . .; by S. Levy. New York. 1954. (American Institute of Accountants, 96s.)

Accounting Practice Management Handbook; edited by J. H. MacNeill. New York. 1962. (American Institute of Certified Public Accountants, 96s.)

The Appraisal of Management for Executives and Investors; by J. Martindell. New York. 1962. (Harper, 38s.)

The Basic Postulates of Accounting; by M. Moonitz. New York. 1961. (American Institute of Certified Public Accountants, 12s.)

The British Banking Mechanism; by W. M. Dacey: fourth edition. 1962. (Hutchinson, 21s.)

'Cash Flow' Analysis and the Funds Statement; by P. Mason. New York. 1961. (American Institute of Certified Public Accountants, 12s.)

The Commonwealth and Europe. (Economist Intelligence

Unit.) 1960. (E.I.U., 42s.)
The Complete Guide to Personal Investment; by P. J. Naish. 1962. (Evans Brothers, 21s.)

The Consolidation of Accounts explained step by step; by W. J. Fairbairn: second edition. Cape Town. 1962. (Juta, presented by the author.)

Costing and Efficiency in Hospitals: a critical survey; by

C. Montacute. 1962. (O.U.P., 25s.)

The Design of Forms in Government Departments.

(Treasury.) 1962. (H.M.S.O., 21s.)

Effective Speaking; by D. Carnegie: revised by Dorothy Carnegie. Kingswood, Surrey. 1962. (Worlds Work, 18s.) Employer's Liability at Common Law; by J. Munkman:

fifth edition. 1962. (Butterworths, 47s 6d.)

Formation and Management of a Private Company; by F. D. Head: fifth edition by Margaret Booth. 1962. (Pitman, 21s.)

Guide to the Friendly Society Acts and the Industrial Assurance Acts. (Registrar of Friendly Societies . . .) 1962. (H.M.S.O., 12s 6d.)

History of the British Steel Industry; by J. C. Carr and

W. Taplin. 1962. (Basil Blackwell, 63s.) How to Lie with Statistics; by D. Huff. 1954. (Victor

Gollancz, 138 6d.)
Industrial Relations: Contemporary Problems and Per-

spectives; edited by B. C. Roberts. 1962. (Methuen, 30s.)

Laws of Business Management and the executive way of life; by G. Copeman. 1962. (Business Publications, 42s.) Monetary Theory and Practice; by J. L. Hanson: second edition. 1962. (Macdonald & Evans, 30s.)

The New Law of Betting and Gaming; by J. P. Eddy and L. L. Loewe. 1961. Supplement by J. P. Eddy and D. G.

Cracknell. 1962. (Butterworth, 45s and 10s.)

Practical Applications of Accounting Standards: a decade of comment on accounting and auditing problems; (edited) by C. G. Blough. New York. 1957. (American Institute of Certified Public Accountants, 48s.)

Practical Public Relations; by S. Black. 1962. (Pitman,

30s.) The Preparation of the Accounts of Trustees and Liquidators; by W. J. Fairbairn. Cape Town. 1962. (Juta, presented by the author.)

The Principles of Production Control; by J. L. Burbidge.

1962. (Macdonald & Evans, 50s.)

The Rating and Valuation Act, 1961, with introduction and annotations; by E. Roydhouse, 1962. (Butterworths, 25s.) Report of a special committee dealing with Terminology, Classification, Preparation . . . and Other Aspects of Accounting for Livestock Farming. (New Zealand Society of Accountants.) Wellington. 1961. (New Zealand

Society of Accountants, presented.)
Report of the Company Law Committee. Cmnd. 1749.
(Board of Trade.) 1962. (H.M.S.O., 128 6d.)

Standard Costs: how they serve modern management; by C. W. Bennett. Englewood Cliffs, N.J. 1957. (Prentice-Hall, 77s.)
Trade Unions in a Free Society: studies in the organisation

of labour in Britain and the U.S.A.; by B. C. Roberts: second edition. 1962. (Hutchinson, 30s.)

## Notes and Notices

### PROFESSIONAL NOTICES

Mr D. F. Byrne, B.A., F.C.A., and Mr D. A. PALMER, A.C.A., announce that the practice formerly carried on by them in partnership under the name of D. F. BYRNE & Co, at 48A London Road, Kingston upon Thames, Surrey, is being continued at the same address under the name of BYRNE, PALMER & Co.

Messrs Cobden, Board & Co, Chartered Accountants, of Fountain House, Sheffield 10, and Bush Lane House, Cannon Street, London EC4, announce that as from July 1st, 1962, they have taken into partnership Mr CLINTON JULIAN BOARD, A.C.A.

Messrs Coopers & Lybrand, Chartered Accountants, announce the extension of their practice to the Bahamas, and a partnership has been formed consisting of Messrs Bernard Gadd, a.c.a., Brian C. J. BECKETT, A.C.A., HARRISON C. HAYES, C.A. (CANADA), and CAMPBELL W. LEACH, C.A. (CANADA). The firm will practise from 234 Bay Street, P.O. Box 5539, Nassau, Bahamas.

MESSAS B. GRUGEON & Co, Chartered Accountants, of 56 Westmoreland Road, Bromley, Kent, announce that Mr A. R. REYNOLDS, A.C.A., has been admitted to partnership as from July 1st, 1962. The practice will be carried on under the style of GRUGEON, REYNOLDS & Co at the above address.

Messrs Hibbert, Sier, Woods & Co, Chartered Accountants, of Capel House, 54 New Broad Street, London EC2, announce that Mr C. M. ANSTEAD, F.C.A., and Mr A. L. Burgess, A.C.A., both of whom have been with the firm for several years, have been

admitted to partnership as from July 1st, 1962. The firm's name will remain unchanged.

It is announced that as from June 24th, 1962, the association of Messrs Litton, Pownall, Blakey & HIGSON and ASTBURY, MITCHESON & MILLER with Messrs Dryden, Dorrington & Co has been discontinued. Messrs Litton, Pownall, Blakey & HIGSON and ASTBURY, MITCHESON & MILLER (partners: James Blakey, Clarence Rutter, John Deakin WALTER STANLEY ECCLES, GRAHAM THORNLEY, CUNLIFFE and DAVID PINNOCK HARLOW) will continue to practise from 42 Spring Gardens, Manchester 2, and Messrs Dryden, Dorrington & Co (partners: Hugh McCreery and Keith Ashton) will practise from 21 Spring Gardens, Manchester 2.

Messrs Turquand, Youngs & Co announce that Mr F. A. Keeling, F.C.A., who has been with the firm for many years in London and the East is being admitted as a partner of their Far Eastern firms with effect from July 1st, 1962. Mr KEELING will be resident in Kuala Lumpur.

### Appointments

Mr H. S. Axton, F.C.A., and Mr R. Rees, F.C.A., have been appointed general manager and secretary, respectively, of Brixton Estate Ltd.

Mr E. S. Bell, M.A., F.C.A., has been appointed financial director of the Amalgamated Dental Co Ltd, as from June 30th, 1962, and has resigned from the office of secretary from that date.

## NATIONAL INSURANCE Collection of Graduated Contributions

Mr John Boyd-Carpenter, Minister of Pensions and National Insurance, has asked the National Insurance Advisory Committee to consider and report on draft regulations<sup>1</sup> concerning the collection of graduated national insurance contributions. These amending regulations are necessary because the regulations governing the collection of income tax under the P.A.Y.E. system on which provision for the collection of graduated contributions is based have recently been consolidated. They contain only one new provision which concerns the power of collectors of taxes to certify amounts of unpaid graduated contributions in the same way as unpaid P.A.Y.E. income tax.

The Committee will consider representations on these draft regulations received by them not later than July 31st, 1962. Representations should be made in writing and should be sent to the Secretary, National Insurance Advisory Committee, 10 John Adam Street,

London WC2.

### IN PARLIAMENT £ Sterling: Value

Mr COLLICK asked the Chancellor of the Exchequer whether he is aware that, taking the internal purchasing value of the £ sterling as 20s in October 1951, it had declined to 18s 1d in June 1954, and to 15s 11d in June 1957; and what was the comparable figure for May 1962.

Sir E. BOYLE: Yes, on the basis of the retail price index. The comparable figure for May 1962 was 14s. Hansard, June 27th, 1962. Written Ans. Col. 156.

## INCOME TAX PAYERS' SOCIETY Affiliation to National Federation of Property Owners

The Income Tax Payers' Society, which recently announced its decision to wind up after forty years' existence, is to continue. At a general meeting of members held on July 12th a resolution was moved by the Chairman, Mr Geoffrey Stevens, F.C.A., M.P., recommending the affiliation of the Society to the National Federation of Property Owners, who have undertaken to enable the Society to continue its aims and objects. Economies in administration will be effected by merging the staff and offices of the two organizations. The Income Tax Payers' Society will, however, remain a separate entity.

however, remain a separate entity.

Mr E. C. L. Hulbert-Powell, director of the National Federation of Property Owners will become director of the Society, which will in due course leave its present offices and be accommodated with the

<sup>1</sup> The draft National Insurance (Collection of Graduated Contributions) Amendment Regulations, 1962. H.M.S.O. 1s.

National Federation of Property Owners at St Stephen's House, Westminster.

The journal of the Society, the Income Tax Payer, will be incorporated into Property, the monthly journal published by Property Newspapers & Periodicals Ltd, which is a subsidiary company of the National Federation of Property Owners. The main features of the Income Tax Payer will be continued in Property.

## THE INSTITUTE OF INTERNAL AUDITORS London Chapter

At the annual general meeting of the London Chapter of The Institute of Internal Auditors held on June 13th, Mr E. N. Judge, F.C.W.A., A.I.M.T.A., South Eastern Electricity Board, was elected President for 1962-63. Other principal officers elected were:

First Vice-President: Mr D. Taylor. Second Vice-President: Mr J. H. Protheroe, A.A.C.C.A., A.I.M.T.A.

Secretary: Mr H. G. Cox, The Monotype Corporation Ltd, Salfords, Redhill, Surrey.

### BUDGET POSTER, 1962

Facts about the United Kingdom revenue and expenditure are shown graphically in the Budget Poster for 1962 published by the Treasury. The Poster, the thirteenth in the series, gives the main items of revenue and expenditure proposed in the 1962 Budget, both in money terms and as a share of each £1.

For every £ of revenue that the Government expects to collect in the financial year, 1962-63, over one-third - or 7s 1d - will come from taxes on personal incomes (income tax and surtax). Tax payments by companies will provide 2s 10d, while death duties should yield 9d. Taxes on spending will provide 8s 9d in the f, the main items being tobacco (2s 7d), oil and motor duties (2s 1d), purchase tax (1s 9d) and alcohol (1s 4d). On the expenditure side, 'social and community services' take 7s 3d of every £. This includes assistance to Local Authorities for expenditure on such services as education, housing, police and roads (2s 5d); central education services (5d); health services (2s 3d), and personal payments - national insurance, war pensions, family allowances, etc. (1s 10d). 'Economic services' take 2s 6d of each £; interest payments on the national debt, 1s 11d. Defence takes 5s 3d of each £. The Budget is estimated to yield a surplus of revenue over expenditure, amounting to 1s 3d in each f of revenue which will be allocated to 'below the line' spending on such things as loans to nationalized industries and to the Post Office and loans for overseas development.

A quarter of a million copies of the Poster have been printed for distribution to offices, factories, schools, libraries, public houses and post offices, etc. Copies can be obtained free of charge from Central Office of Information, Circulation Section (H), Hercules Road, Westminster Bridge Road, London SE1.

# The Cambridge Summer Course

HE season for summer schools, courses and conferences is now under way and, this week-end, 140 fortunate members of The Institute of Chartered Accountants in England and Wales are in residence at Emmanuel and Sidney Sussex Colleges, Cambridge. Until last year, Oxford had been the exclusive venue for these Institute gatherings first started in 1947 but, new ground having been broken, the Cambridge summer course looks like creating the same high traditions as those already established at the 'other place'. As Mr Percy F. Carpenter, F.C.A., states in his foreword to the programme booklet, the summer courses which stand high in the post-war development of the Institute have had far-reaching and beneficial effects and they become more popular each year. Preference is given to members who have not attended a previous course or who have not attended one for a period of five years. This policy ensures that an ever-growing cross-section of members may take advantage of these delightful cultural and social occasions.

As usual, three subjects have been chosen for discussion and the now customary methods of presentation are being observed. In the morning, the speaker introduces his paper and this is followed by group discussions before and after the coffee break. In the evening, after dinner, the speaker in general meeting answers questions raised by the groups who then retire for further talk far into the night. Afternoons are being given over mainly to sight-seeing and sporting activities.

The first paper, in point of time, was Insurance and the accountant', presented by Mr DAVID WILLIAMSON, F.C.A., on Thursday. Insurance is a subject about which accountants are expected to know little or nothing for their examinations and everything afterwards for the benefit of their clients or company. Mr Williamson, in his informative survey, wisely confines himself to those aspects of it most likely to be met with in industrial companies. First among these is fire insurance, the primary consideration being what assets should be covered and, most important of all, what basis of valuation should be adopted. The insurer has two alternatives – the reinstatement basis (known as 'new for old') which provides for full replacement cost and the indemnity basis (known as 'like for like') in which the insurer has to make a cash contribution equivalent to the improvement element derived from having new assets in place of old. Mr WILLIAMSON deftly explains how these questions are dealt with and, also, in what circumstances the policy should be governed by average and when by special condition of average.

Linked with fire insurance is consequential loss insurance. There can be few accountants in practice who have not certified details on behalf of clients in connection with this kind of policy. Mr WILLIAMSON summarizes the essentials without a hint of compression and then goes on to deal with profit insurance on new plant; employers', public and products liability insurances; engineering and motor vehicle insurances; and, among others, insurances relating to goods in transit, fidelity, personal accident and forged transfers. The first of these, profit insurance on plant, may not be quite so familiar as the others. It covers the contingency of loss of profits which may result for one reason or another from the postponement of the completion date of new plant. In view of present-day costs and of setbacks through strikes and other causes which may arise, delay in the commencement of the 'pay-off' period may be serious. Mr Williamson concludes a most useful paper by drawing attention to discounts which insurance companies may offer under long-term agreements.

In Friday's paper, 'Taxation aspects of amalgamations and reconstructions', Mr D. O. Bailey, F.C.A., is concerned with problems made daily more difficult on the one hand by the intricacies of modern business deals and, on the other, by the complications of taxation law. He divides his thesis into two parts, the case which concerns the acquisition of shares and the case where the business is acquired. In each instance, Mr Bailey clearly restates the law and, where relevant, considers income tax, profits tax, surtax and estate duty consequences as well as stamp duty obligations.

This must have been a most difficult paper to write because, as Mr Bailey says in his conclusion, circumstances differ with each case and nothing is more likely to lead to error than an attempt to lay down hard and fast rules. Nevertheless, he succeeds expertly in encompassing his subject and in providing material for discussion. It is safe to say, even writing a day or two before the event, that Mr Bailey had many questions to answer.

Saturday's child, according to the rhyme, works hard for a living, and Mr R. D. S. Shrimpton, F.C.A., who presents today's paper must have

worked hard to produce such a comprehensive review of what 'Service to management' means in terms of financial control. He defines the objective of manufacturers as being to sell their products as profitably as possible 'in the long term'. This phrase, he emphasizes, is important because although policies may vary profits over comparatively short periods, it is the outcome over 'the long term' which is decisive. To achieve this aim, the manufacturer must buy the best materials, pay good salaries and wages to secure the best human material and be content with reasonable profit margins in order to consolidate and expand his business and to discourage competition. The purpose of financial control is to help the manufacturer and his men first to create a market and then to keep it adequately supplied as expeditiously and as economically as possible.

This is philosophy rather than commercial accounting but it is good philosophy, and Mr Shrimpton soon proceeds to explain how it can be put into practice by keeping a careful watch on capital investment and the return being obtained therefrom and by the installation and operation of systems of costing and budgetary control.

It is interesting to note the geographical and occupational representation of the 140 members attending the course. Nearly half of them come from London and eighteen from Birmingham and the immediate vicinity. There are seven members from abroad (and that really means abroad because Scotland and Ireland are not represented), Nairobi, Lagos, Bombay, Singapore, Hong Kong, Maracaibo and Cape Town being the names on their luggage labels. The ratio of members in practice to members in industry in each group averages twelve to eight. 'Industry' covers a wide variety of manufacturing concerns as well as commercial and industrial interests. The 'oldest member' was admitted to the Institute in 1925 and the youngest in 1962. In all, five were admitted to the Institute or The Society of Incorporated Accountants in the 1920s, twentyseven in the 1930s, forty in the 1940s, sixtyfour in the 1950s and thirteen in the 1960s. This would presuppose that a greater thirst for knowledge exists among the younger members and that is all to the good for the future success of the courses and, indeed, of the Institute.

We look forward to reproducing the papers in full in future issues.

## Short-term Gains - II

### CONTRACTS TO ACQUIRE AND DISPOSE

AST week we dealt with the circumstances in which a person's dwelling-house is treated as not being a chargeable asset, as set out in clause II (3) of the Finance Bill. Clause II (4) provides further exemptions. It applies to the following assets:

- (i) a building;
- (ii) part of a building;
- (iii) a permanent or semi-permanent structure, in the nature of a building;
- (iv) part of a permanent or semi-permanent structure, in the nature of a building;
- (v) land.

Items (i) to (iv) must be occupied and used by the taxpayer for the purposes only of a trade, profession or vocation carried on by him. The trade must not consist of:

- (i) dealing in land; or
- (ii) developing land; or
- (iii) providing services for the occupier of land in which the taxpayer has an estate or interest.

Item (v) must be occupied by the taxpayer for purposes ancillary to his occupation of items (i) to (iv). If these conditions are satisfied, then items (i) to (v) are not chargeable assets in relation to the taxpayer's acquisition and disposal of them. The scope of this clause 11 (4) exemption is extended to two cases where the occupier is not, technically speaking, carrying on a trade as defined above. The first is where the taxpayer is a public or local authority using the specified assets in discharge of its functions. The second is where the taxpayer is using the specified assets in the occupation of woodlands on a commercial basis and with a view to the realization of profits. By a curious quirk of the law, this activity is not regarded as a trade.

The limitations imposed by clause II (7) (referred to in one place last week by its original number, 'clause IO (6)') apply to clause II (4) as they apply to clause II (3). This puts the occupier of woodlands in a curious position; he has to satisfy the Revenue that he is occupying the woodlands with a view to realizing profits but that he acquired the specified assets without any view to disposing of them at a profit. The clean-boot

farmer is in a similarly Gilbertian position.

At the committee stage Mr Bruce Millan, C.A., pointed out that clause II (4) did not deal specifically with fixed plant. As a result, clause II (5) was introduced at the report stage. It provides that fixed plant or machinery which does not form part of a building or structure (when it would be covered by clause II (3)) and which a person uses for the purposes only of a trade carried on by him, shall not be chargeable assets in relation to any acquisition or disposal of it by him. Again this provision is subject to clause II (7), and it applies in relation to the discharge of public or local authority functions, and the occupation of woodlands on a commercial basis, as it applies in relation to a trade.

There was a curious lacuna in the Bill as originally drafted. Clause 11 (6) provided that patent rights should not be chargeable assets. There are, of course, provisions dating back to 1945 which impose tax liability on the proceeds of sale of patent rights. What the draftsman overlooked was that these provisions were long ago extended to rights to acquire patent rights in the future. Clause 11 (6) was extended at the report stage to exclude those rights also from the categories of chargeable assets so that there will be no double taxation.

That the new tax is confined, at any rate at present, to short-term gains is emphasized by clause 10 (2) which provides, not very logically, that

'there shall be no acquisition and disposal within the meaning of this chapter where the disposal occurs more than three years after the acquisition in the case of a disposal of land, or where the disposal occurs more than six months after the acquisition in any other case'.

This is subject to clause 14 which deals with the disposal of shares in land-owning companies. Broadly speaking, any acquisition of an interest in assets, or rights over them, is to be treated as an acquisition of the assets, even if the interest or right, as such, ceases to exist on the acquisition. Likewise, any disposal of an interest or right in or over the assets is to be treated as a disposal of the

assets (clause 12 (1)). The corollary to this is contained in clause 12 (2). The contract to acquire or dispose is to be deemed to constitute in itself the acquisition or disposal. As a further corollary, the conveyance or transfer in pursuance of the contract 'shall not be deemed to be an acquisition or disposal of the asset'. No doubt, what the draftsman really means is 'shall be deemed not to be an acquisition or disposal.' (This kind of confused thinking is not uncommon in Finance Act drafting.) Clause 12 (2) applies even where the asset is not in existence or is not ascertained at the time of the contract.

The Ninth Schedule to the Bill seeks to tie up some of the loose ends left by the main clauses. Paragraph 1 (1) provides (subject to paragraph 2) that a person's acquisition or disposal by a contract is to be disregarded for the purposes of Case VII if:

- (a) the contract is discharged by mutual consent or by operation of law; or
- (b) default is made in carrying out the contract and by reason of that default there is no conveyance or transfer to implement the contract, whether by or to the person originally making the contract or another; or
- (c) the contract is conditional and the condition is not satisfied.

It follows that if the contract to acquire or dispose is abortive, then there is no acquisition or disposal for Case VII purposes, notwithstanding clause 12 (2). If, nevertheless, some consideration has been given and retained under the contract, that consideration will apparently be disregarded. For instance, if the taxpayer buys property for £1,000, agrees to resell it for £1,200 but retains the property and a deposit of £200 because the sale goes off through the purchaser's default, the £200 is not taxable. If, still within the maximum period, the taxpayer completes a sale at, say,  $f_{1,100}$  he pays tax on only the  $f_{100}$ . By the same token, the first purchaser, who paid £200 for nothing, will not be able to claim it as a Case VII loss.

Paragraph I (2) of the Ninth Schedule must be read in the light of the foregoing. It purports to deal with the situation 'where a person disposes of an asset', but 'disposes' here must be read in the sense of disposal under a contract which is not abortive in the sense of paragraph I (2). Any

amount of the consideration which is irrecoverable is to be disregarded for Case VII purposes – except to the extent that the right to such irrecoverable consideration is itself disposed of for a consideration which is actually received. Similarly, where the consideration under the contract is abated for any error or default in the contract, the abated consideration is to be taken as the consideration originally bargained for.

Many contracts for the acquisition and disposal of assets are subject to some condition before they take real effect; for instance, the contract may merely give one party an option to purchase. To treat such a contract as an acquisition and disposal, under the general rule laid down by clause 12 (2), would open the way to an artificial lengthening of the period between acquisition and disposal. Accordingly paragraph 1 (3) of the Ninth Schedule lays down another general rule, namely, that the acquisition or disposal takes place when the condition is satisfied, e.g. when the option is exercised. However, in the case of the person disposing of the asset under a conditional contract, if the consideration does not depend wholly or mainly on the 'value' of the asset at the time the condition is satisfied, then (on the condition being satisfied) the disposal is to be treated as if the contract had never been conditional. In other words, in favour of the disponor one reads the period between acquisition and disposal as ending when he made the conditional contract to dispose of the asset (paragraph 1 (4)).

One apparent way to avoid Case VII tax would be to discharge the contract for disposal by mutual consent, and substitute a later contract outside the vulnerable period. Paragraph 1 (5) counters this by providing that the new contract is to be treated as if it had taken place at the time when 'the disposal by the previous contract is to be treated as having taken place'. If the previous contract was conditional, the condition is to be regarded as satisfied at the time of the new contract. Paragraph 1 (5) conflicts with paragraph I (I). It speaks of the 'disposal by the previous contract'. But ex hypothesi the previous contract was discharged and, therefore, by paragraph 1 (1) the disposal under that previous contract is to be 'disregarded for Case VII purposes'. In view of paragraph 1 (5), it is not to be disregarded entirely.

(To be continued.)

#### THE JENKINS REPORT

# Company Audits and Auditors

AFTER imposing the obligation on companies to produce audited accounts, the Companies Act, 1948, requires the auditors of companies to be qualified persons, but it goes on by proviso to exempt (in effect) about five-sixths of all companies from this requirement, namely, exempt private companies. In its memorandum of evidence, the Council of The Institute of Chartered Accountants in England and Wales claimed that this exception was unsound and created dangers to which a company should not be permitted to expose itself. The memorandum said:

'The exception was introduced in the mistaken belief that there were not sufficient qualified auditors to act for all exempt private companies. The information available to the Council indicates that relatively few exempt private companies have auditors who are not qualified or authorized as required by section 161 and therefore the Council is satisfied that the removal of the exception would not create difficulty for exempt private companies in obtaining qualified auditors.'

The Councils of The Institute of Chartered Accountants of Scotland and The Association of Certified and Corporate Accountants both made similar representations in their written evidence. The Board of Trade added the weight of their own suggestions.

In its Report, the Jenkins Committee said that there was general agreement - except by certain associations of accountants not recognized under section 161 (1) (a) of the Companies Act, 1948 – that the accounts of all companies should be audited by accountants qualified under section 161 (1). A sample inquiry conducted by the Board of Trade indicates that some 90 per cent of all exempt private companies are now audited by such accountants. The Committee therefore sees no good reason for continuing the distinction between exempt private companies and other companies in this, or indeed in other, respects. Accordingly, it is part of the general recommendation for the abolition of exempt private companies that all companies shall have qualified auditors.

The Committee goes on to observe that if this

recommendation were adopted without qualification, the result would be that a number of persons now employed as auditors of private companies would be deprived of their livelihood. The Committee therefore recommends that the Board of Trade be empowered to authorize any person, who can satisfy them that at the date of publication of the Jenkins Report he was mainly occupied in private practice as an accountant and was employed as the auditor of an exempt private company, to be appointed auditor of a company. This is provided that none of the company's securities have been quoted or offered to the public, and also provided that the company is not a subsidiary of a company whose securities had been quoted or offered. There would also be a power of revocation.

To be a qualified auditor under section 161 (1), it is necessary to fall into one of two categories, (a) and (b). To be within (a), the auditor must be a member of a body of accountants established in the United Kingdom and for the time being recognized by the Board of Trade. Category (b) is split into three; the auditor must be individually authorized by the Board either as

- (i) having similar qualifications to those in (a) but obtained outside the United Kingdom; or
- (ii) having obtained adequate knowledge and experience in the course of his employment by a member within (a); or
- (iii) having before August 6th, 1947, practised in Great Britain as an accountant.

The bodies recognized under (a) are four in number. The Jenkins Committee did not accept a suggestion that the four be actually named in the Companies Act and that this list be subject to addition or removal subject to the affirmative resolution procedure.

The Committee recommends that section 161 (1) should be redrawn in order to avoid giving the impression that members of

bodies of accountants established abroad are regarded as not professionally qualified. The Board of Trade have in practice authorized foreign accountants to be appointed auditors if the Board were advised that the professional standards of the foreign accountancy organizations to which the applicants belonged were similar to those of the four recognized United Kingdom bodies. As a condition of authorizing other individuals the Board have required evidence that the applicant has been in the employment of a member of a recognized body for, in general, five years and that his employment has been such as to enable him to obtain adequate knowledge and experience in the work of auditing the accounts of non-exempt companies. The Board understandably do not relish this duty; they suggested that it was not a proper function of a Government department to assess professional competence and complained that they had experienced difficulties in regard to this responsibility. However, the Committee has made no recommendation in response to this plea. Indeed, the recommendation that the Board should have power to revoke authorizations under the suggested new code will, if adopted, add to the Board's statutory duties. The Committee does recommend that if a recognized auditor becomes disqualified, either by his own accountancy body or by withdrawal of Board of Trade authorization, it should be clear, under the Companies Act, that his appointments as auditor of companies automatically cease.

The unqualified repeal of the exemptions for exempt private companies would mean that in no case would it be possible for the partner of a director or other officer or servant of the company to be appointed auditor. Thus, where at present an exempt private company finds it convenient to have a professional accountant on its board, and that accountant is a member of the same firm as the auditor, such an arrangement will have to be terminated. The Committee is against such arrangements in principle but it recognizes that an abrupt change might cause practical difficulties in particular cases and it expresses the hope that these difficulties could be provided for by suitable transitional provisions.

Section 159 (2) of the Companies Act provides for the automatic reappointment of a retiring auditor at the annual general meeting unless he is not qualified for reappointment, or there is a resolution to a contrary effect, or he has given written notice of unwillingness to continue. This is an anomalous provision and the Committee quite rightly recommends that every company should be bound to appoint or reappoint an auditor expressly at each annual general meeting.

The practice has grown up of appointing firms of accountants by name, as auditors. This is all very well in the case of a Scottish firm which has an independent corporate existence. It is not always understood in England that a reference to a firm is a reference to the persons composing it at the time. It is certainly not universally realized that an individual who becomes a partner in a firm of accountants does not thereby become an auditor to the company which has appointed the firm as its auditors. The confusion can be worse when years go by without any express reappointment. The Committee recommends that where an English firm is appointed, the appointment should be deemed to extend to all the duly qualified members of the firm from time to time during the period of the appointment. However, the Committee thinks that the appointment should lapse if (a) more than half of the members at the time of the appointment leave the firm, or (b) the number of new members joining the firm after the last appointment exceeds the number of present members who were members at the time of the appointment. Moreover, the members of the firm should be under a duty to notify the company that their appointment has lapsed owing to these changes. The Committee thinks that similar provisions should apply to Scottish firms of account-

Section 160 requires special notice to be given to a company when it is intended to propose a change of auditor. On receipt of this notice the company must notify the retiring auditor. The Committee recommends that the proposed new auditor should also be notified. Another recommendation is that the Companies Act should expressly authorize an auditor to resign during his period of office. Whether by so resigning he is to be regarded as being at fault is a matter which can be dealt with by his professional association, or by the Board of Trade if he is not a member of an accountancy body.

The Committee accepts the suggestions of accountancy bodies that the wording of the

auditor's report should be shorter and simpler. It recommends that the Ninth Schedule be amended to require the auditors' report to state:

- (i) whether in their opinion the balance sheet and profit and loss account of the company (or, where group accounts are submitted, the said accounts of the holding company and the group accounts) are properly drawn up in accordance with the provisions of the Act so as to give a true and fair view of the state of the company's affairs at the date of its balance sheet and of its profit or loss for its financial year ended on that date; or
- (ii) (in the case of a company which has taken advantage of the exemptions conferred by Part III of the Eighth Schedule) whether in their opinion the balance sheet and profit and loss account (or those accounts and the group accounts as the case may be) are

drawn up in accordance with the provisions of the Act.

The report would of course contain any qualifications which the auditors wished to make. The shortness of the statutory form of report would help to highlight any such qualifications. With the current report it is difficult for the layman to distinguish the wood from the trees.

The Committee has rejected the plea that the auditor of a holding company should have power to require the auditor of a subsidiary company to furnish him with such information and explanations in relation to the affairs of the subsidiary as he thinks necessary. In the Committee's view it would be invidious to give such power, the logical conclusion of which would be that both companies must appoint the same auditor; a provision which the Committee would regard as impracticable and undesirable, although it does not say why.

# Professional Negligence

# With Special Reference to Solicitors' Accounts by A BARRISTER-AT-LAW

THIS subject was discussed generally by the writer in *The Accountant* of December 24th, 1960. In the present article it is proposed to consider in particular an accountant's duty of due and proper care in furnishing a certificate under the Accountant's Certificate Rules, 1946, and the Accountant's Certificate (Amendment) Rules, 1954 and 1956. This is a topical subject by reason of the case of *Luscombe* (a former solicitor) v. Roberts and Pascho (a firm of chartered accountants) which came before Mr Justice Megaw last April and was referred to in *The Accountant* of April 28th, at page 537.

The duties of practising solicitors are such that more of other people's money passes through their hands than through those of other professional firms. Accordingly, there is special legislation dealing with solicitors' accounts, just as there is special legislation dealing with the accounts of savings banks, local authorities, companies, trustees and other bodies handling large sums of money in connection with which they have special obligations. The relevant legislation relating to solicitors is to be found in the Solicitors

Acts, 1933, 1941 and 1957; the Solicitors' Accounts Rules, 1945, and the Solicitors' Accounts (Amendment) Rules, 1959; the Solicitors' Trust Accounts Rules, 1945, and the Accountant's Certificate Rules referred to above.

The general scheme of the legislation, so far as it affects solicitors' accounts, provides:

- (i) for the keeping of books of account and of separate bank accounts for the solicitor's own money on the one hand, and for clients' money and trust money on the other;
- (ii) for every solicitor to deliver annually, when he applies for a practising certificate, a declaration as to his compliance with the Solicitors' Accounts Rules; and
- (iii) for the compulsory examination each year of every solicitor's accounts by a duly qualified accountant, and for the delivery by the solicitor to the Registrar of Solicitors of an accountant's certificate as to his compliance with such Rules.

Paragraph 10 (1) of the Solicitors' Accounts (Amendment) Rules, 1959, states that every solicitor shall at all times keep properly written up such books and accounts as may be necessary:

(a) to show all his dealings with (i) clients' money held, received or paid by him, and (ii) any other money dealt with by him through a client account, and (b) to distinguish such money held, received or paid by him on account of each separate client, and to distinguish such money from other money held, received or paid by him on any other account.

Paragraph 7 of the Solicitors' Accounts Rules, 1945, is particularly relevant to the case in question. It states that there may be drawn from a client account (a) in the case of clients' money:

(i) money properly required for a payment to or on behalf of the client;

 (ii) money properly required for or towards payment of a debt due to the solicitor from the client or in reimbursement of money expended by the solicitor on behalf of the client;

(iii) money drawn on the clients' authority; and

(iv) money properly required for or towards payment of the solicitor's costs where a bill of costs or other written intimation of the amount of the costs incurred has been delivered to the client and the client has been notified that money held for him will be applied towards or in satisfaction of such costs;

and (b) in the case of trust money:

(i) money properly required for a payment in the execution of the particular trust; and

(ii) money to be transferred to a separate bank account kept solely for the money of the particular trust.

#### Accountant's Certificate Rules

The nature of the examination of a solicitor's books to be undertaken by an accountant before furnishing his certificate is prescribed by Rule 4 of the Rules of 1946. He is not required to carry out a complete audit of the solicitor's accounts but, first, to make a general survey of the books of account and bank statements so as to satisfy himself that a separate bank account for client's money has been kept; that a reasonable system of book-keeping is in use, and that the books are kept up to date. Secondly, he should select two dates at random and make an examination of the solicitor's position regarding liabilities to clients at each of those dates, asking for such information and explanations as he may require. If the general examination and detailed tests disclose evidence that the Rules have not been complied with, the accountant is required to pursue a more detailed investigation. The form of accountant's certificate in the Rules relates to an individual solicitor, and it is not sufficient to give a single certificate in respect of a firm. Rule 6 prescribes the cases where an accountant's certificate is not required –

generally where a solicitor does not practise or does not hold clients' money.

#### Facts in Luscombe's Case

The plaintiff was the sole partner in a firm of solicitors and had been in practice since 1930. From 1946 onwards the defendants had acted as the plaintiff's accountants both for the purpose of furnishing the annual certificate under the Accountant's Certificate Rules and for the purpose of preparing his accounts for submission to the Inspector of Taxes.

Towards the end of July 1958 the defendants discovered a deficiency in the plaintiff's clients' account, amounting at September 14th, 1958, to £10,369. This deficiency had been accumulating since 1952-53 and had arisen because of the transfer of money paid to clients' account, on behalf of clients, to the plaintiff's office account. The office account had been used for the payment of moneys to, or on account of, clients; for the payment of the plaintiff's professional expenses, and for payment of his private and personal expenses. These payments had, over the years 1953 to 1958, exceeded the plaintiff's receipts from his practice by the amount of the deficiency. The plaintiff's income for tax purposes had been overstated for each year from 1953 to 1957 and he had paid tax on this overstated income, but £1,564 had later been recovered from the Revenue.

The plaintiff appeared before the Disciplinary Committee of The Law Society, which in January 1959 held that he had failed to comply with the Solicitors' Accounts Rules; had utilized for his own purposes money held and received by him on behalf of clients; had made declarations which he knew or ought to have known were untrue for the purpose of obtaining practising certificates, and had delivered accountant's certificates which he knew or ought to have known to be false. His name was ordered to be struck off the Roll of Solicitors of the Supreme Court. He appealed, but the Divisional Court dismissed the appeal.

In an action against the defendants, the plaintiff claimed that the sole cause, or at least the effective cause of his misfortunes – the creation of the large deficiency in the clients' account, his being struck off the Rolls and the over-payments of tax – was the defendants' breach of the duty which they owed him. He therefore claimed damages against them.

Megaw, J., said that in considering the issue between the plaintiff and the defendants he thought it right to disregard altogether the findings of the Disciplinary Committee and the

judgment of the Divisional Court, because the evidence was by no means necessarily the same in each case and a solicitor could be struck off the Rolls without being dishonest. He found, however, that throughout the years 1953 to 1958 the plaintiff had been dishonest so that there was no liability on the defendants by reason of the maxim ex turpi causa non oritur actio. But the defendants 'were in breach in various respects of their duty as accountants towards the plaintiff for which in other circumstances they would have been liable'.

#### Accountants' Duty

His lordship said it was at least highly probable that if the defendants had carried out their duties in accordance with the required standard of care, including their duty (which was a duty to the public as well as the plaintiff) under the Accountant's Certificate Rules, the irregularities which the plaintiff was committing in connection with his clients' moneys, and his accounts with regard thereto, would have come to light much earlier and would have been prevented for the future. If the plaintiff were innocent of dishonesty, he would presumably thereafter have conducted his affairs in a regular way so as not to imperil his clients' money. If he were dishonest and knew full well that what he had been doing was wrong, he would have been pulled up short in his dishonest practices by the refusal of the defendants to give a certificate, other than a certificate reporting fully on the irregularities discovered under the Rules.

In these circumstances it was clear that if the plaintiff were himself completely free from blame, he would be entitled to recover damages in some measure from the defendants in respect of their breach of duty, which would have been in part, if not in whole, the cause of his loss. If, throughout the period from 1953 to 1958, he had acted dishonestly in dealing with his clients' money, he would not be entitled to recover from the defendants any loss of any sort which he had suffered arising out of or connected with his own dishonesty; and that would be the case no matter how great or glaring the defendants' breaches of duty towards him or towards the public might have been, and no matter how clearly it might be established that the defendants, acting with due diligence, could have put a stop to the plaintiff's conduct and have saved him from the consequences of continuing dishonesty.

#### Plaintiff's Irregularities

The plaintiff kept all his own books of account. Each year after April 5th, he submitted them to the defendants who, after making such study of them and the bank pass-sheets as they thought necessary, gave year by year their accountant's certificate. From 1953 to 1956 it was a clean, unqualified certificate; for 1957 there was a qualification that there had been certain trivial breaches of the Solicitors' Accounts Rules due to errors or mistakes in book-keeping, all of which were rectified on discovery, and that the certifier was satisfied that none of such breaches resulted

in any loss to any client.

The certificates were, in fact, untrue on each occasion. The plaintiff had not complied with the provisions of the Solicitors' Accounts Rules in most material respects. The judge said the defendants should have known this, but they did not, in fact, know it. Though in no way dishonest they had failed to carry out their duties with the care required of competent accountants. The qualification was appended to the certificate of 1957 because, by an amendment of the Rules operative in November 1956, solicitors were required to keep their clients' account ledgers with two separate principal money columns on each side. The plaintiff's client's ledger was not so kept and this breach had not been remedied when the certificate had been issued.

In respect of the plaintiff's accounts for the year 1951-52 the defendants raised a query with the plaintiff which brought it clearly to his notice that the manner in which he was dealing with clients' money was not proper and not in accordance with the Solicitors' Accounts Rules. Nevertheless, the plaintiff thereafter not only continued to deal with clients' money in the same way, but from the autumn of 1952 onwards greatly increased the practice. The defendants, in breach of their duty as accountants, failed in relation to the accounts of the year 1952-53 and all subsequent years down to 1958 to discover that the practice which they had condemned in 1952 was continuing and had increased. In 1958 their audit clerk discovered what had been going on and brought the matter to light.

#### Defendants' Negligence

His lordship said that the partner in the defendant firm who issued the accountant's certificate was guilty of negligence. He fell short of his duty, both to the plaintiff and to the public, in that he failed, knowing what had been found in 1952, to ensure that the different audit clerk who did the detailed work on the accounts in the following year was made alive to the criticism which had properly been made in 1952. He failed, without adequate excuse,

OUNTANT July 21st, 1962

to qualify the 1952 certificate so as to inform The Law Society of what had been found in the 1951-52 accounts. He failed in all subsequent years to exercise the supervision which it was his duty to exercise in ensuring that comparatively young and inexperienced audit clerks performed their task with full appreciation of what was involved. He did not suggest it was a breach of duty to allow young staff to do detailed audit work; the breach lay principally in inadequate supervision. The plaintiff was personally known to the partner concerned who relied on the fact that he was the sole partner, that he kept his own books, and having no executive staff, was unlikely to be prejudiced by dishonesty or incompetence in his own office. He failed to appreciate to the proper extent that his duty as an accountant was wider than merely to protect the plaintiff, and extended to protecting clients and the public against carelessness or dishonesty on the part of the plaintiff himself. The defendants failed in their duty to discover from the plaintiff's books that in each year from 1953 to 1957 inclusive, the Solicitors' Accounts Rules were being seriously infringed and clients' moneys wrongly used.

They should have discovered that the accounts they prepared for income tax purposes overstated the plaintiff's income since, in effect, they included moneys which belonged to clients. There were numerous features of the plaintiff's books which would have put a competent accountant on inquiry, and inquiries properly pursued would have led to discovery. Transfers had been made from clients' account before they could properly be made under the Solicitors' Accounts Rules. Under Rule 7 (a) a solicitor could not, without his client's authority, pay money from clients' account into an account of his own in anticipation of making a disbursement on behalf of a client. He could make the disbursement direct from clients' account, when it was due, to the person to whom it was due. He could make the disbursement from his own funds and thereafter reimburse himself from clients' account; but he could not draw money out of the clients' account and pay it into some other account of his own before he had himself paid the disbursement.

Also under Rule 7, a solicitor was not entitled without his client's authority to transfer money out of clients' account in satisfaction, in whole or in part, of profit costs unless and until a written intimation or bill showing the amount of the costs had been delivered to the client, with a notification that money held for the client would be used in satisfaction of such costs. Transfers could not

be justified by profit costs earned but not yet

The defendants had contended, however, that they were entitled to assume without further ado that part of the irregular transfers which could not be ascertained to have been for disbursements was properly made as representing profit costs, for which bills had been duly rendered to the clients concerned. The judge said the defendants were not entitled to make such an assumption, particularly having regard to the frequency, amounts and dates of the transfers and to what had been discovered in the 1952 accounts. They ought to have inspected the bill file which was open to them. That would have shown that many of the transfers could not be justified since there was no record of bills having been rendered. Certain deliberately inaccurate entries had been made by the plaintiff with intent to deceive the defendants. In these cases payments were shown to have been made in a previous financial year. It was the discovery of three such entries which had put an audit clerk on inquiry in 1958.

#### **Defendants' Warning to Plaintiff**

At a meeting with the plaintiff on July 25th, the partner dealing with his affairs had told him he had been guilty of fraudulent conversion; that his practice of making transfers from clients' account must cease immediately, and that in future all clients' moneys must be held on clients' account and disbursements on behalf of clients made from that account, the only transfers to office account being in respect of ascertained costs.

By August 6th, however, the plaintiff had made further irregular transfers without the knowledge of the defendants. On hearing of them the partner concerned had, on August 26th, written the plaintiff the following letter:

'You have actually transferred clients' moneys, to which you had no entitlement, to your private account, and have continued to do so after our interview of July 25th, when we specifically told you that the practice must cease. As we have already informed you at interview we cannot accept that you were unaware of what you were doing. You must have known that you have used clients' moneys for your own purposes and are apparently continuing to do so.'

The partner did not, however, inform the plaintiff that his income had been overstated year by year in the accounts prepared for the Inspector of Taxes, so that a substantial amount of tax had been overpaid. The partner's explanation, given in evidence, was that the overpaid tax would have been included in a full computation of the plaintiff's affairs which was being prepared by an audit clerk but which had not been completed when the plaintiff, early in September 1958, had taken other advice, employed another accountant and withdrawn his instructions to the defendants. The judge said it would have been better if the defendants had mentioned this aspect to the plaintiff at an earlier stage, even if they were not then in a position to compute the figures. But that failure did not reflect on the partner's integrity.

#### **Breaches of the Rules**

His lordship said that in finding the plaintiff guilty of dishonesty he had applied the standard of proof laid down by the Court of Appeal in Hornal v. Neuberger Products Ltd ([1957], 1 Q.B. 247). The defendants, however, had made an alternative submission as to liability, and in case he was overruled as to the plaintiff's dishonesty, he ought briefly to deal with it. It was contended that even if the plaintiff were acquitted of dishonest intention, he was clearly in breach of the Solicitors' Accounts Rules during the period in question, and whether he realized it or not, that fact alone would debar him from succeeding in his action. In support of that submission they cited R. Leslie Ltd v. Reliable Advertising Agency Ltd ([1915], 1 K.B. 652); Haseldine v. Hosken ([1933], 1 K.B. 882); Askey v. Golden Wine Co Ltd ([1948], 2 All E.R. 35), and Strongman (1945) Ltd v. Sincock ([1955], 2 Q.B. 525). They also pointed out that by section 47 of the Solicitors Act, 1957, the Disciplinary Committee of The Law Society had statutory power to impose for breaches of the Rules, inter alia, a penalty not exceeding £500 to be forfeit to Her Majesty. Thus, it was contended a breach of the Rules by a solicitor was unlawful in the full sense of that word, as being something contrary to the public interest and expressly made punishable by a fine payable to the Crown.

The judge said that the point was one of considerable difficulty. But he had no doubt that the plaintiff knew, from 1952 onwards if not earlier, that his transfers from clients' account were being made in breach of the Rules, and he would accordingly have held (if he had not found the plaintiff to have been dishonest) that the true cause of any loss which he had suffered was his own continuing breach of the Rules. Hence, even on that hypothesis, the plaintiff's claim would

have failed.

#### **Damages**

The judge also considered the measure of damages which would be payable by the defendants, if he

were overruled. The damages claimed by the plaintiff were:

- (i) £3,679 amount of plaintiff's income overstated for the years 1953-57, less net overpaid tax recovered.
- (ii) £3,546 additional sum necessary to meet total deficiencies in clients' account.
- (iii) £166 interest on tax overpaid.
- (iv) £100 fee paid by plaintiff to an accountant to make an investigation.
- (v) £1,569 alleged loss on forced sale of goodwill of plaintiff's practice.
- (vi) Loss of earnings a continuing sum through plaintiff being struck off the Rolls.

His lordship said that if there were liability on the part of the defendants, the plaintiff would clearly be entitled to recover item (iii). He would also be entitled to recover that part of item (iv) which was attributable to the investigation itself. That fee, however, included the work of preparing the plaintiff's accounts for 1957-58, which would not be recoverable. He would assess the recoverable part of that fee at £70. Nothing would be recoverable under item (v) as the goodwill of the plaintiff's practice had been sold for a fair price, even supposing it had taken place in normal circumstances. Nothing, too, would be recoverable under (vi) as the plaintiff had not been struck off the Rolls as a consequence of any negligence alleged or proved against the defendants. Items (i) and (ii) covered the amounts subscribed by other solicitors to make up the balance of the deficiency on clients' account. If a loss were proved which was recoverable from a defendant as damages, the plaintiff's claim was not prejudiced by the fact that charitably disposed persons had come to the plaintiff's assistance (see Redpath v. Belfast and County Down Railway Co ([1947], Northern Ireland Reports 167)).

If there had been liability on the part of the defendants for professional negligence, the judge said he would have been disposed to hold that there should be an assessment of the loss which the plaintiff had suffered by reason of his having been induced to live at too high a standard over a period of five or six years, resulting in his being faced with a very substantial debt in 1958. But he would not have assessed that value at anything like the figure in money which the plaintiff had actually overspent. In the end he would have taken that value as being one-half of the money figure, so that the damages recoverable under this head, if liability had been established, would have been of the nature of £3,600 with interest.

However, the judge's decision was that the plaintiff's claim wholly failed and must be dismissed.

# Weekly Notes

#### EIGHTH INTERNATIONAL CONGRESS

N other pages of this issue we set out the programme for the Eighth International Congress of Accountants in New York next September, together with details of the United Kingdom delegations.

One of the principal speakers at the opening plenary session will be Mr P. F. S. Otten, Chairman, N.V. Philips' Gloeilampenfabrieken. Mr Arthur K. Watson, President of the IBM World Trade Corporation, will be the second speaker at the opening session. Like Mr Otten, Mr Watson heads a large international organization and is familiar with the financial, accounting and marketing problems inherent in world-wide operations. Others to speak briefly at this session will be the Presidents of the Sixth International Congress of Accountants in London in 1952 and the Seventh Congress in Amsterdam in 1957, Sir Harold Howitt and Mr J. Kraayenhof.

At the technical sessions that follow on Monday afternoon there will be fifteen simultaneous sessions at which forty-five accountants from various countries will present papers. Each session will have one speaker talking on 'Auditing and the world economy', another on 'Accounting and the world economy' and a third on 'Financial reporting and the world economy'. These papers will deal with specific problems as the speakers see them. Eight of the papers are being submitted by United Kingdom contributors as detailed on pages 77-78 of this issue. The papers presented at these sessions will provide the subject material for the Tuesday morning discussions when the Congress will be divided into 150 groups each comprising twenty members.

It seems to us a pity that copies of the papers are not to be circulated in advance as, of course, it will entail a considerable expenditure of members' time in New York in studying them. Although the organizing committee will no doubt have considered the matter and presumably have good reason for deciding against distributing the papers beforehand, it is only natural that visitors may wish to feel free to take full advantage of their stay in New York, both socially and for sightseeing. As so many are journeying long distances to attend, this travelling time would have provided an admirable opportunity for Congress members to digest the papers and so be in a position to obtain the full benefit of the discussion periods.

In addition to the Congress technical sessions, an interesting programme of tours and social events has been arranged from which visitors can make their individual choices.

#### TREASURY CHANGES

WHATEVER impact Mr Macmillan's sweeping changes in his Government may have upon the electorate, in the long run everything depends upon the effect Mr Reginald Maudling, the incoming Chancellor, can exert upon the sluggish economy. It is far from apparent how the economy may be jerked into a forward momentum to achieve the long overdue expansion in the national product, without at the same time generating another spiral of wage inflation.

The transfer of Mr Anthony Barber from the post of Economic Secretary to Financial Secretary may well be the limit to which Mr Macmillan is willing to see Mr Selwyn Lloyd's policies continued, but Mr Edward du Cann's appointment as Economic Secretary should find a response within London's Square Mile. The last set of Budget estimates did not suggest that the first holder of the new post of Chief Secretary to the Treasury, Mr Henry Brooke, had made a particularly auspicious start and, given the need for expansion, it may well be doubted if the new occupant, Mr Boyd Carpenter, will enjoy any greater measure of success in restraining the flood tide of Government expenditure

Overdue or not, these changes in the faces in the Treasury will not by themselves resolve the problem of steering between the Scylla of inflation and the Charybdis of stagnation which has defeated every British post-war Chancellor. Foreign opinion will watch with interest the efforts to galvanize the British economy into action, but with the still limited reserves and inadequate export performance, the future of sterling may again become a matter for world concern. We can but wish success to Mr Maudling and his colleagues in their formidable tasks.

#### PROGRESS ON BUSINESS STUDIES

THERE were a number of developments in 1961 **L** on education for business studies according to Education in 1961 published last week. The report points out that these were on the lines of the 1959 McMeeking report on education for commerce.

Revised syllabuses and detailed arrangements of conditions for the approval of part-time courses leading to the Ordinary and Higher National Certificates in Business Studies were published in the spring, and the introduction of a new Ordinary National Diploma in Business Studies was also announced. The new certificate and diploma courses were offered in colleges in the autumn of 1961 and by the end of the year applications for approval for the three types of course exceeded 500. This is considered an encouraging response.

In July 1961 the Minister of Education announced the establishment of a Higher National Diploma in Business Studies to be awarded for the successful completion of a three-year sandwich or equivalent

<sup>&</sup>lt;sup>1</sup> Cmnd 1737. Price 8s 6d.

THE

full-time course. These courses are to begin in the autumn of 1962.

The introduction of a Higher National Diploma means that in business studies there is now the same pattern of national certificate and diploma awards as in the main technologies. Commercial educationalists will no doubt press for an even more advanced course comparable with the diploma in technology. The National Advisory Council has set up a working party under the chairmanship of Mr W. F. Crick to consider the demand for a higher award in business studies.

New diploma courses in management studies began in the autumn of last year. It has been emphasized by the Ministry that provision for advanced management studies should be limited to colleges where staff and other facilities enable them to give adequate tuition to students already holding degrees or equivalent qualifications and holding responsible posts.

The response from students and staff to the new courses in management studies was enthusiastic. Most of them came within the age group 25 to 35 and from a wide variety of occupations.

#### U.S. PLANT ALLOWANCES INCREASED

N July 11th President Kennedy announced a more liberal policy on depreciation allowances for the purpose of Federal taxation of profits. This is the first full-scale revision of tax depreciation schedules for twenty years. Its effect is to enable the writing-off of plant and equipment over a considerably shorter period than has been possible hitherto. The new rules give business men greater freedom and flexibility in determining for themselves the rate at which their equipment should be written off. Their write-offs would not in future be questioned as long as they were consistent with actual replacement and discarding of machines. Mr Dillon, Secretary to the Treasury, estimated that the additional depreciation allowances claimed on tax returns in the first year would be \$3,400 million which would in turn produce a reduction of some \$1,500 million in tax liabilities.

#### SORRY TALE FROM SIERRA LEONE

SELDOM in the history of auditing can a report have been more damning than that by the Director of Audit on the accounts of the Bonthe District Council for the year ended December 31st, 1961, reproduced in a recent issue of The Sierra Leone Gazette. At every stage the Council appears to have been frustrated in its efforts to keep proper records owing to 'the obtuseness, negligence and misdemeanour of its servants'. Control of expenditure was made more difficult because 'the treasurer, secretary and clerk' had all 'in recent months, accused each other of fraudulent practices and negligence'. Intentionally or otherwise, every error of

commission and omission in the accounting calendar appears to have been perpetrated within the year. The treasurer overdrew his salary; adjusting entries were not made for a number of dishonoured cheques already entered in the cash-book; in consequence, not surprisingly, the balance at bank was overstated and by a sum large enough to turn it into an overdraft; the existence of certain balances (representing grants received but not utilized) reflected 'the inability of Council to plan and control the expenditure on projects for which the grants were made'; towards the question of arrears of scholarship donations and uncollected fees, the attitude of the schoolmasters concerned was 'indifferent'; and, most original of all, the Council entered into a road contract 'with a limited company which, at the time, had not been incorporated, and was thus not a legal entity'. The Council subsequently had to pay the wages of labourers in order to prevent a breach of the peace.

In addition to his published report, which gives nearly thirty specific examples of irregularities, the Director of Audit submitted a detailed report to the Council containing sixty-five paragraphs of comment and four schedules of observations and queries and addressed to it a separate letter on thirty-one major matters requiring attention. In these circumstances and because this catalogue comes on top of adverse reports for the years 1959 and 1960, the director's stricture that 'the time has come when Council must properly assume its statutory responsibilities to the people in the matter of finance' would seem to be both a model of professional politeness and a masterpiece of restraint.

#### SPURT IN COTTON RE-EQUIPMENT

THERE has been a last minute burst of activity under the Government's re-equipment plan for the cotton textile industry.

Three weeks ago the President of the Board of Trade said in the House of Commons that he hoped applications would reach £80 million. It now looks as though £100 million will be achieved. The problem is now to decide how far these last minute applications are intended as genuine indications of an intention to invest in new capital equipment, and how far they may be merely a form of insurance. Before a scheme is approved it has to be vetted by the Cotton Board and orders for machinery have to be placed and installed by July 1964. There is thus some time to elapse before it can be said that full advantage has been taken of the Government's offer.

There have been instances reported where companies have submitted an application for the grant and have already regretted their decision because the outlook for the cotton textile industry is so problemmatical. Most concerns in the cotton industry, at least on the spinning and weaving side, are pinning their hopes for the future on the negotiation of additional protection for the home market against Asiatic competition.

# Tales of a Tax Man

#### by HAROLD E. COX

THE BLONDE AND THE BARROW BOY

HE was a young, zealous, crusading type of inspector of taxes and we find him examining the accounts sent in by a newsagent-tobacconist. His eager brain was alerted when he saw the amount charged for wages. It was undoubtedly high in relation to the turnover. And, of course, he sent out the stock inquiry.

Back came a brief reply: 'Wages £364: paid to young lady assistant, £6 per week; to errand boy, £1 per week.' This was long ago when a £ had real value.

The inspector's official mind revolved on to the next cog and he wrote: "The wages paid to your lady assistant appear to be much higher than the normal commercial rates of wages paid to shop assistants. Are there any special reasons for this, please?"

A few days later a young lady called at the tax office requesting to see the inspector. She had a letter to hand to him personally. She was shown up to his room. She was tall, blonde, extremely attractive and shapely. She held out the letter and smiled: 'Mr X. asked me to give you this letter.'

The inspector read:

'Dear Sir, This is Miss R. to whom I pay the £6 per week. Be a man, don't you agree she's worth every penny of it? Yours gratefully,——.'

I should like to be able to report that the inspector resigned and became a newsagent. Alas! he disallowed one-third of the wages. May his spirit be tormented by statistical blondes with long pink finger-nails for ever and ever!

The barrow boy was one of my guests when I was a young assistant inspector in a SW. London district. The inspector and I had been rather vainly endeavouring to canvass for members among the stall-holders in the North End Road area. This particular barrow boy sold fish. A return had been sent to him but he had ignored it and so an estimated assessment of £250 had been made on his profits.

The return may have suffered the fate of many other forms as reported by Mr Edward Welsh, Surveyor of Taxes for the City of London in the 1850s. He related how he went to Billingsgate and found Schedule D income returns being used to wrap up fish. He proudly wrote: Trecovered 1,200 of them.

My barrow boy called at the tax office to appeal against the assessment and he was shown up to me. He was short, tubby and red-faced. A curly-brimmed bowler hat, about two sizes too small, was perched on his head. His navy blue suit was sequined with fish scales and he reeked. I asked him to sit down and the

interview opened on conventional lines. No, he hadn't kept any books.

I then approached the problem from the other direction. What were his living expenses – how much did he give his wife each week for the housekeeping expenses, etc. I wish I could reproduce his rich, fruity (or fishy) Cockney accent, but this is impossible:

'Alf a minute, guvnor. I don't know what yer talking abart! It's like this – let me explain. Every morning I borrers two quid from a pal and I pushes me ole barrer up to Billingsgate and I buys two quids' worth of fish. I goes back to me pitch outside the Rose an' Crown. I then sells two quids' worth of fish and I pays back me pal.

'I goes on selling to get me a few bob for me beer and fags, which I goes and 'as in the Rose. Me missus watches me go in and she comes down and sells the bleeding lot that's left. She 'as this for what yer calls 'ousekeeping.'

Then he paused and looked at me in utter astonishment: "Tell me, guvnor, 'ow the 'ell can I keep accounts?' I agreed - 'ow the 'ell could 'e?

Here is another story which belongs to the past, before the job of an Inspector of Taxes became mechanized and sterile. In those days the collection of taxes was not centralized; it was carried out by numerous local collectors who were also assessors of taxes. One of their duties was to report to the inspector all businesses in their areas and this gave rise to the following incident:

A collector saw a brass plate affixed to the front wall of a house announcing Miss P. P. Minim, Teacher of Pianoforte. An income tax inquiry was in due course addressed to her. Some days later the inspector received this letter:

'Will you please note that no one of the name of Miss Minim lives at this address.

'My wife, who has been away for some time, is suspicious that I have been playing the part of sugar daddy to some little bit of fluff, during her absence. I should be glad if you would discontinue these letters as they cause much mental suffering.

'So far as the brass plate is concerned, it is retained on the wall to prevent it bulging.'

Was the following the origin of the phrase 'benefit in kind'? The parish council of H. in Bedfordshire was assessed on profits of £2 from the past year's working of the local cemetery. On receipt of the demand note, the clerk wrote explaining that his council had decided to consult the district auditor before paying the tax. 'Another way, of course, would be to offer to bury an Inspector of Taxes, at once, free of charge.'

It is frequently as difficult to end an article as it is to end a letter. I am reminded of a letter from a farmer's wife:

'My husband has received your assessment but it is wrong. He is not single but married and there are seven children, the last were twins, which arrived only a fortnight ago. That's all for now.'

# Finance and Commerce

#### **Stoll Theatres**

UR reprint this week shows the consolidated accounts for 1961 of Stoll Theatres Corporation Ltd, a name that from the point of public interest has moved from the financial columns to the news pages of the National Press. To readers of this journal, there is a natural interest in the accounts of a group which occupies such a dominant place in the theatre world. The extent of this dominance is apparent from the list of companies in the group given in the report; in all but three of the twenty companies listed, the Stoll interest is shown to be the full 100

A further list identifies the theatres controlled; twenty-nine in all, they include the Coliseum, Drury Lane, Her Majesty's and the Palladium in London, the Empires in Glasgow and Edinburgh, the Manchester Palace, the Empire and Theatre Royal in Nottingham and the Hippodromes in

Birmingham and Brighton.

Of more professional interest, however, is the fact that the company and its shareholders have become involved in a matter concerning an interpretation of the articles of association on the subject of voting powers. Accountants, from the earliest days of their training, are imbued with the importance of knowing for what a company's articles provide. As may happen in matters involving definitions, however, in practice a particular definition can be uncertain. At least, there may be sufficient ground for argument.

#### Voting

Stoll Theatres has a capital of £1,601,934 in ordinary stock and £80,000 in management stock. The ordinary is a quoted security and publicly held; the management stock derives from the founder, the late Sir Oswald Stoll, and his desire that his theatre empire should in the last resort remain under his control.

Voting on a poll is based on 4s units of stock, each unit carrying one vote. The management stock collectively confers on the holders the right to as many votes as shall be equal to the number of votes at a poll conferred on the ordinary, and each management holding confers the right to a rateable proportion of the votes thus collectively conferred.

The company was registered in 1928 and it would appear that not until 1962 has it been felt necessary to use the management stock voting power. The occasion was an extraordinary resolution for the removal of a director at the recent annual meeting. The meeting, in the parlance of the day, was 'noisy'. One director (not the one whose removal was proposed) was described in the Press as having been 'howled down'.

71

The weight of the management vote was put in favour of the removal resolution which was declared carried by 9,234,420 votes to 314,786 votes.

#### What They Mean

Other resolutions were left to the decision of the ordinary voting. Such was the feeling at the meeting that shareholders, on a show of hands, actually took the probably unprecedented step of voting against the payment of the dividend and special capital distribution. On the poll, voting for the adoption of the accounts was 1,409,473 in favour and 157,378 voted against. The board had the benefit of proxies; the opposition did not seek proxies.

The issue fundamentally was whether the board was making the best of its opportunities of property development. The director removed maintained that board policy was lacking on that count and the

crowded meeting supported him.

The removed director now says there are 'serious grounds for doubting the legality of the poll' and solicitors have been instructed to issue a High Court writ for a declaration that the extraordinary resolution was null and void. The contention would appear to be that the management voting right was that number of ordinary votes actually recorded in the poll, and not the number that could have been polled had every ordinary vote been used.

Which, applying the lesson generally, emphasizes how important it is to know what the articles really

do mean - not what they may seem to mean.

#### Congratulations

MOST company chairmen, it is to be hoped, give the secretaries and accountants in their organizations a pat on the back for services rendered but few go so far as Sir Ambrose Keevil, chairman of Fitch Lovell, who has made his remarks to secretaries and accountants in the group available to the

Congratulating his staff on the completion of the accounts of the seventy companies of the group within five weeks of the end of the year, Sir Ambrose said, 'experience shows that when profit and loss accounts are promptly rendered a company is

healthy'.

'A company', he went on, 'is like a line of production in a factory; every one has a part to play in the finished product, and if one part breaks down the whole line fails. Your part has well and truly functioned . . . never forget, you render your finest service to your fellow men and women by doing your daily work to the best of your ability, with diligence, unselfishness and enthusiasm.'

# NOTES ON THE ACCOUNTS

The movements in these Reserves consist of surpluses on realisation of properties £117,793, on realisation of trade investments £198,515, and on liquidation of a Subsidiary £1,530, the apportionment of these surpluses to minority shareholders of a Subsidiary £135,363 and the proposed capital distribution by the Parent Company of £84,097. 2. Net Surplus on Consolidation—Consolidated Balance Sheet

1. Capital Reserves-Consolidated Balance Sheet

- The movement on this Reserve of £894 represents premiums paid on further acquisitions of shares in a Subsidiary Company.
- Mr. D. M. Leapman, a Director, has instituted legal proceedings against the Company making claims for substantial sums for services to the Company; these claims are not admitted and steps are being taken to defend the action, m,

#### CITY NOTES

EARLY stock-market reaction to the recent sweeping Ministerial changes was cautious in the extreme. Marking up of prices failed to attract new buying in equity sections to any degree and prices eased back.

The Government changes in themselves cannot have investment impact until they are seen in terms of new policies and programmes. Inevitably, the assumption is that the change of Chancellor of the Exchequer heralds a less restrictive and more expansion-minded economic policy, but it may be the autumn before the new Chancellor sees his way clearly enough to put any new policies into action. At least he takes office against the background of an improving trade and balance of payments situation, both of which owe something to the policies of his predecessor.

While it is agreed that re-expansion in the economy may be desirable, the City will watch for any sign that such a policy is being undertaken for political ends, rather than from the aspect of economic common sense.

A repetition of the exercises of 1958 and 1959 will be greeted, undoubtedly, with concern and possibly with suspicion – and not only in the City. The stockmarkets are already indicating a 'once bitten, twice shy' attitude on the part of the public.

#### **Materials and Labour Variances**

SIR, — It is one thing to admit to ignorance in private; it is another to demonstrate it in public. To save my blushes, therefore, may I ask for your indulgence for signing this letter with a pseudonym.

In his article in your issue of July 7th, Mr R. N. Parker gives an example:

 $\begin{array}{c|ccccc} & Units & Price & Value \\ Actual & 1,100 & at & 21s & = & £1,155 \\ Standard & 1,000 & at & 20s & = & £1,000 \\ \hline & 100 & 1s & & £155 \end{array}$ 

Treating this example as relating to materials (though, mutatis mutandis, his remarks had similar application to labour), Mr Parker considered it correct to break the variance of £155 down as:

Usage variance
Price variance
Joint variance  $\frac{100 (100 \times 20s)}{50 (1,000 \times 1s)}$   $\frac{5}{5} (100 \times 1s)$ 

He disapproved of combining the joint variance with the price variance as a single (price) variance of £55 because, he said, this would assume that the buying department was accountable not only for a rise in price but also in some measure for materials being used in excess of standard.

War Loan 31%

57<del>1</del>

Even if his algebra leaves me dizzy, I follow the trend of Mr Parker's argument, but I am unable to appreciate the force of his conclusions when one applies it to the practical business of communicating and explaining variances to management so that they can do something about them. This, as I see it, is what variances are for I see no future in subdividing variances for fun.

Starting from the basis that the standards are correctly set, I would surely be justified in reporting to management, on the example given, in the following sense:

(a) The buyer's job is to buy what we want at the right price. If we want more than we ought to, that is not his affair. He has bought 1,100 units

at is each more than the proper price. This is the direct cause of our losing £55, whatever the use to which we put the materials which he bought.

(b) The works' job is to obtain a given volume of output from a given quantity of material. They have used 100 units more than they should have done. If the buyer had done his stuff, these units would have cost us £100 and this is the measure of the loss which is within the direct control of the works.

So far as (b) is concerned, it is no part of the works' responsibility that the buyer did not do his stuff. That is the buyer's fault and the resulting loss of  $f_{.5}$ has therefore been charged against him, as price variance, under (a).

I can see no excuse for going to management and saying that the £5 is a joint variance, due partly to bad buying and partly to bad production - and here

is a bit of algebra to prove it.

If I were to do this I would surely get the answer when shorn of its more exotic phrases - that buying occurs before usage and that buying at the wrong price occurs before usage in the wrong quantities.

Buying at the wrong price causes a definite loss to the company irrespective of the quantities subsequently used. This loss should be exposed and pursued at the earliest possible moment.

So if I think I can get away with trying to charge

up to the works part of a loss caused entirely by that tomfool buyer, then Heaven help me next time I want a job done on my car in the works garage.

And, as to my bit of algebra . . . Or am I wrong? Yours faithfully,

AT VARIANCE.

Sir, - Mr Parker (article July 7th issue) is right - in theory. Unfortunately, the problem gets out of hand as the number of separate causes of variation increase.

Let us take sales variances, of which the Terminology of Cost Accountancy (Institute of Cost and Works Accountants, 2s 6d) lists three and a total. On the theory we should have:

Single variances: price; allowance (discounts and rebates); mix.

Joint variances (double): price and allowance; price and mix; allowance and mix.

Joint variances (treble): price, allowance and mix.

The total comes to seven. The algebra is the same in principle as Mr Parker's, and the graph is a box instead of an oblong.

The Terminology lists twenty cost variances. Fortunately they are not all applicable at once to any particular cost. Unfortunately there are some which are not specifically mentioned.

Take overheads. The Terminology lists four:

Item 3.416 Calendar variance.

3.417 Volume variance.

3.418 Efficiency variance.

3.420 Method variance (which it considers as part of 3.419 - the total cost variance; evidently a change of method can and usually does affect the overhead).

The Terminology does not list a further two as part of the overhead variance (3.415), although clearly they affect it:

Price variance: This is different from the efficiency variance, in the same way as the material price and usage variances are different.

Mix variance: Most costing systems use average departmental overhead rates, and these are changed by a different mix of the various departmental processes, even though the volume is unchanged.

There are six independent causes of variation; and this means sixty-three separate single and joint variances. (Students of the Pools will be accustomed to calculating the various combinations, but there is a short cut. If there are n causes, the number of separate variances is  $2^n-1$ . Had the twenty causes of variance all been able to act at once, we should have had to list 1,048,575 different single and joint variances.)

Sixty-three overhead variances is far too many for the list of figures to convey any coherent story to anyone. So, in spite of the theory, we have to agree some sort of convention on the sequence in which the variances are considered, even though the answer will not be right. In other words, if an oblong is increased in size due to an increase in both length and breadth, we must consider the increases in areas as due either to:

(i) increase in length at standard breadth; and then

(ii) increase in breadth at the increased length; or the other way round.

Of course, if we use marginal costing, there is no volume variance; and, if we use individual processhour rates (including machine-hour rates), there is no mix variance. Everything becomes more manageable - although fifteen separate and joint variances is still rather too many; and this is one of the merits of these two techniques to those who believe, with me, that the paramount need of cost accountancy is clarity and accurate measurement.

London SW1.

Yours faithfully, D. R. C. HALFORD.

#### Tax Allowance: Specialist's Home Telephone

SIR, - Can any of your readers please say what can be claimed for tax purposes in respect of the home telephone of a medical specialist who holds an appointment at a large hospital, when one of the conditions of his employment is that he shall have a telephone at this private residence?

Yours faithfully, EMERGENCY.

[The specialist is entitled to an allowance for expenses wholly, exclusively and necessarily incurred in the performance of his duties. His employers clearly regard it as necessary that he shall provide a telephone at his home and therefore he should claim an allowance equal to the rent plus the cost of calls applicable to his hospital appointment. - Editor.]

# Eighth International Congress

## NEW YORK, SEPTEMBER 23rd-27th

THE Eighth International Congress of Accountants opens in New York on September 23rd and registrations are already in the region of 3,000. Of this number, over 1,800 are members of the profession from overseas and rather more than 1,000 are United States accountants. The total attendance, including ladies, is expected to exceed four thousand.

As already announced, the central theme of the

Congress will be the relationship of accounting, auditing and financial reporting to the world economy. These subjects are to be treated both as techniques for communicating information to shareholders, bankers, Governments and other interested parties, and as tools of internal management and control. The Congress President will be Mr Arthur B. Foye, a Past President of the American Institute of Certified Public Accountants.

# Congress Programme

We set out below details of the full programme for the Congress:

#### Sunday, September 23rd

Optional Church Services for Registrants

- (a) St Patrick's Cathedral, 10 a.m. High Mass arranged by Catholic Accountants' Guild of New York.
- (b) St Bartholomew's Church, 4 p.m. Protestant service with choral and religious music for Congress registrants.
- (c) Temple Emanu-El, 4 p.m. Special choral service for Congress registrants.

Congress Reception followed by a Buffet Supper, 6 to 10 p.m., Waldorf-Astoria

For the comfort of the large number of guests expected, tickets in registration folders will indicate the room to which registrants have been assigned for the reception. Each room will be a self-contained reception with a Congress officer and his wife as the official host and hostess assisted by other United States accountants and their wives. At any time during the evening members and their ladies will be free to move about from room to room.

#### Monday, September 24th

Opening Plenary Session, 9 a.m. to 11.45 a.m., Grand Ballroom, Waldorf-Astoria

Presiding: Mr Arthur B. Foye, President, Eighth International Congress of Accountants.

Speakers: Sir Harold Howitt (England); Mr J. Kraayenhof (Netherlands); Mr Arthur K. Watson, President, I.B.M. World Trade Corporation (United States); Mr P. F. S. Otten, Chairman, Philips' Gloeilampenfabrieken (Netherlands).

Also on the Platform: Congress officers, heads of delegations of the United States sponsoring organiza-

Tickets are not provided for this session, as the Congress badge will admit members to the Ballroom. Because of space problems, this session is for accountants only.

Accountants' Luncheon, 12.45 to 2 p.m., Grand Ballroom, Waldorf-Astoria

Celebrity Luncheon for Ladies, 1 to 3 p.m., Imperial Ballroom, Americana Hotel

Mrs Alvin R. Jennings, Chairman of the Ladies' Committee, will preside, and the speakers will be women prominent in business and the arts.

Technical Session, 2.30 to 4.30 p.m.

Members will be assigned to one of fifteen simultaneous sessions and their tickets will indicate the session and its location. At each session three papers – one on auditing, one on accounting and one on financial reporting – will be presented.

#### Evening Entertainment

(a) Concert by the Philadelphia Orchestra, 8.30 p.m., Carnegie Hall.

The Philadelphia Orchestra, under the direction of Eugene Ormandy, will give a programme ranging from Beethoven's Symphony No. 5 to Ned Rorem's composition Eagles. The latter, a contemporary United States composer, will be present at the concert and will be introduced to the audience.

(b) Concert by Duke Ellington and his Jazz Orchestra, 8.30 p.m., Town Hall.

Duke Ellington will present a programme of American music from its folk origins to the intricate inventions of progressive modern jazz.

(c) Motion Picture and Stage Show, 7.30 p.m. Radio City Music Hall.

#### Tuesday, September 25th

Technical Discussion Sessions, 9 a.m.

These sessions will be held in boardrooms or conference rooms of various New York companies. Each member will receive in his registration folder a ticket for the session to which he has been assigned. Also in the folder will be an instruction sheet giving further details about the session, its location and a list of the participants.

Ladies' Luncheon and Fashion Show, I to 3 p.m., Grand Ballroom, Waldorf-Astoria

Seating at the luncheon will be informal although there will be a United States hostess at each table.

Meeting of Chairmen of Delegations, 2.30 to 5 p.m., Sert Room, Waldorf-Astoria

Open only to the chairmen of delegations and two members of their delegation selected by them.

Official Delegates' Dinner, 7 to 10 p.m., Ballroom, Hotel Pierre

The Delegates' Dinner, owing to the size of the Pierre Ballroom, is limited to those who have been designated 'official delegates' by their organizations in accordance with the allocation granted to each by the Congress Organizing Committee. Dress for the dinner will be full evening dress or dinner jacket, with honours and decorations.

#### Roosevelt Raceway

Many registrants have elected to attend the harness races at the evening meeting of the Roosevelt Raceway.

#### Metropolitan Museum of Art

Special showing of the American Wing, Great Hall and Renaissance Art Collection at the Metropolitan Museum, between 7 and 10 p.m.

#### Wednesday, September 26th

This will be an open day for members of the Congress to spend as they wish, or to join the tours, listed below, which are arranged both for the morning and afternoon.

Boat around Manhattan Island

Duration two hours and forty-five minutes.

Sightseeing Tour of the City

Duration three hours.

Garden Tour

Duration about four hours.

#### Industrial films

A continuous showing of industrial films will be conducted in the Jade room of the Waldorf-Astoria from 10 a.m. to 5 p.m. for those who may be interested.

#### Thursday, September 27th

Closing Plenary Session, 9 a.m. to 12.30 p.m., Grand Ballroom, Waldorf-Astoria

Presiding: Mr Arthur B. Foye, President, Eighth International Congress of Accountants.

Speakers: Mr Paul Grady, Chairman, Technical Session Committee; Mr Frederick G. Donner, Chairman of the Board, General Motors Corporation; Mr J. C. Stewart, President, The Institute of Chartered Accountants of Scotland.

Also on the Platform: Chairmen of various Congress subcommittees.

Congress Grand Ball, 9 p.m. to 1 a.m., Waldorf-Astoria Dancing to the music of Glenn Miller's Orchestra under the direction of Ray McKinley will start at 9 p.m. in the Grand Ballroom of the Waldorf. After midnight, a light buffet supper will be served.

### Delegations from Great Britain and Ireland

We give below the names of the official delegates attending the Congress from the accountancy bodies in Great Britain and Ireland, with details of those who are to present papers or who will otherwise be actively participating in the proceedings.

# The Institute of Chartered Accountants of Scotland

Official Delegation

Chairman: The President, Mr James C. Stewart, C.A. Vice-Chairman: The Vice-President, Mr W. L. Milligan, J.P., B.A., C.A.

Professor D. S. Anderson, M.A., C.A. (former member of the Council); Messrs G. D. H. Dewar, C.A. (member of Council); James T. Dowling, C.A. (Past President); A. I. G. Farquharson, C.A., A.C.W.A. (member of the

Institute's Examining Board); James R. Gellatly, C.A. (member of Council); J. G. Girdwood, C.B.E., C.A. (former member of Council); Alexander McKellar, C.A. (Past President); J. T. H. Macnair, M.C., B.A., C.A.; H. Forbes Murphy, C.A. (Convener of the Institute's Apprentices (Policy) Committee); C. G. M. Pearson, C.A. (former member of Council); G. I. Stewart, C.B.E., M.C., C.A. (Past President); Graham A. Usher, M.B.E. (MIL.), T.D., C.A. (Past President); E. H. V. McDougall (Secretary of the Institute).

The President has been invited to speak on behalf of overseas participants at the concluding session.

Professor Anderson will present a paper on 'Communications: Problems facing a practising accountant as a financial reporter'.

In addition to the delegates, approximately one hundred members of the Institute, with their ladies, will be attending the Congress.

## The Institute of Chartered Accountants in England and Wales

Official Delegation

Chairman: The President, Mr Percy F. Carpenter, F.C.A.

Vice-Chairman: Sir Thomas Robson, M.B.E., M.A., F.C.A. (Past President and Chairman of Overseas Relations Committee).

Messrs W. L. Barrows, LL.D., F.C.A. (Past President); T. A. Hamilton Baynes, M.A., F.C.A.; H. A. Benson, C.B.E., F.C.A.; Sir William Carrington, F.C.A. (Past President); Messrs D. A. Clarke, LL.B., F.C.A.; W. G. Densem, F.C.A.; S. Dixon, M.A., F.C.A.; S. M. Duncan, F.C.A. (Vice-Chairman, Taxation and Research Committee); Sir Harold Howitt, G.B.E., D.S.O., M.C., D.C.L., LL.D., D.L., F.C.A. (Past President); Mr R. O. A. Keel, F.C.A.; Sir William Lawson, C.B.E., B.A., F.C.A. (Past President); Messrs R. B. Leech, M.B.E., T.D., F.C.A.; R. P. Matthews, B.COM., F.C.A.; G. P. Morgan-Jones, M.A., J.P., F.C.A.; W. E. Parker, C.B.E., F.C.A.; S. John Pears, F.C.A. (Past President); L. W. Robson, F.C.A.; J. D. Russell, M.A., F.C.A.; D. Steele, F.C.A.; J. E. Talbot, F.C.A.; Miss E. Watts, B.A., F.C.A. (Past Chairman, Women Chartered Accountants' Dining Society); Messrs F. J. Weeks, F.C.A.; E. F. G. Whinney, M.A., F.C.A.; J. C. Montgomery Williams, F.C.A.; Robert P. Winter, C.B.E., M.C., T.D., D.L., F.C.A. (Vice-President); E. K. Wright, M.A., F.C.A.; Alan S. MacIver, C.B.E., M.C., B.A. (Secretary); C. A. Evan-Jones, M.B.E. (Under-Secretary).

Three members are presenting papers; they are: Mr H. A. Benson on 'Auditing and the world economy'; Mr R. O. A. Keel on 'Financial reporting and the world economy'; and Mr W. E. Parker on 'Accounting and the world economy'.

Sir Harold Howitt, who was President of the Sixth International Congress held in London in 1952, has accepted an invitation from the President of the Congress this year to reply to the opening address of welcome.

Mr G. P. Morgan-Jones will be Vice-Chairman of a Technical Session.

Although some 800 members of the Institute originally expressed an interest in attending the Congress, many have now found that it will not be possible for them to make the trip; the final number of registrants, many of whom will, of course, be accompanied by their ladies, may not exceed half the above figure.

# The Institute of Chartered Accountants in Ireland Official Delegation

Chairman: The President, Mr R. E. McClure, M.B.E., F.C.A.

Vice-Chairman: Mr John Love, F.C.A. (member of Council).

Messrs H. W. Robinson, B.A.(MOD.), LL.B., F.C.A. (member of Council) and W. S. Orr, B.A., LL.B., A.C.A. (Secretary of the Institute).

The President has accepted an invitation to act as vice-chairman at one of the technical sessions.

Mr Robinson is to present a paper in the section on 'Financial reporting and the world economy'.

About twelve members of the Institute, with their ladies, expect to attend the Congress.

# The Association of Certified and Corporate Accountants

Official Delegation

Chairman: The President, Mr E. Spencer, F.A.C.C.A.

Vice-Chairman: The Immediate Past President, Mr G. L. Barker, F.A.C.C.A.

Messrs V. R. Chennell, F.A.C.C.A. (Vice-President of the Association); J. E. Harris, B.COM., F.A.C.C.A. (Past President); Lord Latham, J.P., F.A.C.C.A. (Past President); Messrs C. R. Poole, F.A.C.C.A., F.I.M.T.A.; and F. C. Osbourn, M.B.E., B.A., LL.B. (Secretary of the Association).

Lord Latham is to be a vice-chairman of a technical session.

Mr Harris will submit a paper on "The purpose and principles of accounting'.

Approximately 150 United Kingdom and overseas members of the Association, together with their ladies, will be attending the Congress.

# The Institute of Municipal Treasurers and Accountants

Official Delegation

Chairman: The President, Mr Norman Doodson, F.I.M.T.A., F.S.A.A.

Vice-Chairman: The Vice-President, Mr G. C. Jones, F.C.A., F.I.M.T.A.

Messrs H. Keeling, F.I.M.T.A.; I. M. Cowan, M.B.E., F.I.M.T.A., F.S.A.A.; L. F. Cheyney, O.B.E., F.I.M.T.A., F.S.A.A. (Secretary of the Institute).

ALTERNATES: Messrs H. R. Page, M.A.(ADMIN.), F.I.M.T.A.; E. L. Jones, F.I.M.T.A.; H. Hayhow, O.B.E., F.I.M.T.A., F.S.A.A.; Richard Davis, F.I.M.T.A.

Mr Doodson is to submit a paper on 'Accounting in the public sector'.

About fifteen other members, with their ladies, hope to accompany the official delegates.

# The Institute of Cost and Works Accountants Official Delegation

Chairman: The President, Mr W. Bishop, c.A., F.C.W.A.

Vice-Chairman: Mr Ian T. Morrow, C.A., F.C.W.A. (Past President).

Messrs J. F. Body, F.C.A., F.C.W.A.; A. R. Hague, F.C.W.A.; J. L. Hilton, F.C.W.A., M.B.I.M.; W. L. Spalding, B.Sc. (ECON.), C.A., F.C.W.A., F.C.I.S. (Chairman, Education Committee); Derek du Pré (Secretary of the Institute).

ALTERNATES: Messrs W. A. Harvey, B.COM., C.A., F.C.W.A.; H. T. A. Hastie, C.A., F.C.W.A.; J. A. P. Coe, F.C.W.A.; E. A. Corbett, A.C.W.A.; L. C. Kelvin, A.C.W.A.; H. N. Wadsworth, A.C.W.A.

The President has been invited to be vice-chairman of one of the technical sessions.

Mr Morrow will present a paper on 'The need for special reports'.

About thirty members of the Institute, with their ladies, expect to attend the Congress.

# Electronics in the Office

#### Computer for Graduated Pensions Scheme

A COMPUTING system for processing data for the Government Graduated Pensions Scheme, in a new computer building in the central office of the Ministry of Pensions and National Insurance at Newcastle upon Tyne, was inaugurated by Queen Elizabeth, the Queen Mother, on July 2nd.

Based on an EMIDEC 2400, described by the manufacturers, E.M.I. Electronics Ltd, as one of the most powerful in Europe, the system has many novel features and the high computing speeds, combined with flexibility of input and output equipment, make it ideal to cope with the problems which the scheme involves.

Although it is expected that eleven million people will have paid contributions to the Graduated Pension Scheme in the first year, the computer's magnetic tape files will additionally contain records for over twenty-six million insured persons under the general national insurance scheme, and about one million new accounts will be inserted into the files each year.

The files contain information about each insured person, such as national insurance number, name and address, date of birth and graduated contributions paid. The file containing contribution details will be searched every two days in order to extract information about persons approaching retirement age or retiring after that age. Nearly forty million contribution items and changes of circumstances will be entered in the files each year.

The system uses twenty-four EMIDATA magnetic tape decks. To speed the flow of information from the computer, an ultra high speed Rank Xeronic printer, capable of producing 3,000 lines a minute, is used.

#### **Course on Computers**

LECTRONIC computing systems' will be the Sir John Cass College, Jewry Street, Aldgate, London EC3, commencing on October 24th. Two lectures will be given each evening, the first from 6.15 p.m. to 7.15 p.m. and the second from 7.30 p.m. to 8.30 p.m.

The course is intended for executives and others interested in the commercial applications of computers. No prior technical knowledge will be assumed. The first part of the course will consist of twelve lectures on 'The construction and operation of electronic digital computing systems designed for commercial purposes' and will give an appreciation of the operation and programming of computers in general. Part II of the course, which will begin on January 16th, 1963, will comprise twelve lectures on 'Some commercial applications of electronic digital computing systems'.

The fee for the course is £1 and applications to attend should be made to the secretary of the College, prior to the opening date of the course.

#### Mail Order Mechanization

THE chain store division of Littlewoods Mail Order Stores Ltd is to use an N.C.R. 315 computer to control the distribution of merchandise and keep its financial accounts. The installation, which will be situated in Liverpool, will cost about £180,000.

One of the computer's main tasks will be to maintain sales and stock records for the company's seventy stores. It will then use the information to determine the best ways to distribute available stocks of different lines. This operation will take into account a variety of factors, from changes in fashion to the assembly of economic transport loads. When fully developed, the system is expected to be one of the most advanced of its kind. In parallel with the preparation of delivery notes and other documents, the 315 will also produce up-to-date trading records and sales statistics, and will calculate the profit percentage on individual lines.

The records of these operations will be stored in CRAM, the computer's Card Random Access Memory, which employs magnetic cards housed in interchangeable cartridges.

The use of this system of storage will also reduce the size and cost of the installation. Suppliers' records and stores' trading records will be held in a single CRAM cartridge, which measures only a few inches in all dimensions.

#### Bank Adopts 13B System

LOYDS bank has placed an order with Burroughs Machines Ltd for a data processing system which envisages the automation of their clearing departments.

Known as the B.271, the system incorporates central computers, magnetic character sorter/readers and high-speed multi-tape listers. The sorter/reader sorts cheques at a speed of 1,500 per minute, supplies input to the central computer from which output is by means of the high-speed multi-tape lister which lists and adds cheques at the same rate. Also included is encoding equipment which will inscribe the amount on completed cheques in magnetic ink characters.

The delivery of the B.271 equipment is phased to coincide with the progressive circulation of magnetically-encoded cheques. The significance of this decision by Lloyds is that all cheques issued by the bank will, in due course, be magnetically encoded as to the amount so that eventually they may become the automatic instruments of customer accounting. The E-13B common machine language was adopted by the London clearing banks in November 1960.

#### Computer System for B.O.A.C.

PRITISH OVERSEAS AIRWAYS CORPORA-TION has ordered from IBM United Kingdom Ltd a data processing system to be installed at London Airport. The system comprises an IBM 1410 computer, with RAMAC random access disc storage, and an IBM 1401 computer in support. Magnetic tape units in the system will be switched between the two computers.

The applications to be handled by the installation include revenue accounting, payroll, flight operations, and control of engineering stores. The 1401 system will be installed in November 1963 and the 1410 system in February 1964.

# Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the Annotated Tax Cases'.

# Thomas McGhie & Sons Ltd v. British Transport Commission

In the High Court of Justice (Queen's Bench Division)
April 11th, 1962

(Before Mr Justice PHILLIMORE)

Income tax – Profits tax – Non-working of mine – Compensation therefor – Whether for loss of profits or for capital asset – Whether tax liability to be taken into account – Railway Clauses Consolidation Act, 1845, sections 77, 78A – Mines (Working Facilities and Support) Act, 1923, section 15.

The applicant, the lessee of minerals under the area of protection of a railway, gave notice to the respondent of its intention to work the minerals. The respondent served a counter-notice, and the effect thereof was to prohibit the applicant from working 94,338 tons of gypsum and anhydrite. The applicant accordingly became entitled to compensation under section 78 of the Railway Clauses Consolidation Act, 1845, and the question of the amount of compensation was the subject of an arbitration. It was admitted that the profit which the applicant would have made on a sale of the minerals would have been £87,135. It was also admitted that the applicant would not be liable to income tax or profits tax in respect of the compensation therefor; and that if the applicant had been liable to those taxes, the amount would have been £42,478 6s 3d. The arbitrator decided that that sum should be deducted from the £87,135, and he awarded the applicant £44,656 13s 9d.

On appeal to the High Court the applicant contended that no liability to income tax or profits tax should have been taken into account by the arbitrator, because the compensation was for a capital asset and not for loss of profit.

Held: that section 78 of the Railway Clauses Consolidation Act, 1845, as substituted by section 15 of the Mines (Working Facilities and Support) Act, 1923, gave compensation, not for the value of the sterilized minerals, but for what the mine-owner would have made out of the minerals, if he had not been

prohibited from working them; and that accordingly the incidence of taxation had been rightly taken into account by the arbitrator in arriving at the amount of the compensation.

#### C.I.R. v. Coutts & Co (Stanhope's Trustees)

In the Court of Appeal - April 17th, 1962

(Before The Master of the Rolls (Lord Evershed), Lord Justice Upjohn and Lord Justice Diplock)

Estate duty – Exemption – Settled property – Duty paid on death of spouse – Surviving spouse's life interest in whole income – Whether duty on second death would be payable in respect of same property – Competency to dispose – Whether part of settled estates non-exempted – Finance Act, 1894, sections 1, 2 (1) (b), 5 (2), 16 (3) – Finance Act, 1914, section 14.

In 1914, on the occasion of the marriage of the deceased, some freehold and leasehold property was settled so that the deceased was entitled to a rentcharge of £200 a year, and then to the deceased's husband for life, and afterwards so that the deceased should have a larger rent-charge, and then to other uses, the last of which was for the husband in fee simple. The deceased's husband died in 1916, having left his residuary estate to the deceased, and included in his residue was the ultimate trust under the 1914 settlement. Estate duty was paid on his death in respect of all the property then comprised in that settlement, subject to a deduction of a notional slice to produce the £200 a year. In 1923, the deceased made a voluntary settlement, and thereunder she received for life all the income of the property settled in 1914.

On the death of the deceased the defendants claimed that no estate duty was payable in respect of the settled property, as the duty had been paid on that property on the occasion of her husband's death in 1916. It was contended that what passed on the death of the deceased in 1957 was the property within the 1914 settlement. It was contended on behalf of the Inland Revenue that what passed on her death was her interest in the 1914 settlement; and, alternatively, that at any rate a 'slice' of the settled property representing the £200 a year was not exempt on the death of the deceased, because duty had not been paid on it on her husband's death in 1916.

Held (affirming the judgment of Mr Justice Buckley): the settled property was exempt from estate duty on the deceased's death; but that a 'slice' of that property representing the £200 was liable to duty.

#### FOR STUDENTS

#### TRADERS' PAYMENTS

FOR twenty years or more business concerns have been settling their accounts by credit transfers and during the last ten years this practice has almost trebled, with the result that in April 1960 the banks introduced a credit clearing system on the same lines as the cheque clearing system. Over the past year emphasis has been placed on the facilities available to the individual to settle his accounts by this method.

A credit transfer consists simply of an instruction made to a bank by a customer, whether he has an account or not with the remitting bank, to place a certain sum of money to the credit of another customer either of the same or another bank.

The most common use of the system by the individual is for the payment of recurring charges such as rents, mortgage repayments, insurance premiums and professional fees.

In the case of the individual who wishes to make a transfer and who is not a customer of the bank, he will of course be requested to deposit the cash to cover the transfer along with a charge of about 6d.

To the commercial establishment the greatest benefits can be obtained by the company whose periodic payment includes small remittances made to a considerable number of creditors, or for the payment of salaries, especially where the place of work of the company's employees is widespread.

#### Mechanics of the System

The operation of the traders' credit system is comparatively simple, and briefly it is as follows:

- (1) In the place of the cheque a credit slip is used which shows:
  - (a) the name of the company or individual making the transfer;
  - (b) the name and address of the bank to which the credit is to be transferred;
  - (c) the name of the account to be credited;
  - (d) the reference number of the remitter's bank.

#### (2) The Schedule

The schedule is a list in duplicate of the credit slips giving the name of the bank to be credited, the name of the individual account and the amount to be so credited. The first page of the schedule is usually prefaced by a request to the customer's bank requesting them to distribute x number of slips amounting to y number of pounds to the credit of the accounts listed, and is signed by the authorized representative of the company. After the bank have made the distribution the duplicate copy is returned to the company duly endorsed to that effect.

(3) A cheque to cover the total of the schedule made payable to the remitting company's bank.

Most of the leading makes of accounting machines can be adapted to produce in one operation the credit slip, schedule in duplicate, the cash sheet (usually a third copy of the schedule) and to post the creditor's account. Punch cards can be used, provided that the design is approved by the bank. Except in the cases where special stationery is required (i.e. 'no carbon

required' paper) the bank will supply free of charge a standard form of credit slip and schedule.

However, before putting the traders' credit system of payment into operation in a commercial establishment, it is wise, if not in fact essential, to obtain from the creditor his written acceptance to this mode of payment. This can be obtained by sending under a covering letter explaining the advantages of this method of payment, a standard authority (copies of which can be obtained from any bank) on which the creditor states:

- (a) the name and address of the bank to be credited;
- (b) the account to be credited, i.e. No. 1, No. 2 Sales Account, etc.;
- (c) a signature by an authorized representative of the company accepting the mode of payment.

It is usual commercial practice to enclose a pre-paid envelope with this request.

#### Some of the Advantages

The main advantages to be gained through payment by traders' credit are:

- (a) To the creditor. He will receive the benefit of the credit immediately and there will be no delay as often arises between the creditor receiving the cheque and depositing it with his bank.
- (b) To the remitter:
  - (1) no duty stamp is required. Arising from this, if a credit slip is spoilt in preparation no laborious procedure to recoup the stamp duty is required:
  - (2) the cost of the credit slip is considerably cheaper than the cost of a cheque;
  - (3) in most cases there will be a saving in postages and in the cost of envelopes. In some cases, especially in the case of nationalized bodies, remittance advices will still be required;
  - (4) a considerable saving in time by the executive whose duty it is to sign cheques, as in place of an individual signature for each cheque all that is required is one signature for the cheque covering the total payments on the schedule and one signature on the schedule itself;
  - (5) the possibility of putting a cheque in the wrong envelope, or the cheque being lost in the post is obviated;
  - (6) the common cheque errors such as the words not agreeing with the figures or a lack of signature which causes delays in the accounts being met are practically avoided.

#### Disadvantages

There are, of course, a number of small disadvantages such as the remittee not receiving an immediate notification that the account has been settled or the clerical labour involved in preparing a credit advice slip being greater than that employed in preparing a cheque but the main disadvantage applies to companies who operate on an overdraft or on the verge

of one. The average length of time between a cheque being posted and the remitting company's account being debited is about four days, whereas if the payment is effected by traders' credit the total amount of the schedule is debited immediately by the bank. Therefore, assuming that the monthly pay-out is in the

region of £100,000 the cost in bank interest alone could be as much as £800 in the year.

To somewhat mitigate this heavy interest charge and still reap the benefits of the scheme a number of companies pay the majority of their accounts by traders' credit, but pay by cheque the few accounts that involve large sums of money. This has the result of only slightly reducing the number of credits but substantially reducing the total amount of the credit.

#### Remittance Advices

There are two main ways of avoiding the extra cost of sending separate remittance advices in the cases where it is not apparent to what the payment relates. (a) Type the brief details of the payment on the reverse side of the credit slip. (b) A system that is now becoming very popular is the use of a combined bank and remittance advice slip. On the face side of the form is printed a normal remittance advice which is entered simultaneously with the ledger card in the ledger posting routine. On one half of the reverse side is printed a form of bank advice. The creditor's name and address on the face side and the name and bank details on the reverse side are entered by the use of an addressing machine at the beginning of the month or accounting period. At the end of the month or accounting period the advice is extracted from the ledger and the total to be remitted to the creditor is entered in the appropriate place on the bank advice. The form is then folded with the detailed remittance advice inside and sealed. This can then be substituted for the normal bank advice slip and is sent with the schedule etc. to the bank for distribution.

#### Cost

To look now more specifically at the costs and assuming that:

(a) there is no saving on bank commission;

- (b) that the average charge made by the bank is 4d per transaction (although this figure can be reduced by arrangement with the bank if the number of transactions is large);
- (c) 500 payments a month are made totalling £50,000.
- (1) A company without an overdraft:

``. C.	heque			Traders' Credit					
Stamp duty	•	£	s 3	d 4	Stamp duty	£	s	d 2	
Envelopes Remittance	ad-	1	5	0	Bank charge	8	6	8	
vice slips			15	0					
Postage		6	5	0					
	£	12	8	4		£8	6	10	

(2) A company operating an overdraft:

$\dot{c}$	hequ	e			Traders' C	redit		
	•	£	5 -	ď		£	S	d
Stamp duty		4	3	4	Stamp duty			2
Envelopes		I	5	o	Bank charge	8	6	8
Remittance	ad~		-		Interest (at say			
vice slips			15	0	6 per cent for			
Postage		6	5	0	four days)	33	0	0
		£12	8	4		£41	6	10

Whilst the above calculations do not take into consideration such items as saving in time of executives or of the office staff putting up cheques and the postal department dealing with them and so forth, it does show that to a company operating on a healthy bank balance monetary advantages do exist, but in the case of a company operating on an overdraft then the question whether or not to operate a traders' credit system has to be decided essentially upon the question of convenience.

# Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Beevers & Adgie and John Gordon, HARRISON, TAYLOR & Co, of Leeds, Messrs WILLIAM-SON, BUTTERFIELD & ROBERTS and BOYCE WELCH & Co. of Bradford, and Messrs Bottomley & Smith, of Keighley, announce the formation of a separate associated firm of chartered accountants under the name of Addie, Boyce, Gordon, Roberts & Co. The partners in the new firm will be Messrs Arthur Kenneth Gill, HARRY ANDERSON, MICHAEL GROVE CRAWFORD, M.A., JOHN MICHAEL LYTTON JAEGER, M.A., DAVID STEELE, GEOFFREY MICHAEL HOLROYDE, FRANCIS WILLIAM BOYCE, M.C., T.D., KENNETH WILFRID OXLEY and JAMES STANLEY HEATON. The firm will practise for the time being from the addresses of the five sponsoring firms and will act as successor to ADGIE, ROBERTS & Co, which now ceases to practise.

Messrs Charles Hamer & Co, Chartered Accountants, announce that their address is now 10 Dunning Street, Middlesbrough. Telephone: Middlesbrough 3529 and 43873.

Messrs Thorne, Lancaster & Co, Chartered Accountants, announce that as from the close of business on July 20th, they have moved their offices to Hillgate House, 26 Old Bailey, London EC4. Telephone: City 9901.

#### Appointments

Mr Raphael Dean, F.C.A., secretary of Dannimac (Manufacturing) Ltd, has been appointed a director of the company.

Mr O. R. Dorken, F.C.A., has been elected chairman of the British Export Houses Association.

Mr W. Hyde, F.C.W.A., A.A.C.C.A., has been appointed a member of the West Midlands Gas Board. He will continue as the Board's director of finance and administration, an appointment which he took up last August.

Mr F. R. B. Lockwood, F.C.A., has been appointed to the board of A. & S. Henry Ltd as deputy to the managing director.

Mr R. J. Middleton, F.C.A., has been appointed financial director of Nicholas Products Ltd.

Mr Albert E. Perry, F.C.A., secretary and chief accountant of Olympia Business Machines Co Ltd, has been appointed a director of the company.

Mr R. C. Saloway, F.C.A., has been appointed a director of Associated Coal and Wharf Companies Ltd.

Mr J. G. Shepherd, F.C.A., formerly assistant accountant, has been appointed accountant of Turner & Newall Ltd.

Mr G. S. Simpson, F.C.A., finance and accounts manager of Midland Division of Shell-Mex & B.P. Ltd, has been appointed manager of financial services at the company's head office in London.

Mr A. N. Tod, A.C.A., has become a partner of Ashton Tod & Noble, stockbrokers.

Mr James Webb, F.C.A., secretary of Craven Brothers (Manchester) Ltd, has been appointed a director of the company.

# CLOSURE OF SCOTTISH COLLIERIES Accountants in Deputation

Lord Polwarth, T.D., M.A., C.A., Chairman of the Scottish Council (Development and Industry), led a deputation from the Council on July 13th to discuss with the Secretary of State for Scotland the hardship which is likely to arise from the closure of collieries in Scotland.

Among the members of the Council who were present at the meeting held at the House of Commons were Provost W. Macfarlane Gray, o.B.E., J.P., F.A.C.C.A. of Stirling, a Past President of The Association of Certified and Corporate Accountants, and Mr J. N. Toothill, F.C.W.A., whose committee was responsible for the recently-published report on the Scottish economy.

#### RECORD OFFICE EQUIPMENT EXPORTS

Office equipment exports for May amounted to £3,725,196 (compared with £3,287,665 for May 1961) and provided the highest monthly total in the history of the industry. Main increases were in the sales of standard and electric typewriters and duplicating equipment.

Sales to E.E.C. countries again showed a substantial rise over the same month last year – £727,163 compared with £559,886. Sales to E.F.T.A. countries were £296,346 (£242,698), while those to the Commonwealth rose to £780,862 compared with £689,822 in

May last year.

#### O.E.C.D. ECONOMIC SURVEYS

Three further booklets in the 1962 series containing economic surveys of the Netherlands, Spain and Yugoslavia have been published by the Organization for Economic Co-operation and Development. Copies of the booklets are obtainable from H.M. Stationery Office, price 3s each.

# SHEFFIELD AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

#### New President

At the eightieth annual meeting of the Sheffield and District Society of Chartered Accountants held recently at the Kenwood Hotel, Sheffield, Mr C. E. Copley,

B.SC., F.C.A., was elected President of the Society for 1962-63.

Educated at Rotherham Grammar School and a graduate of Sheffield University, Mr Copley was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1926 and was elected to fellowship in 1938. Senior partner in the firm of Hart, Moss, Copley & Co, Chartered Accountants, of Rotherham and

Mr C. E. Copley

Barnsley, he is also a director of The British Wagon Co Ltd and a member of The Institute of Directors.

For sixteen years Mr Copley held the position of secretary of the Rotherham and District Chamber of Commerce and is a past president of the Chamber. He is also a past president of the Rotherham Rotary Club and for twenty-three years served as chairman of the Council of the Rotherham and District Y.M.C.A. Mr Copley is an enthusiastic golfer and a music lover.

Other officers of the Society have been elected as

follows:

Vice-President: Mr W. B. Douthwaite, F.C.A. Hon. Secretary: Mr J. M. Beard, F.C.A., Victoria Chambers, 22 Norfolk Row, Sheffield 1.

Treasurer: Mr R. L. Emmitt, F.C.A. Hon. Auditor: Mr A. G. Bedingfield, F.C.A.

Mr Copley proposed the vote of thanks to the retiring President, Mr A. G. Thomas, F.C.A., for the excellent way in which he had carried out his duties during the year. This was seconded by Mr J. W. Richardson, F.C.A.

Mr M. Sheppard, F.C.A., tendered his resignation as honorary secretary after holding this position for the past seven years, and thanks were expressed for his services to the Society during that period.

#### **Annual Report**

The report of the committee records an increase in membership of the Society during the year of eighteen, bringing the total at December 31st, 1961, to 503.

The general programme for 1961-62 consisted of a number of lecture meetings and a visit to the works and offices of Edgar Allen & Co Ltd. Luncheon meetings were held at Sheffield, Chesterfield, Doncaster and Rotherham during the year and were all well attended. Two meetings held in Sheffield for the purpose of allowing newly-qualified members to meet the President, committee, and other members of the

MOTOR — FIRE — CONSEQUENTIAL LOSS

# MOTOR UNION

INSURANCE COMPANY T TD

10 ST JAMES'S STREET, LONDON, SW1

Society achieved considerable success in creating further interest in the activities of the Society. A total of 408 members and guests attended the annual dinner held at the Cutlers' Hall on March 1st last, when the President of the Institute and the Lord Mayor of Sheffield were the principal guests. The first steps for the formation of the Sheffield Chartered Accountants' Golfing Society took place last September, and some twenty-six members of the Society have now joined.

Referring to students' classes, the report states that the committee has been greatly encouraged by the increased attendance at Saturday morning lectures for Intermediate and Final students. Following eighteen months' examination of tutorial arrangements for articled clerks, the committee have formed a Joint Tuition Authority on which students are represented.

#### THE BIRMINGHAM CHARTERED ACCOUNTANT STUDENTS' SOCIETY

The seventy-ninth annual report of The Birmingham Chartered Accountant Students' Society presented at the annual meeting on July 4th, records an active year during 1961-62 in which 130 lecture meetings were held between September 30th, 1961, and May 26th, 1962. A number of visits were made and small parties of about twenty students visited Joseph Lucas Ltd and the Birmingham Law Courts; in addition six parties were shown round the Birmingham Stock Exchange. An interesting joint debate was held with the Birmingham Law Students' Society, while, with the co-operation of the Birmingham Chamber of Commerce, a course on public speaking was run for the first time as an experiment.

Social events included the annual dinner attended by a record number of 435 members and guests and the annual ball which proved to be the most successful held by the Society in recent years. A midsummer dance was also arranged and the seventh annual treasure hunt proved popular with an entry of fifty-one cars. At sport, a considerable number of rugby football, hockey, tennis and cricket matches were played while at golf the Society twice played the senior society and won convincingly on both occasions.

The various area branches of the Society at Coventry, Hereford, Shrewsbury, Stoke-on-Trent, Wolverhampton, and Worcester all arranged full programmes during the year.

The following officers have been elected for 1962-63:

President: Mr Stanley Kitchen, F.C.A. Vice-President: Mr P. J. Garland, F.C.A.

Hon. Secretary: Mr B. R. I. Scorer, Chartered Accountants' Library, 36 Cannon Street, Birmingham 2.

Hon. Asst Secretary: Mr D. J. Bettinson.

Hon. Treasurer: Mr R. J. Easton. Hon. Librarian: Mr D. G. Parkes.

#### CHARTERED ACCOUNTANTS' **GOLFING SOCIETY**

The Chartered Accountants' Golfing Society played its annual match against The Chartered Accountant Students' Society of London at Walton Heath Golf Club on July 6th. The weather was ideal for golf and the course was in excellent condition. Both teams enjoyed the very keenly contested match, which resulted in a win for the Chartered Accountants' Golfing Society by six matches to four.

The teams consisted of five pairs each and ten four-some matches were played. The results (chartered

accountants' names first) were as follows:

#### MORNING

M. T. W. Easby and J. R. Briggs beat Tudor Davies and R. King, 2 and 1.

P. J. Hughes and D. J. Hedges lost to W. J. Moberly and I. Scade, 2 and 1.

J. M. Kaye and D. L. Shaw beat R. Stocks and R. Sinclair, 9 and 7.

R. G. M. Drummond and H. W. Pitt lost to A. Urquhart and N. Lambert, 3 and 1.
D. W. Gibson and C. I. Steen halved with A. Ross and

J. Lyttleton.

#### AFTERNOON

Easby and Hughes beat King and Lambert, 6 and 4. Kaye and Briggs halved with Tudor Davies and Moberly. Shaw and Drummond beat Scade and Urquhart, 6 and 5. Gibson and Hedges beat Stocks and Lyttleton, 7 and 6. Pitt and Steen lost to Ross and Sinclair, 3 and 2.

#### SANDWICH COURSE IN BUSINESS STUDIES

The Department of Economics and Management of Woolwich Polytechnic is to hold during the session 1962-63 an industry-based sandwich course in business studies of honours degree standard, designed especially for industrial firms operating a five-year commercial apprenticeship scheme.

Students will attend the Polytechnic for five annual periods of nineteen weeks, excluding vacations, but will also be supervised in their further studies during the industrial training period by correspondence or by attendance at tutorial classes where possible. The course will have the backing of a number of industrial companies who will be sponsoring students.

There will be two intakes of students during the session: course A. will commence on September 24th, 1962, and will finish on February 22nd, 1963; course B. will commence on February 4th, 1963, and

will finish on July 5th, 1963.

Tuition methods will include lectures, seminars, projects, tutorials, case studies, films and visits, the aim being to develop in students the capacity for original and analytical thought in their approach to business problems.

# Computing National Growth

UST as the development of the electronic computer is widening the horizons of the scientist, the engineer and the accountant, so it has opened up a new field for the professional economist. The study of 'model-building', as it is known, has not merely become fashionable in economic circles as the latest piece of theory, it is becoming an essential adjunct to the system of economic planning which is inherent in the creation of the National Economic Development Council. It will be recalled that 'Neddy' has asked its economic secretariat to prepare plans on the assumption of an annual rate of growth equal to 4 per cent per annum. Some of the technical and theoretical problems involved in the formulation of these plans, which are based upon 'model-building', are described in a new publication from the Department of Applied Economics in the University of Cambridge – A Computable Model of Economic Growth. (Chapman & Hall, 10s net.)

The model prepared by this group of Cambridge economists under the direction of Professor J. R. N. STONE, C.B.E., M.A., P. D. Leake Professor of Finance and Accounting, is one of the most sophisticated ever to be produced. It contains over 250 accounts within the social accounting matrix, an exceptionally large number for this type of model, but practicable because of the new high-speed computer currently available. The basis of this model is a large number of econometric relationships expressed in the form of equations which the computer can resolve at high speed. While the mathematical problems are thus soluble, the greater problem of ensuring that the various constants and variables making up the equations are up to date is only partially met by the computer. For example, consumption patterns will change as real incomes increase and, while it is possible to make assumptions regarding the likely relationship between, say, personal incomes and outlays on consumer durables to ensure that a reliable prediction can be made, the computer enables a very large number of forecasts to be made on the basis of differing assumptions.

It has often been asserted that before long the machine will replace the man at most levels of human activity. This may be something of an exaggeration, but there is certainly more than a grain of truth in the assertion that the effectiveness of this type of economic exercise and its development for national planning may exceed in importance changes of Treasury Ministers. Just as radar has transformed the navigation of liners, so the social accounting matrix and the computer will ultimately be indispensable in the direction of the economy.

# Short-term Gains - III

#### DEALINGS IN CONTRACTUAL RIGHTS

Nour last issue we dealt with the general rule laid down by clause 12 (1) of the Finance Bill that acquisitions and disposals of interests in assets (or rights over assets) are to be treated for Case VII purposes as acquisitions or disposals of the assets themselves. It is possible to 'acquire' a right which thereupon ceases to exist, e.g. by merger into the acquirer's pre-existing rights. In the same way, a person who grants a right thereby disposes of the right, notwithstanding that it had no previous existence.

The words 'acquire' and 'dispose' in the Case VII provisions are to be construed in this sense, unless the context otherwise requires. Clause 12 (2) provides that a contract to acquire or dispose is to be treated in itself as the acquisition or disposal; the subsequent transfer being disregarded for this purpose.

These artificial concepts naturally give rise to complexities and anomalies, and paragraphs 1 and 2 of the Ninth Schedule attempt to deal with these. Paragraph 1 was examined here last week. It deals with contracts which either do not come to fruition, or are modified. This week we examine paragraph 2 which is concerned, broadly speaking, with dealings in contractual rights to acquire or dispose of assets.

Paragraph 2 (1) postulates:

- (i) a subsisting contract;
- (ii) a right under that contract 'to acquire or dispose of an asset';
- (iii) a person 'acquiring' that right.

It treats the person as acquiring or disposing of the asset itself 'to the like extent as if he had entered into a new contract conferring' the right mentioned in (ii). Thus an acquisition can be treated as a disposal.

The cost of the 'acquisition' as mentioned in (iii) is to be treated as an *expense* of acquiring or disposing of the asset. If the person also undertakes the obligations under the subsisting contract at (i), this is not to be treated as part of the cost of the acquisition at (iii). It seems clear from the context that when the Ninth Schedule speaks of a 'right to acquire or dispose of an asset' it is not to

be taken literally, but is referring to a right to acquire or a right to dispose.

Paragraph 2 (1) (like paragraph 2 (3) which is dealt with below) is expressed to be subject to paragraph 18. Paragraph 18 (1) deals with the following circumstances:

- (iv) Pr acquires an asset; and
- (v) Pr has to be treated as if an acquisition by P2 had been an acquisition by P1.

It requires two artificial assumptions to be made as follows:

- (vi) Pr is to be treated as having acquired the asset at the time P2 acquired it;
- (vii) Pr is to be treated as having given such consideration to P2 as would produce the result that P2 made neither a profit nor a loss (computed on Case VII principles).

Where P2 had two or more acquisitions, being of different interests in the asset, then (vi) and (vii) apply to each one. There are two provisos (a) and (b) to paragraph 18 (1), as follows:

- (viii) P2's acquisition is to be treated as P1's acquisition if, and only if, the interest taken by P1 will be treated for Case VII purposes as 'deriving from' P2's acquisition; and
  - (ix) in so far as the interest mentioned in (viii) would be treated as deriving from an acquisition by P2 as a legatee, then P1 is to be treated as acquiring the asset as a legatee.

The notional dating back (see (vi) above) of P1's acquisition could take it to a date before April 10th, 1962, so as the exclude liability to Case VII tax altogether, in view of the proviso to clause 10 (1). Similarly, it could have the effect of artificially lengthening the gap between acquisition and disposal to more than the statutory six months or three years as laid down by clause 10 (2). As regards (viii) and (ix), the question whether a particular interest 'derives' from a particular acquisition is dealt with by subclause (8) of clause 13, which clause deals with the arithmetical computation of gains or losses for Case VII purposes. 'Legatee' is defined by clause 16 (1) as 'including'

'any person taking under a testamentary disposition

or on an intestacy or partial intestacy, whether he takes beneficially or as trustee'.

For this purpose, a donatio mortis causa is a testamentary disposition.

A person acquiring assets as legatee (as so defined) is not chargeable under Case VII in respect of any disposal by reference to that acquisition (clause 12 (8)) but there is an exception in the case of shares in a land-owning company (clause 14).

Paragraph 2 (2) of the Ninth Schedule makes two provisions about rights to acquire or dispose of assets (being rights under a subsisting contract):

- (x) a person disposing of the right is not to be treated as thereby disposing of the asset; and
- (xi) he is not to be treated as having acquired or disposed of the right by the subsisting contract.

Paragraph 2 (2) is expressed to be 'notwith-standing anything in subsection (1) of section 12 of this Act' but in any case the whole of clauses 10 to 16 inclusive are expressed, by clause 16 (8), to be subject to the rules contained in the Ninth Schedule. The second of the provisions, viz. (xi), does not apply to a case which is within paragraph 2 (3) of the Ninth Schedule.

Paragraph 2 (3) has three dramatis personae: P1, P2 and P3. One assumes the following circumstances:

- (xii) there is a subsisting contract for the disposal of an asset to P<sub>3</sub>;
- (xiii) P1 disposes of the asset to P2 but subject to and with the benefit of the subsisting contract at (xii);
- (xiv) the contract at (xii) is either unconditional or, if it is conditional, the condition has been satisfied by the time of the disposal at (xiii).

Given these circumstances, paragraph 2 (3) provides as follows:

- (a) (i) Pr is not treated as making any new disposal of the asset except to the extent to which it was not disposed of by the subsisting contract;
  - (ii) one must disregard so much of the consideration for the disposal at (xiii) as is attributable to the right to receive the consideration under the subsisting contract at (xii);
- (b) (i) Pr is treated as completing the disposal by the contract at (xiii);
  - (ii) paragraph I does not operate on the disposal at (xiii), i.e. one disregards the subsequent discharge of that contract or any default or abatement.

Paragraph 2 (3) is expressed to be subject to

paragraph 18 which we have dealt with above.

Paragraph 2 (4) consists of a number of words strung together so loosely that some courage is needed to assert what it really means. It is in two parts. The first part seems to envisage the following circumstances:

- (xv) P entered into a contract;
- (xvi) Under that contract P had a right to acquire or dispose of an asset (i.e. either a right to acquire or a right to dispose see the commentary to paragraph 2 (1));
- (xvii) P disposes of the right at (xvi).

Given those circumstances, then in relation to the disposal at (xvii),

- (xviii) the right is treated as having been acquired by P when he entered into the contract at (xv); and
  - (xix) as acquired by him for any consideration given by P for having that right (but excluding from such consideration his agreement to acquire or dispose of the asset).

The second part of paragraph 2 (4) is simpler. It deals with the case where P1 is under a contract to acquire or dispose of an asset and he gives consideration to P2 in order to be discharged from that contract. P2 is treated as disposing, for that consideration, of P2's right (under the contract) to dispose of or acquire the asset.

The object of paragraph 2 (5) is to withhold the operation of paragraphs 1 and 2 in certain exceptional circumstances, namely, where a person has entered into a conditional contract for the acquisition or disposal of an asset but has died without the condition being satisfied. If the contract was to acquire, then nothing in paragraph 2 is to apply so as to treat any other person as acquiring the asset by reason of the condition being eventually satisfied. However, paragraph 2 (1) is to apply in relation to a person acquiring the deceased person's right from his personal representatives or legatees. If the contract was to dispose, nothing in either paragraph applies so as to treat him as disposing of the asset when the condition is eventually satisfied.

'Personal representatives' has the same meaning as in section 423 (4) of the Income Tax Act, 1952, which incorporates the definition in section 55 of the Administration of Estates Act, 1925, but extends it to include the foreign equivalents of personal representatives.

(To be continued.)

# Reform of Schedule A

by H. S. A. MACNAIR, F.C.A.

In his Budget speech the Chancellor asserted that the proper time to decide on the future of Schedule A would be in connection with the 1963 Finance Bill, when the new valuations for rating purposes in England and Wales would take effect. After referring to the unsatisfactory character of the tax in relation to owner-occupiers, he then gave this assurance:

'We will not seek to use the new rating valuations for Schedule A purposes so far as these owner-occupiers of residential property are concerned... we will make proposals for bringing this tax on them to an end.'

It will be seen, therefore, that the end of Schedule A as a whole is a much less definite policy objective than the proposed introduction of a single corporation tax of which the Chancellor said:

'We have got beyond the stage of general talk about the desirability or otherwise of a single tax and can now look at a possible scheme.'

However, the decision to sacrifice the yield of tax derived from beneficial occupation – estimated at about £50 million – does mean that the main obstacle to change has been overcome. Although this figure was quoted in the context of prospective loss of tax from owner-occupied residential property only, it appears, in fact, from the memorandum submitted by the Board of Inland Revenue to the 1960–61 Estimates Committee, Subcommittee C., that £50 million represents the loss that would result if Schedule A were abolished and let properties assessed under Schedule D.

#### **Proposed Modifications**

Attention can be concentrated, therefore, on the modifications called for in existing administrative arrangements in order to satisfy the requirements of efficiency and equity. The proposals summarized below were included in a memorandum by the Association of British Chambers of Commerce:

(a) No separate collection of tax under Schedule A to be made where premises are owned and occupied for business purposes.

The objection that this step would entail an artificial increase in earned income relief in the case of farm-houses and other premises partly in

private occupation could be overcome initially by limiting still further the net annual value deductible from trade profits and amending from two-thirds to one-half the maximum proportion laid down by section 137 of the Income Tax Act, 1952. Ultimately the elimination of the tax charge on residential owner-occupiers would be extended to the case of business premises.

The remaining proposals were:

- (b) Where a taxpayer owns properties in a number of districts it should be arranged that the statement of tax due and its collection is channelled through a single office;
- (c) Where it is clear that the maintenance expenditure already on record for earlier years is sufficient to eliminate any Schedule A liability, the collection and subsequent refund of tax should be dispensed with;
- (d) On a change of ownership the inspector should give particulars of the previous owner's expenditure on maintenance without requiring a written authority from him;
- (e) A simplified 'new owner' return form should be devised for use where properties are acquired by a company.

#### Schedule A Administration

At this point it may be useful to consider the place of Schedule A in the organization of a typical Revenue district. The latter is divided between P.A.Y.E. (where the bulk of the staff is concentrated) and general matters; each of these two sections coming under the supervision of an inspector assisting the district inspector. The staff in the general section are divided into three groups of five members each, headed by a tax officer, higher grade. Claims and Schedule D matters are the responsibility of two such groups while the activities of the third are wholly devoted to Schedule A and Schedule B. When it is considered that the collection offices are responsible for issuing some 52 million Schedule A demands (as compared with a turnover of 7 million Schedule D demands) it will be apparent that the collection of tax under Schedule A requires an effort out of all proportion to its yield.

As regards the actual scope of the duties involved, reference may be made to the memorandum submitted by the Board to the Estimates

Committee in which the principal tasks are summarized as follows:

(1) Preparation of Schedule A assessments and issue of a duplicate to the collector.

(2) Examination of particulars of new and altered ratings supplied by the Valuation Office and the raising of new, or the adjustment of existing, assessments, as necessary.

(3) Dealing with various claims for relief or allowances (e.g. maintenance and repair, voids and unpaid rents, building society interest and other interest paid in full).

(4) Division of assessments on splitting and sale of estates.

(5) Issue to the collector of any necessary advice notes and preparation of authorizations for discharge of tax following objections and appeals.

(6) Dealing with correspondence from other groups

or other districts.

(7) Schedule B assessing (now a comparatively small feature). (In this connection it may be noted that the yield of Schedule B is of the order to £100,000 only. The abolition of this schedule, however, presupposes an alternative tax treatment of woodlands.)

#### **Cost of Collection**

In view of the fact that retention of Schedule A was recommended by the Royal Commission in 1955, it is possible that, political considerations apart, the disfavour with which it is now regarded owes something to its relatively high cost of collection. This cost was estimated by the Board in the sum of £4.4 million, based on a collection of about £103 million (exclusive of about £40 million dealt with under P.A.Y.E. and in other ways). However, the present method of operating Schedule A reflects the problems of taxing notional incomes and the changes now proposed open up the prospect of reducing the cost of collecting the tax on real property incomes to the rate applicable on average to income tax generally, about 1.5 per cent.

A reform frequently mooted is the amalgamation of the collection service with the Inspectorate with a view to elimination of duplicated effort. However, the Bamford Committee which reported in 1950 found that the parallel records were not duplicates but differed in nature and purpose and their unification would be impracticable. As regards staff it may be explained that a collection office is divided between the cashier's section and the control section. The latter deals with the necessary paper work, including liaison with the inspector's office and recovery of arrears. The personnel are trained to be interchangeable

between the sections so that seasonal peaks of work are handled without extra staff. This advantage would be lost if the control section were to be integrated with the inspector's office since, for security reasons, the cashier's section would have to be kept entirely distinct from the staff responsible for preparing assessments. The fact that the quest for economy in administration has resulted in a ratio of collection offices to inspector's offices of about 250 to 700 represents a further obstacle to any worth-while scheme of integration.

It appears that the local character of the collection service has hitherto been regarded as a basic right of the taxpayer and the decline in the number of collection offices is considered to have reached the limit compatible with such a right. The substitution of a centralized collection, however, would open up possiblities not only of economies through mechanization but, paradoxically enough, of better service to the taxpayer. This inference may be drawn from the experience in the field of surtax where the cashier's function is exercised by the Accountant-General at Worthing, while the duty of seeing that surtax is paid is laid upon the official who computes the liability. The Board stressed the advantages of this system in these terms:

'Instead of having to notify a collector of any variations in the assessment, the examiner who is dealing with the liability and making adjustments in the liability is aware of the collection position and can deal with it in the same letter. It is a very much quicker method of doing it and it saves the correspondence that goes on between the inspector and the collector.'

It may be mentioned that there are some 18 million Schedule A assessments.

#### Reform or Abolition?

It remains to consider the choice between further reform of Schedule A and its abolition. A proposal by the Revenue that assessments should be open to revision year by year has the obvious merit of eliminating related excess rent assessments, except in the somewhat rare case where an intermediate lessor pays to his superior landlord a higher rent than he himself is able to command. This proposal has the further merit that retention of Schedule A implies retention of the system of deduction of tax at source in relation to property incomes, a feature of the administration of the Revenue which is regarded as fundamental to the discouragement of tax avoidance.

The alternative course whereby all rental income would be dealt with under the rules of

90

Case VI of Schedule D raises certain difficulties. Provision would be needed for those instances where the money rent does not represent the true return to the landlord, e.g. because there is additional consideration for the letting such as a covenant by the tenant to carry out improvements. In such a case it would be appropriate to quantify the value of the benefit accruing to the landlord by adhering to the rateable value as the measure of the assessment. This measure might also be appropriate in the case of small investors, for reasons of stability and simplicity. It is suggested that there could be a right of election for this basis, subject to certain safeguards. Again, the receipt of a premium would require treatment as rent, subject to a possible option to spread the charge forward over six years as is done in the case of patent rights sold for a lump sum (section 318, Income Tax Act, 1952). As a corollary the trader or investor who pays a premium should be given the right of amortization over the period of duration of his interest, by analogy with section 316 in relation to expenditure on the acquisition of patent rights.

Another practical consideration in applying the rules of Case VI concerns the losses likely to be recorded at intervals by reason of the cyclical incidence of repairs. At present the treatment of these outgoings is inconsistent, in particular in relation to the artificial computation of excess rents on the one hand, and on the other the requirement that a loss qualifying for relief under section 346 must be computed on the lines of a commercial loss (Barron v. Littman (31 A.T.C. 387; 33 T.C. 373)).

The removal of the limit on relief imposed by reference to the net annual value would alleviate the problem as would the treatment of the management of all property in one ownership as a single activity, comparable to the 'one estate' contemplated by section 101. Evidently equity requires the grant of a right of carry-forward of unrelieved property expenses for an indefinite period, although in order to avoid possible abuse where dilapidated structures are concerned it seems probable that the right to relief in respect of such losses would be restricted to future income from property, by analogy with Case VII. Finally, it may be observed that there would be no place in the new scheme for the anomalous carry-forward of expenditure incurred by a previous owner for the benefit of his successor.

# Canada's Disclosure Act

by KENNETH F. BYRD, M.A., B.Sc.(Econ.)(Lond.), F.C.A. Professor of Accounting, McGill University, Montreal

Thas long been a fear of the Canadian Government that Canada was becoming far too dependent, financially, on the colossus across the southern border for development of her natural resources. Moving the second reading of Bill C-38 which became law on April 9th, 1962, as the Corporations and Labour Unions Returns Act, the Minister of Justice quoted the words of the Prime Minister when, as Leader of the Opposition in 1957, he spoke of the need for:

'... a national policy; not a policy of nationalism but one whereby Canada in the days ahead will remain an independent Canada and will not inexorably drift into economic continentalism; one whereby Canada will maintain her economic independence and her sovereignty; a policy that will provide national development for a greater Canada in which growth and prosperity will not be purchased at the expense of our economic independence and our effective national sovereignty'.

With the enactment of Bill C-38, popularly

called the Disclosure Bill, the Conservative Government claimed to have made the first step towards dealing with this problem. It is an attempt at self-assertion and the maintenance of independence by a nation whose growth and economic prosperity still inevitably depend on financial assistance from across her borders. While investment from abroad is still needed in vast quantities, it must not be at the expense of effective control by Canadians. The new Act is meant to ensure that Canada has, at all times, the information which will enable her to direct her policy towards the maintenance of this effective control.

#### Company Information Required

The Corporations and Labour Unions Returns Act is divided into two sections, Parts I and II. Part I concerns itself with incorporated companies (corporations), both public and private, authorized under Canadian law, whether Federal

or provincial, to carry on business in Canada. Beginning with the financial period ending in 1962, each company is required to make an annual report to the Federal Government, divided into two sections. Section A comprises details which will be fully open to public inspection. These include classification of share capital as to shares held by persons with addresses of record inside and outside Canada, respectively; the number of persons with addresses outside Canada holding each more than 5 per cent of the issued shares of a class, and the number of such shares; specified particulars as to each body corporate holding 10 per cent or more of the issued shares of any class, and the number so held; further particulars where the company itself holds more than 50 per cent of the issued shares of a body corporate authorized by Canadian law to carry on business in Canada; the name and address and nationality of each director, wherever resident, and of each officer resident in Canada.

Section B includes full financial statements for the reporting period. Also, except where the company was at no time resident in Canada during the reporting period, details are required as to the total amounts paid or credited during the period to non-residents, in respect of dividends interest, rents on real property in Canada, rent on equipment used by the company in carrying on business in Canada, and royalties classified as to copyrights, patents, industrial designs and trade-marks. Other details include remuneration of officers and directors, annuities, pensions, etc., for officers and directors and persons holding more than 5 per cent of issued shares of any class, and fees for professional services, duly classified.

Each statement in Section B is to be accompanied by a signed auditor's report. The greatest pains are taken to ensure that all information supplied in Section B shall be kept secret and not available to the public. To this end, while both A and B sections of the annual report are to be filed direct with the Dominion Bureau of Statistics, a copy of A is to be passed on to the Department of the Secretary of State and kept on record for public scrutiny, but B will remain with the Dominion Bureau which has a long experience in custodianship of such privileged information.

#### **Trade Union Provisions**

Part II of the Act is concerned wholly with labour unions on a parallel basis to the incorporated companies of Part I; this juxtaposition within a single Act being a most unusual feature. The information required is similar to that specified for incorporated companies, and there is a division into Parts A and B with a like significance. The labour unions affected are those carrying on activities in Canada, with a local union or branch in Canada and with not less than one hundred members resident in Canada on the last day of the reporting period. Where the union headquarters are outside Canada, a statement is required showing separately the total amounts paid or credited to the union, in the reporting period, by or for members resident in Canada, in respect of initiation fees, members' dues, health and welfare, death benefit and strike assessments, fines and work permits. Each financial statement in Section B is again to be accompanied by a signed auditor's report.

Part III of the Act provides for the availability of the information supplied, both by companies and unions. In the case of the unions the A information is passed on to the Department of Labour, just as it goes to the Department of the Secretary of State where companies are concerned. In these two departments the Section A information is to be available for inspection by any person for a fee not exceeding \$1.00. On the other hand, the privileged information in Section B, which remains in the Dominion Bureau of Statistics, is not to be communicable even in connection with legal proceedings, except in the case of criminal proceedings and for purposes of administration or enforcement of the Act itself. It may not, for example, be communicated to the Department of Income Tax, a fact which was stressed by the Minister of Justice in response to questions in the House. The penalty for any official or authorized person who contravenes the provisions as to this privileged information is a fine not exceeding \$1,000, or imprisonment up to three months, or both.

#### **Exempt Concerns**

A separate schedule to the Act specifies the following as exempt from disclosure under the Act: banks, insurance companies, trust and small loan companies, fraternal benefit societies, credit unions, Crown corporations, municipalities, agencies of foreign Governments, charitable bodies, broadcasting companies, airlines, and railways, telegraph, telephone or express companies. The argument here, as indicated in Parliament by the Minister of Justice, is that for the most part these companies are, in various other ways, already required to give the informa-

92

tion obtainable under the new Act and the aim is to avoid unnecessary duplication.

It remains to be seen whether this Act - which had only a handful of dissentients when it came to the vote - will, in effect, give the Canadian Government such additional information not before available to it, as will enable it to take action to control Canada's industrial and economic expansion. One of the most sensible of the contributions to the debate which preceded the second reading of the Bill was that of Mr E. I. Broome. who has had a Private Member's Bill on the order paper for three or four years dealing with financial disclosure by Canadian subsidiaries of foreign companies. He approved the Government's determination to go further than his own Bill in including in the new measure all companies in Canada, both public and private and whether under a Federal or provincial charter, together with labour unions.

#### Criticisms of the Act

Mr Broome's main criticism was that the information to be supplied in Section A did not, in fact, amount to very much. He made the point that foreign capital did not come to Canada to do her a favour but because of what Canada offered as an incentive. Consequently he objected to the fact that almost all the information of value was placed in Section B and so kept secret from the public. He urged that the Act was, in effect, protecting foreign-owned subsidiaries in competition with Canadian companies – subsidiaries such as Chrysler Corporation, General Motors, Colgate-Palmolive and International Harvester.

There can be no doubt that this is a strong point. The Canadian investor's present position is that these Canadian private company subsidiaries of huge United States parent companies are able to hide from the public, simply because they are legally private companies, financial information which competitive Canadian public companies are forced to supply. The requirements of the Securities and Exchange Commission in the United States are, on the whole, far more exacting in regard to disclosure by published accounts than those of the Companies Act (Canada) which have remained unchanged since their introduction in 1934. Why should not the subsidiary in Canada be expected to be just as open as its parent in the United States has necessarily to be? One company, at least - International Harvester - was reported in Parliament by Mr Broome as having stated that it felt that its duty to its customers and employees in

Canada necessitated publication of its balance sheet and profit and loss statement, with all the details that would have been required if it were a public company. It published this information with the intention of taking the people of Canada into its confidence.

#### Government's Aim

This seems eminently reasonable, for it is absurd to find the Financial Post having to announce that it has resorted to information published by the parent company in the United States for financial results of a Canadian subsidiary which was silent in Canada. Since a main aim of the Government is to encourage the Canadian investor to increase his share in the financing of Canadian industrial development, it is illogical to give the United States parent companies the incentive of the secrecy of Section B for restricting Canadian participation in the Canadian subsidiaries. Here there is no such justification for the difference between private and public company which is recognized where closely held family interests are involved.

The real question at issue, of course, is whether the Government could make a requirement of foreign-controlled Canadian subsidiaries which is not imposed on other Canadian private companies. The new Act will result in the supply by all Canadian private companies, to the Secretary of State, of financial information not formerly required of them. The Minister of Justice stated in Parliament that the interests of the Canadian private company not under foreign control necessitated the placing of such financial information in Section B, where it would have the privilege of secrecy. Otherwise its United States competitors would be given a means of information which might be highly damaging to the Canadian private company.

The Government's avowed aim is to obtainfull information as to the extent of present control of the Canadian economy by outside interests, both in the field of the incorporated company and in that of the labour union. The new Act will certainly supply it with a fund of information not formerly available to it. Where vast concerns like General Motors operate in Canada through private companies, sources of information hitherto completely secret will be opened up to the Government's statisticians. It remains to be seen to what extent they are able to synthesize the information and report it to Parliament, each year, in a manner which will enable it to achieve its aim.

# Service to Management - I

by R. D. S. SHRIMPTON, F.C.A.

#### Introduction

EARLY forty years ago, when I was an articled clerk, I got to know a young qualified accountant who was himself the son of a doctor. I asked him one day why he had chosen to become an accountant rather than (say) a doctor like his father. He replied that in some respects the two professions were alike and that he had been attracted by the idea of becoming a sort of financial doctor whose function it was to check the health of his patients through the medium of the annual audit, to prescribe for their financial ailments and if, unhappily, they became mortally ill, to guide them through the legal and financial intricacies of bankruptcy or liquidation.

- 2. It seems to me that this answer typifies the conception which most people, including most accountants, had of the accountancy profession at that time and even in the case of the industrial accountant the conception was not radically different. The function of the chief accountant of a manufacturing or trading company was to keep the company's books of account, to collect the book debts, to pay the creditors, to safeguard the assets through suitable recording and checking procedures, and periodically to produce to the board balance sheet snd statements of past trading results. The emphasis, in fact, was always on the past. The future was the concern of management not the accountant.
- 3. That was many years ago and since then there has been quite a radical change of thinking on the part of accountants and others with regard to the function of the accountant, and particularly the industrial accountant. More and more accountants—and more and more boards of directors—are coming to realize that the accountant can provide invaluable assistance to management in planning the future and to managers at all levels in controlling the activities for which they are responsible. This seems to me to be a development of great significance for our profession and a healthy sign that we are prepared to adapt and expand our services to meet the needs of management in the modern world.
- 4. I think I should say at this point that nothing in this paper is intended in any way to belittle the importance of the services which accountants have always provided and will continue to provide in controlling the accounting function and in the fields

A paper given last Saturday at the Cambridge Summer Course of The Institute of Chartered Accountants in England and Wales. The author is chief accountant in the Paints Division of Imperial Chemical Industries.

of auditing, bankruptcy, liquidation, taxation and financial advisory services of all kinds. What has happened – so it seems to me – is that a new dimension has been added to the function of the accountant. He is no longer just a scorer whose job it is to prepare periodic reports on the past. Now he is expected to take a full part in the game as a member of the management team.

5. This new dimension which has been added to the accountant's function lies in the field of what is usually known as 'financial control' and we must now consider what we mean by financial control and the manner in which it should be exercised in a well-run manufacturing company. (The same principles will apply in the case of purely trading companies or firms, but in their case the application will, of course, be very much simpler.)

#### The Scope and Purpose of Financial Control

6. What then do we mean by financial control and what is its purpose? Before I answer that question I think we should consider what is the fundamental objective of manufacturing industry. As I see it, and in the purely material sense, the fundamental objective of every manufacturer must be to sell his products with maximum profit in the long term. I say 'in the long term' because policies which produce additional profits in the short term may have the effect of reducing profits in the long term, and it is the long-term picture that is important. Long-term profitability is ultimately dependent upon having a growing number of customers each of whom believes that he is getting a good product at a fair price. It follows that to ensure long-term profitability a manufacturer should be prepared to buy the best materials for the job, to pay good salaries and wages in order to secure good men for his manufacturing, selling and administrative operations and to be

content with reasonable profit margins in order to retain and increase his business and discourage competition.

- 7. There are some people, of course, who think that there is something inherently wrong in the idea of profit and the profit motive. In fact, as we all know, the profitability of a manufacturing enterprise is the best measure we have of the effectiveness with which the manufacturer has made use of his human and physical resources in providing to his customers the products which he manufactures.
- 8. In order to achieve maximum long-term profitability the manufacturer must first create a market for his products and he must then supply products of the right quality, at the right price and in quantities adequate to meet market requirements with the minimum overall expenditure of the three basic factors in production, i.e. capital, materials and labour. The purpose of financial control is to help the managers of the organization at all levels to do just that.
- 9. In principle, financial control comprises three operations, i.e.
  - (a) conversion of the plans of the organization both long-term and short-term—into terms of money.
  - (b) Comparison in terms of money of actual and planned performance.
  - (c) Ascertainment of the reasons for divergencies between actual and planned performance as a guide to appropriate corrective action.

The ways in which these operations are carried out in practice will, of course, vary widely in accordance with the type of business, the organization and management structure of the company and the personal predilections of the directors and the chief accountant. The following description of a typical financial control system should not, therefore, be taken as a blue-print to which all systems must conform but merely as an illustration of the principles involved.

- ro. Let us now consider how a typical financial control system would operate. It is a statement of the obvious that every manufacturer who wishes to run his business successfully must first decide what he is trying to do and then formulate a fundamental policy to guide him in giving effect to his decision. This policy may be changed from time to time in the light of changed circumstances but it is most important that at all times there should be a definite policy for running the business which is fully understood by the directors and managers of the business. In formulating such a policy the manufacturer must answer one or more of the following questions:
  - (a) Should I restrict my range of products to those in regard to which I am technically competent or should I enlarge my product range to cover other related requirements of the market(s)

- which I serve? In the latter case, I may we need to buy 'know-how' or to increase substantially my expenditure on research an development.
- (b) Should I enter new markets with my existin and/or a new product range?
- (c) In regard to the products which I supply, an the markets which I serve, should I try t cover the whole field of usage or should concentrate on a particular quality bracket?
- (d) How big do I want to be, or in other words how much of the market(s) which I serve do wish to secure? In answering this question th manufacturer should realize that in industry is rarely possible to stand still, and that usuall the only alternative to expansion is progressiv contraction.
- 11. Having made these fundamental decisions, the manufacturer must then take steps to ensure that he always has an adequate, but no more than adequate supply of the human and physical resources necessar to maintain and expand his production so that he calcalways meet the demands of his customers.
- 12. The first essential, of course, is to ensure the the human resources are adequate because in the en it is the quality of the manufacturer's employee rather than the quality of his plant and the excellenc of his materials which will ensure his success. It is most important, therefore, that the manufacture picks his employees well and in good time for ordere promotion to vacancies as they arise and that he make good provision for their training. Physical resource can be roughly classified as:
  - (a) fixed assets;
  - (b) raw materials, fuel and stores;
  - (c) services, i.e. steam, electricity, etc.;
  - (d) cash.
- 13. As already stated, the object of acquiring thes resources is to ensure that the manufacturer can mee the demands of his customers. In a competitiv market the loss of an order due to the manufacturer' inability to supply what is wanted when it is wante may mean the permanent loss of a customer. It i most important, therefore, that the physical resource should be adequate. They should not, however, b significantly more than adequate. Surplus productiv capacity and excessive stocks involve tying up capita in idle plant and materials on which it will b impossible (except in conditions of monopoly) t earn an adequate return.

#### Long-term Plans

14. In order to steer a middle course between th twin evils of surplus and shortage, the manufacture must try to gauge the probable level of demand fo his products some years ahead and this must be

continuous operation. For this purpose a long-term sales forecast, showing quantities and analysed by markets and by main products, should be prepared each year for (say) five years ahead. These forecasts will involve for each market for which the company caters, an assessment of two factors, i.e.:

- (a) the probable future rate of growth of the market as a whole, and
- (b) the probable future rate of growth or decline of the company's penetration of the market.

Having made these two basic assessments in regard to each market and each product, or group of products supplied to that market, the completion of the forecast is merely a matter of arithmetic.

15. The responsibility for preparing these long-term sales forecasts will depend upon the size of the company and the complexity of the markets which it serves. In a small company supplying a single industry the job might be done by the sales manager or one of his assistants. In a large company supplying a

number of different industries the task might be entrusted to a market research section, staffed with economists and statisticians. Whoever prepares it the forecast will finally be submitted to the sales manager who, in addition to approving the forecast, will estimate for each market, each product and each of the years covered by the forecast the net prices which he expects to realize.

16. The importance of the long-term sales forecast cannot be over-emphasized since it will form the basis of the manufacturer's plans for expansion of his productive capacity, for planned recruitment of additional staff and labour and for provision of accommodation for the additional employees. Accordingly it is worth while spending considerable time and effort to ensure that the long-term sales forecasts are as accurate as it is humanly possible to make them. Because they are so important they will need to be approved by the board and in particular the board must approve the basic assumptions made by the forecasters in regard to such factors as the future

## Some Personalities at the Institute's Cambridge Summer Course

Front Row (left to right): Mr J. H. Mann, M.B.E., M.A., F.C.A., Vice-Chairman, Summer Course Committee; Mr J. A. Jackson, F.C.A., Chairman, Summer Course Committee; Mr Percy F. Carpenter, F.C.A., President of the Institute; Mr Robert P. Winter, C.B.E., M.C., T.D., D.L., F.C.A., Vice-President of the Institute; Mr Alan S. MacIver, C.B.E., M.C., B.A., Secretary of the Institute.

Middle Row (left to right): Mr E. J. Newman, M.A., F.C.A., Leader of Group F; Mr D. S. Smith, M.A., F.C.A., Leader of Group A; Mr E. C. Sayers, F.C.A., Leader of Group G; Mr K. A. Buxton, F.C.A., Leader of Group B; Mr David Williamson, F.C.A., Speaker; Mr G. B. Judd, M.A., F.C.A., Leader of Group E; Mr G. E. Morrish, F.C.A., Leader of Group D; Mr W. Taplin, M.A., B.Com., Editor of 'Accountancy'; Mr C. H. S. Loveday, F.C.A., Under-Secretary of the Institute, Back Row (left to right): Mr D. P. Hubbard, B.A., Assistant Secretary of the Institute; Mr P. Carrel, C.M.G., O.B.E., B.A., Under-Secretary of the Institute; Mr A. W. Howitt, M.A., F.C.A., Leader of Group C; Mr R. D. S. Shrimpton, F.C.A., Speaker; Mr D. O. Bailey, F.C.A., Speaker; Mr F. M. Moys, B.A., Administrative Assistant of the Institute.

trend of national production and the effects of possible Government action, both in the domestic and the international sphere.

- 17. After board approval, the long-term sales forecast will be remitted to the production manager who must ensure that there will be sufficient plant capacity to cater for the highest level of sales during the period, i.e. usually the sales during the final year covered by the forecast. If it is found that the existing plant capacity is insufficient, the production manager will estimate the additional requirements and discuss and agree with the board the best method by which, and the place at which, these requirements should be provided. The chief engineer will then prepare detailed designs of the proposed new plant and estimates of its cost for the approval of the board.
- 18. In addition to plant capacity the production manager must also concern himself with supplies of essential raw materials and services. To ensure that these will be adequate he will calculate for each of the years covered by the long-term sales forecast the total requirements of each material and service. The figures so calculated will be passed to the supply manager who will be responsible (a) for ensuring that the materials and services will be available when they are wanted; and (b) for estimating their probable cost.
- rg. At the same time the managers of the individual works and departments of the company will be asked to prepare for the approval of the board and on the basis of the long-term sales forecast, estimates of their staff and labour requirements for each of the years covered by the forecast.
- 20. Up to this stage the various forecasts and estimates will have been expressed largely in physical and quantitative terms and it is now the job of the chief accountant to collect the figures, value them where this has not already been done, and weld them into a draft long-term plan expressed in terms of money. This will include for each of the years covered by the long-term sales forecast:
  - (a) a profit forecast;
  - (b) a forecast of capital employed;
  - (c) a cash forecast.
- 21. The profit forecasts will be based on the sales quantities for individual market and product groups given by the long-term sales forecast, the estimates of net sales realizations given by the sales manager, the estimates of raw material and services costs given by the supply manager and the estimates of staff and labour requirements furnished by the individual works and departmental managers.
- 22. The forecasts of capital employed will be divided into two sections for fixed and working capital respectively. The forecasts of fixed capital will be based on the value of existing assets, plus the estimated costs of additions to existing assets coming into production or use during the five-year period,

less the value of assets which it is planned to demolish, scrap or sell during the five-year period. For the purpose of determining capital employed fixed assets should, in my view, be valued on a 'gross' basis, i.e. before deducting depreciation, and existing assets should preferably be valued at their current estimated replacement cost. This will ensure that assets acquired in the past are valued on the same basis as assets to be acquired in the future and that the figures bear some relation to the capital investment which these assets represent. The forecasts of working capital will be based on the estimated future volume and cost of sales and on expected future stock-holding periods and terms of credit.

- 23. The cash forecasts will show for each year (a) the net cash receipts which will arise from the forecasted profits and (b) the cash which will be required for:
  - (i) income and profits taxes;
  - (ii) capital expenditure;
  - (iii) increased working capital resulting from the increased turnover;
  - (iv) dividends to shareholders.
- 24. The completed forecasts will be considered by the board. In looking at the profit forecasts and the forecasts of capital employed the board will pay particular attention to the trend of the ratio of net profit to capital employed, or, in other words, the percentage return on capital. If the trend is downward the board must decide how this unfavourable tendency is to be corrected. In coming to a decision on this point the board will first examine critically the forecasted future levels of sales volume, since probably the most satisfactory way of increasing the percentage return on capital is to increase sales volume, particularly if existing and committed future productive capacity is, or will be, under-employed. If the board decides that an increase in sales volume ought to be possible, ways and means of achieving this increase will be considered. For example, it might be decided to adopt one or more of the following alternative lines of action:
  - (a) To reduce selling prices. This may be possible without reducing unit profitability (i.e. the profit per ton, per gallon or etc.) since an increase in sales volume will mean a reduced unit cost of fixed overheads. I propose to refer again later to the question of fixed overheads and their impact on price policy.
  - (b) To improve product quality, provided the additional cost is not excessive.
  - (c) To increase the number of sales representatives.
  - (d) To undertake more (or better) publicity.

Apart from action taken to increase sales volume the percentage return on capital could be increased by the adoption of the following alternative lines of action:

- (e) Cost reduction, not forgetting that part of the cost which is represented by 'overheads'. A searching examination of the operations carried out in offices and laboratories designed to eliminate those that are not really necessary and to streamline those that are, can often produce significant cost reductions.
- (f) Debasement of product quality in order to reduce product cost if, in fact, the existing quality is manifestly superior both to market requirements and to that of competitive products.
- (g) Concentration on the more profitable products or markets at the expense of the less profitable. This policy should not, however, be carried too far since it is unwise to have too many eggs in one basket.
- (h) Increases in selling prices, provided that this is not likely to involve a disproportionate reduction in sales volume.
- (i) Reduction of capital requirements. As regards existing assets this is usually only possible in the case of working capital where reductions could possibly be made by reducing stockholding periods or by tightening up the terms of credit allowed to customers. In the case of fixed assets nothing can be done since the money spent on them cannot be unspent. Future fixed capital investment can, however, often be reduced by paring the cost of planned future plant, office or laboratory extensions. One should not carry this process too far however. It is very easy to be 'penny wise, pound foolish' when investing money in buildings and plant.

25. Finally the board will turn to the cash forecasts which will, of course, have been amended in the light of any changes in the forecasts of profits or capital employed which have resulted from board action on the lines which I have just indicated. If these show that the company is likely to have cash surplus to its requirements the directors will consider the possibility of investing the surplus cash in Government or other securities of a readily realizable nature. If, on the other hand, the forecasts show that there is likely to be a cash deficiency and the total of the company's realizable securities is insufficient to provide for the deficiency, then the directors must decide whether to try to meet the deficiency by means of a bank overdraft or whether the time has come to raise fresh capital either in the form of shares or debentures. Each of these methods of finance has its advantages and disadvantages. Bank overdrafts are suitable for financing temporary or seasonal requirements, particularly of working capital, since interest is only charged on the actual amounts overdrawn. They are unsuitable as a source of permanent capital, i.e. fixed capital and the irreducible minimum of working capital, firstly because banks are normally unwilling to lock up their funds indefinitely in this

way and secondly because there is always the risk that in a period of credit restriction the bank might decide to call on its loan. At such a time it would probably be very difficult to secure alternative finance except on very onerous terms.

#### Short-term Plans

26. To plan in general terms for some years ahead, as described above, is essential for the efficient running of any industrial organization since if this is not done there is a serious danger that the progressive and harmonious development of the business may be suddenly interrupted by shortage of plant or of essential raw materials or of cash. These long-term plans should, however, be supplemented by plans in considerably more detail for much shorter periods and the period usually chosen for financial control purposes is the company's financial year. As in the case of the long-term plan the short-term plan will be based on a sales forecast, but because the period covered is so much shorter and so much closer, the forecast will normally be prepared in much greater detail. The first step, therefore, is for the sales manager to prepare a detailed sales forecast in quantity and value for the coming year for the approval of the board. If the company's business is seasonal in character the forecast should be analysed by calendar quarters.

27. On the basis of the approved sales forecast, the production manager will prepare a detailed manufacturing programme for the year, copies of which will be sent to the works and supply managers. On the basis of the manufacturing programme the works manager will allocate plant for manufacture and will arrange for budgets of their expenditure during the current year to be prepared by the heads of the various works departments. The supply manager will take steps to ensure that the requisite raw materials are available and will estimate their cost. At the same time the managers of the various headquarters departments will be asked to prepare budgets of their expenditure for the coming year.

28. The sales forecasts and expenditure budgets, after approval by the appropriate directors, and the estimates of raw material costs, will be passed to the chief accountant who will prepare for the coming year a profit forecast, a forecast of capital employed and a cash forecast. (A chart illustrating the method of preparing Profit and Cash Forecasts is attached [see page 98] as Appendix A.) These forecasts will be submitted to the board for approval.

29. Board action in regard to these forecasts will, of course, depend on what the figures show. If the forecast return on capital and the chief accountant's explanations are considered to be satisfactory the board will approve the forecasts. If, on the other hand, the forecast return on capital is considered to be unsatisfactory – and particularly if it is significantly

#### Appendix A

#### CHART ILLUSTRATING THE PREPARATION OF PROFIT AND CASH FORECASTS

PROFIT FORECAST		SOURCE OF INFORMATION
GROSS SALES REALIZATIONS Less: Rebates, discounts, commissions, royalties and bad debts NET SALES REALIZATIONS	100 5 95	Sales forecast Estimate by chief accountant, after discussion with sales manager
Less: Cost of sales: Raw materials, packages and services Variable conversion, packing, storage and dispatch costs Carriage GROSS MARGIN	40 10 5	Estimate by supply manager Works budgets Estimate by transport manager
Less: Fixed overheads:     Departmental expenses     Publicity     Depreciation     NET TRADING PROFIT     Add: Sundry income (net)	20 5 6 9	Works and headquarters departmental budgets Publicity budget Estimate by chief accountant based on capital expenditure budget Estimate by chief accountant

CASH FORECAST		
NET PROFIT BEFORE TAX Add: Depreciation (not paid in cash)	10 6	—
Less: Income and profits taxes  CASH CONTRIBUTION FROM PROFITS	16 5	Estimate by chief accountant
Less: Fixed capital expenditure Increase in stocks Increase in debtors (less creditors) Proposed dividends (net)	4 2 2 2 2	Capital expenditure budget Stock forecast Estimate by chief accountant Board decision
NET CASH GAIN FOR PERIOD	1	7

less than the figure for the year included in the last previous long-term forecast—then the board will take action on the same general lines as that indicated above in regard to long-term forecasts which show unfavourable profit trends. If the situation looks really bad the board may require expense budgets to be cut, in which case the board will indicate the areas of expenditure where reductions are to be made.

30. Requests for budget amendments after the profit forecast has been completed will mean that much of the work involved in the preparation of the original budgets and profit forecast will have to be done all over again. To avoid this the chief accountant will be well advised to prepare, on the basis of the sales forecast and in advance of the preparation by managers of their departmental budgets, a series of approximate profit forecasts calculated on very simple lines, which will show, very approximately, the profits which will be earned on the basis of a number of alternative assumptions in regard to movements in works and departmental expenses compared with the current levels of expense. The advantage of doing this, particularly in times of trade recession, when profits are tending to fall, is that it enables the board, in the light of these approximate profit forecasts, to issue general directions in regard to the maximum permitted levels of staff, labour and expense before the various works and departmental managers prepare their budgets.

31. The profit forecast for the year, when finally approved by the board, will represent the company's official plan for the year. It is no use making plans, however, without taking steps to ensure that the plans are in fact carried out. For this purpose the chief accountant will arrange to submit to each manager, at monthly or quarterly intervals throughout the year, statements comparing the actual expenses of his department to date with the corresponding budget figures. Similarly the sales manager will receive statements comparing the actual and forecast figures to date of sales quantities, net realizations and gross margins. Copies of all these statements will be sent to the directors to whom the managers are responsible and the individual managers will be expected to give to their directors explanations of significant differences between actual and budgeted performance in relation to their own particular functions.

32. Finally, the chief accountant will prepare for the board at the end of each financial period (month or quarter) summary statements showing for the period and cumulatively to date, actual sales, actual usages of raw materials, actual expenses and actual profits compared in each case with the corresponding forecast or budget figures and, if desired, with the corresponding figures for the previous year.

(To be concluded.)

# Weekly Notes

#### MUNICIPAL TREASURERS' EXAMINATIONS

A TOTAL of 1,124 candidates sat for the May examinations of The Institute of Municipal Treasurers and Accountants, and 436 (39 per cent) were successful.

In Part A of the Final, there were 373 candidates, of whom 148 (40 per cent) passed compared with 98 successful candidates (41 per cent) in the November 1961 examination. In Part B there were 271 candidates, of whom 122 (45 per cent) were successful; in the November 1961 examination 93 (47 per cent) passed.

A total of 480 candidates sat for the Intermediate and 166 (35 per cent) passed compared with 98 (36 per cent) last November.

Places and prizes will be awarded on the combined results of these examinations and those to be held next November. The names of the successful candidates in the two parts of the Final examination, together with a summary of the results, appear elsewhere in this issue.

#### CAIPEE

THE Minister of Education, on the application of The Institute of Chartered Accountants in England and Wales, has made a common investment scheme having as its object the establishment of a common investment fund for the property of educational charities in the trusteeship of the Institute or associated with it. The initial participating charities are fifteen Institute prize funds; other charities may from time to time be accepted by the investment trustees for admission, being charities established exclusively for the advancement of education and having power to participate in common investment schemes. The scheme accordingly permits of the inclusion of educational endowments connected with district and students' societies.

The scheme is dated June 8th, 1962, and it came into effect on that date. The fund is given the name of 'Chartered Accountants' Investment Pool for Educational Endowments' (CAIPEE), and the trustees to manage the fund are Chartered Accountants' Charities Ltd.

This scheme is believed to be the first to be established under section 22 of the Charities Act, 1960, but the section, though itself new, gives statutory effect to an existing practice whereby two or more charities delegate to joint nominees the management of their property, the arrangement being sanctioned by a scheme made by the Charity Commissioners or the Minister, as the case may be, or by the Court. In accordance with the provisions of the section, the scheme now made makes provision

for, and for all matters connected with, the investment, management and winding up of the fund. Each charity participating in the scheme is credited with shares in the fund. At the outset there is a division of the fund into f shares, and each charity is credited with as many f shares as the value of that charity's contribution has in pounds. Thereafter there is a half-yearly valuation of the shares, and if a charity subsequently brings in additional funds, or a charity is newly admitted to the scheme, the number of new shares then credited is arrived at by dividing the value of the assets then brought in by the value of each existing share in the fund. Each charity's halfyearly dividend is, of course, calculated by reference to its shareholding. Broadly speaking, the field of investment of the fund is that prescribed by the Trustee Investments Act, 1961, for trust funds, the assets being divided into two pools, 'the equity pool' and 'the restricted pool', of equal market value at the date of division.

The investment trustees may wind up the scheme, but only with the approval of a resolution of the Council of the Institute. On winding up there is a pro rata distribution among the participating charities.

The value of a scheme of this kind to small charities is considerable, because it affords them investment opportunities which they would not otherwise have. CAIPEE is accordingly welcome, and it will be a matter for satisfaction if it proves to be the precursor of many others made under section 22.

#### MONOPOLY IN SCOTLAND

WHILE the effectiveness of the post-war legislation in Britain dealing with monopolies and restrictive practices is a matter of opinion, it is certain that the actual number of cases which come before the Restrictive Practices Court cannot be regarded as a true measure of its success. According to a paper submitted to the Edinburgh conference of the International Bar Association by two Scottish lawyers, Mr K. J. A. Greig and Mr J. R. Fiddes, as the number of cases heard in the Court increases, so the rate of abandonment of restrictive agreements among both producers and distributors tends to increase without the formal institution of proceedings.

As evidence for this thesis the authors cite the only cases so far brought before the Scottish Court – those concerning the Scottish Association of Master Bakers and the Wholesale and Retail Bakers of Scotland Association, heard together. The Court held that the associations had failed to establish their case that their activities were in the public interest, and the agreement was abandoned. A number of other groups terminated their agreements, in particular the Washed Sand and Gravel Associations, and the Scottish Firebrick Association; the former after contesting their case to the stage of submitting a statement of case to the Court. The authors say that the number of cases abandoned either voluntarily or following a decision of the Court, prompts the question whether

restrictive trading agreements are being driven

In a concluding thought the authors assert that the challenge to resale price maintenance is growing in Britain, not least from the supermarkets. Resistance from the manufacturers was inevitable, but the challenge may well eventually be settled, the authors suggest, by a change in the law.

#### THE BANK'S REPORT

THE report of the Bank of England for the year-ended February 28th, 1962, although slightly larger than those of earlier years, is nevertheless a very much slimmer and slighter document than the Bank's Quarterly Bulletin. The brief resume of the year's events in the financial world as they affected sterling and the Bank is based upon the longer accounts contained in earlier issues of the Bulletin. The most interesting feature of this annual report is the information it provides on the currency. Thus, a comparison of note circulation for the five years ended February 1962 shows that the present total is £2,302 million, compared with £1,966 million in 1958, an annual rate of increase of just over 4 per cent.

It is the composition of the note issue which is of most interest. In the year ended February 28th, 1958, of the above total note circulation, £1,338 million was in pound notes and £421 million in five-pound notes. Five years later the former total had been reduced to £1,091 million while the total value of five-pound notes in circulation had more than doubled at £998 million. Another table compares 1956 with 1962; for those two years pound notes represented 76 and 47 per cent of the total note issue, respectively. In contrast, whereas in the earlier year five-pound notes represented only 13.5 per cent of the total note issue, by 1962 the corresponding figure was over 43 per cent.

#### DENIAL BY SATELLITE

PRESIDENT Kennedy took the opportunity of the first Telstar transmission on Monday night of denying emphatically at his Press conference that the United States would devalue the dollar. Perhaps he thought that a denial under these circumstances, when reputedly 200 million people were watching the programme, would be particularly convincing. It has sometimes happened in the past, however, that the more emphatic a denial of a change in monetary policy, the more imminent is that change.

The President's remarks followed a period when gold has been particularly in demand on the London market. Continental buying has been persistent in the last eight weeks although France has intimated that she will not buy any more United States gold for dollars in the immediate future. For some time past Continental central banks have been quite content to hold increasing amounts of their reserves in dollars but there have been signs that confidence in the

dollar has weakened to the extent that gold is being increasingly brought with dollars.

In the spring of this year the Bank of International Settlements was equipped with a gold pool of \$250 million and this reserve is thought to be about exhausted. Indeed, it has been said that the pool may have been reinforced or gold shipped across the Atlantic in some way to avoid appearing in official trade statistics.

President Kennedy said that the United States hoped to bring its international balance of payments into better equilibrium by the end of next year and could indeed do so at any time by cutting down military aid and overseas investment. He said that if the United States were to devalue its currency, others would also devalue their monetary systems. This is true but it does not meet the point that if everybody increased the price of gold, existing gold reserves would be worth more and international liquidity would be correspondingly assisted.

#### CHANGES ON THE STOCK EXCHANGE

THE Stock Exchange Council confirmed on Monday the changes to the rules to permit members to open branches abroad. Reference to the impending change was made in our issue of July 7th, at page 16.

Expansion is, however, not the only theme these days on the Stock Exchange. There has been a long-term trend for jobbers to amalgamate owing to shortage of capital and last week proposals were put forward by a firm of stockbrokers for smaller partnerships to have common services. An application has in fact been sent to the Stock Exchange Council to alter the rules to allow the formation of one service company to provide services for a group of firms.

The idea would be for such a company to act for up to ten firms, supplying statistical and other services. It is hoped that mechanization would be possible if the service were on a considerable scale: certainly there should be a saving of expensive manpower. The attractive business for the stockbroker today comes from the institutions, not from private investors. The institutions are generally equipped with expert advice and statistical services. Like must talk with like and so it is those brokers who have the services available who tend to get the institutions' business.

#### **EUROPE'S MONETARY SYSTEM**

THE Third Annual Report of the Board of Management of the European Monetary Agreement was issued recently in Paris. It considers that confidence in the soundness of the world monetary system is much firmer than at the beginning of 1961. In the past two years the system has been subject to considerable strains in the form of balance of payment difficulties by countries whose currencies are widely used in international payments. There were also fluctuations on the gold and foreign exchange

markets and large movements of short-term capital HIGHER EARNINGS FOR MANUAL WORKERS funds.

The loss of foreign exchange reserves by deficit countries to surplus countries was much smaller in 1961 than in 1960. The main improvement, however, was achieved through advance repayment of debt and transactions with the International Monetary Fund. It is still too early, in the report's opinion, to form definite ideas as to whether the basic balance of payments situation of most countries is in better equilibrium. Meanwhile it considers that Western European countries, Canada and the United States are much better armed to manage disturbances in international monetary systems, especially those which come from the large-scale movement to shortterm funds.

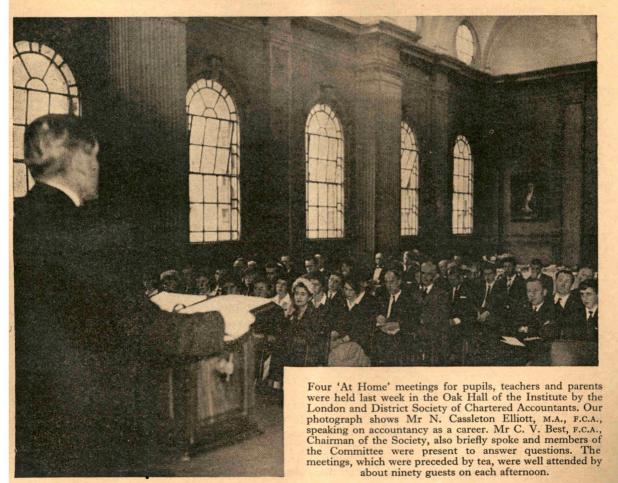

Considerable progress was made in 1961 in developing ways of controlling the effect of these movements on national and international payments. The report hopes that national techniques will be further advanced and international monetary cooperation will be actively continued.

IN spite of the pay pause, earnings for manual work in manufacturing industries were 1.9 per cent higher in April 1962 than they were six months earlier in October 1961. The rise between April and October last year was only o.8 per cent. Men on manual work earned £16 3s 10d a week on the average last April, according to provisional figures issued by the Ministry of Labour, while average weekly hours were 46.6 compared with 46.8 last October and 47.3 in April, 1961.

Average earnings for women in manufacturing industries showed a smiliar increase. This rise of 1.8 per cent, however, was on much smaller money earnings. Average earnings for women were £7 17s 1d.

If other industries as well as manufacturing ones are included in the calculations thereby giving a total of some seven million manual workers, the increase of men's earnings is even more noticeable. It was 2 per cent from last October and 3.8 per cent compared with April 1961.

#### London Chartered Accountants 'At Home'

### Tales of a Tax Man

by HAROLD E. COX

FOR YOUR NOTE-BOOKS

MANY times in the past my accountant friends, when preparing a talk or toast, have asked me for an amusing and apposite anecdote. The following miscellany could perhaps be appropriately filed, for use on such an occasion.

Confucius, so it is claimed, told the following story: 'Once I was walking in the mountains and saw a woman weeping by a new grave. I asked her the reason for her grief and she explained: "We are a family of hunters. Both my father and my husband were killed by tigers. And now my son has just been killed". 'Why don't you move away from this place?' "Oh, no!" said the woman. 'Why not?' I asked. And the woman replied: "Because there are no tax gatherers here".'

In John Earle's *Microcosmographic* (1628) there is this description of 'A Medling Man':

'He will take you aside and question you of your affaires, and listen with both eares, and looke earnestly: and then it is nothing so much yours as his.'

There were no Inspectors of Taxes in those days.

Young accountant to inspector, hopefully: 'Perhaps we can arrive at some compromise.' He should have been told the story of the bear who met a hunter and asked him what he was looking for. 'I want to get myself a fur coat for the winter.' 'Well', said the bear, 'I'm looking for my dinner. Why can't we talk this over, we can surely arrange some compromise.' And so the hunter followed the bear into a cave. Some time later the bear walked out alone. They had reached a compromise – the bear had had his dinner and the hunter had a fur coat.

"The law does not say there are to be no cakes and ale, but that there are to be no cakes and ale except as required for the benefit of the company." (Hutton v. West Cork Railway Co (1883 Ch.D.).)

Note the date: they were at it even then.

A rebel: 'If you don't stop badgering me with all these questions I shall change my inspector.'

A small boy had a shilling stuck in his gullet. His mother, a couple of neighbours and even a doctor, had failed in their efforts to make him eject it. Then another neighbour said: 'Just a moment, I know someone.' A few minutes later she returned accompanied by a brisk important-looking man. He took the child into another room and in a very short time brought him out again, slapped a half-crown down on the table and hurried out. You're allowed one guess only.

From the will of an Essex testator which was duly admitted to probate: 'From the grave I curse the

Board of Inland Revenue. All Inspectors of Taxes are sadistic and depraved individuals with no sense of equity, justice, or even common decency.' I wonder what they had done to him. He directed that a copy of the relevant part of his will should 'be sent to every Inspector of Taxes with whom I have ever had any dealings, to each member of the Board of Inland Revenue, and to whoever is the dishonest Chancellor of the Exchequer of the day'. He must have felt better when it was out!

From Professor Dicey's Law of the Constitution published in 1885:

"The whole revenue of the nation is paid into the Bank of England to the "account of His Majesty's Exchequer", mainly through the Inland Revenue Office. That office is a mere place for the receipt of taxes; it is a huge money-box into which day by day moneys paid as taxes are dropped, and whence such moneys are taken daily to the Bank. What, I am told, takes place is this. Each day large amounts are received at the Inland Revenue Office; two gentlemen come there each afternoon in a cab from the Bank; they go through the accounts for the day with the proper officials; they do not leave till every item is made clear; they then take all the moneys received, and drive off with it and pay it into the Bank of England.'

No coshes, no guns. Fings ain't what they used to be.

I recall examining the accounts of an undertaker in which there was quite a substantial charge for entertainment expenses. This was an opportunity not to be missed. I wrote to the accountant submitting that his client could hardly claim he was entertaining his customers; neither was it conceivable that prospective customers would relish discussing cerements with their soup or coffins with their coffee. The accountant rallied and in his reply reminded me that the Romans had a practice of exhibiting skulls at their banquets and sometimes miniature skeletons of silver, as a silent admonition to the guests to enjoy life while it lasted.

An elderly lady wrote despairingly:

'I have called at your office three times altogether for my rebate. The first time I was told the delay was due to the man working my case dying suddenly. The next time the girl then working my case was away sick. Will you now please put a strong healthy man on the job.'

Extract from the rules of a friendly society:

'If any brother shall strike another in Lodge he shall be fined 5s; if the offended brother strike in return he shall be fined 2s 6d. If any brother strike another out of Lodge he shall be fined 10s and if the brother so struck return the blow he shall be fined 5s.'

May I conclude with a quotation from a letter I once received from an undertaker: "Thanking you for past favours and assuring you of my best personal attention in the future'.

Our 'Industrious Accountant' returns to our columns next week - Editor.

# Finance and Commerce

#### Dixons Photographic

ROM time to time, our weekly reprint of company accounts is varied to present instead an extract from a published prospectus or similar statement which includes an accountant's report. This week, then, for the wider interest of readers, the reprint comes from the Statement of Information published in connection with the marketing of the 2s shares of Dixons Photographic Ltd, a name probably well-known to many whose hobby is photography.

The law invests such documents with their own special importance and places a grave responsibility on those charged with their preparation and publication. In this particular case, interest is immediately centred upon the extraordinary growth of profits from a mere £1,663 for the year ended March 1953, to £160,776 for the year to April 1962. To some extent this exemplifies public spending power – an ability to use present earnings, or to pledge the future, on cameras, cine-cameras, and associated equipment. It also shows what can be done by the application of big business' methods.

#### **Big Scale**

The company was registered in 1937 as Dixons Studios. Mr Charles Kalms, now aged 65, ran a portrait studio. The dropping of that line after the war for concentration on large-scale buying and intensive selling of photographic equipment is very much a demonstration of the surging energy of youth, ypified in Mr Kalms's son, Mr Stanley Kalms, the present managing director, aged 30; Mr Peter Kalms, A.C.C.A., a cousin, who is financial director, aged 32; and non-related Mr Ernest Shenton, sales director, aged 31.

Mr Stanley Kalms goes out to see foreign manufacturers of photographic equipment, notably the lapanese, on their own ground and buys on a big scale, with the obvious price advantage that large-scale buying produces. Selling is partly through tetail shop outlets, but very much through the mail-order business attracted by extensive advertising in the photographic journals and national Press.

Mr Kalms believes that the new Dixons camera shop shortly to be opened in Oxford Street, London, will be the biggest this side of the Atlantic. One point that illustrates the thought behind this 30-getting business is that this new project will cater for foreign camera enthusiasts in nine languages.

#### For Information Only

RATHER interesting reason is given for not writing into the accounts of F. Hills & Sons the increased values for land and buildings in the United Kingdom resulting from a professional revaluation. To obtain a 'more realistic' view of the company's land and buildings thus situated, states Mr M. B. Browne, the chairman, these assets were valued at March 31st, 1962, to show an overall surplus of some £369,257 over book value. Book value in the parent balance sheet (as a matter of expediency, revaluation was not undertaken in respect of the company's fixed assets in Ghana) was £476,453 less accumulated depreciation of £160,227, making £316,226 net, the basis for the figure being a professional valuation in 1936 or cost in the case of later acquisitions.

But as the revaluation was initiated 'primarily for the information of shareholders' the directors do not propose to disturb existing book values. This might almost imply that the accounts are not intended primarily for the information of shareholders, although Mr Browne could hardly have intended such an implication.

#### Lansil

SIR J. DONALD HORSFALL, chairman of Lansil Ltd, draws shareholders' attention to the result of a revaluation of land, buildings and water rights. The balance sheet view has been decidedly changed. As compared with £905,245 less £199,899 depreciation, leaving £705,346 in the 1961 comparison column, these assets now stand at £1,426,268, less £2,708 depreciation, making £1,423,560 net.

Capital reserve has benefited by the credit of £632,652 revaluation surplus, which now stands at £712,364, from which £336,250 is being transferred to capital account by a capitalization which doubles the issued ordinary capital, leaving the units as a 5s denomination, instead of units of 2s 6d.

Sir Donald says it has not been thought expedient at this time to consider revaluing the plant, in view of its extreme complexity and the expense of such an operation. But shareholders will appreciate, he adds, that the valuation given in the balance sheet does not represent 'anything like the present-day value'. The plant item in the consolidation at March 1962 was at £3,805,365 cost, less £2,459,913 aggregate depreciation, leaving £1,345,452 net.

The thought is nevertheless prompted as to whether it ought not to be possible to give some closer indication of current plant value. Presumably, it is insured – for how much?

The Chemstrand Company of New York, meanwhile, has put a worth of £2.9 million on the Lansil equity by bidding 21s 6d for the 2s 6d shares. On Wednesday the Lansil directors unanimously recommended acceptance of the offer, which is, of course, subject to Treasury consent.

#### DIXONS PHOTOGRAPHIC LIMITED

#### SHARE CAPITAL

Authorise	ed: .		ssued and ully Paid:
£300,000	in 3,000,000 Ordinary shares of 2s. each	 	 £150,000
50,000	in 500,000 Deferred shares of 2s. each	 	 50,000
£350,000			£200,000

On 23rd June, 1962, there were outstanding (a) on mortgage of the Company's freehold property the sum of £2,775; and (b) on promissory notes issued by a subsidiary to a Finance Company, secured by the assignment of hire purchase and credit sale agreements, the sum of £287,421. The Company has given its bankers a mortgage and general charge supported by an unlimited guarantee by a subsidiary to secure its overdraft from time to time; at the aforesaid date there was no bank indebtedness. Save as aforesaid neither the Company nor either of its subsidiaries has any debentures, debenture stock, mortgages or other loan capital, guarantees or bank overdrafts outstanding.

ACCOUNTANTS' REPORT.—The following report has been received from Hereward, Scott, Davies & Co., the Auditors to the Company, and Peat, Marwick, Mitchell & Co.:—

The Directors,

DIXONS PHOTOGRAPHIC LIMITED SETON TRUST LIMITED

4th July, 1962.

#### Gentlemen.

We have examined the audited Accounts of Dixons Photographic Limited ("the Company") (formerly Dixon Studios Limited) and of its wholly-owned subsidiary companies Dixon (Edgware) Finance Company Limited ("Dixon Finance") and Fotopost Limited ("Fotopost") for the periods relevant to this Report.

The entire share capitals of Dixon Finance and Fotopost were acquired by the Company on 26th April, 1961, for an aggregate consideration of £6,000 payable in cash.

The Company and its subsidiaries are referred to collectively as "the Group".

#### We report as follows:--

1. Profits.—The combined profits of the Group attributable to the members of the Company, arrived at on the basis stated below, were as follows:-

			(1)	Profits before Taxation (2)
Year ended 31st N	1ar	ch, 1953		£ 1,663
., ,,				2,559
,, ,,		1955		3,615
,, ,,		1956		5,876
17 17		1957		8,823
19 19		1958		6,810
25 77		1959		24,637
,,		1960		, 30,184
13 months ended	30t	h April,	1961	77,374
Year ended 30th	Apr	il, 1962		160,776

NOTES .- (1) The profits before taxation set out in column (2) above are arrived at:-

- (i) after charging all expenses including Directors' emoluments, interest payable, amortisation and depreciation of fixed assets as charged in the accounts; and
- (ii) after crediting commissions receivable from an associated company; and
- (iii) after making such adjustments as we consider appropriate.
- (2) Physical inventories in respect of stocks prior to 30th April, 1961, are not now available. Peat, Marwick, Mitchell & Co. have therefore been unable to confirm either that stocks were properly taken and valued on a consistent basis up to that date or that the allocation of profits between individual years up to and including the period ended 30th April, 1961, is correctly stated.
- (3) At 30th April, 1961, the Company changed its accounting practice so as to carry forward a provision for unrealised profit on Hire Purchase sales; adjustments have been made to the results of earlier years to bring them on to a comparable basis.
- (4) No depreciation is provided in respect of freehold property. Amortisation of leaseholds (which is not an allowable deduction for taxation purposes) amounted in the year ended 30th April, 1962, to £1,630; the charge for the year ended 30th April, 1963, in respect of leaseholds owned by the Company at 30th April, 1962, as revalued, will amount to £5,000.
- (5) The profits of Dixon Finance and Fotopost are included as from the date of acquisition, 26th April, 1961, the aggregate amounts so included in respect of the period from that date to 30th April, 1962, being £417.
- (6) The emoluments of the Directors of the Company for the year ended 30th April, 1962, amounted to £14,115; under the arrangements now in force the emoluments payable to the present Directors would have amounted to £15,500.

II. Net Assets.—The following is a statement of the net assets of the Company and of the combined net assets of the Group based on the audited Balance Sheets at 30th April, 1962, adjusted to take into account (a) the issue for cash of 500,000 Deferred Shares of 2s. each at par and (b) the estimated costs and expenses payable by the Company in connection with the said issue, the reorganisation of capital and the application to The Stock Exchange, London.

			Note.—Capital commitments: The Company £6,000,			
			The Group £6,000.			

III. Dividends.—Dividends have been paid by the Company at the rate of 6 per cent per annum on its 6 per cent Redeemable Cumulative Preference Shares which were finally redeemed on 26th February, 1962, as follows:—

Period	Nominal Capital on which dividends paid
lst April, 1954 to 31st March, 1959	1,690
lst April, 1959 to 31st December, 1959	1,415
1st January, 1960 to 31st March, 1960	1,625
Ist April, 1960 to 7th October, 1960	1,600
8th October, 1960 to 26th February, 1962	865

No dividends have been paid by the Company on its Ordinary Shares In respect of the period 1st April, 1952 to 31st March, 1960, or in respect of the year ended 30th April, 1962. A dividend of 37½ per cent actual, less income tax, has been paid by the Company on the issued Ordinary share capital of £15,000 in respect of the period of thirteen months ended 30th April, 1961.

IV. Accounts,-No accounts of the Company or its subsidiaries have been made up in respect of any period subsequent to 30th April, 1962.

#### ACCOUNTANT

#### CITY NOTES

If the stock-markets mirror public opinion to any accurate degree, the Government's image — for all the new faces and the new outline of policy — remains more than a little tarnished. Investment business in the stock-market is virtually at stagnation point, and the market itself is undoubtedly feeling the effect of the short-term capital gains tax.

Lord Ritchie, Chairman of the London Stock Exchange Council, has made the point that the shortterm gains tax is being imposed in the manner which the Stock Exchange warned the Treasury would have the most harmful effect on market business.

It is estimated that the tax has resulted in a reduction of some 25 per cent in the volume of short-term business on which the market relies as a stabilizing influence.

Absence of this business must inevitably result in a less commercial market in which dealings become more difficult. It is already being reflected in merger moves by leading jobbing firms and in an attempt by smaller broker firms to explore possibilities of some kind of pooling arrangement in order to hold if not reduce the level of operating costs.

Such matters are admittedly brought into sharp focus in a period of slack business. A revival of business might push them a little into the background, but while uncertainty and doubt persist in the investment mind a worth while and reliable improvement in prices and in business activity seems some way off. The consolation is that the market mood can and does change quickly.

### Reviews

#### Managerial Accounting for Small Business

by JOHN D. DALE. (Reinhold Publishing Corporation, New York: Chapman & Hall Ltd, London. 40s net.) This is a book to be read on recommendation rather than on casual acquaintance, and this review seeks to recommend. Appearances, both in style of production and language, are against it: it looks - as it is - an American 'home study' book for the busy manager of a small business who has somehow escaped formal instruction in management. The author takes a wide sweep, which includes basic accounting, the setting of standards, the compilation of budgets, management reporting in financial and non-financial terms, control of physical resources, work study and standard costing. Surprisingly, he succeeds in saying useful things about each of these subjects within 163 pages of text. Since the book is almost pocket size and the print is large this is particularly remarkable. What is more, this is achieved in sound and simple English

with only a few instances of lax writing. On the other hand, it is almost certain that these few lapses together with the examples of empirical spelling of certain words will be what will strike the eye of the person who picks the book up casually.

Funding 3% 66-68

It would be nice to believe that qualified accountants could skim through the book and then slip it nonchalantly to chosen clients for their edification; but the fact is that many accountants should study it first and then make a further extensive use of the bibliography which is provided. It is a pity, incidentally, that a book which uses basic English so well, and which could be as useful in Bangalore or Blantyre as in Baltimore or Birmingham, follows a positively isolationist line in the books and articles it recommends, and can in fact only recommend two articles and no books published in Britain.

The book is really designed to help the manager of the small business and, if he happens to be the manager of a very small business, he should not be put off by such remarks as 'a computer vastly simplifies the mechanical work of preparation'. Many of the ideas which are put forward in this book may be immediately applied if they are not already in opera-

tion. Of course, there are moments when the author has to be glib in order to pack so much into so small a compass but he does suggest in the bibliography where the reader should go for a more detailed study of any aspect. At the least the book offers a down-to-earth introduction on what is implied by the term 'management accounting' in Britain. This function has not been very well performed in other cases and the book is valuable for this reason.

### Formation and Management of a Private Limited Company

by F. D. Head, B.A., *Fifth edition* by Margaret Booth, Ll.M., Barrister-at-law. (Sir Isaac Pitman & Sons Ltd, London. 21s net.)

Timing with any book dealing with company law is a great problem. The fourth edition of this book appeared in 1950, just after the existing Companies Act. The present edition has almost immediately been overtaken by the report of the Jenkins Committee which contains a number of recommendations regarding private companies, especially the 'exempt status' companies, and resulting amended legislation may well call for a sixth edition before long. Time has already caught up with the book in one small detail: since its publication, the offices of the Registrar of Companies have moved from Bush House to City Road.

These are by no means criticisms of a most readable and helpful book whose appeal should not be confined to directors or secretaries of private companies (or those about to be!) but should also continue to provide an excellent and convenient means of keeping the major points in mind when a professional man is called upon to advise his clients. Points of interest to registrars are also dealt with, and a feature of the book is its use of ordinary everyday language. Nor does it fall into the fault from which others of the type so often suffer – that of trying to explain problems which in practice require professional attention.

The section on meetings is especially helpful in view of the lack of training in such matters of so many private company secretaries. Copies of the major forms and Table A of the Companies Act, 1948, as well as a specimen vending agreement are included and the book is altogether well produced.

#### The Principles of Production Control

by John L. Burbidge, A.M.I.MECH.E., M.I.PROD.E., M.B.I.M. (Macdonald & Evans Ltd, London. 50s net.)

This book attempts to set out in one volume the many aspects of production control. This requires the author to discuss, in addition to production planning and inventory control as such, aspects of organization, plant layout, capital employment, parts coding, work study synthetics, cost elements, work scheduling, machine loading, purchasing and dispatching. In this

he succeeds admirably and has produced a book which is both comprehensive and readable.

The tyro seeking a broad yet detailed knowledge of the many facets of production control need not be daunted by this work. The accountant, although he might not agree with all that Mr Burbidge has to say on costing, will be amply rewarded by the sections dealing with 'The design of the material flow system' and 'Methods of production control'; even the operational research fraternity may take some comfort from the remarks made about the value of their discipline in production control, although they may be inclined to quarrel with the statement 'They are therefore techniques of little practical use to the majority of medium and small companies, except in so far as they can be applied by employing consultants.' This is surely crediting operational research with being far more of an esoteric art than it really is, or is it that operational research has scared even one so experienced as Mr Burbidge?

Two minor criticisms are, first, the tendency to invent new gobbledegook like 'totoptal' and 'margoptal', particularly when the author himself states, 'These two special varieties of cost are never used for costing in practice, and the names will be generally unknown . . .'; secondly, the type-face and presentation of the book which leave one in no doubt that this is a textbook. This is a pity because the book is neither stodgy nor dull. Why must publishers make textbooks, even good ones like this, look so uninviting?

#### **Business Economics and Statistics**

by A. J. Merrett and G. Bannock. (Hutchinson & Co (Publishers) Ltd, London. 42s net.)

A basic requirement for an understanding of this book is at least the additional mathematics paper at 'O' level, or a good knowledge of basic statistical theory. The reader so equipped will find in this volume a very competent discussion and exposition of three important techniques which are extensively employed in large-scale business undertakings. The first is the use of micro-economic analysis in accounting problems, followed by a longer section on forecasting techniques such as time series analysis and simple regression analysis. The final section dealing with sampling procedures in market research is the longest section of a book which will deserve careful study by the reader with adequate algebra.

#### The Finance of Local Government

by J. M. DRUMMOND, F.S.A.A., F.I.M.T.A. revised by W. A. C. KITCHING, A.I.M.T.A., D.P.A. (George Allen & Unwin Ltd, London. 25s net.)

#### Local Authority Borrowing

A research study. (The Institute of Municipal Treasurers and Accountants, London. 30s net.)

Ten years have elapsed since the first edition of Drummond's deservedly widely-read standard text-

book appeared. The changes in local government finance and the emergence of new problems have necessitated substantial additions and revision. This has been most competently carried out by Mr Kitching who has ensured that the standard of this most useful book for students and others interested in local authority financial problems is fully maintained.

The second study from a research group of the I.M.T.A. (of which, incidentally, this year's President was the leader) is also a revised edition of a book which first appeared in 1957. The interested reader and student will find an authoritative assessment of the various borrowing procedures followed by local authorities clearly expounded, and with conclusions clearly stated. This revision affirms the high quality of the I.M.T.A. research studies.

#### Companies in the Common Market

by R. R. Pennington, Ll.D. (Solicitors' Law Stationery Society Ltd, London. 8s 6d post free.)

This pamphlet is based on a reprint of a series of ten articles, which appeared in the Solicitors' Journal, dealing with certain aspects of company law in the European Economic Community. Taxation is not discussed, nor are the more specialist matters of liquidations, mergers and reduction of share capital. Dr Pennington summarizes the salient features of the law relating to companies, i.e. formation, capital, shareholders and management for the members' countries. A final chapter discusses some of the legal issues confronting a British company transacting business in the Common Market.

#### **Dymond's Death Duties**

### Second (Cumulative) Supplement to Thirteenth Edition

by REGINALD K. JOHNS, LL.B. (The Solicitors' Law Stationery Society Ltd, London. 175 6d net.)

This supplement contains no less than fourteen pages under the heading 'Proper Law of Wills and Settlements. Foreign Immovable Property and Movable Property'. This new matter all arises out of the decision in *Philipson-Stow v. C.I.R.* which upset the existing practice. There are also several pages devoted to the decision in *Coutts & Co v. C.I.R.* concerning chargeability of settled property on the death of a surviving spouse. Thus, although the Finance Act, 1961, introduced no changes in estate duty, the Courts have been busy enough with this topic.

#### SHORTER NOTICES

THE DESIGN OF FORMS IN GOVERNMENT DEPART-MENTS. (Her Majesty's Stationery Office, London. 21s (by post 23s).) Few people enjoy filling up forms but for any administrative body dealing with the public – more especially one as large as a Government department – forms are essential. Much can be done to simplify form-filling, as well as the interpretation and assembly of the information contained thereon. This interesting book explains, with copious illustrations, what the Government has done in this field. Anyone dealing with O. & M. matters should read and study this work.

An Introduction to British Economic Statistics, by E. Devons. (Cambridge University Press, London. 12s 6d net.) This is a paper-back reprint of the 1958 edition of a book written in 1955 and supplemented by a short appendix drawing attention to changes in the published data described in the main text.

THE RATING AND VALUATION ACT, 1961, with introduction and annotations by E. Roydhouse, LL.B. (Butterworth & Co (Publishers) Ltd, London. 25s net.) Practitioners will find this reprint of statutes supplement – No. 129 in Butterworth's annotated legislation service – useful and authoritative. Apart from the schedules to the 1961 Act, appendices cover the relevant sections of the 1925 main Act, that of 1948, and also supplementary legislation of 1953 and 1955.

#### LAW REPORT

#### HIGH COURT OF JUSTICE

(Chancery Division)

#### RULING ON FLOATING CHARGE

#### Yeovil Glove Co Ltd (in liquidation) v. National Provincial Bank Ltd

Before MR JUSTICE PLOWMAN [Wednesday, July 18th]

IS lordship ruled that a floating charge over the assets, goodwill and undertaking of Yeovil Glove Co Ltd, was valid to secure the company's indebtedness to the National Provincial Bank Ltd, notwithstanding that it was created less than a year before the company was compulsorily wound up.

The applicant liquidator, Mr Arthur Malcolm Cooper, F.C.A., of Westminster Bank Chambers, Yeovil, had contended that the floating charge was void against him under section 322 of the Companies Act, 1948.

Giving judgment, his lordship said that the floating charge was created on January 24th, 1958, by way of further securing moneys covenanted to be paid under a previous legal charge of the company's property made in 1957.

The company was incorporated in 1934, its authorized capital being £50,000, of which £40,518 was issued and paid up. It was a family business, all shares being held by the directors. It had two accounts at the Yeovil branch of the bank until early 1957 when the company was indebted to the bank for about £65,000, to some extent guaranteed by the directors personally. The head office of the bank were not satisfied with the position, and required a wages account to be opened to ensure that the bank got the maximum benefit of section 319 (4) of the Act in respect of advances for wages and salaries ranking as secured debts.

A wages account called the No. 3 account was opened in February 1957, the bank instructing the company to transfer from its No. 1 account to No. 3 a sum covering the wages paid in 'week 1' when an eighteen-week cycle expired so that the account was like a tank full of water, with a tap at the top and an outlet at the bottom. The money in the 'tank' would thus afford the maximum statutory security to the bank.

In March 1957, at the bank's request, a similar account was opened for salaries, and called No. 4.

The company charged certain of its property in favour of the bank in June 1957, but later in the year the bank intimated that further security was required or its overdraft would be called in. The floating charge was executed in January 1958, when all four accounts were overdrawn to a total amount of about £67,500, which was the limit imposed by the head office.

The property charged included some leases not charged in the earlier mortgage, its uncalled capital, further property, its undertaking and goodwill, assets and rights.

On August 20th, 1958, the bank appointed a receiver. Until then, all four accounts were maintained.

After then, they ceased operation as between the bank and the company.

When the receiver was appointed the company's debt to the bank was £67,857. The receiver realized assets and made certain payments, and the applicant liquidator stated that if the bank's security was valid there would be nothing for unsecured creditors in the winding-up.

It was agreed between the parties that the floating charge was created within a year of the commencement of the winding-up, that it was not proved nor sought to be that the company was solvent immediately after its creation, that no cash was paid to the company in consideration of the charge.

The bank contended that the floating charge was a valid security, and that cash was advanced subsequent to its creation. The dispute was whether any cash was advanced subsequently to its creation.

The word 'consideration' in the expression employed in section 322 had a technical meaning in the law of contract. It was argued that consideration for subsequent advances must necessarily be past consideration and therefore invalid.

In his lordship's judgment, the bank's contention that the expression 'consideration for the charge' meant 'in consideration of the fact that the charge exists' was right. The relevant question of fact was whether the payments would have been made had the charge not been given.

Mr Justice Romer (as he then was) dealt with the point in Re Thomas Mortimer Ltd in 1925 which was reported only in Vol. 46, Journal of the Institute of Bankers, but his lordship had a copy of the judgment. That case was authority for the proposition that the words of exception in section 322 were capable of applying to a floating charge given by a company to secure its current account, even though the bank was under no obligation to make further advances.

In the circumstances, it appeared to his lordship that payments by the bank to the company or third parties after the creation of the floating charge were fresh advances of cash; made in consideration of the charge. Unless it had been given, the bank would not have allowed further drawing.

That left the question to what extent the bank had been repaid by the company, or what proportion of the advances was unpaid at the time of winding up. A preferential claim under this head and section 319 (4) was made by the bank in the sum of £21,000. The liquidator disputed the bank's contention that apportionment of repayments should be made under the rule in Clayton's case.

There was no evidence of any arrangement between the company and the bank to appropriate particular payments to particular indebtedness so as to prevent this rule applying to all the accounts.

In the result, his lordship was satisfied that the bank paid cash to the company after creation of the charge, which was not repaid before the winding up. Unless a figure could be agreed, there would have to be an inquiry as to the precise amount.

For the applicant liquidator, Mr Muir Hunter (instructed by Mathew Trackman, Lifton & Cunnington); for the Bank, Mr L. A. Morris Smith (instructed by Wilde, Sapte & Co).

A monthly feature designed to keep readers - whether in practice or in commerce - abreast of the latest developments in the field of office equipment.

#### Work Speeder for the Pay Office

COUNTING and handling coins is a slow and dirty job which is completely eliminated by a new electric machine. Keyboard operated, it dispenses coins of any total value from  $\frac{1}{2}d$  to 9s  $11\frac{1}{2}d$  straight into wage envelopes and handles forty to fifty coins per minute.

Normal method of operation is for the user to depress the keys with the right hand while holding the pay envelope below the machine chute with the left. For left-handed people, however, this arrangement can easily be reversed. The keys are marked in shillings from one to nine, in pence from one to eleven and there is also a halfpenny key. The keyboard may be an integral part of the machine or a separate, remote control unit. Alternatively, the machine may be operated by a specially adapted add-lister. This allows production of a printed record of each operation, plus sub and grand totals as required.

Money is stored in a nine-channel large capacity tray of stainless steel. This can be loaded into the machine without interfering with its operation and, since it can be stood on any level surface without spillage, can be removed without unloading. For security, it can be covered with a locking lid.

Various safeguards obviate mistakes as far as possible. Keys once depressed remain in this position until a motor bar is pressed to activate the dispensing mechanism. Self-cancelling keys preclude the setting of two amounts simultaneously in the same bank. A warning light shows when any coin channel is nearly empty. Though the machine accepts slightly defective coins, a badly bent one will jam the dispensing mechanism. Should this occur, a buzzer sounds and no further payment can be made until the keyboard is cleared.

The machine is  $13\frac{1}{2}$  in. wide, 18 in. deep, and 18 in. high with the coin tray in place. The accompanying adding machine is  $10 \times 15 \times 7$  in. An alternative version of the machine dispenses coins into a tray where a customer can pick them up.

Price is about £250; with adding machine, about £350.

Vacuumatic Ltd, 129 Kingsway, London WC2.

Vacuumatic Counting Machine with Add-lister attachment

### New Office

#### Mechanized Cheque Writing

ARECENT addition to the well-known *Protectograph* range, the T.260 cheque-writer, is lower that any of its predecessors. But, like others in this priced series, it impresses the cheque as it prints, thus making alteration by chemical or mechanical means virtually impossible.

Protectagraph T.260 Cheque-writer

Using sliders, the operator sets in the required amount, checking this by a clear indicator in front of the machine. An adjustable slide tray positions the cheque correctly; a sliding prefix block prints a £ sign and, as an extra precaution, a company name or trademark can be inserted close against the first figure of the amount, thus leaving no space for fraudulent insertion of an extra figure.

There are no rollers to be cleaned or re-inked: the machine uses a ribbon impregnated with indelible ink. Provision has been made for easy conversion to decimals. It is finished in beige and cordovan blue.

Price, with dust cover, £,95.

Halsby & Co Ltd, 52 Dean St, Shaftesbury Ave, London W1.

#### Addressing Equipment on Show

THE obvious functions of addressing machines is evidenced by their title. Less apparent are the many applications where addressing plays little or no part for which this versatile equipment can be used. In fact, almost any office or factory task which requires the repeated reproduction, in random order, of selected

### quipment

permutations of fixed data might well be handled by

addressing equipment.

At new London showrooms opened by Adrema-Bradma, visitors have an opportunity of seeing such tasks as invoicing, payroll, production of work tickets, hospital records and rating demands demonstrated on addressing equipment. One of the company's most recent high-speed models handles sixty or one hundred metal plates per minute (as decided by the operator) and includes a light signalling system which automatically indicates, for instance, the loading of various machine tools, presses and so forth when job cards are being printed, thus materially assisting in production control.

Demonstrations will also be given on the folding and inserting machines marketed by this organization and on a new range of five spirit duplicators.

Adrema Ltd, Telford Way, London W3.

#### **By-product Addressing**

USERS of tabulators, typewriters and teleprinters are provided with a means of making address masters as a by-product of invoicing or other operations by the Sten-C-Labl method. Stencil blanks, lightly attached to sets of forms, are cut as the address panel is typed or printed. These are then used in conjunction with a hand printer, loaded with a squeeze-fed bottle of weatherproof ink, to print on to labels, tags or cartons.

Lamson Paragon Ltd, Paragon Works, London E16.

#### **High-speed Collator**

COLLATING, jogging, stapling, counting and offset stacking are carried out successively and automatically on the *Fairchild* collator. The machine, which has just been introduced to the British market, can handle up to 3,000 eight-part sets per hour, the distributors say.

Paper may vary in size from  $5\frac{1}{2} \times 8$  in. to  $8\frac{1}{2} \times 14$  in. and may be in any weight from 13 to 110 lb. Should a sheet fail to feed from any station or a double feed occur, the machine is stopped by a signal from automatic detectors. The stapler may be switched out by hand if not needed.

Price is £1,350.

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6.

#### Punched-tape Filing System

NEAT, compact and well-indexed system for filing lengths of perforated paper tape – always a difficult problem – is provided by the *Daprotape* method. This houses the tapes in ingeniously-designed but low priced cassettes, made of card and equipped with an index tab. The cassettes are stored in trays which, in turn, are housed in cabinets of varying capacity.

The cassettes are supplied flat for easy storage and are assembled in a moment by folding and tucking. Each takes from a few feet of tape to 50, 120 or 170 feet, according to capacity. This range is available for two widths – \(\frac{3}{4}\) in. and 1 in. For storage, the tape is wound into a roll and the roll squeezed gently in the hand to assume an oval shape. It is then inserted through one end of the rectangular, open-ended cassette. Cassettes are filed, one behind the other from front to back of the tray, the tab of each standing up to form a visible index. Tray capacity is twenty or forty cassettes of \(\frac{3}{4}\) in. tape, thirty-two or sixteen of 1 in. Cabinet capacities vary from 880 to 2,880 cassettes of the narrower tape, rather fewer of the wider. Those of counter height have laminated plastic working tops.

Cassette prices range from 3s 3d to 4s 3d per dozen. Cabinets are from £33 14s 11d to £80 14s 1d (all prices including purchase tax.)

Punched Card Accessories Ltd, 58 Victoria Street, London SWI.

#### **Executive Furniture**

LLUSTRATED here is one of the items in the new Magnus range of executive furniture. This L-shaped unit is made in elm with a white melamine top and black stove-enamelled framework. The top of the desk is 5 ft 9 in. by 2 ft 9 in. Like others in the series, it can be supplied also in teak or African walnut, with a plain top and a timber, bright chrome or silver bronze plated frame.

The storage cabinet on the left has lockable sliding doors and two adjustable shelves, one of which may be replaced by lateral filing rails. The desk pedestal contains three 6 in. drawers and a pull-out accessory slide with perspex divisions and two pin trays. The chair shown with it, produced by the same maker, is upholstered in black hide.

Magnus L-shaped Unit

Other items include a double pedestal desk with a slide strong enough to support a dictating machine; a bookcase-cum-storage unit with glass or wooden sliding doors; two medium-sized tables; fibreglass chairs; and an equipment trolley with swivel castors.

Price of the complete L-shaped unit is about £115, including purchase tax.

Conran & Co Ltd, 5 Hanway Place, London W1.

## New Legislation

All new Acts will be noted in this column, together with those Statutory Instruments which are of interest to the profession. The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective.

#### **STATUTES** 10 & 11 Eliz, 2

#### Chapter 24: National Assistance Act, 1948 (Amendment) Act, 1962

An Act to amend section 31 of the National Assistance Act, 1948, and to empower local authorities to provide meals and recreation for old people; and for purposes connected therewith.

### Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Harold Everett, Wreford & Co, Chartered Accountants, of Harford House, 103 Gt Portland Street, London WI, announce that Mr S. L. Kingdon, A.C.A., A.A.C.A., who has been a senior member of their staff for some time, has now been admitted into partnership as from July 1st, 1962. They announce also the retirement from the practice of Mr I. B. GLICKMAN, 3.C.A. The name of the firm will remain unchanged.

Messrs Greenslade & Co, Chartered Accountants, of Dashwood House, 69 Old Broad Street, London EC2, announce with regret the death of Mr W. H. W. Greenslade, f.c.a., who had remained a consultant to the firm after his retirement from the position of senior partner.

Messrs J. & J. M. Payne, Chartered Accountants, of 324–325 High Holborn, London WCr, announce hat Mr Joseph Payne, f.c.a., has retired from the practice in order to take up a commercial appointment. I'he practice will be carried on under the same style and from the same address as hitherto by Mr J. M. Payne, A.C.A.

#### **Appointments**

Mr R. H. Dent, F.C.A., deputy chairman and managing director of the Cape Asbestos Co Ltd, has been appointed chairman of the company. He will remain is managing director.

Mr H. V. Hughes, F.C.A., has been appointed secretary of Meredith & Drew Ltd and subsidiaries.

Mr Barry R. K. Hunton, A.C.A., assistant secretary of W. & R. Jacob & Co (Liverpool) Ltd, since January 1961, has been appointed secretary of the company.

Mr F. Nash, F.C.A., has been appointed a director of John White Footwear Holdings Ltd.

Mr D. S. Stevens, F.C.A., has been appointed an additional director of First Garden City Ltd.

#### **OBITUARY**

#### Mr Richard Buxton Morrish, T.D., M.A., F.C.A.

The death of Mr Richard Buxton Morrish, T.D., M.A., c.C.A., on July 15th at the early age of 52 has come as a great shock to his many friends. Although he had been ll for several months the seriousness of his condition was not generally realized.

Born in 1910, the eldest son of Arthur Gabriel Morrish, C.V.O., F.C.A., he was educated at Clifton College and Pembroke College, Cambridge. He was admitted to membership of The Institute of Chartered Accountants in England and Wales in 1935 and became a partner in his father's firm, Morrish, Grant & Co, of London, in 1936. The firm later became Morrish, Walters & Co, in which he was a partner at the time of his death. He was also a partner in Annan, Impey, Morrish & Co.

He was commissioned in the Territorial Army in

1934 in the Royal Artillery and in the Second World War saw active service in France, where he was wounded, and in Italy and Germany, being in command of his Regiment from 1943 until 1945. He was mentioned in dispatches and awarded the Territorial Decoration. In 1945 he was a member of the Military Court which tried officials from Belsen Concentration Camp.

His civic career developed in the 1950s. He was elected to the Common Council of the City of London for Candlewick Ward in 1956. A liveryman of the Mercers Company, he was House Warden from 1961-62 and could have expected, had he lived, to become Master in 1963.

Mr Morrish was a Governor of Clifton College and of St Paul's School; he was also chairman of the Trustees of the Ranyard Memorial Home, joint treasurer of the Old Cliftonian Society, a member of the Union and Gresham Clubs and a director of several companies.

One of his keenest interests was amateur dramatics and he appeared with the Old Stagers for several years in their Canterbury productions.

Mr Morrish, who is survived by his widow, the three daughters of his first marriage and by his stepson, will be widely missed for his warm companionship and solid judgment.

#### B.O.A.C.'s FINANCIAL COMPTROLLER RESIGNS

Mr Kenneth W. Bevan, F.C.A., financial comptroller of British Overseas Airways Corporation, is resigning his appointment on October 1st next. Mr Bevan joined the corporation eleven years ago as chief accountant and was later appointed financial comptroller.

In a statement last week, the chairman of B.O.A.C., Sir Matthew Slattery, paid tribute to Mr Bevan's professional skill and integrity and to the high quality of the work which he had performed for the corporation. 'Mr Bevan,' he said, 'has for many years been under a considerable burden of work and strain and he has indicated that he is no longer able to continue under that strain. The corporation has therefore reluctantly felt obliged to accept his resignation from October 1st next.'

Mr Derek H. Glover, M.B.E., F.C.A., has been appointed to succeed Mr Bevan as financial comptroller with effect from October 1st.

#### **BOARD OF TRADE**

#### Accountants' Division: Change of Address

The Accountants' Division of the Board of Trade, hitherto located at Lacon House, Theobald's Road, London WCI, will (from today) be at the new address of 35 Old Bailey, London EC4. Telephone: City 5757. A general notice about the removal of Board of Trade departments from Lacon House appeared in our issue of July 7th.

### THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

#### **New List of Members**

The Membership and Constitution, 1962, of The Institute of Municipal Treasurers and Accountants, now published, shows that membership at January 1st, 1962, numbered 5,548 together with 280 honorary members and fellows. Comparative figures for January 1960 are 5,203 and 313 respectively. The total membership comprises 884 fellows, 2,551 associates, and 2,113 students.

Topographical and alphabetical lists of members and students are contained in the publication, together with an index to authorities the Institute's Charter and

bye-laws.

#### WIDER SHARE OWNERSHIP

The proceedings of the Wider Share Ownership Conference held in London last March and reported in The Accountant of March 24th and 31st have now been published in booklet form. The conference was called to receive and discuss a report prepared by Dr M. Abrams for the Wider Share Ownership Committee, on 'Savings and attitudes to share ownership', and the booklet contains a summary of the survey. Also included is the address of the chairman, Mr Maurice Macmillan, M.P., together with the addresses of the guest speakers, The Rt Hon. Henry Brooke, M.P., at that time Chief Secretary to the Treasury; Lord Ritchie of Dundee, Chairman of the London Stock Exchange, and Mr S. P. Chambers, C.B., C.I.E., Chairman of Imperial Chemical Industries Ltd. The booklet is illustrated with a number of photographs of personalities who attended the conference and other information includes short extracts from the speeches in the open discussion.

Also reproduced is the constitution of the Wider Share Ownership Council, as it is now called. The principal objects of the Council, it is stated, are to enlighten the community on investment matters; to promote wider share ownership, and to co-operate with

other groups working to the same ends.

#### EUROPEAN FEDERATION OF FINANCIAL ANALYSTS SOCIETIES First President elected

Sir Mark Turner, of Kleinwort, Benson Ltd, the London merchant bankers, has been elected the first president of the recently formed European Federation of Financial Analysts Societies. Mr P. W. Freeman, also of London, has been elected vice-president of the Federation.

As investment becomes more and more the business of insurance companies, banks, pension funds and investment trusts, so the place of the investment analyst increases in importance. The Federation has therefore been set up by the existing national societies of investment analysts in Europe – those of Belgium,

Britain, France, Germany, Holland and Switzerlandto give coherence and momentum to their individual efforts. It has among its aims the raising of the standards of financial analysis and the improvement of the quality and quantity of information given to investors.

The technical side of the Federation's work will be carried on through study groups, national and international, examining such questions as the standardization of financial terms in the different European countries and the critical examination of various techniques of security analysis.

The Federation's office is in Paris, at 28 rue St Marc. It can also be contacted through the Society of Investment Analysts, whose office is at 21 Godliman Street,

London EC4.

#### NATIONAL INSURANCE REPORT Jubilee Report

In 1912 about thirteen million workpeople became contributors under the first National Insurance Act. The cost of benefits then was at the annual rate of about £8½ million. At the end of last year they were costing about £1,150 million a year. These are some of the interesting facts and figures given in the Ministry of Pensions and National Insurance annual report for 1961 published last week¹.

This jubilee report states that at the end of December the Ministry was paying about 700,000 war pensions, and family allowances to over three and a half million families containing about nine and a half million children. The number of retirement pensions had risen to nearly five and three-quarter million and there were over 590,000 widows' benefits and guardians' allowances and over 180,000 industrial disablement pensions.

Claims for benefit and allowances during 1961 totalled some fifteen million; these included ning million for sickness benefit, two and a half million for unemployment benefit, 950,000 for maternity benefits, 345,000 for death grant and 830,000 for injury benefit.

The overall cost of benefits being paid at the end of the year was at the rate of over £1,385 million a year. The main items included over £100 million a year for war pensions and nearly £135 million for family allowances from Exchequer funds and about £1,150 million for benefits from the National Insurance and Industrial Injuries Funds, including £800 million for retirement pensions. Contributions were at the rate of nearly £1,000 million a year and Exchequer support was at the rate of over £200 million a year.

An article - 'National Insurance Jubilee' - appeared in *The Accountant* of December 16th last.

#### GOLF

In a match played on July 19th, at the Bromborough Golf Club, the Liverpool Chartered Accountant Students' Association beat the senior society by five matches to nil.

### NED + NIC = ?

LUS ca change, plus c'est la même chose. It would, to put it no more strongly, be unkind to apply the foregoing quip to the Government's economic policy which, in its new guise and with its new exponents, has now been presented by The Prime Minister. There are two important differences in the situation from that which prevailed some three weeks ago. First, Mr Maudling and not Mr Selwyn Lloyd is at the Treasury. Whether his policy will be so very different from his predecessor's remains to be seen; but he will at least have the advantage of certain spade work undertaken by Mr Lloyd. More important, it is certain that Mr Maudling will handle what is ultimately a public relations job more professionally than Mr Lloyd ever succeeded in doing.

The second difference is Mr Macmillan's proposal for a National Incomes Council, as yet no more than an expression of intent, with the TUC spokesman's death-wish already upon it. Yet NIC offers the possibility that it may partially alleviate, if not completely cure, the running sore of the British economy in the 1950s, i.e. the failure to match pay increases with the rate of growth in the national product. Mr Macmillan was not guilty of exaggeration when he declared that his incomes policy was not to be regarded as 'one of the methods of temporary restriction' but 'as an essential foundation . . . of a policy of expansion'.

Before examining the potential efficacy of Mr MACMILLAN's new prescription for Britain's economic ills, it is as well to be clear what the Government is trying to do. At the present time, and for the past two years, production has been and remains static. The blame for this situation has been laid at the door of Mr LLOYD's restrictive financial policy. Consumer demand has been cut back and manufacturers' order books are slimmer than in the past; hence industrialists in their turn have deferred the installation of new plant. Overall, the result has been a slackening off in the tempo of work and a reduction in the level of weekly earnings which discourages consumption, first, in a small sector of the economy, and then gradually over a much wider area of industry, so that there is concealed unemployment, high unit costs of production and little incentive. All observers are agreed on this simple analysis, and all are agreed that some stimulus is desirable which will raise both consumer spending and industrial investment and thereby accelerate the pace of economic development.

'If we could be sure', declared Mr MacMILLAN to the House of Commons, 'that expansion would not result in our running into

the problems of inflation, we should have dealt with one of the major economic problems of the age.' Unfortunately we cannot be sure. Hence, Mr Lloyd has pursued unrelentingly his restrictive credit policy because, with the given shortage of labour and its distribution, any increase in economic activity would generate wage and salary increases considerably in excess of the increase in the national product. Prices and imports would rise, confidence in sterling would certainly be weakened and ultimately the Chancellor would have to chose between devaluing sterling, running down the gold reserve or borrowing heavily overseas to support sterling until new remedial measures could be taken.

On the other hand, many critics argue that the present slack in the economy is such that the increase in the national product following a stimulus would fully match the demands for higher pay. While there is undoubtedly some truth in this contention, there are many observers of the economic scene - including, it would seem, the Treasury itself - who are sceptical. Yet, if it brings in its train a new balance of payments crisis, then the Government's future prospects of re-election will decline still further. Nevertheless. it would be a fundamental error to view this as a problem of the present administration. It is a problem for the nation and it is no comfort to realize that as yet none of the political parties has suggested how it should be met.

Successful planning, in this case for full employment and external stability, whether it be carried out by a dictatorship or by a Government agency such as N.E.D.C., cannot be achieved unless the rate of annual increases in incomes are regulated in accordance with the growth of the national product. Spokesmen for the trade unions have in their diverse ways and at varying times made it clear that the present system of wage fixing is sacrosanct. Some measure of Government intervention might be accepted by the unions if the Government's economic plan were to be based upon a comprehensive, and thus impracticable, policy of economic direction by the Government. The Government's intervention in the field of wage arbitration, not least in respect of employees in the public services, has clearly demonstrated the weakness of direct intervention in a limited sphere of the economy. This type of

pay pause must be rejected, not so much because it upsets the 'sacred cows' of wage negotiation procedures, which in any case have not worked particularly well in a fully employed economy, but primarily because it was so blatantly unfair.

If, therefore, planning directives are out of the question, the only policy open to the Government is persuasion, i.e. the need to explain to the public the basic fairness of a particular incomes policy which in the present 'mixed' economy must entail Government intervention. Herein lies the significance of the newly conceived NIC While NED should be able to measure the growth in national production and indicate the areas in the economy most seriously short of labour (if it will be permitted to point out the industries which need slimming, it will be even more effective), then the members of NIC should be able to offer applicants for pay awards an increase which bears some relationship to economic realities. Whether a disappointed union membership will choose to strike rather than accept an unpalatable award will be seen in due course. If, however, the issues in major claims were publicized, then public irritation such as arose over the electricians' award, which breached the pay pause, or public. sympathy as in the case of the nurses, might be channelled into forming an effective nation-wide pressure group. According to The Times 'in so far as there is no power within the nation able or willing to control their excesses, both trade unions and employers have become technically irresponsible'. An informed public opinion led by NIC could in time become the 'power' to which The Times refers.

Progress towards an economic policy offering full employment with external stability has been regrettably slow in the United Kingdom; it is slight consolation to learn that the West German trade unions are proving equally reluctant to restrain their current wage claims. The real failure of the last Treasury administration was its inability to explain to a public, which has been nurtured for the past twenty years on inflationary pay awards, why that policy must now halt. This is the real measure of Mr Maudling's task for, properly thought out and directed with determination, NIC could help greatly to solving Britain's basic problem.

### Caveat Emptor

Consumer Protection (Cmnd 1871), produced after three years' deliberation and study of the problem under the chairmanship of Mr Joseph Molony, Q.C., can hardly be said to recommend sweeping changes. It proposes that the existing law relating to false trade descriptions should be tightened up and consolidated; that the Board of Trade be empowered to require compulsory and more informative labelling of goods; that the consumer's rights conferred upon him by the Sale of Goods Act (of which he is often ignorant) be more widely enforced.

The most striking recommendation involves the creation of a Consumer Council with statutory powers to regulate labelling and standards. Useful though the proposed functions of this body may be, the main burden of protecting the British shopper will remain on the shoulders of the local authorities. Unfortunately, not all such bodies are as enthusiastic in enforcing the laws aimed at protecting the consumer as the Molony Committee could wish. To encourage the laggards, the number of prosecutions initiated annually by each local authority should be published.

For the wider public, and for the accountancy profession too, main interest in the report centres on the Committee's recommendations on hire-purchase. The Committee is on the whole satisfied with the current state of the law, a conclusion which will hardly meet with the approval of many vocal critics of recent hire-purchase developments. Its recommendations are thus concerned primarily with tidying up, rather than reforming the law; for example, minor modifications to the basic form of hire-purchase contract, of which the Committee comments that it is difficult to safeguard those who do not read what they sign. However, the Committee seems to recognize that there are people who need protection against high pressure salesmanship, and it therefore recommends a 'cooling-off' period of seventy-two hours after receipt of the agreement, within which period the hirer may cancel the agreement by giving notice of his intention to the finance company. The Committee suggests that this provision should be incorporated in the hirepurchase contract in suitable sized print, but recognizing that unscrupulous salesmen may seek to circumvent this provision it recommends that any failure to comply with that requirement should be treated as a criminal offence.

The Committee notes the problem arising from the position of most third parties who may acquire possession of goods subject to a hire-purchase agreement, although the title to those goods has not yet vested in the 'vendor'. The Committee makes no specific recommendation on this important topic since it is being currently studied by an inter-departmental committee. It does, however, make important recommendations on the hirer's rights in respect of goods exceeding the value of £300 which are not covered by the protective provisions of the 1938 Hire Purchase Act. In the case of such goods, upon his failure to meet the terms of his contract, the hirer may be deprived of the goods even if only a nominal sum remains outstanding. The report analyses the consequences of increasing this limit to £1,000, to cover in particular the large volume of car business, but concludes not only that the existing limit should be abolished, but that to fix any arbitrary limit would produce various inequities between different classes of hirer. The Committee recognizes that such a recommendation, if adopted in the future, would be most unpopular with the finance companies, which are already concerned with the prospect of heavy losses that would ensue, as well as the difficulty of getting cases heard promptly before the Courts, quite apart from the views of magistrates sympathetic to the hirer. The Committee rejects this concern on the grounds that the adoption of their recommendation would compel the finance companies to show 'a deeper regard than has previously been displayed for the credit-worthiness of potential hirers'.

There may well be disappointment over the Committee's recommendations which, as the report clearly states, are 'not aimed to relieve him [the consumer] of the duty to look after himself. No system of protection can avert all the consequences of folly or eliminate every possibility of hardship. . . . The consumer's first safeguard must be an alert and questioning attitude'.

### Short-term Gains — IV

#### COMPUTING THE GAINS

Twould have been possible to impose Case VII tax on the excess of the sale price over the cost price, without regard to any incidental expenses. After all, Schedule E tax is imposed in much the same way, with little more than a token provision for the deduction of expenses. However, the Government clearly intended the deduction of expenses in computing the income to be charged; witness paragraph 44 of the White Paper<sup>1</sup>. Section 13 (1) of the Finance Act, 1962<sup>2</sup> sets out the general rule that the gain to a person shall be computed

'in the like manner as it would fall to be computed for the purposes of Case I... if the acquisition and disposal (together with anything done by him to or in relation to the asset in connection with the acquisition and disposal or with a view to the disposal) had been an adventure in the nature of trade'.

It will be recalled that 'trade' for income tax purposes includes an adventure in the nature of trade, which implies a trade of comparatively short duration. This wholesale importation of Case I rules may well be a convenient device to save the draftsman trouble but it can only do so at some cost in trouble to those who have to pay the tax or administer it. Case I liability and computation are governed by the taxpayer's intention: there can be no trade unless he has an intention to make a profit; there can be no deductible expense, in general, unless he incurs it wholly and exclusively for the purposes of the trade. Now Case VII liability was meant to be independent of intention; it owes its existence largely to the doctrine established by case law to the effect that a sale at a profit attracts no tax unless, broadly speaking, the purchase was made with that profit in view.

Section 13 (1) treats as part of the notional adventure in the nature of trade (which we will call 'the adventure') anything done by the taxpayer:

- (a) to the asset; or
- (b) in relation to the asset,

provided that it was done either:

- (i) in connection with both the acquisition and disposal; or
- (ii) with a view to the disposal.

Read literally, section 13 (1) excludes anything done in relation to the acquisition alone. However, it is clear from the general tenor of the tax, and also from the express words of section 13 (3), that the consideration for the acquisition is deductible. At the same time, paragraph 2 (1) of the Ninth Schedule provides that the consideration given for the acquisition of a contractual right is to be treated as an expense of acquiring or disposing the underlying asset. From this, no doubt, we are expected to infer that such expense was incurred wholly and exclusively for the purposes of the adventure, notwithstanding that at the time it was incurred the person incurring it had no intention of reselling.

Nothing is said about capital expenditure incurred in improving the asset at a time when resale was not contemplated, but no doubt this would be allowed; provided, of course, that it was incurred by the taxpayer himself. Expenditure by some other person which added to the value of the asset would not rank for deduction, if the provisions are to be interpreted strictly.

In the case of an acquisition and disposal of land, paragraph 17 (3) of the Ninth Schedule makes special provision about maintenance expenditure, designed to prevent double allowance. The latter part of the sub-paragraph provides that maintenance expenditure 'incurred by the person chargeable' which falls to be taken into account in a Case VII computation is not to be taken into account under section 101, or section 176 (1) (g) of the Income Tax Act, 1952. These sections deal with maintenance relief for Schedule A and for excess rents. Maintenance relief already given can be withdrawn by additional assessment, 'or otherwise'. In view of the three-year limit in the case of land, any additional assessment is unlikely to be out of time. The sub-paragraph makes it clear that the relief need not have been given to the person actually incurring the expenditure. It follows that a person who has had maintenance relief may have an unpleasant surprise on

<sup>&</sup>lt;sup>1</sup> Cmnd 1710.

<sup>&</sup>lt;sup>2</sup> The Act has passed the final stages.

account of some other person making a chargeable disposal.

The earlier part of paragraph 17 (3) prohibits a deduction for maintenance expenditure 'incurred by any person' –

- (a) in computing the gain accruing to that person from the acquisition and disposal either:
  - (i) for the purposes of the profits tax (if any) chargeable on the disposal; or
  - (ii) for the purposes of paragraph 7 (3) (dealing with assets constituting trading stock);
- (b) in computing for any purpose of the Ninth Schedule the amount which would secure that on that person's disposal of the land neither a gain nor a loss accrued to him.

This last is a reference forward to paragraph 18 (1), which we dealt with in an earlier article, and which is concerned with the notional computation where one person's acquisition is treated as being another's. Profits tax and paragraph 7 (3) will be examined later.

As originally drafted, paragraph 17 (3) simply prohibited, in a Case VII computation on the acquisition and disposal of land, any deduction for any expenditure which *could* be taken into account under section 101 of the 1952 Act. However, it was pointed out that this could cause hardship to the person assessed under Case VII, where for instance he had not or could not claim full relief for this expenditure.

Paragraph 17 (4) deals with management expenses of the kind for which investment companies, insurance companies, and unit trusts can claim relief under section 425 of the Income Tax Act, 1952, as extended. No deduction for such expenditure is to be made if the section, as so extended, applies to the person chargeable and he could claim management expenses relief on it.

The credit side of the account is hardly more clear. It will be recalled that section 10 (1) excludes from charge 'gains which accrue as profits of a trade, profession, vocation, office or employment' but does not exclude interest, dividends, annual payments, etc. Section 13 (1) provides that 'no dividend or interest in respect of which tax has been borne by deduction or otherwise shall be brought into the computation as a receipt'. The words 'has been borne' must be read in a broad sense in relation to interest subject to direct taxation; since the tax is not usually borne until long after receipt of the

interest. Equally, 'receipt' must be read in a broad sense, for actual receipt of income is not a necessity in a Case I computation. Section 13 (3) speaks of 'consideration for any acquisition or disposal or . . . any receipts or expenditure' and here again 'receipts' must be read as not requiring actual receipt. If a receipt is credited at the time the account is made up, then it would seem that there can be no legal claim to relief if the debt proves afterwards to be irrecoverable. Paragraph 17 (5) of the Ninth Schedule provides for a notional 'receipt', and incidentally recognizes, by its wording, the distinction between something a person receives and something which he is entitled to receive. If the person chargeable 'receives or is entitled to claim' any capital allowance (excluding investment allowances) with reference to expenditure relating to the asset, the allowance is to be treated as a trading receipt of the expenditure - less any balancing charge. If the adventure does not relate to the whole of the person's interest in the asset, the necessary apportionment has to be made.

Section 13 (2) makes it clear that Case I rules about basis periods have no application. The gain accruing from a disposal is computed in one sum as from the 'relevant acquisition'; a phrase defined in section 13 (8) (a) as follows:

'relevant acquisition' means, in relation to any disposal of an asset, an acquisition which with that disposal amounts to an acquisition and disposal within the meaning of this Chapter, except that it does not include an acquisition by reference to which tax is not chargeable, nor an acquisition from which no interest included in the disposal derives'.

The last word of this definition leads us to another 'definition', in section 13 (8) (b):

'an interest included in a disposal shall be treated as deriving from an acquisition if without that acquisition the whole interest could not have been so included, but so that the part of that interest which does and the part which does not derive from relevant acquisitions shall be determined as if any interest of temporary duration subsisting at the time of the first relevant acquisition (other than an interest of such a duration as to expire before the time of the disposal) had been of the same duration at the time of the disposal'.

A gain accrues at the time of the disposal, or at the time of the acquisition if later (section 10 (3) (b)).

(To be continued.)

### Meeting the Mandarins

NYONE who wishes to spend Bank Holiday week-end making the vicarious acquaintance of the comparatively small band of influential people who apparently 'run' Great Britain may do so for the modest sum of 35s. The expert guide on this diverting excursion is a London journalist, Mr Anthony Sampson, and his medium is a long and consistently readable book of 650 pages<sup>1</sup>. In it he takes the reader to all the traditional seats of power - the palace, the Houses of Parliament, Downing Street, the ministries, the clubs, the boardrooms of City bankers and West End financiers and even further afield to the senior common rooms of Oxford and Cambridge colleges and to the still stately homes of England. He describes the distinguished occupants of these and other hallowed places deftly, often supplying sartorial detail to indicate character and background ('Everything about him seems to droop - his moustache, his eyes, his mouth, his floppy cardigan' and '... an adventurous stockbroker in Old Etonian braces' are but two examples) and briskly outlines their importance in the scheme of higher things.

The hierarchy he divides into three not altogether clearly defined sections. The first of these, the review of which occupies rather more than half the book, covers royalty, the peerage (on dukes he is delightful), politicians, the Civil Service, the Church, the law, the armed forces and the Press. Part two deals with the City as represented by the Stock Exchange, the Bank of England, other banks and financial houses and insurance and property interests. Part three is concerned, rather haphazardly, with big business. In this section appears a short chapter on accountants.

Mr Sampson, on the whole, is fair to the profession. He calls it the priesthood of industry and attributes much of its present power to the ability of its members to master, among other things, the complexities of taxation. He deplores, however, its (to him) cautious and generally pessimistic outlook and believes that the whole

history of the profession, beginning as it did with bankruptcies and thriving in times of business depression, has filled accountants with 'a vivid sense of disaster'. He would like to see them much more imaginative and adaptable to change.

On his own admission, Mr Sampson is neither a social historian nor a student of constitutional procedures but an inquiring journalist, passionately interested in people, and indeed the influence of his activities as a columnist in a Sunday newspaper is at times only too apparent. The characteristic detracts from the essential seriousness of his arguments and sometimes makes them merely amusing instead of arresting. It also gives his narrative in parts the transient quality of a newsreel than which nothing dates more quickly. A book of this kind, to be topical, must be produced speedily and for that reason the author elected not to include in his survey 'the broad fields of art, medicine, religion or provincial life and culture which all go to make up the character of Britain'. If he had done so, and if he had omitted much of the trivial gossip which clutters up his text, a much better balanced picture might have resulted.

These limitations of presentation, however, do not obscure the success of Mr Sampson's exercise which is to indicate who the real rulers of Britain are and to ascertain if the system which produces them could be bettered. At the end of his investigations, he comes to the firm conclusion that the present leaders, still predominantly recruited from the aristocracy and upper middle classes with benefits of public school and university backgrounds, have failed to keep pace with the eruptions of social and scientific change. The machinery for producing mandarins is Victorian and obsolete. What is needed, in Mr Sampson's opinion, is a generation of clear-thinking managers capable of accepting the challenges offered by a modern civilization of which nationalized industries, new universities and monolithic financial corporations are already, for better or worse, as fixed a feature of the scene as the gaunt skyscrapers now dominating - symbolically? - the sedate Government buildings around Whitehall.

Capital Profits or Losses —

# ACCOUNTANT

### a Further Look

by R. S. WALDRON, F.C.A.

THE Jenkins Committee has sought to define more specifically perhaps than has been attempted previously, the exact basis on which pre-acquisition profits are to be calculated, and the reasons why certain profits are to be regarded as 'capital'. In its report, the Committee states (paragraph 350):

(a) A net realized capital profit may be treated as a distributable profit only if the directors are satisfied that the net aggregate value of the assets remaining after the proposed distribution of that profit will not be less than the book value, so that the share capital and reserves remaining after the distribution will be fully represented by the remaining assets;

(b) a capital surplus arising on the revaluation of unrealized fixed assets should not be directly or indirectly available for distribution in divi-

dend.

#### **Textbook Opinion**

These statements do not in fact seek to alter the existing law so much as to clarify its varying interpretations, and in this connection, Mr M. J. Greener, B.A., A.C.A., may be complimented for his careful and studious analysis of the legal concepts of this topic in his article on the distribution of capital profits published in *The Accountant* of March 3rd, last. Of particular value were his opening remarks reminding us of the textbook opinion within the profession, which he correctly summarized as follows:

'A surplus arising within a company from a revaluation of fixed assets could not be distributed as a profit unless:

- (a) the articles of the company permitted;
- (b) the surplus remained after the proper revaluation of all assets; and
- (c) the surplus was realized.

One of the problems of such basic rules is that of precisely defining terms like 'fixed assets', 'surplus' and 'proper revaluation'. Besides these points of detail, however, it is rewarding to look closely at the basis of the second of these three 'basic rules'.

Textbook opinion appears to be set forth quite

clearly in A Summary of Auditing Case Law (eighth edition) by Miles Taylor, which states:

'From the two decisions (i.e. Lubbock v. British Bank of South America Ltd [1892] and Foster v. The New Trinidad Lake Asphalte Co Ltd [1900]) it appears that three conditions must be fulfilled in order that a capital profit may be distributed in dividend, viz:

- (i) the memorandum or articles of association must permit (or not prohibit) the distribution of capital profits;
- (ii) the profit must be realized in cash; and
- (iii) the surplus proposed to be distributed must exist after a proper reconsideration of the whole balance sheet position and revaluation of the assets (and perhaps the liabilities too).'

Of the two cases, New Trinidad Lake Asphalte is the more interesting. In the judgment it was stated:

'It is clear that an appreciation in total value of (original) capital assets, if duly realized by sale or getting in of some portion of such assets may in a proper case be treated as available for purposes of dividend.... I do not think a realized accretion to the *estimated* value of one item of the capital assets can be deemed to be profit divisible amongst the shareholders without reference to the result of the whole accounts fairly taken.'

If, therefore, one takes the trouble to read the whole of the case in detail, it becomes apparent that summaries, by simplifying the conclusions, have increased the strictness of the ruling of the judgment. It is easy to understand why this has occurred.

#### What has to be Revalued?

It would seem fair that, taking this rule at its face value, the average accountant would argue that if a surplus on one fixed asset is to be distributed then (on the basis that subscribed capital must, at any rate nominally, be kept intact) the remaining fixed assets must be proved not to show a loss viewed collectively. This, however, is not the meaning of the judgment; nor does it fit in with the facts of the case. The real point in

this case, which has led to the assumption of a principle, is that a number of fixed assets were purchased as a block and in order to prove that the purchase price had been properly apportioned when one only of the block was sold, it was necessary to show that the unsold section had a current value of not less than the balance of the purchase price allocated to it. There was never

any suggestion that any of the other fixed assets not connected with the block under consideration should be revalued.

This principle may be illustrated by a simple example. Suppose that a block of ten identical properties is purchased for £10,000. Subsequently one is sold for £1,500. It would be reasonable to assume that each property cost £1,000 but it cannot be proved. Therefore, before the profit on sale of the single property can be accepted as being £500, it is necessary to obtain a bona fide valuation of the remaining houses amounting to not less

than  $f_{0,000}$ .

Who is to make this valuation? Provided that they are demonstrably competent in the field of the particular assets, there seems to be nothing to prevent the directors themselves doing so, but they must do so honestly, believing in their own valuation.

#### Capital Losses on Realization

If we are to be strict in ascertaining capital profits, so we should be strict in measuring losses on realization of fixed assets, and we should apply exactly the same principles to an evaluation of such losses.

It is perhaps unnecessary to point out that 'capital profits' (or 'losses') in this context involves a comparison of original cost with net proceeds of sale of the particular item(s) sold, and that written-down book values are no guide. If a 'capital profit' arises from the sale of an item costing £500, written down in the books to £100 but sold at £525, this profit amounts to £25 and the remaining £400 surplus over book value represents excessive depreciation which, having been charged against revenue profits originally, is therefore of a revenue and not a capital character.

From this brief examination of the problem, it is obvious that adequate records must be maintained of all assets in which the capital of a business is invested with any degree of permanence.

Such records should be adequate in every sense of the word. In the case of buildings and machinery, for example, a proper system would involve the maintenance of a property register and a plant register. In the case of investments (including investments in subsidiary companies), an investments register of ledger is necessary.

#### Meaning of 'Capital Profit'

It is essential that one should be quite clear as to what is meant in this context by the term 'capital profit'. Such a term indicates to readers of this journal, at any rate, 'non-taxable profit' but it should be emphasized that not every surplus on revaluation of a fixed asset is non-taxable, nor is every non-taxable profit necessarily capital in nature.

It has been stated that a capital reserve is by definition one which is not, in the opinion of the directors of a company, free for distribution through the profit and loss account. If, therefore, the test—or main test—of a true surplus is that it must have been realized, then any realized surplus on sale of a fixed asset will presumably constitute a revenue reserve, although for tax reasons it may be prudent to make it the subject of a separate and distinct revenue reserve. Such a surplus (in a 'non-dealing' company) will, under present tax laws, normally be non-taxable.

If such reserves are distributed in cash from a subsidiary company to its parent company, what then is the position? It is submitted that such a distribution becomes a realized surplus, if the present value of the investment in the subsidiary (after such distribution has been made) remains in excess of its book value. If this is the test, it matters not whether the reserves in question were accumulated before or after acquisition of the shares by the parent company.

If the parent company has revalued its investment at some time, the cash realization may result in a reduction in the book value of the investment accompanied by a transfer from capital reserve (being the surplus on revaluation) to revenue reserve (representing the realized

surplus).

It may be worth considering one other aspect of this subject. It has become quite common in recent years to purchase companies for the benefit of their tax losses. When, therefore, such losses are realized in the form of tax savings, the realization is, in fact, the redemption of the purchase price and should be so treated in the accounts, by reducing the revenue profits of the group and writing down the cost of the investment accordingly.

#### THE ACCOUNTING WORLD

### The Profession in Italy

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

IN 1164, the city of Milan employed skilled accountants to control the finances of the Commune, the Ducal Palace, and the Cathedral vestry. Accountants were also active in medieval Florence, Genoa and Pisa.

The first association of accountants in the world was established in Italy, the Collegio dei Raxonati, founded in Venice in 1581 – less than a hundred years after publication of Pacioli's treatise on double-entry book-keeping. Membership was first confined to Venetians who had been resident in the city for at lease five years. In 1596, however, 'strangers' were admitted.

The Collegio prospered, and by 1669 it had attained the status of a craft guild, membership of which was obligatory before an accountant could pursue his craft. Candidates had to obtain from a magistrate a declaration of their fitness to enter the profession; they served an apprenticeship of six years in the office of a public accountant. A commission of examiners, consisting of forty-five persons, of whom thirty were accountants, conducted a preliminary examination, and successful candidates then appeared before a panel of the controllers of the Collegio and five 'learned merchants of the city'. If they secured a three-fourths majority of this body, they were granted their certificates.

In 1739, a somewhat similar Collegio was established in Milan. Members who enjoyed legal recognition were required to have a knowledge of Latin, commerce economics, arithmetic, and public affairs. They were elected after serving an apprenticeship of six years. It should be noted, however, that while the Venetian body had a minimum age of admission of 24 years, with the Collegio established under State protection, in Milan, the minimum age was fixed at 25, and accountants formed their own private institution. But in 1748 there was an official ruling to the effect that certain public appointments should be held only by members of the Collegio. At this time the Milan Government established a scale of charges for professional services rendered by accountants. Because of rivalry, the Milan Collegio eventually was abolished.

By a law passed in July 1906, a Collegio dei Ragionieri had to exist in every Italian province, with its headquarters in the capital of the province. Various accountants who held Doctor of Commerce and Doctor of Science degrees formed syndicates, and published lists of practitioners. By a September 1926 measure, these syndicates of doctors, as well as of accountants, were legally acknowledged as part of the National Federation of the Fascist Syndicates of Intellectual Workers. Other laws defined the duties of accountants.

The title of Commercialista applies to an individual

who practises accounting independently. The professional body of the *Commercialista* is the *Collegio dei Ragionieri* (College of Accountants), to enter which an accountant's diploma is required. The course of study covers eight years and the successful passage of a qualifying professional examination which is given once a year at the seat of the competent tribunal before a commission composed of collegiate accountants, presided over by a magistrate.

Then there are the *Dottori Commercialisti* who must have a degree in economics and commerce. This course covers four years of graduate study leading to a doctorate, in addition to the eight years established as prerequisite for university courses, with the degree granted as accountant, industrial expert, chemist, agrarian, and geologist. During the Second World War, qualifying professional examinations were suspended and, at the present time, a degree in commerce or economics, in itself, confers temporary qualification.

From the cultural point of view, the accountant of the College has a degree which is considered less important than that of the *Commercialista* doctor. In so far as the practice of the profession is concerned, however, the law makes no distinction between the two types of *Commercialisti*. This is evident in practice, especially relative to distribution of appointments as trustee in bankruptcy, or technical advisers.

Both accountants of the College and the Commercialisti doctors can, with equal rights, request to be admitted to the Roster of Official Auditors. Also to this roster may be admitted individuals who do not have any degrees, who do not maintain a practice, or who are in another profession, provided that for the number of years established by law, these individuals have held positions as administrator or as trustee in companies or corporations with relatively large capital or who have completed equivalent tasks. An official auditor does not engage in any particular activity except to participate, in cases covered by the law, in the Collegio Sindacale of public companies. A Collegio Sindacale may be compared to a body of auditors who examine the books infrequently, who are responsible to the stockholders, but whose regular attendance at work is not required, as is the case in the United States and Great Britain for internal auditors.

The professional activities of accountants, of the College and the *Commercialisti* doctors include the following:

- Judicial offices (trustees in bankruptcy, referees in bankruptcy, and technical advisers).
- (2) Legal cases which could be entrusted to a notary concerning the constitution, the re-

organization, the dissolution and merger of corporations, and the increase or decrease of capital and bond issues. An Italian notary must have a Doctor of Laws degree, and pass a Governmental examination. He executes the function of the American notary and, in addition, receives appointments which are restricted to lawyers in America. He is an official of the Government and as such receives State compensation as well as fees from clients. The Commercialista may substitute for the notary only in those cases which do not require the services of a Pubblico Ufficiale, literally, public officer, who executes public functions under instructions from the national or local government.

- (3) Tax consultancy.
- (4) Labour relations advice.
- (5) Installation of accounting systems, auditing and other public accounting work; preparation of budgets; and statistical surveys for the purpose of economic control in private and public administration.
- (6) Preparation or inspection of financial statements of banks and other financial institutions, appraisals of companies, and other technical services.
- (7) Advice concerning market research.
- (8) Advice concerning management and business organization.

The activities covered in (3), (4), (7) and (8) above are considered professional specialization. Specialists in (6) and (7) frequently occupy teaching posts in university schools of economics and commerce.

Italian professional accountants assume and execute their work individually. There are some large professional firms, often part of international accounting organizations, which employ some assistants, but the work is invariably executed under the responsibility of the individual practitioner. There are few associated professional firms. The authority in the Italian profession is based not so much on legal recognition but rather on the reputation of the individual practitioner.

In theory, an accountant can organize in any form he wishes and is not limited to the number of assistants he employs. Fees are stipulated by law and they may be related to the amount of assets, the amount of income, the paid-in capital or the significance of the amounts verified. It should be noted that, especially in the South of Italy, the rendering of advice on technical business practices accrues entirely to lawyers.

Financial reporting must conform to appropriate provisions of the civil code. Subsidiaries of American or British companies operating in Italy usually follow the accounting practices of their parent companies and also conform to local regulatory requirements. The civil code requires a general journal, an inventory book, and other records as demanded by the size of the company; the first two must be officially registered with the Government. The balance sheet must conform with provisions of the code, but presentation of an income account is not defined by the code and this account is usually in an abbreviated form.

Since the Second World War, the Italian lira has been devalued. To recognize this decline, the Government permitted revaluation of the cost of property, plant and equipment, investments and inventories in 1948 and 1952. At these dates also, the reserves for depreciation were revalued. Revaluation surplus thus created may be used for an increase in capital, provision for staff pensions, and payments of stock dividends.

Recent legislation has called for greater disclosure of details in annual tax returns. This may lead to additional data being included in company financial statements.

#### EUROPEAN ECONOMIC COMMUNITY

#### Tax Chart

ASYNOPTIC chart providing an inventory of the different taxation systems applying in the countries comprising the European Economic Community has recently been published by UNICE (Union des Industries de la Communauté Européenne). It is available from Editions Sircy, S.A., 22 rue Soufflot, Paris, Veme.

#### **JAMAICA**

#### Society of Chartered Accountants Formed

WE are interested to learn of the formation of The Society of Chartered Accountants in Jamaica. The members of the Council of the new society are as follows:

Mr R. C. Harty, F.C.A. (*President*); Mr C. V. May, F.C.A. (*Vice-President*); Mr J. D. Ashenheim, A.C.A.;

Mr Peter Harty, F.C.A.; Mr W. A. Thwaites, F.C.A. (all of the English Institute); Mr Trevor Brown, C.A. (Canadian Institute); Mr J. W. Miley A.C.A. (Irish Institute); Mr John Whyte, C.A. (Scottish Institute).

#### UNITED STATES

#### National Accounting Association

MR JOHN B. BACHOFER, C.P.A., has been elected President of the National Accounting Association for the year 1962-63. Mr Bachofer, who is vice-president of Nelly Don Inc., of Kansas City, has been a member of the Association since 1938 and is also a member of the American Institute of Certified Public Accountants.

The following have been elected to serve as Vice-Presidents of the Association for the ensuing year: Messrs John L. Marley, Grant U. Meyers, Nicholas Picchione, c.P.A., Henry W. Pirkey, Jun., Stanley A. Pressler, c.P.A., Julius G. Underwood, John E. Vavasour and William W. Wright.

between the net sales realizations, after deducting all rebates, discounts, commissions and royalties relating thereto, and the variable costs of production, distribution and sale. In comparing the profitability of different products and markets the gross margin is a much more meaningful figure than the net trading profit arrived at after deducting fixed costs which must necessarily have been allocated on a more or less arbitrary basis.

- 50. Fixed costs will include staff salaries, depreciation, rent, rates, insurance and the expenses of departments other than those engaged directly on the production, testing, storage and dispatch of products and services. Fixed costs also can be divided into two classes, viz.:
  - (a) Sectional, i.e. those costs which relate to a particular section of the business and which would cease to be incurred if that section were to be discontinued. (A section might either be a product or group of products or a market or group of markets.)
  - (b) General, i.e. those costs which relate to the business as a whole and which will continue to be incurred at substantially the same level whether or not any particular section of the business is discontinued.

It is important that sectional costs should be correctly allocated to the sections to which they relate so that at any time the effect on the total fixed costs of the discontinuance of any particular section can readily be calculated. There is not the same necessity to allocate general costs, but for the purpose of fixing selling prices and for the purpose of profit budgets (to which I shall refer later) general costs should be allocated to the various sections. For this purpose simple and relatively arbitrary allocations will be sufficient.

51. Except for the purpose of price fixing (to which I shall refer later) it is neither necessary nor desirable, in my view, to allocate fixed costs to individual products since any such allocations must be arbitrary and the 'all in' costs so produced are liable to be misunderstood by those for whose guidance they are prepared. I think we should all realize that those who are not accountants have a touching faith in the accuracy and reliability of the accounting and costing statements which we produce. Accordingly when we say that the 'all-in' cost of a certain product is x it is usually assumed by those who are not accountants that this is a statement of absolute and incontrovertible truth. In fact, as any cost accountant will tell you, there is no such thing as an accurate cost of an individual product. The raw materials and packages component of the cost should certainly be accurate but all the other components of the cost will be figures calculated in accordance with a number of costing conventions which will diverge more and more from what could be termed 'accuracy' the further away one gets from the shop floor.

- 52. The special feature about fixed costs which distinguishes them from variable costs is that they cannot normally be reduced quickly. They represent the cost of having an organization of the required type and size available and they are usually virtually fixed for a year or more ahead regardless of turnover. It follows that in times when business is slack and his productive capacity is only partly utilized, it pays a manufacturer to accept additional business at a net price insufficient to cover a fair allocation of fixed costs subject to the following important provisos:
  - (a) that in accepting the business he is not jeopardizing his ability to take more profitable business if and when the demand materializes, and
  - (b) that acceptance of the business will not make it necessary to reduce prices for similar materials to all other customers.

By taking such marginal business he is at least obtaining some contribution towards his fixed costs and reducing the amount of those costs which will need to be covered by the profits from the remainder of his turnover.

- 53. Conversely, when the manufacturer cannot satisfy all his customers' demands owing to shortage of plant, raw materials or labour, he will maximize his profits by concentrating upon the production of those products which give the highest gross margin per unit of whichever item of his human or physical resources is in short supply. For example, if the item in short supply is a key raw material he will assess the gross margin which he is making on all the products which use the scarce material and will concentrate on the sale of those products which give the highest margin per unit of scarce material. In applying this rule it is, of course, important not to obtain the maximum short-term advantage at the expense of customer goodwill. It will usually happen that there are important customers whom the manufacturer must continue to supply regardless of economics.
- 54. Before leaving the subject of costing I should like to say a few words about the use of costs for fixing selling prices, for which purpose costs can be divided into three categories, viz.:
  - (a) raw materials (including packages);
  - (b) other variable costs;
  - (c) fixed costs.
- 55. In valuing raw materials for price-fixing purposes one can either use the latest actual raw materials costs of the products concerned, or their current replacement costs. Which of these two bases should be adopted is a policy matter which should be decided by the board. In conditions of price stability it does not matter which of these two bases is adopted since they will both produce approximately the same answer. In periods of rapid price movements, however, it matters a great deal which basis is adopted and my view is that in such conditions the current replacement costs of raw materials should be used. This means, in effect, that the raw material content

of the product is offered for sale at the current prices of the raw materials concerned and the cost of the product, as calculated for price-fixing purposes, is not affected by the manufacturer's current stock holdings of the product concerned and of the raw materials used in its manufacture.

- 56. Variable costs other than those of raw materials and packages should be calculated at the current standard rates applicable to the processes used in the manufacture of the product concerned. It is arguable whether one should add anything to cover unfavourable variances from standard relating to these processes. To the extent that such variances arise from external factors which have recently taken effect and which have not yet been embodied in the cost standards (e.g. a general increase in wages) it is obviously right to include in the cost calculation an appropriate percentage addition to the variable costs concerned. Where, however, such variances arise from causes within the control of the works manager, they should not, in my view, be included in the cost calculation.
- 57. In the case of fixed costs accurate allocations to products for price-fixing purposes are neither possible nor necessary. Although it is obviously necessary that the sales manager should so organize his selling and price-fixing operations that in total the net sales realizations cover all costs, both variable and fixed, and produce a satisfactory residual net profit, it should, in my view, be left to him to decide how he is to achieve this end. In other words he should have complete freedom to vary the overheads recovery proportion of his selling prices from product to product and from time to time in accordance with the competitive situation. In practice it is a good thing to fix annually in advance for each section an overheads recovery rate calculated by dividing the total budgeted fixed costs of that section for the year (including the appropriate allocation of general costs) by the forecast sales (by volume) of that section for the year. This will give the sales managers responsible for the various sections 'bogey' overheads recovery rates which they will use as a guide in fixing differential overheads recovery rates for the various groups of products or markets for which they are responsible. These rates will be above 'bogey' in the case of products or markets where the manufacturer has the edge on competition and below 'bogey' in the case of products or markets where competition is exceptionally keen.

#### **Budgetary Control**

- 58. Budgetary control is an important factor in any system of financial control and I propose now to summarize the principles of budgetary control and the way in which, in my view, a budgetary control system should be planned and operated.
- 59. The term 'budgetary control' can be defined as the control of income and expenditure through the medium of budgets with which actual performance is

compared. Budgetary control involves four essential operations, i.e.:

- (a) allocation of the operations involved in carrying on the business to the individual managers who are responsible for ensuring that these operations are properly carried out;
- (b) preparation and approval of budgets of performance in regard to these operations.
- (c) comparison of actual with budgeted performance at regular intervals throughout the period covered by the budgets;
- (d) ascertainment of the reasons for significant divergencies between actual and budgeted performance, as a guide to appropriate corrective action.
- 60. A system of budgetary control is like a suit of clothes in that if it is to give the best results it must be carefully tailored to fit the organization which it is to serve. Before planning the system, therefore, it is desirable to examine the organization and its management structure so that any changes which may be desirable can be made before budgetary control is introduced. In particular it is important that throughout the organization management responsibilities are clearly defined and that there is no overlapping.
- 61. Having defined managerial responsibilities they should be embodied in an organization chart or series of charts which show clearly what these responsibilities are, and which should be given a wide circulation. The budgetary control system can then be planned in detail. Although the chief accountant will take alarge part in the planning of the system it is most important, in my view, that the system should be planned in collaboration with the managers who are going to be concerned with its operation. To bring the individual managers into the planning stages of a system of budgetary control has the obvious advantage that they know their own needs and the special factors affecting their own departments better than anyone else. But it has the further, and probably greater, advantage that it ensures the maximum degree of co-operation on their part in the operation of the system. The average person will take far more trouble to operate a system in the planning of which he has had a share, however small, than a system which he feels has been imposed upon him without consultation.
- 62. Having laid the foundation of the system the next step is to decide how many separate budgets shall be prepared, who shall prepare them and who shall approve them.
- 63. The number of separate budgets will, of course, depend upon the size of the business and the management structure. Certainly there should be a separate budget for each department or works for which there is a separate manager and there will be cases where it is appropriate to go below manager level.
  - 64. With regard to the preparation of the budgets

### Service to Management - II

by R. D. S. SHRIMPTON, F.C.A.

N the preceding sections of my paper we have considered in very general terms the meaning and purpose of financial control and the way in which it should be applied in a manufacturing company. I now propose to consider in somewhat greater detail certain aspects of financial control which seem to me to call for further comment. These are:

- (a) Capital investment and return on capital.
- (b) Costing.
- (c) Budgetary control.

#### Capital Investment and Return on Capital

- 34. Capital investment can take two forms:
- (a) investment in fixed assets, i.e. buildings, plant, vehicles, furniture, etc.;
- (b) increases in working capital, i.e. stocks plus debtors less short-term creditors.
- 35. First let us consider investment in fixed assets. The fundamental point about fixed assets is that once you have spent the money you cannot recover it. If you put up a new plant which proves subsequently to be surplus to requirements you will be unlikely to be able to dispose of it for more than a very small set. It is of vital importance,

pefore spending the t, necessary. Every and an existing pands for d it is

- estimate of its cost, prepared by the chief engineer, and
- (b) a statement of the estimated return on the new capital involved, prepared by the chief accountant on the basis of (i) the chief engineer's estimate of the cost of the new plant, and (ii) the sales manager's estimates of the quantity and value of the additional sales turnover which the new plant will make possible.
- 38. What is an 'adequate return' is a question which cannot be answered precisely because it depends on such factors as the degree of risk involved and the current yields on gilt-edged securities. With regard to the first point, one would obviously expect a higher percentage return from a plant designed to produce an entirely new product than from an extension to an existing plant which has been in operation for thirty years.
- 39. After board approval, it will be necessary for the chief accountant to provide, during the construction period, regular and detailed information with regard to the progress of expenditure so that the chief engineer can take steps to ensure that the expenditure is kept within the limits of the sanction. If for any reason it seems probable that the amount originally sanctioned will be exceeded, fresh estimates of total cost and of return on capital must be prepared for the approval of the board.
- 40. Finally, when the plant is complete and in full operation the chief accountant will prepare for the board a statement of the actual total cost of the project and of the actual return on the increased capital for an appropriate period. This statement will be the latest estimates. Experience ladge that this comparison will on the natural optimism their sales and of ion costs.

- 42. However, the fact that working capital is difficult to control does not mean that control should not be attempted. It is just as difficult to find fresh money to finance working capital as to finance fixed capital and it is important that all practicable steps should be taken to keep working capital to a minimum consistent with satisfactory service to customers. It so happens that that part of working capital which is subject to the greatest fluctuations relative to sales turnover is also the most susceptible to control, i.e. stocks. In order to control stock levels three things should be done:
  - (a) There should be a definite policy, approved by the board, with regard to the number of weeks of stock to be held. These will vary (i) in accordance with the type of material and (ii) from time to time in accordance with the circumstances. The important thing is that the levels should be fixed and varied by board decision.
  - (b) On the basis of current policies with regard to stock levels the managers who control stocks should be asked to prepare forecasts or budgets at (say) annual intervals of the values of stocks of the various categories of material under their control at stated dates during the coming year.
  - (c) Regular comparisons of actual with budgeted stock figures should be made throughout the year, the responsible managers being asked to explain in general terms the reasons for significant differences.

#### Costing

- 43. An effective costing system is an essential part of any system of financial control. The objects of costing are:
  - (a) To ascertain the costs of individual products, processes and services as a guide to management in deciding production and price policy.
  - (b) To disclose sources of inefficience
  - (c) To facilitate the fixing of ance.

44. At one time considered to of particular

- mental costs, etc. Products are costed on the basis of these standards and differences between actual and standard costs are thrown out as specific 'variances' from standard.
- 46. The advantage which standard costing systems have over the older so-called 'historical' costing systems is that in the case of historical costing systems it is only possible to compare the figures for the current period with the corresponding figures for an earlier period, and there is no indication for either period of what the cost should have been. Under a properly designed standard costing system, on the other hand, the 'variances' which are thrown out for each period will show at a glance by how much the actual cost differs from the standard figure (i.e. what it should have cost), and how much of the total variation from standard is due to variations in usage of raw materials, how much to variations in process times, how much to variations in departmental costs, etc. Further, in the case of each variation the place to look for further information is at once apparent.
- 47. It should be noted that the effectiveness of a standard costing system is entirely dependent upon the validity of the standards. It is important, therefore, that the standards are reviewed frequently and amended where necessary in the light of changed circumstances.
- 48. One of the most important aspects of costing is the distinction between variable and fixed costs. In order that management shall get the maximum benefit from the financial statements which it receives it is important that in all accounts there should 'variable costs', i.e. vary significantly.

vary significantly costs' or 'fin the s'

there are, broadly speaking, two possible methods. Either the chief accountant can prepare the budgets and then agree them with the managers concerned (and this, of course, is essential) or the individual managers can prepare their own budgets. I personally feel that it is best to ask each manager to prepare his own budget because he is the person who is, or should be, most competent to say how much his department ought to cost. Further, if the manager prepares his own budget he will have more incentive to keep within it than he would have if the budget had been prepared by someone else. In preparing their budgets the managers will, of course, be entitled - and indeed encouraged - to ask the chief accountant to help them, but they themselves will be entirely responsible for the figures in their budgets.

65. With regard to the approval of the budgets this, in my view, should be a two-stage process. In the first place the budgets should be submitted for approval to the directors to whom the individual managers are responsible. After approval by the various directors the budgets should be passed to the chief accountant who will prepare a summary of the budgets for the final approval of the board. At the board meeting at which the budgets are submitted for approval the individual directors will speak for the departments responsible to them.

66. No manager should be asked to budget or to be responsible for any expenditure which is outside his own control, even if such expenditure is necessary for the proper functioning of his department. Examples of such expenditure are the rates, insurance, heating, lighting and maintenance of office buildings. The best way to deal with such items of expense is to appoint individual managers as 'controllers' of these items for budget purposes. Such managers, although not personally responsible for the expenditure, will be responsible for preparing budgets of the total expenditure, for explaining significant differences between actual and budget, and for giving effect to any economy measures decreed by the board in regard thereto.

67. Every system of budgetary control should contain provision for the revision of budgets during the budget year in cases where changed circumstances make such revisions necessary or desirable. In such cases it will be the manager's responsibility to submit a request for revision, stating the amount and the reasons, to the director to whom he is responsible, after approval by whom it will go to the board for final confirmation.

68. When people talk about budgetary control they are usually referring to the control of expense and all that has been said so far in this section of my paper relates to the control of works and departmental expenses. There is, however, no reason why the principles of budgetary control should not be extended to the control of profits.

69. To do this it is a good thing to divide the sales organization into a number of sections, either on a

product or a market basis (if this has not already been done) and to make a particular sales manager responsible for each section. Each sales manager will be told that he is responsible not merely for sales volume and sales realizations but also for the final net trading profit of his section.

70. The chief accountant will then break down the profit forecast for each year into a number of profit budgets – one for each section. Each of these will be set out in the form of a budget trading account starting with the forecast sales volume and gross realizations and deducting therefrom, in succession, sales rebates, discounts etc., carriage, raw materials and packages costs, other variable costs, sectional fixed costs and general fixed costs, to produce a final net trading profit.

71. The profit budgets will be agreed with the sales managers concerned and a summary of them will be submitted to the board for approval. Thereafter, throughout the budget year, the chief accountant will prepare monthly or quarterly cumulative trading accounts – one for each section – set out in the same way as the profit budgets and comparing the cumulative actual figures with the cumulative budget figures. The individual sales managers will then be responsible for explaining the reasons for significant divergencies between actual and budget and for initiating action to correct unfavourable trends shown by the figures.

72. Experience has shown that a system of budgetary control of profits on these lines has the valuable result that it makes sales managers profit-conscious and not merely volume-conscious, and so tends to increase the profits of the business.

#### Conclusion

73. I have left the most important point to the last. Managerial systems and procedures – financial or otherwise – will not work by themselves. They will only work through people and they will only work effectively if the people who are concerned in their operation want them to. Two things are necessary, therefore, in order that a system of financial control shall work successfully:

- (a) Firstly the proposed system must have the whole-hearted support of the chairman and board of directors of the company and everyone must know this. Departmental and works managers are busy people and they are not likely to give their whole-hearted co-operation in making the system a success if they feel that their directors are disinterested or lukewarm.
- (b) Secondly, it must be impressed upon the managers at all levels who have to operate the system, that the aim of the system is to help them to run their own departments more efficiently, not to provide a stick with which they can be beaten whenever actual falls short of budgeted performance.

The aim of any system of financial control should be

to bring managers at all levels into closer partnership with the directors of the business in their common task which is to ensure that the business shall continue to provide the best possible service to its customers together with adequate rewards to its employees and its shareholders.

74. I hope that this paper will have indicated some of the ways in which the accountant can help management to plan and control its affairs. The matters on which I have touched are, of course, primarily of

interest to accountants in industry, if only because they are working all the time so closely alongside management. It seems to me, however, that there must also be considerable scope for accountants in practice to help their clients in this field, particularly where these clients are small companies or firms who do not employ qualified accountants. The systems of financial control appropriate to such clients will be relatively simple but the principles will be the same, whatever the size of the business.

# Weekly Notes

### NEW MANAGEMENT STRUCTURE AT THE TREASURY

PUBLIC opinion is sensitive to wholesale Government retirements and prescriptions for new policies at the same time. But the changes announced last week-end in the structure of the Treasury had not been unexpected. They are essentially alterations in management structure; it is incidental that they coincide with the retirement of certain senior officials. On the other hand, the structural changes have been used to bring to the top younger men over the heads of certain of their seniors.

It was the Plowden Report on public expenditure which recommended the changes of structure: the changes were planned by Mr Selwyn Lloyd while Chancellor of the Exchequer. The new arrangement will divide the Treasury into three functional groups, in place of two. These will be, first, financial and monetary policy; second, public expenditure and resources; and third, the co-ordination of economic policy. The first group will deal with both home and overseas finance. Under the new arrangement, the professional economists in the Treasury will be integrated with the administrators in the third group.

Mr William Armstrong succeeds Sir Frank Lee as Joint Permanent Secretary (moving up from the position of a third secretary at the age of 47) to take over financial and economic work. Sir Laurence Helsby (aged 54) becomes Joint Permanent Secretary and head of the Civil Service (having been Permanent Secretary at the Ministry of Labour) and Sir Burke Trend (aged 48) becomes secretary of the Cabinet. He was a second secretary at the Treasury.

#### CRISIS ON THE COMMON MARKET

THE long-awaited crisis on the negotiations for this country's entry into the European Common Market has now been reached. The issue which has brought about the impasse is the unwillingness of the

Community, if and when joined by the U.K., to refrain from policies which amount to self-sufficiency in agricultural products. This in turn mainly refers to the protectionist policy of France as regards its wheat farmers.

Both sides have said that they have pronounced their final word on the subject. The negotiators from this country have indicated that they will stand firm on the issue of principle and they are fully aware that the matter has to be faced at this stage because the agreement which might come out of these negotiations has to be defended in the House of Commons and before the Commonwealth Prime Ministers in September.

Negotiations have now been resumed since the middle of the week on this issue but it is becoming increasingly clear that a political decision at the highest level will have to be taken by either side if agreement is to be reached. There have already been murmurs of sympathy from the Belgian side about this country's position. France can hardly be expected to move from its rigid position without some jostling from its following members of the E.C.M. and, therefore, a key position is now held by the German delegation. It is too much to expect that the Belgians and Dutch combined, perhaps with some encouragement from the Italians, would be able to move the French negotiators.

Meanwhile the forces of hostility to Britain entering the E.C.M. have been marshalling their final and vociferous assault on the negotiations. This broadside may at least help to persuade some people on the Continent that this country has not much room left for manoeuvre.

#### CLERICAL PAY REVIEW

STATISTICS just published by The Institute of Office Management show that over both the past ten years and the past two years men clerks did not fare so well as male manual workers in the race for higher remuneration. During the last two years, the wages rates of male manual workers rose by 7.25 per cent and actual earnings by an estimated 10 per cent whereas, during the same period, the salaries of men

<sup>1</sup> Clerical Salaries Analysis 1962. The Institute of Office Management, London. Price 60s.net.

clerks increased by only 5-7 per cent. In that time, the cost of living rose 7.25 per cent. Women clerks fared better; their percentage increase being 7-8 as against a rise in the wages and earnings of female manual workers of 6-7.5 per cent. Over the ten-year period, the effective earnings of clerks (of both sexes) went up by approximately 20 per cent as compared with rises of 31 per cent for male manual workers and 24 per cent for female manual workers. The above analysis relates to the position at March 1st, 1962, when the 'pay pause' was still in operation. Events since that date may have some effect on future statistics as may also Article 119 of the Treaty of Rome which prescribes equal pay for men and women.

Despite these uninspiring findings, the number of clerical workers in the United Kingdom rose in the last decade, it is estimated, from two and one-third million to three million (or from 10 to 12½ per cent of the working population) which would indicate that there is more to a clerical life than merely money. Among other considerations, in this instance, are the attraction of security, the prestige factor and the prospects of ultimate promotion. More prosaically, it should be mentioned that white collar workers are not so well organized as is manual labour and may thus be collectively less aggressive when making pay demands.

#### THE BANK AND THE FRAUDULENT CHEQUES

N Monday the Court of Appeal allowed the appeal by Westminster Bank Ltd from the decision of MacKenna, J., in Orbit Mining & Trading Co Ltd v. Westminster Bank Ltd ([1962] 2 All E.R. 552) in which the learned judge awarded dames against the bank for the conversion of three cheque forms belonging to the company. Although the conversion was admitted, the bank claimed the protection of section 82 of the Bills of Exchange Act, section 17 of the Revenue Act, 1883, and section 4 of the Cheques Act, 1957, on the ground that it had acted in good faith and without negligence. The company admitted the bank's good faith but alleged negligence. MacKenna, J., found negligence but the Court of Appeal has now held that on the facts there was no negligence.

The facts were as follows. A Mr Epstein had been a customer of the bank since 1950. He became, in 1956, the secretary and one of the two directors of the company, the other director being a Mr Wolff. The company opened an account at the Midland Bank with instructions to honour cheques signed by the two directors together. In 1957 and 1958 Mr Wolff went abroad leaving Mr Epstein with cheques on the company's account signed in blank. Mr Epstein presented three of these to the Westminster Bank made payable to 'Cash or Order' and containing his own signature on the front and on the back. The bank collected the money and Mr Epstein used it, wrongfully, for his own purposes.

Lord Justice Sellers said (according to The Financial

Times of July 31st) that the bank had made proper inquiries when Mr Epstein became its customer in 1950; therefore if there was negligence on the bank's part it must have been on the occasions when he lodged the three cheques in question. There were no suspicious circumstances to put the cashier on inquiry and no reason for him to look for an endorsement. The amount of the second cheque, £1,268 18s 6d, was not quite large enough to warrant special inquiry by the cashier, although it was near the border line. This is perhaps why the Court granted leave to the company to appeal to the House of Lords.

#### LARGE REPAYMENT TO THE I.M.F.

THE continuing strength of the pound is reflected in the announcement last week-end that the United Kingdom would repay \$512 million to the International Monetary Fund. This is the final repayment of the \$1,500 million drawn in August and September last year to reinforce the sterling area's reserves. Repayment took place on July 31st.

At the same time, the I.M.F. and this country have made an agreement by which the United Kingdom can draw up to the equivalent of \$1,000 million over the year beginning August 8th, 1962, in currencies held by the Fund. This will establish stand-by facilities to help the pound if they are needed.

This \$1,500 million was the largest drawing facility ever granted by the Fund. Its repayment within a year is considered to be a substantial achievement and emphasizes the value of the Fund's resources as a type of revolving credit.

A repayment of this size is almost certain to be reflected in the figures of Britain's gold and foreign exchange reserves when they are next published. The pound has been strong since the turn of the year and capital funds have moved into London – but hardly on a sufficient scale to prevent a dip in the total. Nevertheless, at about £3,000 million they will be close to the pre-crisis level held in the first half of last year.

#### PILKINGTON REJECTED

TELEVISION, writes Mr David Sawers, in a booklet published by the Institute of Economic Affairs entitled TV: From Monopoly to Competition—and Back? needs 'not the politician, the civil servant or the bureaucrat, but the initiator, the entrepreneur, even the gambler. This short quotation sums up his reaction to the recommendations of the Pilkington Report, the appearance of which has provided the occasion for the publication of this revised and enlarged Hobart Paper which originally appeared last January. In a lengthy analysis of the Pilkington Report he condemns its 'dream of a purified ITA, freed from mutual

<sup>&</sup>lt;sup>1</sup> Hobart Paper No. 15. Price 7s 6d net.

dependence on programme companies' which would merely produce a 'monolithic counterpart to the BBC'. Maintaining his attack, Mr Sawers avers that 'its philosophy emerged clearly as that of paternalists concerned that people should not be exposed to degrading influences...', an attitude which, in his opinion, cannot 'be fitted into the theory of democracy which places power in the hands of the people and accepts their decisions with the accompanying results and risks'.

According to Mr Sawers, the Pilkington Committee's thinking was dominated by two consider-

ations. The first was its belief that so powerful an influence on public opinion should not be left to the profit motive; the second was its failure to realize that the only alternative to commercial control was political. While commercial power can 'be disciplined by competition', there is, asserts the author, as yet no effective means of disciplining political power. Discussing the emphasis laid by the Pilkington Committee on the influence wielded by television on the public, the author comments dryly that 'the hand that controls the TV switch is, after all, the same hand that marks the ballot paper'.

## This is My Life . . .

by An Industrious Accountant

CHAPTER 131

THE trouble started with the old problem of pressure of time. We just can't fit in everything; the days are too short. As a result, reading is neglected, and selective reading is a business necessity.

They were piled on my desk one morning, all the books and magazines I hadn't got round to reading. There was technical stuff, like the articles on the trend of Bradford wool prices, or on the impact of synthetic fibres on the drapery business. I know that accountants are considered to be financial specialists, but we have to keep in touch with trade topics also. There were several chairmen's speeches in *The Financial Times*, and the Chancellor's pronouncement in *The Times*; there were three assorted United States business journals and a Chamber of Commerce report with financial appendices; there was a secretarial monthly magazine. Last, but not least, the last issue of *The Accountant* lay unsullied by human touch. There's a couple of days' work in the bundle.

So I was grumbling mildly to the directors on the subject at our last meeting; their response was unanimous. They, too, found themselves swamped. Our personnel director, in particular, had such masses of Press cuttings about labour disputes and trade union action that he needed a week to catch up with his arrears. He predicted that he'd have to devote part of his holidays to literary research. We all looked profound and gloomy, like the characters in a transatlantic magazine photograph before us. They were a typical bunch of tycoons in a magnificent modern boardroom, with a huge model factory, blue prints, etc. on the gleaming table. One alone looked dynamic and inspiring, but alas, closer investigation revealed

that he owed this good fortune to taking some patent medicine regularly, so he was no help to us.

Then at yesterday's weekly meeting, the managing director explained that a solution to our problem had been suggested and asked for my views. Apparently an official company reader would be appointed, his task being to sift all literature in advance and mark appropriately passages of interest. He would have stick-on lists of names to be ticked, with spaces for page references and circulation time-tables, and would follow up slow readers. The job would obviously provide excellent background management training for aspiring young executives as well as helping their seniors to cope with their work load.

Unwisely, perhaps, I shot the scheme down. 'A soft job for some Parkinson's Law type, in my view,' I said cheerfully. 'He'd probably have a costly staff of technical sub-readers in three mornins. After all, and accountant could pre-digest these specialized accountancy journals, and who's to judge what extraneous material would be of interest to us also? This reading is just an integral part of our jobs, unfortunately.'

Our deputy-chairman contradicted rather aggressively, I thought, on the grounds that any innovation that saved executive time was valuable, and we had a brisk little argument. He felt that the scheme would more than pay for itself; I thought that the sheer monotony of it would soon drive anyone with even the minimum of ability or ambition up the wall.

He got rather red and subsided suddenly. I realized in horror that I'd put my big foot in it again; the scheme was his own suggestion; I should have praised it. He's a man who responds well to flattery, and contrariwise, like the American who visited Martin Chuzzlewit on his sick-bed. 'Our backs is easyris. We must be cracked-up.' Unfortunately, I'd chosen to crack down instead... Anyhow, having an argument with a director is a luxury beyond the range of an accountant unless he's looking for trouble, particularly when the said director is like our deputy-chairman, whose back rises very easily indeed. Judging by his glare across the table, there was more to the story than met my eye. I only learned later that he'd already suggested his son for the post.

Years 1960-62 only reproduced.

## Finance and Commerce

#### Beecham

THE annual report and accounts L of the Beecham Group is one of the leading examples of good company reporting and to it we turn for our reprint this week. The chairman, Mr H. G. Lazell, draws attention to the establishment of three separate divisional management companies for food and drink, for toiletry, and for pharmaceuticals - each with its own management team and concentrating its whole effort on a limited range of products. Experience has shown the great advantages that accrue from such an organization.

Each management team is responsible to the Beecham Group management, the divisional chairman being a group director. Two main features of the new organization are, first, marketing policy is now formulated not by individual operating companies but by divisional managements with direction and control of associated product research work. Secondly, the extension of product specialization which has been a great success in the United Kingdom, progressively to group operations throughout the world, each division being responsible for its own overseas trade. The importance of the overseas business can be seen in the statistical information included in the reprint.

The new organization, which began to operate on January 1st, 1962, does not vitally affect the figures presented, being essentially an internal matter.

#### **Trading Results**

Each division has its own section in the report setting out the constitu-

tion of its management committee (with pictures), a brief description of the trade handled, with colour pictures of some of the important products dealt with. Food and drink provides roughly 60 per cent of group sales, the report on that division explains, with drinks – such as Quosh, Tango, Corona and Lucozade – making the major contribution to the division's sales of £24 million.

Mr Lazell, reviewing trading results as a whole, points out that total sales rose 4 per cent though trading profit was 5 per cent down. Home sales were up 5 per cent against 13 per cent in the previous year - 'probably a measure of the effective restraint on demand'. Home profits were 8 per cent down, primarily owing to a sharp increase in operating costs 'particularly the steep rise in the cost of television advertising'. The combined effect of the increase in advertising rates and the television advertising tax raised the cost of an equivalent amount of television advertising by more than one-third.

Previously, rising costs generally have been offset by bigger sales. This time, the Chancellor's measures to restrict demand started to take effect and 'in such circumstances, profit margins are bound to be reduced'. Mass production business, such as soft drinks and confectionery, have heavy fixed costs and are conducted on narrow margins—'the last 10 to 15 per cent of sales is all-important'. Beecham is now waiting to see what lasting effect the purchase tax on soft drinks and confectionery will have.

#### **Patents**

Mr Lazell's review of the pharmaceutical industry is particularly interesting in view of the Minister of Health's recent decision to proceed under a provision of the Patents Act to buy certain patented drugs from abroad at cheaper prices. 'I believe that these drugs come mainly from Italy and some from behind the Iron Curtain', observes Mr Lazell, and he goes on to say that there is no patent protection for drugs in Italy, so there is nothing to stop

Italian drug-houses from pirating really important pharmaceutical discoveries and offering them at low prices. But, he asserts, 'the Italian manufacturers would not have had the drugs to offer had it not been for the research laboratories in the drug companies of those countries of the western world which can finance basic research under patent protection'. He sees a need to harmonize drug patent law in all the western world countries and, in particular, a need for speeding up procedure for obtaining patent protection. 'Present delays can be most detrimental to the patentee's interests'.

Mr Lazell tends to agree with Sir Harry Jephcottt, of the Glaxo Group, who considers that sixteen years' patent protection under the present system is too rigid and suggests that drug patents might be endorsed 'Licences of right' after a period of years appropriate to any particular drug. This would give the patentee exclusive statutory protection for a restricted period and thereafter the right to a royalty fixed, in default of agreement, by the Comptroller of Patents for the remainder of the normal life of the patent.

#### **Company Articles Again**

A VERY practical example of the vital need to know the provisions of a company's articles has been provided in the failure of an effort to get two new directors on to the board of Barry & Staines Linoleum Ltd. Notice of the intention to propose the election, said Mr T. J. Cavanagh, the chairman, was invalid under the articles, and he asked the company's solicitor to explain why.

To be valid, the solicitor explained, the notice had to be signed by some member duly qualified to be present and vote at the meeting. It was, in fact, signed by two persons, neither of whom was entitled to vote because, under the articles, no member was entitled to vote at a general meeting in respect of any shares he had acquired by transfer unless the transfer had been left with the company for registration

at least three months before. In this case, it had been

left about a month previously.

Mr Cavanagh referred to shareholders having received a letter from 'a certain Mr James' who had had no contact with himself or the board, and was known to them only as a person in whose name a transfer for £100 ordinary stock was lodged for registration 'as recently as May 23rd' – the meeting was on June 28th. The board, said Mr Cavanagh, 'cannot express too strongly its disapproval of this method of intervening in our affairs'.

#### CITY NOTES

THERE are still far too many unknown quantities in the stock-market equation for the arrival at anything like a precise answer to current investment problems. Meanwhile the mistrust of the equity market persists.

City opinion has been unimpressed by the addition of NIC to NED and is still waiting for the Government to take decisions rather than deploy new forces. Obviously the equity market has little chance of prospering when the Prime Minister virtually undertakes to see to it that profits are pinched and dividends restrained as fair exchange for industrial agreement on a wages policy.

To add to the general investment unease has come the first shadow of doubt concerning entry into the Common Market. Against this background the investment money trend remains steadily towards fixed interest stocks and the gilt-edged market is now seen as a hedge against a further equity fall.

It is difficult at this stage to see the makings of an early revival of confidence in the equity market despite the 'confidence factor' implied in the early repayment of the International Monetary Fund loan.

## Reviews

#### Accounting (Rowland and Magee)

Sixth Edition by BRIAN MAGEE, B.COM., F.C.A. (Gee & Co (Publishers) Ltd, London. 20s.)

#### **Principles of Accounts**

by S. W. ROWLAND, LL.B., F.C.A. Seventh edition revised by R. E. SEABORNE, F.C.A. (The Donnington Press, St Albans, and Cassell & Co Ltd, London. 27s 6d.)

#### Intermediate Accounting – A Functional Approach

by C. A. MOYER, PH.D., C.P.A., and R. K. MAUTZ, PH.D., C.P.A. (John Wiley & Sons Ltd, London and New York. 68s.)

These three books present the professional student with a most interesting comparison. In the two English books, in both of which Mr Stanley Rowland had a hand originally, we see good, sensible advice given in a form which is basically traditional. Particular care has been taken in this new edition by Mr Magee to meet the difficulties which many students feel on first encountering 'double-entry'. His arrangement of the sections is a happy one and leads the student to appreciate that methods are but a means to an end, while the appendix sets out typical questions in a section which covers a very thorough test of over sixty pages.

Mr Seaborne's book, primarily designed for a sound correspondence course of tuition, is a thoroughly readable students' book, and in its last three chapters shows itself to be an excellent guide to studies into the published accounts proper. These chapters, which deal respectively with holding companies, published accounts and statutory and specialized accounts, are excellent. The appendices include a questions section and one covering the Recommendations on Accounting Principles of The Institute of Chartered Account-

ants in England and Wales.

It is immediately apparent that the third book originates on the western side of the Atlantic. The précis style of the contents section paves the way for a work which is full of imagination and, unlike most English works, deals with complete transactions from ordering to marketing. The reliance on a bookkeeping system modelled on costing bases is typical of American book-keeping thought. The emphasis is on detail always in the context of building up to the final statement, and on management requirements. The reader is constantly aware of the existence of a business, alive and waiting for information, just around the corner. Possibly this sometimes leads to concentrating less on the basic lessons which British books teach, but sound, realistic and reliable as British textbooks are, there is in this trans-Atlantic work a spark which for some of us would surely have transformed and illuminated our studies if only it had been possessed by more of our own textbooks.

These are all books for thinking students; all excellent of their kind. One may perhaps summarize their qualities best by saying that Mr Magee's book constitutes a fine introduction for any student; that Mr Seaborne's book will carry him well on his way through his studies towards Intermediate level, but that the American work, at that level, would broaden his vision enormously and make more alive the lessons learned from Mr Magee or Mr Seaborne. In this connection, however, it is only fair to observe that within the more modest compass (and price) of the latter books, a more ambitious approach may hardly have been possible.

All these books are well indexed, and all are written in an easily readable manner so that concentration is no difficulty.

#### The Elements of Income Tax and Profits Law

Fifth edition by C. N. BEATTIE, LL.B., and KEITH WEDMORE, M.A., LL.B. (Stevens & Sons Ltd, London. fi 158 net.)

This book is written primarily for law students who hope to take up general practice. It follows, therefore, that certain topics of special interest to the accountant are—to quote the authors—'treated lightly'. Thus calculations and computations are largely absent. Nevertheless, selective reading in this book by accountancy trainees would provide a broader understanding of the subject than an undue concentration on computations in which many students indulge.

## The Law Relating to Bankruptcy, Deeds of Arrangement, Receiverships and Trustees

Seventh edition by O. GRIFFITHS, M.A., LL.B., Barristerat-law. (Textbooks Ltd. Harpenden, Herts. 25s net.) The changes in the law covering these subjects since the sixth edition was published were not very extensive and indeed the new edition differs little from the old one. The references to the Workmen's Compensation Acts have been cut out and there is a reference to the Variation of Trusts Act, 1958, and to the Charities Act, 1960. The book remains a useful conspectus of some important branches of the law.

## **Taxation Cases**

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

#### Brogan v. Stafford Coal & Iron Co Ltd

In the Court of Appeal - June 20th, 1962

(Before THE MASTER OF THE ROLLS (Lord DENNING), Lord Justice Donovan and Lord Justice Pearson)

Income tax – Trade – Collieries and brickworks – Mutual insurance company – Nationalization of collieries – Acquisition of insurance company's business by National Coal Board – Liquidation of insurance company – Share in liquidation received by appellant company – Whether capital or income receipt – Income Tax Act, 1952, Schedule D, Case I.

The respondent company carried on the trade of operating collieries and brickworks down to January 1947, when its colliery business was acquired by the National Coal Board under the Coal Industry Nationalization Act, 1946. The company continued to carry on its brickworks business, and for tax purposes the company was treated as carrying on one trade.

The North Staffordshire Collieries Mutual Indemnity Ltd (Mutual) was incorporated in 1934 by a number of colliery proprietors for the purposes of insuring its members on the mutual principle and the respondent company was one of the members. Mutual had invested funds producing an income, and the rest of its income consisted of the premiums paid by its members. These premiums were allowable deductions for tax purposes, but Mutual was not taxed on the excess of its receipts over its expenses. After the nationalization of the collieries the business of Mutual was acquired by the National Coal Board. In 1953, Mutual was voluntarily wound up, and there was a sum of about £,700,000 available for distribution among its members. The respondent company received £58,000 and carried this sum to a capital reserve.

It was contended on behalf of the appellant that the £58,000 was a trading receipt of the respondent company. It was contended on behalf of the respondent that it received the £58,000 as a member of Mutual; and that the sum was not a taxable receipt. The Special Commissioners decided in favour of the respondent.

Held (reversing the judgment of Mr Justice Plowman) (Lord Justice Pearson dissenting): the £58,000 was a receipt of the respondent company's trade.

## Spencer, Garside and C.H.W. (Huddersfield) Ltd v. C.I.R.

In the Court of Appeal – June 22nd, 1962 (Before The Master of the Rolls (Lord Denning), Lord Justice Donovan and Lord Justice Pearson)

Surtax – Undistributed income of company – Whether a subsidiary company – Whether distribution made within a reasonable time – Persons to whom income apportionable – Income Tax Act, 1952, sections 245, 250, 256, 260.

The appellant company carried on business as a wool merchant, and had an issued share capital in preference and ordinary shares, all of which was held by four individuals (the Garsides and the Spencers). Towards the end of the accounting period from April 1st, 1956, to March 31st, 1957, that is to say in January 1957, the company transferred all its trading assets to two new companies, and was left with two sums of £25,000 and £279,000 respectively, as its only remaining assets. At the same time the Garsides and the Spencers ceased to hold any shares in the appellant company and received shares in the two new companies; and one of those companies, which held nine-tenths of the appellant company's issued capital, was a company to which section 245 of the Income Tax Act, 1952, did not apply.

Accounts of the company were made up for the period from April 1st, 1956, to January 31st, 1957, and they showed a profit of £32,103. These accounts were adopted by the company in general meeting on February 14th, 1957; and the general meeting also confirmed the payment of a dividend on the redeemable preference shares for the accounting period mentioned, and resolved that no dividend be paid on the ordinary shares for that period. On December 13th, 1957, at an extraordinary general meeting of the appellant company, it was resolved, however, to pay a dividend on the ordinary shares for that period. This dividend was £59,130 8s 8d gross.

On July 7th, 1958, the Special Commissioners made a direction under section 245, and apportioned the actual income of the period in question as to 303/306ths to the Garsides and Spencers, and as to 3/306ths to the two holding companies. The sums so apportioned were £54,282 and £537 respectively.

It was contended on behalf of the appellants that as no interim dividend had been paid, and as the Garsides and the Spencers were not shareholders when the dividends were declared, nothing could be apportioned to them; and that therefore the appellant company was a subsidiary company despite section 256 of the Income Tax Act, 1952. It was contended on behalf of the respondents that the Special Commissioners were entitled to make the apportionments on the Garsides and the Spencers; that therefore, pursuant to section 256, the appellant company was not a subsidiary company during the accounting period in question; and that the dividend declared on December 13th, 1957, was not a distribution made within

a reasonable time, so as to satisfy section 245 of the Act in that respect. The Special Commissioners decided in favour of the respondents.

Held (affirming the judgment of Mr Justice Plowman): the Special Commissioners' decision was correct.

#### E.Y.L. Trading Co Ltd v. C.I.R.

In the Court of Appeal - June 25th, 1962

(Before The Master of the Rolls (Lord Denning), Lord Justice Donovan and Lord Justice Pearson)

Profits tax – Sale of business – Dividend paid out of sale money – Purchase of investments – Determination of accounting period – Whether an investment-holding business – Whether determination of accounting period valid – Whether that period the last chargeable accounting period – Finance Act, 1937, section 20 – Finance Act, 1947, sections 30, 35, 43.

The appellant company was incorporated on September 2nd, 1941, and its issued capital consisted of 8,002 ordinary shares and 1,000 preference shares of £1 each. The company traded as a steel stockist till February 19th, 1955, when it solder business and retained only the bank balance.

On March 17th, 1955, the comparansferred its credit balance, which was then £20 1 175 9d, to the credit of an account at another bank. On March 31st, 1955, new directors were appointed, and the 1,000 preference shares and the 8,000 of the ordinary shares were transferred to another company, and the two remaining ordinary shares were transferred to the other company and to one of the appellant company's directors respectively. On the same day the directors resolved that the company should thenceforth be an investment company. On April 1st, 1955, the directors resolved that a dividend of £27 10s free of tax should be paid on the 1,000 preference shares; and that a dividend of £288,300 free of tax be paid on the ordinary shares. In pursuance of these resolutions the sum of £288,327 10s was paid out of the credit balance of £297,647 7s 5d to the other company. Since June 1955, the company had been treated by the Inland Revenue as an investmentholding company.

A balance sheet, and a trading and profit and loss account, to March 31st, 1955, were prepared, and the profit and loss account was credited with £305 9s 8d of interest accrued since March 17th. The balance sheet showed £9,002 in respect of share capital and £288,645 7s 5d as undistributed profits. The only asset was the bank balance of £297,647 7s 5d. On August 14th, 1959, the Commissioners of Inland Revenue determined that the period of  $10\frac{19}{28}$  months from April 1st, 1954, to February 19th, 1955, should be an accounting period for profits tax purposes. On September 30th, 1959, an assessment to profits tax was issued in the sum of £73,990, for the chargeable accounting period from April 1st, 1954, to February

1st, 1955.

In an appeal to the Special Commissioners against the assessment the following points were argued: (1) whether the company's functions on April 1st, 1955, consisted wholly or partly in the holding of investments or other property within the meaning of section 19 (4) of the Finance Act, 1937; (2) whether the determination of the accounting period from April 1st, 1954, to February 19th, 1955, was valid; (3) assuming that it was valid, whether that period was the last chargeable accounting period of the company within the meaning of section 35 (1) (c) of the Finance Act, 1947. The Special Commissioners decided all these questions in favour of the respondents.

Held (affirming the judgment of Mr Justice Cross): the Special Commissioners' decision was correct.

#### Butter v. Bennett

In the Court of Appeal – June 26th, 1962 (Before The Master of the Rolls (Lord Denning), Lord Justice Donovan and Lord Justice Pearson)

Income tax — Schedule E — Necessary occupation of employer's house — Employer bearing cost of gas, electricity, rates and upkeep of garden — Whether perquisites — Whether the energy of the energy of

The respondent was the manager of a company's paper-mill situated about a mile and a half from the nearest village. His service agreement provided that, if so required by the company, he was to reside in any house provided by the company; and that the company should be responsible for the cost of all coal, coke, gas and electricity reasonably required for heating or lighting the house, for the rent, rates and taxes and the upkeep of the garden. It was not disputed that the respondent was required to live at a particular house provided by the company, nor that it was in fact necessary for the manager to live there for the proper performance of his duties.

The respondent was assessed under Schedule E in sums equivalent to those paid by the company for coal and electricity and the part-time services of a gardener at the house the respondent occupied. It was contended on his behalf that none of those sums were perquisites within paragraph 1 of the Ninth Schedule to the Income Tax Act, 1952; and that they were not benefits in kind within section 161. It was contended on behalf of the appellant that the sums in question, not having been spent by the employer on the house itself, were assessable on the respondent because they represented money's worth; and that, alternatively, the sums were benefits in kind within section 161. The Special Commissioners decided in favour of the respondent.

Held (affirming the judgment of Mr Justice Cross): the sums in question were benefits in kind within section 161 (1); and that there was no ground for apportionment under section 161 (6).

## Notes and Notices

### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

#### President's Luncheon

The President of The Institute of Chartered Accountants in England and Wales, Mr Percy F. Carpenter, and the Vice-President, Mr Robert P. Winter, gave a luncheon party on July 27th at the Dorchester Hotel. The guests were: Lord Kilmarnock, Lord Ritchie of Dundee, Sir Howard Florey, Sir Edward Playfair, The Hon. Mr Justice Lloyd-Jones, Mr Kenneth Keith, Sir Thomas Robson, Sir William Lawson, Mr D. V. House, Mr E. F. G. Whinney, Mr Alan S. MacIver and Mr C. Evan-Jones.

#### **Taxation and Research Committee**

The 122nd meeting of the Taxation and Research Committee was held at the Institute on Thursday,

July 26th, 1962.

142

Present: Mr J. Cartner (in the chair), Messrs F. W. Allaway, G. R. Appleyard, G. L. Aspell, T.D., R. D. R. Bateman, M.B.E., R. P. Brown, W. R. Carter, L. H. Clark, S. M. Duncan, N. Cassleton Elliott, E. S. Foden, C. R. P. Goodwin, A. P. Hughes L. N. Hunter, S. Kitchen, J. W. Margetts, A. Martin, B. A. Maynard, S. A. Middleton, G. P. L. gan-Jones, F. L. Moulding, J. Perfect, T. B. Pritchard, A. H. Proud, D. W. Robertson, H. Robinson, C. Romer-Lee, E. C. Sayers, H. G. Sergeant, B. D. Shaw, H. C. Shaw, W. Shuttleworth and C. C. Taylor (thirty-three members), with Messrs F. C. A. Ledsam, E. R. Nicholson and R. T. Walters, and the Assistant Secretaries to the Committee.

#### Subcommittees

Reports of progress were received from subcommittees concerned with twenty-two matters, and a subcommittee to consider one additional matter was nominated.

#### Future meetings

The 123rd meeting of the committee will be held on Thursday, September 13th, 1962, and the following dates have been provisionally fixed for further meetings in 1962.

Tuesday, October 23rd, 1962. Thursday, December 13th, 1962.

#### APPOINTMENTS

Mr H. F. R. Catherwood, M.A., F.C.A., assistant managing director of British Aluminium Co Ltd, has become managing director.

Mr Bernard Dufton, F.C.A., has been appointed a director of Town Investments Ltd, and of Waddon Investments Ltd.

#### IN PARLIAMENT

#### Decimal Coinage: Committee's Report

Mr Proudfoot asked the Chancellor of the Exchequer if he will now state when the report of the Committee on Decimal Coinage will be published.

Mr DU CANN: It is not yet possible to give a firm date, but present indications are that the report should

be available early next year.

Hansard, July 19th, 1962. Written Answers. Col. 83.

#### Sterling Value

SIR J. BARLOW asked the Chancellor of the Exchequer if, taking the internal purchasing power of the £ sterling in 1914 as 20s, he will give the value in shillings and pence for 1061.

MR BOYD-CARPENTER: 4s 5d, based on changes in the consumer price index and, for the period up to 1938, the Ministry of Labour's cost-of-living index.

Hansard, July 19th, 1962. Written Answers. Col. 83.

## EXPORT CR ITS GUARANTEE DEPARTMENT New Office Opened

The Export—Credits Guarantee Department has opened a new office at Clements House (Wood Street entrance), 14–18 Gresham Street, London EC2, for dealing with business of exporters in the SW, SE, and EC4 areas of London, and in the counties of Hampshire, Surrey, Sussex, and Kent. The telephone number of the new office is Monarch 4581. A telex service is in course of installation: the number will be 24812.

#### NATIONAL INSURANCE

#### Graduated Contributions on Holiday Pay

The Minister of Pensions and National Insurance, has made regulations<sup>1</sup>, relating to the calculation of graduated national insurance contributions on holiday

pay.

These regulations which came into force on July 30th last, make a technical amendment to secure that for this purpose certain payments for holiday weeks can be treated as forming part of an employee's ordinary series of payments even though calculated on a quite different basis, such as where a piece-worker receives holiday pay based on his period of service.

<sup>1</sup> The National Insurance (Assessment of Graduated Contributions) Amendment Regulations, 1962. S.I. 1962 No. 1565, H.M.S.O. Price 3d.

#### MANCHESTER SOCIETY OF CHARTERED ACCOUNTANTS

At a recent committee meeting of the Manchester Society of Chartered Accountants the following officers were re-elected for the year 1962-63:

Hon. Secretary: Mr T. W. E. Booth, F.C.A., 46 Fountain Street, Manchester 2.

Hon. Treasurer: Mr A. E. Armitage, M.A., F.C.A.

Hon. Librarian: Mr G. W. Murphy, B.A. (COM.), F.C.A.

#### THE MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

At a recent committee meeting, the following officers were re-elected for the ensuing year:

Hon. Secretary: Mr F. A. Watson, B.A.(COM.), 46 Fountain Street, Manchester 2.

Hon. Treasurer: Mr E. K. Richardson, B.Sc. (ECON.).

Hon, Librarian: Mr R. M. G. Carter, B.A.

#### SOUTH EASTERN SOCIETY OF CHARTERED ACCOUNTANTS

#### Students' Residential Courses

The South Eastern Society of Chartered Accountants will hold its thirteenth annual students' residential tuition course in Brighton from September 24th to 28th (Intermediate students) and October 1st to 5th (Final students).

Lectures will be given by tutors from the accountancy correspondence schools, and the programmes include evening buffet meetings and dinners. Arrangements for hotel accommodation can be made if desired and there will be a grant towards the cost of accommodation and travelling expenses. The fee for each course is £4 5s.

All students, whether or not within the area of the South Eastern Society, wishing to attend should apply during August for registration forms and further particulars to Mr T. T. Nash, F.C.A., 33 Lawrence

Road, Hove, Sussex.

#### THE INSTITUTE OF OFFICE MANAGEMENT **One-day Conferences**

A series of one-day conferences to be held in London during the autumn/winter 1962 session by The Institute of Office Management will deal with the following subjects: 'The functional approach to office accommodation' (September 19th); 'Grading and merit rating for the office' (October 3rd); 'The role of the office in the export drive' (October 23rd) and 'The electronic computer - challenge to personnel management' (November 28th), arranged jointly with The Institute of Personnel Management.

Further particulars regarding the conferences are obtainable from the Courses and Conferences Department, The Institute of Office Management,

56 Victoria Street, London SW.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of August 6th, 1887 Extract from a leading article entitled

THE AUDIT OF GOVERNMENT ACCOUNTS

The appointment by the Select Committee on the Army and Navy Estimates of the President of the Institute, Mr Frederick Whinney, to audit and report upon the accounts of the Army Manufacturing Establishments, with power to select another professional accountant to assist him in the work is, for accountants, the most notable, and in its influence and effects, may prove the most important event which has occurred since the Incorporation of the Institute. The Select Committee, of which Lord RANDOLPH CHURCHILL is not merely the Chairman, but the ruling and the guiding spirit, have, in the course of their enquiries, brought to light a state of confusion in the public accounts and laxity in the system of checking and auditing the same, which, with good reason, are believed to cause both waste and extravagance. . . . That Government should undertake no business which can be as well performed by private enterprise is a maxim which in the abstract all people recognise as sound, but which in the confusion and the complication of actual life is apt to pass unrecognised. The fact that the services of chartered accountants have been called in to assist the work and deliberations of a Committee who have attracted great public attention is an indication, we trust, of the fact that public men not only recognise the value of an audit, but recognise that the most efficient auditors are to be found in the ranks of the Institute of Chartered Accountants. The event is auspicious and may have important results.

#### THE PROFESSIONAL CLASSES AID COUNCIL

The forty-first annual report of The Professional Classes Aid Council for the year ended March 31st, 1962, records that total available income for the year amounted to £33,462 compared with £29,242 in the preceding year. Expenditure rose by £4,610 above last year's figure of £29,242 and comprised £25,039 for relief for all the several kinds mentioned in the report, £6,539 for administration costs and £2,274 for other expenses including appeals and publicity.

During the year financial assistance was extended to 527 families - fifty-six more than last year. In addition to general assistance given in cases of distress, grants were made for the education of children and training of students and for additional help in the cases of

elderly and infirm people.

The Council is composed of representatives of nearly all the professional bodies and it works in close

## Promulgating Parker

SINCE the report of the Parker Committee – appointed in 1958 to consider the education and training of articled clerks – appeared in May of last year, the Council of The Institute of Chartered Accountants in England and Wales has been occupied in studying its three score and ten recommendations. The first results of these deliberations are contained in the report of the August meeting of the Council elsewhere in this issue. The statement deals with exactly half the recommendations and the Council announces that further statements will be issued in due course with regard to others still under consideration.

It must be gratifying for Mr PARKER and his colleagues to have their suggestions accepted with so little qualification. Apart from a few which have been referred to specific committees for further investigation, only one recommendation so far has been rejected. That is (39) which proposes that candidates who would have passed either part of the Final examination as proposed but for failure in one paper should be allowed, at the discretion of the Council, to re-sit that paper alone at a subsequent sitting. Of the many recommendations that have been approved either as they stand or with only minor modifications, one of the most important is that candidates over 18 years of age who have two passes at advanced level out of the total of five required for entrance will be allowed a reduction of one year in the normal five-year term of articles. This will enable scholars to enjoy the undoubted advantages of a sixth form course without feeling that by so doing they will ultimately be a year later in qualifying.

There are three significant changes in the Institute's examinations. The first is that the Institute's own preliminary examination will cease. This, as the Parker Committee pointed out, involves a break with a tradition of nearly eighty years but there is no valid reason why the examinations for the General Certificate of Education should not provide, as indeed they have been doing for many years now, an accurate measure of the level of general education of prospective candidates.

The scope and character of the present Intermediate examination will be substantially altered when the proposals contained in recommendation (37) are implemented. The existing three papers on book-keeping and accounts will be reduced to two, the subjects of executorship and cost accounting will be omitted and taxation will be confined to the treatment of taxation in accounts as already included in the book-keeping and accounts paper. The revised syllabus will then be two papers on book-keeping and accounts, one on auditing and a general paper. The Intermediate examination

in its new form will be held in March and September each year and the date of the first examination will be September 1964. The last Intermediate examination in its present form will be held in May 1965.

The Final examination, as well as having a revised syllabus, will be divided into two parts. Part I will contain one paper each on advanced accounting and taxation and two on English law. Part II will have two on advanced accounting, one each on auditing and taxation and a general paper. Details will not be available until November of this year but if recommendation (33) of the Parker report is followed, one of the

accounting papers will give additional scope for examination in matters relating to management accounting. The first dates for the new examinations will be May 1965 for Part I and November 1965 for Part II. The curtain will fall on the present composite Final examination in November 1966.

The objects of these and other changes outlined in the Council's statement are twofold – to avoid specialization during the period of articles and to provide a test of practical competence. Those responsible for setting this course have done a difficult job well. It is now up to future generations of clerks to make it a demonstrable success.

## Short-term Gains — V

#### **APPORTIONMENTS**

AST week began the examination of section 13 of the Finance Act, 1962, subsection (1) of which says that the gain from an acquisition and disposal is to be computed for Case VII purposes in like manner as for Case I, on the assumption that the acquisition and disposal, and certain matters related to them, all constituted an adventure in the nature of trade – which ex hypothesi they do not<sup>1</sup>.

The section 13 (1) definition of the scope of the adventure is elaborated by section 13 (3). By virtue of paragraphs (a) and (b) of section 13 (3), the adventure does not relate to:

- (i) assets not included in the disposal; or
- (ii) interests not included in the disposal (even though they are interests in assets which are included in the disposal); or
- (iii) assets which are not chargeable assets2; or
- (iv) assets not included in the 'relevant disposition', as defined in last week's article (page 121).

What section 13 (3) (a) (b) actually says is that the adventure 'shall not be treated as relating to' the above matters, which seems to be putting the idea the wrong way round. It would be more apt to say that the adventure shall be treated as not relating to these matters.

Section 13 (3) (c) widens the scope of the adventure. It is to be treated as relating to:

<sup>1</sup> Case VII income is not, for instance, earned income.

<sup>2</sup> See The Accountant of July 14th.
<sup>3</sup> Cmnd. 1710.

- (v) all assets included in the same disposal' whether or not included in the same acquisition;
- (vi) all relevant acquisitions of those assets;
- (vii) the whole interest (included in the disposal) in any assets to which the adventure relates, whether or not the whole interest was included in any relevant acquisition.

However, this is not to operate so as to extend to assets included in the disposal which are not in any case 'chargeable assets' or which were not included in a relevant acquisition, as already defined.

These rules clearly call for apportionments on both the receipts and the expenditure sides. For instance, if a freehold is acquired but the disposal is only of a fifty-year lease, then the consideration for the 'acquisition' of the lease must be arrived at by apportioning the cost of the freehold. Section 13 (3) ends by directing that 'all necessary apportionments' shall be made.

In this connection, the White Paper<sup>3</sup> says (paragraph 46) that 'the accepted practice in the case of a trader' will be followed. These general provisions as to apportionment have to be read in conjunction with paragraph 17 (1) (2) of the Ninth Schedule. If a 'single bargain comprises two or more transactions whereby assets are disposed of, those transactions shall be treated for the purposes of section 13 as a single disposal'. There then follows, in paragraph 17 (1), a provision

which has obviously been lifted bodily from section 326 of the Income Tax Act, 1952. Where separate considerations are agreed, or purport to be agreed (presumably between the parties to the bargain) then they are to be aggregated into one sum and that one sum is to be apportioned between the transactions. This applies even if not all the transactions constitute the disposal of assets.

Paragraph 17 (1), unlike section 326, does not expressly say that the apportionment is to be 'just' whatever that may mean. What then are the principles to be followed in re-apportioning sums which have been already effectively apportioned by the parties? Nothing is said about market value, for instance. That being so, it is difficult to see why, when the separate considerations (or 'purported' considerations) have been aggregated, the aggregate sum should not be apportioned back to the original amounts.

However, that the intention is to remake the bargain for the parties, as far as Case VII is concerned, is clear from the Tenth Schedule of the Finance Act, 1962, to which no reference is made in the Ninth Schedule, in which paragraph 17 appears. The Tenth Schedule provides that section 329 of the Income Tax Act, 1952, is to apply for Case VII purposes in relation to any apportionment (and in relation to any determination of market value) as it applies for purposes of Part X of the Income Tax Act, 1952. Section 329 says that where, under the provisions of Part X, a sum has to be apportioned, and, at the time of the apportionment, it appears to be material as respects the liability to income tax of two or more persons, then 'any question which arises as to the manner in which the sum is to be apportioned' is to be determined by the body of Commissioners there provided for, in like manner as a Schedule D appeal. Section 329 (1) contains a proviso to the effect that all the persons mentioned above have the right to appear, be heard, and make representations in writing.

Paragraph 17 (1), which starts all this complication, is confined in its own terms to a 'single bargain', which itself may well throw up difficulties of construction. Further complications are raised by paragraph 17 (2) which provides for artificially treating different bargains, between different people, as a 'single bargain' for the purpose of paragraph 17 (1). These different bargains have to be 'associated transactions' to be

hit by paragraph 17 (2), but the draftsman has not apparently supplied any definition of this vague phrase. It will be remembered that section 412 of the Income Tax Act, 1952 (dealing with avoidance of tax by transfer of assets so that persons abroad receive the income) uses the phrase 'associated operation' and carefully defines it in section 412 (4). This definition has nevertheless given rise to a good deal of litigation, and has produced from Lord Justice Harman the observation that:

'Death, as we know, is an awfully big adventure, but even the Crown admits that it is not an associated operation.'

Even less then can a passing on a death be an associated transaction.

If a husband and his wife enter into associated transactions, paragraph 17 (1) is to apply as if the transactions were comprised in a single bargain. It would be difficult to argue that this means that paragraph 17 (1) cannot apply unless both husband and wife entered into all the associated transactions, since if that was the construction (which without the context would be a reasonable construction), then paragraph 17 (2) would be unnecessary. The sub-paragraph also couples the following in this way:

- (i) a body of persons and a person having control of it;
- (ii) two bodies of persons under common control. 'Body of persons' includes a partnership; and 'control' has the same meaning as in section 333 of the Income Tax Act, 1952 (see section 16 (1) of the 1962 Act). Paragraph 17 (2) ends with a proviso. Considerations given or received by different persons are not to be aggregated under the paragraph:

'unless they are given to or received from a single person or persons in relation to whom they can by virtue of (paragraph 17 (2)) be treated as an entire consideration'.

So much for the general principles of apportionment. Section 13 (4) deals, broadly speaking, with gains from the disposal of an interest in an asset where not all the acquisitions disposed of are 'relevant acquisitions' as defined in section 13 (8) (a) and considered in the fourth article in this series. For instance, the taxpayer may sell land outright, and it may be that he acquired the absolute ownership in steps, some within the

<sup>&</sup>lt;sup>1</sup> Bambridge v. C.I.R. (33 A.T.C. 273).

statutory three years and after April 9th, 1962, some either more than three years ago, or before April 10th, 1962. He might, for instance, have owned a long lease for more than three years, then buy up the reversion and sell the land as a whole. When he acquired the reversion the long lease would merge into the freehold and, of course, he would take one price for the whole. But only the gain applicable to the acquisition and disposal of the reversion is to be taxed under Case VII.

Section 13 (4) has a neat way of dealing with this problem; it provides as follows:

'(4) If in the case of any asset the interest to which the adventure relates does not derive wholly from one or more relevant acquisitions then the gain shall be computed as if such part of that interest as derives from any other acquisition had been first appropriated to the adventure immediately before the disposal.'

In the example cited above, the effect of section 13 (4) is presumably to bring in the whole proceeds of the disposal of the freehold but to enter on the debit side what would have been the market value, at the time of the disposal of the freehold, of the interest which was not the subject of a relevant acquisition. It follows that expenditure confined to that interest is not also deductible.

Although land is the kind of chargeable asset which springs to mind when one is considering section 13 (4), the subsection is not in terms confined to land. Section 13 (5), on the other hand, is expressly confined to 'land'. It will be recalled that section II (I) provides that section 10 (2) 'shall apply to an option or other right to acquire or dispose of land as it applied to land'. Now section 10 (2) lays down a three-year time limit for acquisitions and disposals of 'land', as against the six months for chargeable assets which are not 'land'. It follows that the ambit of section 13 (5) is not extended by section 11 (1). Options to acquire or dispose of land are apparently not land, and therefore are not within section 13 (5), notwithstanding that they have to be held for three years in order to escape Case VII.

Section 13 (5) applies to the following set of circumstances:

- (a) the taxpayer disposes of Blackacre;
- (b) this disposal of Blackacre is part of an 'adventure' for Case VII purposes;
- (c) included in the above disposal is the disposal of Whiteacre (not part of the 'adventure');

- (d) Whiteacre is land adjoining or neighbouring to Blackacre:
- (e) Whiteacre is chargeable assets, i.e. it is not within the exemption in section 11 (4) in favour of trade, etc. premises;
- (f) Whiteaere was not 'acquired as legatee' (presumably by the taxpayer);
- (g) the value of Whiteacre was enhanced by a 'relevant acquisition' of Blackacre;
- (h) part of the consideration for the disposal represent this enhancement.

If all these circumstances apply, then on apportioning the total consideration for the disposal between Blackacre and Whiteacre, for the purpose of the Case VII computation, the whole of this enhancement is to be apportioned to Blackacre and not to Whiteacre. The White Paper on Case VII purports to explain section 13 (5) in paragraph 48, which consists of five lines. The paragraph seems to contain an error, for its says in effect that Blackacre shall not have been acquired as legatee, whereas what section 13 (5) actually says (whatever it was meant to say) is that Whiteacre shall not have been acquired as legatee. (We shall deal with legatees in a later article.)

Section 13 (6) deals with the case of land being disposed of, subject to an interest created by a letting of the land which letting is itself exempted from charge to Case VII tax, by virtue of section 12 (11). It will be convenient to deal with section 13 (6) when we deal with section 12 (11).

Section 13 (7) provides that:

'An asset shall be treated as having been acquired free on any interest or right by way of security subsisting at the time of any relevant acquisition of it, and as being disposed of free of any such interest or right subsisting at the time of the disposal.'

Thus if a taxpayer bought land which was subject to a mortgage to secure repayment of a loan of £1,000; borrowed a further £1,000 also secured on the land; and then sold his equity of redemption for the same price which he had himself paid, then prima facie there would be no profit. But of course the taxpayer would normally be in pocket to the extent of the £1,000 he had himself borrowed. Section 13 (7) seems to ensure that this  $f_{1,000}$  is taxed. If eventually (after Case VII tax had been paid) the purchaser failed to pay off the mortgages, and the taxpayer was called upon to repay out of his own pocket the £1,000 which he had borrowed, then apparently he would have no redress. (To be continued.)

#### THE ACCOUNTANT

## Early Company Legislation

#### HUNDREDTH ANNIVERSARY OF 1862 ACT

by R. ROBERT, A.C.I.S.

HE Bubble Act, 1719, made it an indictable offence for a company to invite public subscriptions, to make its stock transferable or to act as a corporate body, unless it was incorporated by royal charter. This Act, passed with the best of intentions at the time of the 'South Sea fever', held back the development of joint-stock companies for over a hundred years and it was not until after the Napoleonic Wars, when capital was freely available for investment, that the 'pause' was broken. Then, in the 1820s, a boom in the formation of joint-stock companies began and forced Parliament to reconsider the position. In 1825 it repealed the Bubble Act and thenceforth the 'unincorporated' companies were treated as partnerships.

As such they could neither sue nor be sued unless all their members were joined in the legal proceedings. This meant that companies with large memberships were virtually barred from going to the Courts, a circumstance which gave rise to many difficulties. An Act was therefore passed in 1834, empowering the Crown to give unincorporated companies the right of maintaining and defending actions in the name of one or more of the company's officers. This Act, together with that of 1825, was repealed in 1837 and was succeeded by another which permitted the granting to unincorporated companies by letters patent of any privilege which might be granted by charter.

#### **New Form of Association**

A deed of partnership and particulars of members, under the Act of 1837, had to be made available for inspection by anyone on payment of a small fee. The aim was to create a new form of association which had some of the advantages of a corporation but enjoyed neither the monopoly rights nor the limited liability of the chartered bodies. Seven years passed and then, under pressure of events, Parliament was again obliged to review existing legislation. The Joint Stock Companies Act of 1844 was the first to deal with the subject comprehensively and at full length. As at the time of the 'Bubble', 'stock jobbing' was much in evidence and fraudulent schemes for extracting money from the public caused grave concern. A favourite device was using the names of well-known people as directors without authority.

The 1844 Act sought to end abuses of this kind by providing for compulsory registration of jointstock companies, which were defined as all partnerships with more than twenty-five members, and partnerships with transferable shares. Registration was effected in two stages: first, before public subscriptions were invited there had to be a provisional registration; full registration followed after one-quarter of the capital had been received and a deed settlement had been filed. On completion of these formalities the company emerged as a separate, legal entity.

Though the incorporation of joint-stock companies after 1844 became a right instead of a privilege, for practical purposes they still remained partnerships with unlimited liability. This left the company promoters and entrepreneurs with the biggest problem still unsolved.

#### **Beginning of Limited Liability**

Parliament at that time rejected the idea of trading by manufacturing companies whose liability was limited; and in fact ten years elapsed before the climate of opinion changed. Not until 1854 did the House of Commons pass a resolution to the effect 'that the law of partnership should be so far modified as to permit persons to contribute to the capital of such concerns, on terms of sharing their profits, without incurring liability beyond a certain amount'. This resolution, for all its lack of virility, was the father of the Limited Liability Act of 1855, which - though no more than an amendment of the Act of 1844 - established the important principle that joint-stock companies could limit the liability of their members to the amount unpaid on their shares.

This Act was no more than a stop-gap measure, for a Bill revising the whole of company law was laid before Parliament in its next session. This

new Bill, by removing certain restrictions contained in the 1855 Act (such as the stipulated minimum amount of £100 per share), greatly facilitated the formation of limited liability companies. At the same time, by calling for more information to be published it gave a measure of protection to investors. Though some members of the House opposed the new freedoms for jointstock companies, a majority favoured the Government proposals and so the Act of 1856 was duly passed.

#### The 1862 Act

We are now able to consider a major piece of legislation which received the Royal Assent on August 7th, 1862 - just one hundred years ago. The Companies Act of 1862 was intended to be a comprehensive code of law applicable to trading companies for the whole of the United Kingdom. Experience had shown that there were serious disadvantages in allowing trading activities to be carried on by bodies whose membership changed from day to day. Hence, one of the Act's first and most important provisions: that no company, association, or partnership consisting of more than twenty persons (or ten in the case of banking) should be formed after commencement of the Act, for the purpose of carrying on any business which had for its object the acquisition of gain (by the company, association or partnership, or by the individual members thereof) unless it was registered.

Companies formed in pursuance of an Act of Parliament or of letters patent, or companies engaged in working mines within, and subject to the jurisdiction of, the Stanneries, were exempt from the provisions. Fundamentally, the main concern of the Act was that all commercial undertakings - as distinguished from learned, charitable or other non-profit making bodies should be registered. Having made its basic intention clear, the Act went on to indicate the precise manner in which companies were to be

formed and incorporated.

Briefly, it was laid down that any seven or more persons associated for any lawful purpose could, by subscribing their names to a memorandum of association and otherwise complying with the requirements of the Act in respect of registration, form an incorporated company with or without limited liability. The subscribers did not necessarily have to be traders, nor did it matter if six of the subscribers were merely nominees, or relatives, of the seventh. This latter point was made clear beyond a doubt in the famous case of Salomon v. Salomon, decided by the House of Lords in 1807.

The document to be subscribed - i.e. the memorandum of association - corresponded, in the case of companies formed under the Companies Act of 1862, to the charter or deed of settlement in the case of other corporations. The form of the memorandum was given in a schedule to the Act and varied slightly according to whether the company was limited by shares, by guarantee or was unlimited.

#### **Essential Conditions of Incorporation**

Companies limited by shares were required to state: (1) the name of the company with the word 'limited' as the last word in such name; (2) the part of the United Kingdom, whether England, Scotland or Ireland, in which the registered office of the company was to be situated; (3) the objects for which the company was to be established; (4) that the liability of the members was limited; and (5) the amount of capital with which the company was to be registered.

No subscriber could take less than one share and each subscriber had to write opposite his name the number of shares he took. These five points relating to the memorandum of association the Legislature regarded as of such cardinal importance that it required them to be set down for all to see and inspect. They were the essential conditions of incorporation, and as such had to be explicitly stated. Further, with certain exceptions they could not be altered.

With reference to the articles of association, or regulations for internal management of the company, these were regarded as the terms of the partnership which the subscribers had drawn up among themselves and were agreed upon. 'Table A', annexed to the Companies Act of 1862, was a model or specimen set of articles. Accompanied by the memorandum, the articles of association had at that time to be taken to the Registrar of Joint Stock Companies at Somerset House, together with other relevant details.

From what has been said, it will be clear that the Companies Act of 1862 laid the foundations of company law as we know it today. There have been subsequent reshapings, amendments and alterations; two major consolidating Acts in 1928 and 1948 – have been passed, and doubtless the recently published report of the Jenkins Committee presages further modifications. Yet many of the fundamental principles remain very much as they were a century ago.

# Taxation Aspects of Amalgamations and Reconstructions—I

by D. O. BAILEY, F.C.A.

#### Introduction

MALGAMATIONS and reconstructions are almost everyday events in present-day business life and are subjects of constant discussion among business men generally as well as among those who are charged with the actual formulation and putting into effect of the relative scheme. It is common knowledge that such schemes involve many difficulties, and not least of these are the pitfalls introduced by an ever more complicated taxation law. It is only too easy to find that excessive taxation has arisen as a consequence of a transaction which on business grounds would be wholly desirable.

- 2. These transactions may take several forms, and the method adopted may well depend to an important degree on tax considerations. It is for the accountant to weigh up and advise on the consequences of the different methods possible and to point out the pitfalls along the way.
- 3. Very broadly, the courses open fall into two categories, namely, the acquisition of shares or the acquisition of a business.

#### References

4. All references to statutes relate to the Income Tax Act, 1952, unless otherwise stated.

#### Acquisition of Shares

#### Income tax consequences

- 5. Apart from special cases the income tax liabilities of all parties are not affected by a straightforward acquisition of share capital. Reference is made later to the position which arises where such an acquisition is followed by the transfer of a business.
- 6. Where one of the companies concerned has losses carried forward the question arises whether relief can be obtained against the profits of the other company. It is clear that this is not possible so far as losses prior to the date of acquisition are concerned, but relief may be available for subsequent losses.
- 7. The simplest way of effecting this is by subvention payments under section 20, Finance Act, 1953, which applies once two companies are parent and

subsidiary, or fellow-subsidiaries, as defined for profits tax by section 42, Finance Act, 1938. It must, however, be borne in mind that under section 20 (10) the appropriate relationship must exist between the companies at all times from the beginning of the payee company's accounting period to the date of making the payment. It follows that a subvention payment will normally be barred for the first accounting period ending after the acquisition. A change in the payee company's accounting date may be desirable to minimize this difficulty.

- 8. The possibility of feeding profitable business into the company having past losses must be approached with some caution. Losses can only be carried forward against the profits of the same trade as that in which the losses arose (section 342), and cease to be available for carry forward if that trade has terminated (Goff v. Osborne & Co (Sheffield) Ltd (34 T.C. 441)1).
- 9. A similar note of caution is desirable in connection with the possibility of recouping losses by intercompany charges on a generous scale. Limits to this possibility are provided in section 469 which restricts such charges to the independent arm's length rate unless both companies are carrying on a trade in the United Kingdom and the charges would figure in their respective computations of taxable profits. Apart from section 469, however, such charges can be disallowed in the computations of the paying company if they are clearly in excess of a commercial rate (Commissioners of Inland Revenue v. Huntley & Palmers Ltd (12 T.C. 1209)<sup>2</sup> and Marshall Richards Machine Co Ltd v. Jewitt (36 T.C. 511)<sup>3</sup>). An excessive charge may

Mr D. O. BAILEY, F.C.A., the author of this paper given at the Cambridge Summer Course of The Institute of Chartered Accountants in England and Wales, is a partner in Price Waterhouse & Co. Prior to integration, he had been a member of the Society of Incorporated Accountants since 1934.

<sup>1</sup> 32 A.T.C. 262. <sup>2</sup> 7 A.T.C. 323.

<sup>3</sup> 35 A.T.C. 186.

therefore leave the group worse off, since the disallowance of a sum in the paying company's computation does not necessarily involve the exclusion of that sum from the profits of the recipient.

- 10. A more complicated situation arises where the company whose shares are acquired has accumulated profits out of which dividends are subsequently paid. The practice of 'dividend-stripping' whereby dividends drawn from pre-acquisition profits were used to frank repayment claims was first the subject of legislation in the Finance (No. 2) Act, 1955. Section 4 of this Act was aimed only at finance companies and bodies exempt from tax. In the case of the former the net dividend received out of pre-acquisition profits was to be treated as a trading receipt: in the case of the latter the exemption from tax was not to apply to such dividends.
- 11. By section 19, Finance Act, 1958, these provisions were extended to all persons carrying on a trade, who were deprived of the right to repayment under a loss claim under section 341 of tax deducted from dividends paid out of pre-acquisition profits and further could not include such dividends either in calculating the surplus available for a subvention payment under section 20, Finance Act, 1953, or in deciding whether annual payments were wholly covered by taxed income for the purposes of section 170. There appears to be no prohibition on the use of a dividend paid out of pre-acquisition profits to support a management expenses claim under section 425.
- 12. These provisions having proved insufficient to protect the Revenue, more drastic steps were taken by section 28, Finance Act, 1960. This represented something of an innovation in income tax law in that if the requisite conditions were fulfilled the Commissioners of Inland Revenue were given general powers to counteract any 'tax advantage'. Powers of this kind have previously been given in connection with profits tax and excess profits tax but not in connection with income tax. The counteraction may be effected by assessments, additional assessments, nullifying a right to repayment or requiring the return of a repayment already made.
- 13. The conditions pre-requisite to the application of section 28, Finance Act, 1960, may be summarized as follows:
  - (a) There must be a transaction in securities.
  - (b) In consequence a person must be in a position to obtain, or have obtained, a tax advantage.
- (c) The advantage must arise in one or other of certain defined circumstances, namely:
  - (i) the receipt of an 'abnormal' dividend by a person who, by reason of losses or exemption from tax, is entitled to repayment of tax;
  - (ii) the right to claim an allowance in computing taxable profits for depreciation in the value of securities;

- (iii) the receipt by some person of a non-taxable sum representing the value of assets of a company, under a transaction whereby some other person receives an abnormal dividend or becomes entitled to a deduction as in (ii) above;
- (iv) the receipt by some person of a non-taxable sum in connection with the distribution of profits of either:
  - (a) a company under the control of not more than five persons within the meaning of section 256 or,
  - (b) any other company whose shares are not dealt in on a stock exchange. Subsidiaries of companies exempt under this heading are themselves also exempt.
- 14. Cases (i) and (ii) are reasonably clear and are designed to tax the purchaser of shares under a dividend-stripping or similar scheme, while case (iii) is directed at the vendor. Case (iv) is concerned with liability to surtax and is consequently limited in its application to certain closely-controlled companies.
- 15. The Finance Bill introduced in April 1962, contains provisions which would tighten up the application of section 28, Finance Act, 1960, in regard to transactions carried out after April 9th, 1962. From the information available at the time of publication of the Bill the effect seems to be:
  - (a) To include relief for a subvention payment made by a company in the classes of claims for repayment of tax referred to in paragraph 13, (c), (i) above.
  - (b) To extend the terms of paragraph 13, (c), (ii) above to an allowance claimed in respect of securities formerly held by the taxpayer. Moreover if the tax advantage from such an allowance accrues to another company because it makes a subvention payment that advantage also is to be covered by the section.
  - (c) To treat man and wife as one person for the purposes of section 28.
  - (d) To treat the combined effect of a transaction in securities and liquidation of a company as a transaction in securities within the section.
- 16. The section does not apply if the transaction was carried out for bona fide commercial reasons or in the ordinary course of making or managing investments and if the obtaining of a tax advantage was not a main object. It is also interesting to note that the liquidation of a company is not a 'transaction in securities' within the section (Hansard, May 25th, 1960, column 511). Under subsection (10) application for a clearance from the operation of the section may be made to the Commissioners of Inland Revenue. Such a clearance is final unless there has been non-disclosure of material facts. Appeals against directions under the section may be taken to the Special Commissioners, with a right of re-hearing before a special

tribunal, and there is also a right prior to any proceedings to make a statutory declaration to the tribunal who may decide whether or not there is a prima facie case for action under the section.

- 17. There are certain other cases which may need consideration under the anti-avoidance provisions of the Finance Act, 1960. They are cases of the sale of shares in companies of the following kinds:
  - (a) Companies carrying on a trade of dealing in property or securities.
  - (b) Companies carrying on some other trade, if the value of any single object included in trading stock amounts to one-fifth or more of the value of the net assets.
  - (c) Companies whose activities include the erection of a building, provided the shares are sold within six years of the date of completion of the building and its value, or the aggregate value of all such buildings owned by the company concerned amounts to one-fifth or more of the value of the net assets.
- 18. These provisions only apply where the shares are sold to a person who has, or in consequence of the sale will have, control of the company. They then proceed on the basis that the price of the shares, suitably adjusted for the value of assets other than stock (or buildings completed within the six years) and for liabilities, should be treated as if it represented the sale price of the stock (or buildings). The tax, which may include surtax, is chargeable on the vendor and may bear no relation to the actual profit made by him since, except in very limited circumstances, the price paid by him for acquisition of the shares is disregarded and he obtains no allowance if his cost includes a premium.
- 19. Although the tax under these provisions is primarily payable by the seller of shares, any tax not paid by him is recoverable from the company, and there is therefore a contingent liability to be considered by the advisers of the purchasers. In the cases considered in paragraph 17 (a) and (b) above, but not in 17 (c), there is provision for exemption if the Commissioners (i.e. the General or Special Commissioners, not the Commissioners of Inland Revenue) are satisfied that all the company's trading stock will be disposed of in the ordinary course of business, and a clearance can be obtained from the Commissioners of Inland Revenue on this point. Neither the exemption nor the clearance is, however, of any avail in so far as the stock held by the company at time of sale of the shares remains unsold at the expiry of six years unless the stock was retained for bona fide reasons connected with the trade (subsection (10)). It appears that the Commissioners of Inland Revenue are unwilling to give any form of assurance involving any admission as to the scope of these provisions.
- 20. Where shares in a company have been sold in such circumstances as are referred to in paragraph 17, but no tax was assessed at the time of that sale because

the Commissioners were satisfied that the trading stock would be sold in the ordinary course of business, a subsequent purchaser of the shares may be in difficulties if some part of the stock remains unsold at the end of six years. The assessment under subsection (10) is in such a case made on the company, and the Finance Act gives no right of recovery from shareholders or former shareholders. The possibility of such a position arising must therefore be investigated if the company under consideration is of the type likely to be affected.

21. These provisions only apply where shares are sold. It is understood that in law an exchange does not constitute a sale, so that certain forms of amalgamation not involving a cash consideration may be outside these provisions.

#### Profits tax consequences

- 22. The question again arises as to the position where one or other of the companies concerned has incurred or is incurring losses. As regards postmerger losses the parent company has the right to give notice of election for group treatment under section 22, Finance Act, 1937. The notice will apply for chargeable accounting periods throughout which the necessary relationship subsists, and it is the practice of the Commissioners of Inland Revenue, by virtue of their powers under section 38 (4), Finance Act, 1947, to direct that a separate chargeable accounting period shall commence on the date of acquisition of the shares.
- 23. Losses incurred in periods prior to the operation of the grouping notice remain individual to the companies which incurred them. These losses are deducted from the profits of the company concerned before arriving at the amount to be included in the group computation.
- 24. In any consideration of the profits tax position it is always necessary to bear in mind the powers of the Commissioners of Inland Revenue under section 32, Finance Act, 1951, to counteract any avoidance or reduction of liability to profits tax, if in their opinion such avoidance or reduction is a main purpose of a transaction. Where the transaction consists of a transfer of shares or debentures, and in certain other limited circumstances, these powers will apply if, whatever the main purpose, the main benefit which might have been expected to arise in the three years immediately following the transaction was the avoidance or reduction of profits tax. This involves an estimate, on a reasonable basis, of the position as it appears to be when looked at at the date of completion of the transaction. Application may be made to the Commissioners of Inland Revenue in advance of a proposed transaction for a clearance against possible liability under this section.

#### Surtax consequences

25. Where the company whose shares are acquired is a 'surtax company' within the provisions of section

245 the purchasers must consider the possibility of directions under that section in relation to past profits. The mere absence of directions to date cannot be regarded as affording any protection.

26. For accounting periods ended prior to August 1st, 1957, the well-known 'Chancellor's umbrella' provided adequate protection in a straightforward case. Subsequent periods remain subject to the full rigour of the law, except that, following on the Chancellor's request for dividend restraint in 1961, the following statement was made on his behalf:

'As hitherto, where there has been no material change in circumstances, surtax action will not be taken against a trading company which distributes the same proportion of its profits as the Special Commissioners have accepted as reasonable for past years.' (Hansard, Vol. 645, No. 162, colš 202-3).

It will be observed that the emphasis is on the proportion of profits distributed. It is, of course, open to a company to defend the distribution of a lower proportion in appropriate circumstances, e.g. where all profits have been absorbed in development of the business.

- 27. The most satisfactory step is to obtain clearances under section 252. Unless there has been a failure to disclose material facts such clearances may be regarded as providing full protection. In the absence of clearances indemnities with suitable backing are essential.
- 28. A difficulty may arise in regard to the accounting period immediately preceding a sale of the company's shares. If the interval between the end of the accounting period and the date of sale is short, and if the purchaser is a company outside section 245, it may be suggested that there is no likelihood of a direction for that period. This view will not necessarily be accepted by the Special Commissioners. They, relying on the requirement that dividends should be declared within a reasonable time, may argue that the vendor shareholders would have obtained sufficient information before selling their shares to enable a decision as to the amount of a reasonable dividend to be taken then, and that accordingly any subsequent distribution could be outside the 'reasonable time'.
- 29. As regards the accounting period in which the shares are acquired, the position should be within the control of the purchasers. A point to be borne in mind is that, if the shares are acquired by a company outside section 245, the acquired company is not necessarily itself outside the section. It would remain subject to the section if, on a notional apportionment of its income, more than half would be apportioned to five or fewer persons (section 256 (4) and section 256 (2) (c)). The importance of this point in relation to the period in which the sale of shares takes place arises from the fact that an apportionment can be made to persons who were shareholders at any time during the period (C.H.W. (Huddersfield) Ltd v. C.I.R. (40)

A.T.C. 371)). Care should, therefore, be taken to ensure that for this period a reasonable dividend is declared within a reasonable time.

#### Estate duty

- 30. A company may become liable for payment of estate duty under section 46, Finance Act, 1940, and the purchaser of shares must be on his guard against any such possibility.
- 31. The companies subject to this legislation are generally defined on the same basis as surtax companies within section 245, except that there is no exemption for a public company or a company in which the public are substantially interested. The broad effect of the section is to charge to estate duty a proportion of the company's assets corresponding to the proportion which the 'benefits' received by a deceased person bore to the company's income. The basic conditions prerequisite are:
  - (a) that the deceased shall have made a transfer of property to the company, and
  - (b) that he shall have received benefits, as defined, from the company within the five years preceding his death.
- 32. If these conditions apply it may be difficult to form a close opinion as to the potential liability and indemnities would be required. In most cases, however, there should be little to fear as the legislation is in practice only applied where the company has formed part of a scheme for evasion of estate duty and the Estate Duty Office has given the Law Society assurances to this effect.

#### Stamp duty

- 33. Stamp duty would normally be payable at 2 per cent on the consideration for the acquisition of shares, and, if the transferee company has to increase its own nominal capital, at 10s per cent on such increase. Relief, however, may be available under section 55, Finance Act, 1927.
- 34. The requirements for a claim under that section may be summarized as follows:
  - (a) a scheme for reconstruction of a company, or for the amalgamation of companies;
  - (b) in connection with such scheme a company has been registered or increases its nominal capital;
  - (c) the registration or increase in capital takes place with a view to the acquisition of not less than 90 per cent of the issued share capital of an existing company;
  - (d) the consideration consists as to not less than go per cent of the issue of shares in the transferee company to the holders of shares in the company to be acquired.
- 35. If the conditions are fulfilled relief from stamp duty is given:
  - (a) from capital stamp duty on the lesser of the

share capital of the company to be acquired and the amount to be credited as paid up on the shares to be issued as consideration;

- (b) from transfer stamp duty on the transfers of shares in the company to be acquired.
- 36. The memorandum of association of the transferee company should refer to the acquisition as one of the company's objects, or alternatively the resolution increasing its capital should state that the increase is for the purpose of the acquisition.
- 37. The exemption will be withdrawn if the shares acquired are disposed of within a period of two years otherwise than in consequence of reconstruction, amalgamation or liquidation. The disposal of even a small number of shares will bring about this result.
- 38. It is essential that the particular scheme should relate to the acquisition of 90 per cent of the transferor company's share capital. If the transferee company already holds over 10 per cent the exemption does not apply. The new shares must moreover be issued to the shareholders of the transferor company, not to their

nominees or to persons to whom they have sold shares, so that the use of renounceable allotment letters is undesirable.

- 39. Where no claim arises under section 55, Finance Act, 1927, a saving of transfer stamp duty may be effected by the use of renounceable allotment letters. Letters of allotment and letters of renunciation are not subject to stamp duty.
- 40. If the accounts of the transferor company permit, therefore, and if it has the requisite powers, it can capitalize an appropriate part of its reserves and issue renounceable allotment letters to the shareholders. These letters can be renounced, free of stamp duty, in favour of the transferee company, while the consideration for the transferor company's original share capital, on which duty is payable, will be correspondingly reduced.
- 41. Questions affecting stamp duty require the advice of lawyers and it would be inappropriate for the accountant to purport to deal with them in detail.

(To be concluded.)

## Weekly Notes

#### REVENUE WARNING TO TAX OFFENDERS

NSWERING a question in Parliament on August A2nd as to the present practice of the Revenue in regard to instituting criminal proceedings for alleged fraudulent claims to income tax personal allowances and to expenses deductions, particularly where the taxpayer has made a voluntary disclosure of his offence, the Financial Secretary to the Treasury stated:

Criminal proceedings are normally instituted against a person who has evaded tax by making a fraudulent claim to income tax personal allowances or to an expenses deduction. The Commissioners of Inland Revenue have power under the income tax Acts, however, to make a monetary settlement with such a person and in such a case criminal proceedings are not taken against him.

In all cases, including cases of voluntary disclosure, the Commissioners reserve to themselves complete discretion as to their course of action; they can give no undertaking that criminal proceedings will not be taken. Nevertheless, if a person who has made a false claim comes forward voluntarily, without having been challenged with his offence, and makes a full and complete confession, these facts have great influence on the decision as to whether or not he should be prosecuted.

Any person who has made a false claim should

therefore consider whether it is in his or her interest immediately to make a disclosure of it to the Inland Revenue.

The Inland Revenue say that this statement has been made following suggestions that there is a considerable number of people who have made or are making false claims to income tax personal allowances and who would now like to straighten out their tax affairs but are deterred from doing so by fear of prosecution and imprisonment. Such people are, as a rule, law-abiding citizens apart from their tax offences and it is hoped that this statement - to which some publicity is being given by, e.g. a poster being exhibited in tax offices - may encourage them to come forward and confess.

The sort of offences dealt with by the statement consist, for example, in claiming income tax allowances for children who do not exist, or for the maintenance of relatives to whose support no assistance is in fact given. The statement also covers another sort of offence - fraudulent claims to tax allowances for expenses, e.g. a gross inflation of mileage covered (and hence expenses incurred) by persons who have to use their cars in the course of their employment.

Anyone who evades tax by fraudulent claims is liable to prosecution; alternatively, he may be charged with money penalties. In either case he has to pay back the tax lost. This statement is not an 'amnesty' for such offenders, observe the Revenue, it merely makes clear that where a tax offence of this class is detected by the Inland Revenue, criminal proceedings usually follow (and the offender has still to repay all the tax lost). On the other hand, where the offence comes to light only because the offender comes forward and makes a spontaneous and full confession,

then this weighs heavily in favour of a money settle-

ment and against prosecution.

The number of cases of false claims to tax allowances and expenses deductions which have been detected by the Revenue and made the subject of criminal proceedings has risen in recent years. In the years ended March 31st, 1959, 1960 and 1961, the numbers convicted were respectively fifty-four, thirty-one and sixty. In the year ended March 31st, 1962, eighty people were prosecuted for such offences. All were convicted, and thirty-four were sent to prison for terms ranging up to two years. The remainder were mostly fined varying sums.

## INSTITUTE PRESENTATION TO MR AND MRS MacIVER

LAST week's meeting of the Council of The Institute of Chartered Accountants in England and Wales was attended by Mr Alan S. MacIver, C.B.E., M.C., B.A., for the last time before his retirement from the secretaryship of the Institute next October. Mrs MacIver was also present.

The occasion was marked by the passing of a resolution recording the Council's gratitude to Mr and Mrs MacIver and by the presentation to them of some Georgian silver, with a fob watch as a personal gift to Mrs MacIver. The resolution was proposed by the senior Past President, Sir Thomas

Robson, who said that it would be stating the obvious to say that Mr MacIver had enhanced the prestige of the Institute 'throughout these islands and wherever he has gone on its behalf overseas'. The resolution, seconded by Mr Leonard Barrows, was as follows:

'As today Mr A. S. MacIver, C.B.E., M.C., is attending this Council as Secretary of the Institute for the last time before his departure on Institute business to North America and his subsequent retirement, the Council expresses to him and to Mrs MacIver the warm affection of its members and other members of the Institute for them both.

The Council records its deep sense of gratitude for the self-sacrificing, distinguished and devoted service which Mr and Mrs MacIver have performed for the Institute since Mr MacIver first became associated with it as Assistant Secretary in 1935, becoming Deputy Secretary ten years later and succeeding to his present appointment as Secretary in 1970.

'The Council offers to Mr and Mrs MacIver its sincere good wishes for their future happiness and asks them to accept the gifts which will now be presented by the President as a token from past and present members of the Council of the great esteem in which Mr and Mrs MacIver are held.'

Acknowledging the presentation, Mr MacIver commented on the changes at the Institute since he joined the staff in 1935. The membership was then little over eleven thousand, the total staff was seventeen and, he said, amid laughter, 'Moorgate

Mr MacIver thanking the Council for the presentation made to himself and Mrs MacIver. The President, Mr Percy F. Carpenter, F.C.A., is in the chair.

Place was then remarkable for an atmosphere of almost complete inactivity'. The staff now numbered about one hundred and twenty, with a membership approaching thirty-six thousand. Mr MacIver said he would be leaving in October 'with very happy memories and a very great measure of affection'.

The speeches are reported in full on other pages.

#### INSTITUTE STAFF APPOINTMENTS

THE Council of The Institute of Chartered Accountants in England and Wales has announced the appointment, as Joint Secretaries, of Mr F. M. Wilkinson, F.C.A., and Mr C. A. Evan-Jones, M.B.E., in succession to Mr A. S. MacIver, C.B.E., M.C., B.A. Their appointment will take effect from November 1st next.

It is also announced that Miss M. T. D. Reynolds, B.A., an assistant secretary of the Institute since 1947, is to be appointed an Under-Secretary as from November 1st.

#### I.M.T.A. ON DECIMAL COINAGE

In a memorandum on decimal coinage prepared for submission to the Halsbury Committee and reproduced elsewhere in this issue, The Institute of Municipal Treasurers and Accountants considers the question of conversion mainly from the viewpoint of its members most of whom are local government officers. It suggests that the change to decimal currency would be one of balance of advantage rather than of complete superiority of any proposed system over the existing one. The Institute is satisfied that, even on this basis, the change-over should be made and favours a principal unit of 10s with a hundred sub-units rather than the division of the present pound into a thousand units. It also suggests that, even at the risk of 'some possibility of confusion at the period of change-over', the name 'pound' should be retained and applied to the 10s unit.

This seems scarcely a practicable proposal and even less so the Institute's method for dealing with the future of the penny:

"The single problem in adapting present coins for use in a new currency is then whether the penny, while still in circulation, can be used as one cent, although one cent would be worth 1.2d. This difference is so trifling and the profit to be made from hoarding the penny so small that the Institute, whilst recognizing the difficulties inherent in dual currency, suggest that from a given date and for a limited period the penny might be regarded as a cent, thus making the two currencies fully interchangeable transitionally."

The first essential of any currency conversion scheme is that the absolute and, therefore, relative values of all coins in circulation should be scrupulously maintained. Even if the degree of profit made from hoarding pennies was almost infinitesimal, this fundamental principle of equity, if the Institute's

proposal was implemented, would be violated and the faith of the population in the fairness of the changeover might, in consequence, be seriously impaired.

#### LIAISON ON SHIPPING

AT the end of last week the Minister of Transport announced the setting up of a Shipping Advisory Board to act as a liaison committee between the Government and the shipping industry. There will be seventeen members and of the two non-shipping people on the board, one will be Sir William McFadzean, c.a. The other is to be Mr Paul Chambers, chairman of Imperial Chemical Industries Ltd.

The members of the board also include Mr A. E. C. Drake, c.B.E., M.A., F.C.A., a managing director of British Petroleum. The Minister himself will act as chairman. The terms of reference will be to advise the Minister on economic and commercial matters affecting the future prosperity of British shipping. Its purpose will be to act as a forum for discusion of general problems, Government officials alone working off previously prepared briefs.

The appointment of eminent industrialists from outside the shipping world will ensure that the committee will not operate merely as a highly informed and distinguished pressure group; it will also bring to the deliberations experience from the outside to an industry which has suffered to no small extent in the past from inbreeding and isolation. Its function, however, is clearly not to prepare or study blue-prints for the shipping industry but to bring about the cross-fertilization of ideas which may have some influence on Government policy.

### INFORMATION ON THE COMMON MARKET

THE hold-up in the Common Market negotiations I may serve as a reminder that Britain is as yet a good way off membership of the European Economic Community. That her ultimate entry is certain seems to be the view of many Britons, hence in anticipation of that event the business community is rapidly acquainting itself with the business, legal and financial structures of the Six. A recent effort at disseminating such information about the Six comes from Lloyds Bank which has produced seven small pamphlets under the general title of Expansion into Europe. The first of these discusses the basic issues raised by Britain's request for admission to the E.E.C. while the others, one for each country, deal with the main economic features of the member countries. These very short pamphlets, most of them are less than ten pages, are excellent summaries of some key facts on taxes, trade, exchange control and company law. They are available, without charge, from any branch of Lloyds Bank.

The first of yet another series of explanatory

booklets on the E.C.M has also emerged. This time from the Federation of British Industries.

It is called *The Treaty of Rome*<sup>1</sup> and was written in June 1962, while the negotiations were in progress. It starts off with a brief but useful glossary of abbreviations used in western economic jargon, followed by an historical outline of the various western European economic organizations created since the war.

There follows a short but valuable summary of the Treaty of Rome with an indication of where a copy of the unofficial English text can be obtained. There is of course no authentic English version. In the

margins of the booklet will be found cross-references to the articles in the Treaty.

Cross headings in bold type give subject headings which can be easily looked up by the reader. At the end there is a chapter which answers certain general questions likely to be of interest to British exporters. These include the length of time industries will have to adjust themselves to competition from countries already within the Six if Britain enters the E.C.M. and whether taxation will be changed. The view is expressed that the British direct taxation system seems unlikely to be affected for a long time but the indirect system may face harmonization problems in due course.

## This is My Life . . .

by An Industrious Accountant

CHAPTER 132

OUR shirt factory sales have been booming with the big demand for the new light-weight 'specials', and Mrs Smith-Smith's shop in a well-known coastal resort has been buying heavily from us. I met her recently, as hard-eyed a bargainer as ever I saw, who expounded briskly on her prosperous season and record business. So it caused quite a sensation when she 'went broke'.

In fact, our first intimation was the arrival of her solicitor's letter enclosing the usual statement of affairs. Half-a-crown in the pound she'd pay right away, with two instalments totalling as much again in the year to come. All subject to prompt acceptance by the creditors, of course; and there was a sort of impression created that it was only Mrs Smith-Smith's charitable generosity that made even this modicum possible. The first creditors' meeting would be held at once.

I noted with chagrin that we were by far the largest account in the analysis of her liabilities. This time we had slipped up; though all the available evidence indicated that she had resources. I smelt a rat somewhere. Our irascible deputy-chairman, who knows her personally, was fuming with outraged annoyance. The escutcheon of the accounts department was blotted; action was essential.

Of course, all these statements of affairs are capable of being fiddled. Take the sundry debtors item, for example. Total £2x good, £y doubtful; expected to realize £x. If Mrs Smith-Smith gave out all that dud credit, she must have been doddering; and in the phrase of Ruggles of Red Gap, she would fight a rattlesnake and give it the first two bites. Or stock-intrade £2x at cost, estimated to realize £x. And how? Maybe there was a roomful of it somewhere that she

had forgotten to mention, or some savings in an old sock in the attic at home.

Anyhow, it seemed that the old battleaxe was calmly proposing to slough three-quarters of her legal liabilities like the aforesaid snake its old skin, and continue trading as before. She'd probably be in to us looking for credit by next spring. Indeed, her solicitor's last sentence proclaimed her desire to rely on the forbearance and helpfulness of her old and valued suppliers to ensure unhampered operations in the future. No reference to her moral obligation to pay off the deficit when she found her feet again. There was a lack of old-fashioned decency about it that revolted me, and I said as much. 'Nonsense', grunted the deputy-chairman, 'you'll always have these tricky types. Nothing to be done about it; spilt milk and all that... write it off to experience.'

My blood began to simmer; I seized the telephone and told our solicitor to object: to tell her that we'd fight every step. Unless the offer was substantially increased, we'd demand to examine her books; we'd contact the Bankruptcy Court inspectors.... He was rather amused at my reaction. That wasn't the drill, he explained, these things followed a pattern nowadays. But I dug my toes in and he agreed coldly to follow his instructions.

In due course he telephoned again. Mrs Smith-Smith would do her utmost to meet us. She'd try to pay 7s 6d in the £1 in three instalments at the risk of wearing her fingers to the bone, but her solicitors had naturally been somewhat pained at our uncouth reaction. The other creditors were stoically acquiescent; we alone were hounding the destitute widow. I told him to seek Counsel's opinion forthwith. To cut a long story short, we finally compromised on a settlement at 9s in an atmosphere of unanimous umbrage.

When I told the deputy-chairman the result of the struggle, he just grunted again. 'You should have got at least ten bob,' he said. 'It was obvious from the start she was a twister.'

You can't please everyone these days.

<sup>&</sup>lt;sup>1</sup> Price 2s, from the F.B.I., 21 Tothill Street, London SW1.

# Finance and Commerce

#### **Quarterly Figures**

GRADUALLY, company reporting moves to higher levels. Our reprint this week comprises examples of interim statements: the first consolidated quarterly statement of The De La Rue Co Ltd, a familiar name in the business world and associated in the public mind with a wide variety of activities from security printing to the manufacture of playing cards, Formica and, more recently, computers; and the monthly statement of the Caterpillar Tractor Company of America.

Mr B. C. Westall, the chairman, in a letter to shareholders introducing the new quarterly statement, reminds them that it has always been the board's aim to keep shareholders as fully conversant with the company's affairs as possible. To this end, a series of board meetings has been held in various places outside London, shareholders being invited to meet the directors after the meetings. Half-yearly statements, initiated a few years ago, he says, have been welcomed

not only by shareholders but by the financial Press and the board feels that this extension to the quarterly statement will be further applauded.

#### Lean and Fat

Mr Westall says the board has been a 'little hesitant about doing this because the results of any one quarter when compared with the corresponding period of the previous year may be misleading. For one thing,' he points out, 'figures for the quarter may be affected by costings of a series of lean or fat contracts. For another the figures may be influenced by the conclusion of a number of big contracts'.

"The comparison between the profits of this quarter, namely, £161,000 as against £72,000 last year is a

good illustration of what I mean', he says.

He warns shareholders that it must not be assumed from the quarter's comparison that the year's profits will increase in that ratio. 'It would be a mistake to multiply £161,000 by four and to assume that that will be the profit of the year.' And he reminds them that 'the results of the first quarter were very much as we expected when I wrote my review to shareholders which you received a week or two ago'. He hopes that as time goes on, the quarterly statements will be of increasing benefit to shareholders and whenever the figures are affected favourably or unfavourably by unusual circumstances, the board will do its best to give an explanation.

No doubt it took a good deal of courage to start

## THE DE LA RUE COMPANY LIMITED CONSOLIDATED QUARTERLY STATEMENT (for the twelve weeks ended 23rd June 1962)

					lst quarte <b>r</b> 1962/63	lst quarter 1961/62	Year 1961/62
urnover .				ľ	£	£	£
Home sales					2,105,000	1,868,000	8,977,000
Export sales from the United Kingdon	۱				1,470,000	946,000	6,958,000
Sales by overseas companies	••			4.	1,646,000	1,343,000	5,974,000
_					5,221,000	4,157,000	21,909,000
				ĺ	£	£	£
Profit before tax			••		521,000	361,000	2,599,000

Interest of outside shareholders	• •				76,000	79,000	273,000
Profit attributable to the De la Rue Co	o. Ltd.	••	••		161,000	72,000	832,000

These figures have not been audited and may be subject to adjustments which can only be made in the accounts for the full year.

quarterly statements with a 'lean' and 'fat' comparison. The lean-fat problem is one of the big arguments against quarterlies and it takes time to build up the longer view that puts the figures into proper perspective. But it is a move in the right direction and the De La Rue board deserves congratulation.

#### Monthly

THE other example of 'interims', published almost at the same time as the De La Rue quarterly is the monthly/quarterly from the Caterpillar Tractor Company of America. It is given without comment: Caterpillar is no stranger to this column. It is interesting to note, however, that the statement is dated July 17th, in Peoria, Illinois, and was received in London on July 19th. One cannot but recall and compare the one-time objection to the production of consolidated accounts that it took time to get figures from subsidiaries abroad.

#### Non-recurring

MR L. HORVATH, chairman of Daintifyt Brassiere (Holdings) Ltd, tells shareholders in his statement with the 1961 accounts of 'comparatively large non-recurring amounts' which have been deducted before arriving at the group net trading profits. The accounts show a profit on trading of £227,994, against £296,715, and a net profit before taxation of £180,493, against £250,113. The accounts themselves, however, do not bring to the fore the fact that there is this non-recurring element in the figures.

Mr Horvath refers to a sharp increase in competition, especially from new manufacturers, which became apparent during 1960. To counteract the effect this was expected to have on the group's trading, the directors took 'decisive steps' which they felt would justify their actions in the future. They sought to reduce production costs without impairing the quality of the group's products, and to achieve this objective they engaged American production consultants to streamline manufacturing methods in the factories 'at a cost this year of £32,827 (1960, £12,714)'. 'I venture to suggest', says Mr Horvath, 'that the net profit figures should be read in conjunction with this expenditure.'

Incidentally, there was no mention of the 'sharp increase in competition' in the 1960 statement, or of the item of £12,714. That year's net profit of £250,113 compared with £242,736, and the dividend was 32½ per cent against 27½ per cent.

#### CITY NOTES

EXPERIENCE in the new issue market is currently providing a clear view of changed investment trends. New equity share offers even if they attract oversubscription, which is certainly not the guaranteed process it once was, are apt to slide to a discount in early market dealings.

On the other hand, the run of fixed interest offers is attracting strong support with stock usually moving to a small premium on initial business. Following the considerable success of the Warwickshire County Council loan the Plymouth and Southampton Corporations are coming to the market with 6 per cent 1973 loans offered at £98 per cent, Plymouth offering £4 million of stock and Southampton £5 million.

Other corporation offers are known to be on the way with a Liverpool loan probably nearing the launching stage.

The gilt-edged market is showing a better capability than the equity market to absorb sizeable new offers, even though equities are now showing a rallying tendency. The market looks to be bumping on the bottom, but there are still too many unknown quantities in the stock-market equation for any definite answer to be arrived at as to whether or not there is now a basis for a reliably-based rally.

With Common Market negotiations hanging fire until mid-October and economic policy of the revised Cabinet still undisclosed, 'watch and wait' is likely to be the majority investment view for a while to come.

## Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

#### Bicber Ltd v. British Guiana C.I.R.

In the Privy Council - June 19th, 1962

(Before Lord Evershed, Lord Morris of Borth-y-Gest and Lord Pearce)

Income tax – Dividend paid out of capital surplus – Whether income of recipient – British Guiana Tax Ordinance, section 5.

The appellant company was incorporated in the United Kingdom, and it carried on business in British Guiana. It owned 600 shares in another company incorporated there, and that company sold

some of its fixed assets, and realized a surplus, which was admittedly on capital account. The surplus was transferred to a capital reserve, and a dividend of \$2 a share was paid out of the sum standing to the credit of that reserve. The amount of the dividend received by the appellant company was \$1,200.

The Commissioners of Income Tax of British Guiana assessed the \$1,200 as investment income of the appellant company. The appellant contended that the \$1,200 was not liable to income tax under the heading '(c) dividends, interest or discounts', in section 5 of the British Guiana Income Tax Ordinance, but on appeal the assessment was confirmed. On further appeal to the Full Court of the Supreme Court of British Guiana, the decision was reversed, but on appeal by the respondents to the Federal Supreme Court of the West Indies the judgment confirming the assessment was restored.

Held: the judgment of the Federal Supreme Court of the West Indies was correct.

#### Tax Allowance: Specialist's Home Telephone

SIR, - Thank you for your comments on my inquiry published on page 75 of *The Accountant* of July 21st. The Inspector of Taxes, however, contends that the allowance cannot be claimed, quoting the case of *Nolder v. Walters* (9 A.T.C. 251; 15 T.C. 380).

Yours faithfully, EMERGENCY.

[It is difficult to appreciate the Inspector's contention. In the present instance it would seem from the information given in our correspondent's previous letter that it is a condition of the employment that a telephone shall be maintained. This was not so in Nolder v. Walters. There is a further distinction in that a medical specialist would have to carry out his duties at his residence or elsewhere as circumstances require, whereas an airline pilot (as in Nolder v. Walters) could not commence his duties until he reached the airfield. – Editor.]

#### The Accountant in the Motor Age

SIR, - Within the World Traffic Management Centre which I am trying to form, the accountant would have

a very important job of work to do.

I am anxious that the architect and town planner should appreciate that the question of urban development must come from what I call a 'balanced judgment'. To exclude the accountant from any national planning team would be to bring discredit to any reconciliation between what the planners want and what they will achieve.

In recent submissions to the Committee of Inquiry into the Problem of Noise, I have dealt with the overall transportation scene. The cost of reducing noise must be measured in relation to reducing inventive genius – a job for the accountant, for unless economics come within the realm of research, we shall never produce those projects which industry and commerce will find economic to exploit.

The traffic problem must be viewed in relation to the overall cost to the community. Can an architect or town planner adequately do this? I think not, and it is imperative that experienced accountants from within industry and commerce are available to measure the effect of planning conceptions in advance of their imposition by authority.

Thus the World Traffic Management Centre could be the beginning of a comprehensive approach to urban development in a practical way. I would hope to have research projects developed in which account-

ants would play an increasingly important part. To my mind to advance without the accountant will be to fail. I want to see different design conceptions of vehicles, but ways and means must be found of providing solutions to fit the requirements of massproducing industries. How can this be obtained if the very men who measure cost, who calculate capital structures, are excluded from participation?

My suggestion to accountants everywhere is to press for inclusion within the Centre should it be established. I shall be happy to deal with any letters on this subject should any reader be interested.

> Yours faithfully, BR∪CE DELVE.

Byways Cottage, Northdown Way, Margate, Kent.

#### **Television Rentals**

SIR, - We should be glad to hear of the experience of any readers in circumstances similar to the following.

A retailer of electrical goods, principally radio and television sets purchases these for renting. He displays these in his showroom and may, albeit rarely, sell one for cash but does not separate his stock at this point between those sets available for hire and those available for sale. With few exceptions the sets are rented out.

Is he entitled to investment allowance on these sets as plant, or is he only so entitled if from the moment of receipt from his supplier he segregates

the sets bought for hiring?

In the course of hiring out the sets he finds it necessary to obtain finance by way of discounting rental agreements and a point is reached where he finds himself over-committed. At this point he is approached by a finance house which offers to purchase the rental agreements at a price considerably in excess of the value at which the hired sets appear in the stock sheets, the latter value having been accepted by the Inland Revenue for normal accounting and assessment purposes.

The Inspector contends that the total sums receivable for the sale of the agreements is assessable.

It is contended for the taxpayer that such sums, in so far as they exceed the agreed stock values represent a premium for the rights in the agreement, are for goodwill and are capital.

Yours faithfully, T. V. HIRE.

#### Getting Ready for Decimalization?

SIR, — It may not have been generally noted that the 5s receipts franked on to documents sent for filing at the new Companies Registry show the amount paid as £00.25. It would seem that the Board of Trade are really getting ready for possible decimalization!

Yours faithfully, JOHN W. SMITH.

Richmond, Surrey.

## **Decimal Currency**

#### A memorandum prepared by

# THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

#### Introduction

THIS memorandum was prepared by The Institute of Municipal Treasurers and Accountants at the invitation of the Committee of Inquiry on Decimal Currency. The Institute is a professional body of accountants whose membership extends to many different branches of the public service. Most of its members, however, are employed as chief and senior financial officers in the local government service; and for this reason the memorandum is mainly directed towards aspects of a decimal currency of application to local government with the further object of presenting a document acceptable to all the local authority associations, and avoiding the submission of separate memoranda.

2. Because of the range of the services which they administer and of the large staffs which they employ, local government and other public authorities will experience most and probably all of the problems which will inevitably arise on the change to a decimalized currency, whatever its form and however advantageous it may be in the long run. Indeed, in the public services the main problems of a change of currency will probably arise from the bulk and diversity of the transactions and the numerous staffs involved rather than from any innate difficulties in the change itself.

3. The large number of authorities which the public services-embrace (including, for example, some 1,500 local government bodies) means on the one hand that the impact of the task would be lessened by the spread of the work, but on the other hand that special attention would need to be paid to the steps necessary to achieve a proper degree of uniformity in the principles and practices of a transition.

4. Fortunately, although they are much diversified, local authorities are highly organized in associations representative of the different classes of authority. Further, the treasurers and accountants of local authorities, hospitals and nationalized boards form a closely organized profession. Consultation between the associations and among chartered municipal treasurers, and with other related professions would be close, and agreed practices would certainly be readily evolved for coping with decimalization, within any national regulations and directives.

#### The Desirability of a Change

5. A change to a decimal currency would be one of a balance of advantage rather than of complete superiority of a new to an old system. The Institute believes the the balance of advantage is significantly on the side a decimal currency and supports such a change.

6. If the decision is finally taken to decimalize currency, this will presumably be on the growthe change offers overall and continuing the nation. The Institute therefore sufferm problems and costs emphasized in a consi

should be made and, if so, which alternative offers the greater advantages. In particular, the Institute is sure that the resourcefulness and adaptability of both lay and professional members of the public services would enable them to cope adequately with any transitional problems with which they would be confronted on a change.

7. Nevertheless, the success of a transition will depend on attention to detail, and any change will be much facilitated by the ingenuity with which the new system is designed and its introduction organized.

#### The System Proposed

8. The use of an octonary or a duodecimal system is being canvassed as an alternative to a decimal system. While the significance of the arguments used is recognized (and in particular that an arithmetical basis of eight facilitates the use of electronic computers), the Institute believes that a fundamental change of the arithmetical basis of this kind is not practicable, and that the change in currency to be made should be to a decimal system.

9. The Institute is satisfied that a unit with a hundred sub-units – the cent system – is preferable to a unit with a thousand sub-divisions – the mille system. This again is a matter of strong balance of advantage.

10. The cent system is that in common use in other countries using the decimal system, and as one of the reasons for a change is to facilitate international financial transactions, this argues strongly in favour of a similar system in this country.

11. The cent system also lend easier notation in the great by this extent will be more

12. Less importantly an easier basis for becomes 1.45 under 0.725 under the mil

13. The Joint Reg. Association and of recommended in opinion generally a basis. A consideration the joint registerling interpretention.

of change-over in the retention of the name 'pound'.

15. Because of the enormous frequency both in speech, writing, and machine use, of the symbols representing a currency, simplicity in the name and clarity in the symbols used are of great importance. Thus, for example, the word 'pound' has in this respect an advantage over the use of the word 'sovereign'.

16. There is little difference from this point of view between the words 'cent' and 'penny'. If the traditional basis is to be retained, a new pound of 10s present value, with one hundred new pence would be simple and logical, but for the purpose of this memorandum the term 'unit' is used for the main unit of currency equivalent to 10s and 'cent' for the hundredth division of this 'unit', the symbols being U and c.

#### The Change-over

17. Coins will be struck with the new names and values, but, apart from the penny and the halfpenny, there should be no difficulty in the use of dual currency for a transitional period, because notes and other coins now in use will have an equivalent under the suggested decimal U/c system. Thus:

£	s	d	-		In Units	In cents
5	0	0	note eq	uivalent to	10	1,000
I	0	0	,,	,,	2	200
	10	0	,,	,,	I	100
	2	6	,,	**	0.22	25
	2	0	,,	,,	0.2	. 20
	1	0	,,	,,	0.1	10
		6	"	"	0.02	5
		3	,,	,,	0.022	21/2
N	ew	coin	,,,	,,	0.01	. 1

18. The Institute consider that a  $\frac{1}{2}$  cent coin is unlikely to be necessary and that the abandonment of the halfpenny should coincide with the change-over. Although the 3d piece could continue to be used as a direct equivalent to  $2\frac{1}{2}$  cents, it is suggested that the need for a coin of this denomination should be reviewed after an experimental period. The inclusion of notes for 1, 2, 5 and 10 Units would

cash handling generally.

minations.

ht to 1.2 pence, will but the number of private ownership, 3d or 6d is rapidly

ng present coins
wher the penny,
one cent,
ce. This

and convert old ones, particularly the more complex types. A transition period after the appointed day would also be needed, for which a maximum of twelve months seems appropriate. This period will be needed to complete the modification of accounting machines, cash registers, and coin operated machines, and for the adjustment of debts outstanding at the appointed day, and other problems of accountancy. Public authorities (like the banks) would begin to use the new currency in all reports and publications immediately following the appointed day.

23. On balance, the change-over would be most convenient if on April 1st, to fit the financial year of most local authorities and most organizations; alternatively, April 6th would coincide with the start of the Government financial year. There is, however, by no means

uniformity in year-end dates.

#### **Practical Points**

#### (a) Machines

24. Machines are in extremely widespread use in public authorities. The main practical difficulty will arise in the conversion of many of these to the new system. There has not been time to make even a pilot census of the costs and other problems involved in these conversions, but if it were thought essential, it would be possible to make such a survey in due course. There would, however, be difficulty in attempting more than a pilot survey owing to the great variety of machines in operation.

25. There are three considerations which will affect

the use of machines:

(a) Many of the more complex and expensive machines can already cope either with sterling or decimals, and some will indeed already cope more readily with decimals.

(b) Many machines have a sufficiently large capacity to permit the abandonment of the s d facilities, without material inconvenience during the remainder of their lives; machines which have an inadequate capacity should be given priority in conversion.

(c) Many machines will have only a short life which will not justify conversion, and for others slight

deferment of renewal will be possible.

26. The change-over will probably therefore create less difficulty with local authority machines than might be expected. Almost certainly the cent system, needing only two columns, would create less need for conversion than the mille system needing three, even though the units of the new currency would tend to use more digits in the pounds columns than are used at present.

27. Various classes of machines in use by public authorities are considered in the appendix to this

memorandum.

28. A system of priorities for conversion will need to be established and the conversion will require careful organization. Makeshift methods can be evolved to lessen the peak load of conversion. For example, wage reparation accounting machines can continue in use or the change-over for a short time on the old currency the manual conversion of the 'net amount due' in to the new currency each week. Many make-ices will certainly suggest themselves as the lop so that the impact of change will be than but which always arises on a machine system, or

ard system.

#### (b) General Administration

29. Most of the transitional problems will not be peculiar to the public services and standard codes of conversion and standard rules on general matters are called for. For example, a system of conversion of wage rates where fractions of a penny are at present common, will need to be introduced for general application, and a national rule will be needed to deal with the circumstances which would arise if the appointed day cuts

across a pay period.

30. Conversion scales will be needed for gas and electricity tariffs and for the multitude of rents and tariffs used by local authorities, but the issues involved are similar to those raised in changes in price bases generally. No particular difficulty is foreseen. Those concerned may take the opportunity of conversion to simplify wage rates now employing three decimal places of a penny, and tariffs which may have been built up piecemeal over long periods; but too much 'revision' as distinct from 'straight conversion' will add to the difficulties and misunderstandings of the conversion period.

31. No doubt the general law will provide that loans and other debts outstanding on the basis of the old currency shall be converted and made repayable on

the new basis.

32. Schools will have a short-term problem in the conversion of textbooks for which a period of two years

may not be sufficient.

33. Most stocks of stationery will be useable after conversion, so that new stationery can be introduced gradually. The planning and stocking of new stationery and the running down of old stocks will be part of the introductory planning.

#### Compensation

34. Whether public authorities should seek compensation from the Government for machine conversions is mainly a matter of policy to be settled by the associations of local authorities and by the public boards. It is possible that the procedure to be adopted in the case of commerce and industry should have some bearing on this point, but the following reasons are put forward in favour of the suggestion that compensation should not be claimed by anyone.

(a) Costs of conversion will be offset by the gain from

the simplifications of decimalization;

(b) Costs of conversion will be distributed broadly in proportion to ability to meet them; the larger organizations are on the whole more highly mechanized and while having the greater costs, will have the greater resources;

(c) Detailed claims, their audit, and the machinery for settlement are hardly justified in a nonrecurring transfer of this sort between public funds, or in private enterprise when the costs of conversion will be a charge against taxable profits;

(d) If compensation is not paid, greater forbearance and ingenuity will tend to be exercised in 'making

do' without modification.

#### Conclusion

35. In short, the Institute see little of especial application to the public services in the decimalization of the currency which is likely to cause more than shortterm transitional disturbance. There is nothing to be gained at this point by elaborating on problems of detail with which local authorities and the other officers will be able to deal adequa-

36. Within an adequate period for pred twelve months' transition, all but minor r will be assimilated.

37. The real issue is whether the change made, and if so, the basis which should be adopted Institute is clear on these two points: first, that balance of advantage is in favour of a change, an

second, that the balance of advantage is in favour of the 10s/cent system. In selecting the terms and symbols to be adopted, attention should be directed towards the need for simplicity. Similarly, over-elaboration of the

transitional arrangements should be avoided.

#### Appendix

The following are the main types of machines in use by public authorities:

(i) Electronic machines. Generally these machines will not require modification. Certain parts of the machine will cease to be used but the capacity of the registers will be increased by using the decimal scale.

(ii) Punched-card equipment. Only tabulators are affected. The newer type could be used without conversion, though counter capacity would be slightly reduced, because the sterling counting mechanisms would become redundant, but as a permanent feature they will need modification.

Older type tabulators with fixed counters will create more difficulty, because they will suffer a greater restriction in counter capacity; modification of these

will be more urgently necessary.

(iii) Master packs and files of punched cards. Much work will be involved in amending master files of punched cards. These can be amended mechanically by using an electronic calculator or possibly by other automatic means (e.g. 'ready reckoner' packs). Magnetic tape presents no problem of conversion.

(iv) Desk calculators. Many of these would be little affected as keyboard capacity is such that for nearly all work the shilling and pence positions can be ignored. A machine having a long residual life might need to be

modified but not as a matter of urgency.

(v) Keyboard accounting machines. Ledger posting and wages 'purpose built' machines will require con-

version with priority.

(vi) Desk listing machines. Most 'full keyboard, fixed position' machines will not be able to spare two of the pound positions for cents, without unduly limiting the columns available for the main units and will require

(vii) Cash registers and receipting machines. These are in widespread use in local authorities. The printing and adding mechanism will need modification without

much delay.

(viii) 'Addressing' equipment (embossing and printing machines). The machines do not need modification, but the embossed or stencilled plates used on them, many of which contain financial details, will generally cause a problem as the process of alteration is a lengthy one.

(ix) Cheque writing machines. These will need slight

modification to the names of the new currency.

(x) Other machines which may need modification, depending on the revised arrangements are coincounting machines, ticket issuing machines, slot machines, postal and insurance franking machines.

## THE INSTITUTE OF CHARTERED OUNTANTS IN ENGLAND AND WALES

PÉCIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, August 1st, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Moorgate Place, London EC2, there were present:

Mr Percy F. Carpenter, President, in the Chair; Mr Robert P. Winter, C.B.E., M.C., Vice-President; Messrs J. Ainsworth, C.B.E., J. F. Allan, C. Percy Barrowcliff, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay Davison, W. G. Densem, S. Dixon, W. W. Fea, J. Godfrey, G. G. Goult, P. F. Granger, L. C. Hawkins, J. S. Heaton, D. V. House, J. A. Jackson, H. O. Johnson, Sir William Lawson, C.B.E., Messrs H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, C. U. Peat, M.C., F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs R. G. Slack, J. E. Talbot, A. G. Thomas, A. H. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, E. K. Wright, Sir Richard Yeabsley, C.B.E.

#### Chairmen and Vice-Chairmen of Committees

The Secretary reported the appointment of the following Chairmen and Vice-Chairmen of Committees for the ensuing year:

Consultative Committee of Members in Commerce and Industry Chairman, Mr W. W. Fea; Vice-Chairman, Mr J. Clayton.

Disciplinary

Chairman, Sir Harold Gillett; Vice-Chairman, Mr T. A. Hamilton Baynes.

Library
Chairman, Mr D. A. Clarke; Vice-Chairman, Mr J. H. Bell.

Overseas Relations

Chairman, Sir Thomas Robson; Vice-Chairman, Mr S. J. Pears.

P. D. Leake

Chairman, Mr W. L. Barrows.

Relations with the Universities Chairman, Mr Bertram Nelson.

#### The Accounts and Audit of Friendly Societies and Industrial and Provident Societies

On the report of the Parliamentary and Law Committee, following consideration of a memorandum submitted by the Taxation and Research Committee, the Council approved a memorandum on 'The Accounts and Audit of Friendly and Industrial and Provident Societies' for submission to the Chancellor of the Exchequer.

#### Bankruptcy: Remuneration for Assisting a Debtor

Representations have been made to the Board of Trade about the remuneration allowed by official receivers when members assist debtors in preparing their statements of affairs in bankruptcy. The Council is pleased to state that the Inspector-General in Bankruptcy has brought the representations to the notice of the official receivers. Clarification of the position has been reached in the following terms.

The Board of Trade emphasize that what assistance should be given and what expense may be allowed from the debtor's assets (subject to prior charges) must lie in the discretion of the official receiver. It will not usually be possible to determine in advance the precise extent of the work which it will be necessary to do to assist a debtor in preparing a statement of affairs. This will depend upon the state of the records and the complexity or otherwise of the debtor's financial position. Nevertheless the extent of the work to be done and the remuneration should be discussed and agreed in principle with the official receiver before the work is commenced. There should be further discussion if the member finds it necessary to seek an increase above the limit of expense which has been agreed. It is hoped that no difficulty will arise in agreeing suitable remuneration, either initially or on an application to exceed the limit, but if a member does encounter difficulty which he cannot resolve satisfactorily he may bring the matter to the notice of the Secretary of the Institute. It is understood that the Inspector-General would then consider any representations which the Institute may make. If representations were made at a later stage they might run up against the difficulty that the Inspector-General must not usurp the functions of the Court in relation to appeals against the decision of the official

The Treasury scale of fees for professional work carried out by firms of accountants for Government Departments does not as such apply to bankruptcy work, but it is a useful guide in determining appropriate remuneration for the work involved in assisting a debtor in preparing a statement of affairs which has been done in agreement with the official receiver. Official receivers are aware of this scale but the Inspector-General has taken the present occasion to remind them about it. The current Treasury scale became operative from September 1st, 1956. Any change in the scale will be brought to the notice of official receivers

by the Inspector-General.

#### Advertisements for Staff

In view of the representations which have been made to, the Council since the publication in April 1960 of the statement under the above heading (section E3, paragraphs 10 and 11 of the *Members' Handbook*) the Council is satisfied that more specific guidance is needed. The Council has therefore decided to withdraw the statement published in April 1960 and substitute the following:

#### Advertisements for Staff

1. A considerable number of inquiries has been received at the Institute as to the propriety of the publication by members or their firms under their own names of advertisements for staff which are presented in such a manner that in giving particulars of the duties for which applicants are required the advertisements could be considered to approach closely to advertising the activities of the members or their firms.

- 2. The Council recognizes that the attraction of suitably qualified staff of necessity requires adequate description of the functions to be performed and that, particularly in times of intense competition for accountancy staff by commercial concerns, this description can only be effective in advertisements for staff if they are made in terms and printed in type which will attract the attention of suitable applicants. Nevertheless the Council emphasizes that an advertisement for staff for the member's own office should conform to a high standard of professional good taste and that the position in which the name and address of the member or firm is printed and the form and content of the advertisement should not be such as to warrant a suggestion that an attempt is being made to bring the activities of the member or firm concerned to the notice of the public. In general the same considerations apply to advertisements on behalf of associated firms or clients and to advertisements where a box number is used.
- 3. The following points should particularly be noted

by a member who advertises for staff for himself or for his firm:

- (i) There is no objection to the inclusion of an advertisement for staff in display or semi-display form in a page which contains other staff advertisements in similar form, provided that it conforms to the general principles mentioned above and to the points set out below.
- (ii) The size of advertisements should be kept within modest dimensions not exceeding two columns in width. The whole of the body of the advertisement including the name of the firm should be in type of modest and uniform boldness. In a display or semidisplay advertisement, however, headings indicating the nature of the staff required may be in capitals or bold type.
- (iii) The name and address of the member or firm should not be given undue prominence. It should appear not more than once in the advertisement and in all display or semi-display advertisements should be within the body of the text (that is, not separated or inset on a separate line as heading or otherwise) in the same size and boldness of type as the body of the advertisement.
- (iv) The name of the member or firm may be printed in capitals or in bold type at the beginning of classified advertisements for staff in journals in which, as in Accountancy and The Accountant, capitals or bold type in the first lines of such advertisements are standard form.
- (v) The use in display or semi-display advertisements of headings which do not refer to staff vacancies may be open to misconstruction. Such headings as 'Management accountancy', 'Management consultancy', 'Taxation' or 'Audits' should be accompanied by the word 'Staff' or a similar word to make it clear that the advertisement is addressed to the possible candidates for staff vacancies.
- (vi) In his own interest a member proposing to issue an advertisement in display or semi-display form would be well advised to ask for a proof to be submitted to him before the advertisement is issued so that he may ascertain whether his instructions have been followed.
- 4. A member who is in any doubt concerning the propriety or form of an advertisement is advised to seek the advice of the Secretary.

#### Advertisements by Members seeking Employment or Professional Work

The Council considers it necessary to restate the general rule, which has been of long standing in this country, that members may not advertise in a manner which could be interpreted as offering to undertake professional work (see paragraph 1 of section E3 of the Members' Handbook).

The only circumstances in which advertisements for work of an accountancy nature can be permitted are those in which a member is seeking salaried employment, whether full-time or part-time, which is to be his sole occupation.

Advertisements by members for sub-contract or agency work are not permissible.

#### Examination Results - May 1962

The results of the Institute examinations held in May 1962, were as follows:

more as rome			-		Passed	Failed	Total
Preliminary					54	153	207
Intermediate	• •			• •	1,015	1,047	2,062
Final	• •	• •	• •	• •	814	806	1,620
					1,883	2,006	3,889

(The names of the successful candidates and of the recipients of prizes and certificates of merit will be published in next week's issue.)

#### Articles and Examinati

The following applications under various b
to articles and examinations have been gran
during the six months ended June 30th, 1962:

#### Registration of Articles

The Secretary reported the registration of ninety-four articles of clerkship during the last month, the total number since January 1st, 1962, being 1,208.

#### Report of the Committee on Education and Training

1. In paragraph 63 of the Council's report for 1961 the Council made the following statement regarding the report of the Committee on Education and Training:

"The Council has adopted in principle many of the recommendations made in the report and others are still under consideration. The relevant committees are considering the financial implications and, where applicable, the procedure and time-table for implementation. There will be consequential alterations to the Royal Charters and bye-laws. Meanwhile announcements will be made from time to time by the Council but no member, student or prospective student should take any course of action based on the assumption that a particular recommendation will be implemented."

2. The Council has authorized the publication of this statement of the decisions which it has reached on certain of the recommendations and the steps which it proposes to take to implement those decisions. The Council still has under consideration other recommendations of the report and will make further statements in due course.

3. Where a reference is made in this statement to a recommendation in the report of the Committee on Education and Training the number of the recommendation is given in brackets.

4. In authorizing the publication of this statement the Council emphasises that in the cases marked with an asterisk amendments to the supplemental Royal Charter and/or the bye-laws will be required and that these will be submitted to members in the form of resolutions at a special meeting early in 1963. If these resolutions are adopted by members the amendments will be subject to approval by the Privy Council. Where, therefore, decisions are dependent upon such amendments, no member or student or prospective student should take any course of action based on the assumption that these particular recommendations will be implemented.

cil has accepted recommendation (1) that embership of the Institute should continue upon service under articles with a member in the United Kingdom. Iso accepted recommendation (26) that transfers

should be permitted as at present but should not cated. The Council intends, however, to propose to hers an amendment of the bye-laws to permit secondate to the office of another member in practice—see aragraph 17 below.

#### Quota of articled clerks

7. The Council has accepted recommendation (16) and accordingly does not propose to recommend any change in bye-law 56 under which a practising member may normally have up to four articled clerks at any one time. This bye-law will continue to be interpreted so that it does not confer on a practising member a prescriptive right to take an articled clerk.

#### Registration of articles

\*8. The Council already has power by bye-law to refuse to register articles. It has accepted recommendation (2) and intends to propose to members an extension of the bye-law to permit it to withdraw the registration of articles previously registered. It is intended that the revised bye-law shall provide for an appeal to the Council by any member, articled clerk or prospective articled clerk against whom a decision is taken.

#### Probationary period of service

9. The Council has accepted recommendation (11) and intends to introduce a compulsory probationary period for the first six months of articled service. It is intended to include as a prescribed provision in articles a covenant governing the detailed rights and obligations of the parties with regard to this period of probation.

#### Settlement of disputes

\*10. The Council has accepted recommendation (12) and intends to propose to members a bye-law to provide that any dispute between the parties to articles arising from a provision therein prescribed by the Council may be referred to the Council by any of the parties for a decision which shall bind the parties.

#### Term of service under articles

- \*11. The Council has accepted recommendations (23) and (24) that the basic term of service under articles shall remain at five years and that, as at present, graduates of universities in the United Kingdom be granted a reduction in service to three years. The Council has also accepted in substance recommendation (25) and therefore intends to propose to members amendments to the supplemental Royal Charter and bye-laws to provide that the following may be granted a reduction in service to four years:
  - (a) certain graduates of universities outside the United Kingdom – on conditions which will be the subject of a later statement;
  - (b) those who have both:
    - (i) obtained at examinations held before entry into articles at least five passes, including at least two at advanced level, in the general certificate of education examinations recognized by the Council; for this purpose the Council will limit the acceptance of certain subjects or combination of subjects in accordance with the regulations relating to the standard required for entry into articles see the appendix, notes I, II, IV and V;

#### and

(ii) entered into articles after attaining the age of 18 years. 12. The second of these conditions has been substituted for that part of recommendation (25) which proposed that an applicant should have remained at school until the end of the term in which he reached the age of 17½ years. It remains the objective of the Council to encourage students to continue their education for a full sixth form course before commencing service under articles and thus to raise the general educational standard of those who enter into articles. The implementation of recommendation (25) on the revised basis as set out in paragraph 11 above should substantially achieve this objective.

\*13. The Council further proposes, in the event of the adoption of the alterations to the supplemental Royal Charter and bye-laws, to permit the endorsement, with the consent of all parties thereto, of articles previously executed and registered so that clerks already serving under articles who satisfy the provisions set out in paragraph 11 above may be granted a reduction in service to four years.

\*14. The Council intends to propose to members an amendment of bye-law 61 which relates to a reduction in service for those with not less than ten years' experience as defined in that bye-law. Details of the proposed amendment are given in paragraphs 21 and 22 below.

#### University degree courses

15. The Council wishes to increase the proportion of university graduates of all faculties who are admitted to membership of the Institute and to investigate ways in which it may achieve closer links with the universities. It was with this in mind that in March 1962 the Council announced the appointment of the Committee on Relations with the Universities.

\*16. The Council has accepted recommendation (42) that an articled clerk who takes a degree course approved by the Council under bye-law 62 should not be allowed to count as part of his service under articles any periods spent in the principal's office during university vacations. The Council endorses the view that experience obtained in this way in short and infrequent periods in the office is of limited value, and intends to propose to members alterations in the bye-laws to give effect to this recommendation.

#### Secondment during articled service

\*17. The Council has accepted recommendations (27), (28) and (30). It does not propose to recommend any change in the arrangements under which an articled clerk may be permitted, during his service under articles, to spend up to six months in an industrial, commercial or other suitable organization approved by the Council. It intends however to propose to members an amendment to the bye-laws to allow an articled clerk, in accordance with recommendation (27), to spend up to six months during his service under articles on the business in the United Kingdom of another member in practice so that the articled clerk may broaden his experience.

#### Theoretical training

18. Recommendation (46) proposed that inquiries should be made into the feasibility and cost of providing certain introductory courses for articled clerks. The Council has already announced that in view of the increasing part being played by technical and commercial colleges within the educational system it has decided to examine the scope for assistance from such colleges on a wider scale than is envisaged in the report.

envisaged in the report.

19. The Council has accepted recommendation (58) that students' societies should continue to provide for the wider professional education of articled clerks, including the development of a corporate professional sense. The Council hopes that students' societies will increasingly be associated with the educational developments referred to in paragraph 18 above.

<sup>\*</sup> See paragraph 4.

20. The Council has accepted recommendation (57) and will in due course arrange the distribution to all students who pass or who are exempted from the Intermediate examination of a booklet on the structure and functions of the Institute, the Council and its committees, together with those sections of the Members' Handbook and any other publications which are relevant to preparation for the Final examination and admission to membership of the

#### Articled clerks with no less than ten years' experience

\*21. Bye-law 79 permits the Council to grant exemption from the Preliminary examination to a person of not less than 30 years of age, who has had at least ten years' experience as a clerk to a member or members in practice. The Council has accepted recommendation (21) which proposes

certain modifications to that bye-law.
\*22. In addition, bye-law 61 and bye-law 85 (b) permit the Council to grant to those who have had at least ten years' experience as defined in those bye-laws a reduction of up to two years in the term of service under articles and exemption from the Intermediate examination respectively. It is intended to propose to members amendments to all three bye-laws along the lines of recommendation (21) so that in all cases the applicant shall be at least 27 years of age and for ten years after the age of 17 years shall have been continuously in the employment of a member or members in practice, whether in the United Kingdom or elsewhere, or shall have had such other experience for at least ten years as the Council may deem acceptable.

#### Preliminary examination

23. The Council has accepted recommendations (17) and (18) that the Preliminary examination should cease to be held and that instead the minimum standard of general education required for entry into articles should be defined by reference to the general certificate of education examina-

24. The Preliminary examination will be held in November 1962, May 1963 and November 1963, and will then

#### Standard for entry into articles

25. As is at present the case, passes at the appropriate standard in other examinations recognized by the Council will be accepted as equivalent to passes at ordinary and advanced level in the general certificate of education

26. The Council has accepted with modifications recommendations (19) and (20) setting out the conditions under which passes at recognized examinations will be accepted for the purpose of satisfying the minimum standard required for entry into articles. The recognized examinations and revised conditions are set out in the appendix to this

27. Any person who satisfies the revised conditions may make the necessary application at any time after October 31st, 1962. Any person who satisfies the existing conditions by virtue of passes obtained at examinations held in or before the summer of 1963 will remain eligible irrespective of the date on which application is made.

\*28. The Council intends to propose to members an amendment of bye-law 79, which at present relates to persons of not less than 30 years of age with not less than ten years' experience as a clerk to a member or members of the Institute in practice. Details of the proposed amend-

ment are given in paragraphs 21 and 22 above.

#### Examinations

29. The Council has accepted recommendation (32) that the Intermediate and Final examinations should continue to be so framed as:

(a) not to encourage specialization during articles;

(b) to provide so far as possible a test of

30. Recommendation (34) proposed a choice in certain papers at the Final examination. has accepted this in principle and has invited the tion Committee to consider its implementation papers at both the Intermediate and Final examina

#### Intermediate examination

31. The Council has accepted the substance of recommendation (37) relating to the revision of the Intermediate examination, and the new examination will be held in the following papers:

								Hours
Book-keepi	ng and	Accour	nts I			• •		3
Book-keepi	ng and	Accour	its II			• •	• •	3
Auditing_			• •	• •	• •	• •		3
General Pa	per	• •	• •	• •	• •	• •	• •	3
								_
								12
								_

Details will be published in November 1962 of the syllabus for the revised Intermediate examination, and these will be incorporated in the edition of the booklet General Information and Syllabus of Examinations to be published during that month.

\*32. Subject to the allowance of the necessary alterations to the supplemental Royal Charter and bye-laws, it is intended to implement recommendations (38), (40) and

(41) as follows:

- (a) that a clerk serving for more than three years under articles shall first be permitted to sit for the new Intermediate examination not earlier than in the seventeenth calendar month following the date of commencing service under articles (the eleventh calendar month for those serving for three years);
- (b) that the new Intermediate examination be held in March and September in each year;
- that the first date for the new Intermediate examination shall be September 1964;
- (d) that the last date for the present Intermediate exami-
- nation shall be May 1965; (e) that a clerk entering into articles before June 1963, may elect:

either

(i) to sit for the present Intermediate examination under the existing rules of eligibility until the last examination in May 1965;

(ii) to sit for the new Intermediate examination under the new rules of eligibility from the date of the first new examination in September 1964

(f) that a clerk entering into articles after May 1963 shall be required to sit for the new Intermediate

examination;

(g) that a clerk who is unsuccessful at the present Intermediate examination may be permitted, if he so wishes, to sit subsequently for the new Intermediate examination;

(h) that a clerk who sits for the new Intermediate examination shall not subsequently be permitted to sit for the present Intermediate examination;

- (i) that a clerk who is successful at the present Intermediate examination may be permitted, if he so wishes, to sit subsequently for the new Final examination;
- (j) that a clerk who sits for the new Intermediate examination shall be required to sit for the new Final examination;
- (k) that, except at the Council's discretion, a clerk entering into articles after May 1963, shall not be permitted to sit for any examination after the expiry of his articles unless he has passed the Intermediate examination during articles or has been exempted therefrom.

<sup>\*</sup> See paragraph 4

ouncil has accepted recommendation (33) the extension of the syllabus for the Final and these extensions will be incorporated in vllabus

Council intends to propose to members that ments be made to the supplemental Royal Charter bye-laws to provide that the Final examination shall, m the dates given below, be divided into two parts. If he proposal is adopted by members and allowed by the Privy Council in due course, the two parts of the examination will be divided as follows:

Part I							Hours
Advanced Accou	nting	Ι					3
Taxation I							
English Law I					• •		3 3 3
English Law II	• •	• •	• •		• •	• •	3
							12
Part II							Hours
Advanced Accou							3
Advanced Accou	nting :	III			·		3
Auditing		• •			• •		3 3 3
Taxation II			• •	• •		• •	3
_General Paper		• •	• •	• •	• •	• •	3
							*******
							15
							turns.

Details will be published in November 1962 of the syllabus for the proposed revised Final examination, and these will be incorporated in the edition of the booklet General Information and Syllabus of Examinations to be published during that month.

\*35. Subject to the allowance of the necessary alterations to the supplemental Royal Charter and bye-laws, it is intended to implement recommendation (38) as follows:

- (a) that both parts of the Final examination be held in May and November of each year and not as stated in recommendation (36)
- (b) that the first dates for the new Final examination shall be as follows:

Part I - May 1965

Part II - November 1965;

- (c) that the last date for the present Final examination shall be November 1966;
- (d) that a clerk shall not sit for any part of the Final examination until he has passed or been exempted from the Intermediate examination;
- (e) that a clerk who has been granted exemption from the Intermediate examination shall not be permitted to sit for Part I of the Final examination earlier than the eleventh calendar month following that in which service under articles commenced;
- (f) that a clerk shall not sit for Part II of the Final examination before sitting for Part I, although he may sit for these two parts at the same session;
- (g) that no clerk be permitted to sit for Part II of the Final examination at a date earlier than within the last six months of his service under articles;
- (h) that a clerk who sits for both parts of the Final examination at the same session and who is successful in one part only may sit at any later examination for whichever part of the Final examination he has not passed at that session;
- (i) that a clerk who is eligible under the existing rules to sit for the present Final examination may unless he is precluded by any of the provisions in this paragraph and in paragraph 32 elect to do so until the last examination in November 1966;
- (j) that a clerk who is unsuccessful at the present Final examination, may be permitted, if he so wishes, to sit subsequently for the new Final examination
- (k) that a clerk sitting for any part of the new Final examination shall not subsequently be permitted to sit for the present Final examination.

36. The Council has not accepted the proposal contained in recommendation (39) that in relation to each part of the Final examination there should be discretion to allow a candidate who would have passed the relevant part but for failure in one paper to be re-examined in that paper alone at a subsequent sitting.

37. Recommendations (55) and (56) relate to the published syllabus for the new papers in Part II of the Final examination and to the issue of a reading list for the Advanced Accounting III paper and for the General Paper. The Council endorses these recommendations in principle only in so far as it is necessary to give some indication of the scope of such new papers and that the issue of a reading list should be for a limited period only until the syllabus is sufficiently established.

Details will be published in November 1962 of the implementation of these recommendations and they will be incorporated in the edition of the booklet General Information and Syllabus of Examinations to be published during that month.

#### Examination statistics

38. The Council has requested the Examination Committee to consider the extent to which from time to time publication should be made of statistics of performance in the Institute's examinations as proposed in recommenda-tion (52). It has also asked the Examination Committee to consider the proposals in recommendation (53) relating to results in individual papers but confirms that information relating to such results should not normally be published.

#### Review of progress of articled clerks

39. The Council intends to arrange for the recording of the additional information referred to in recommendation (70) and in Appendix M of the report so that a regular review of the progress of articled clerks may be undertaken more readily.

#### Admission to membership

40. The Council has accepted recommendation (40) that a clerk should continue to be ineligible for admission to membership of the Institute unless and until:

(a) he has completed his service under articles;

(b) he has passed or been granted exemption from the Intermediate examination and has passed either the present Final examination or both parts of the new Final examination.

#### APPENDIX

The following shows the manner in which the revised regulations relating to the standard required for entry into articles will be reproduced in the booklet General Information and Syllabus of Examinations.

#### University Degree Examinations

The minimum standard shall be:

- (i) the final degree examination of any university in the United Kingdom; or
- (ii) the final degree examination of any other university approved for the purpose by the Council.

#### SCHOOL AND UNIVERSITY ENTRANCE EXAMINATIONS

(1) Examinations recognized General certificate of education School certificate Higher School certificate

of the United Kingdom examining bodies already recognized and set out in the current regulations

Matriculation Senior certificate (Northern Ireland) Scottish certificate of education Senior leaving certificate (Scotland)

Scottish leaving certificate

Preliminary examination of the Scottish Universities Entrance Board

<sup>\*</sup> See paragraph 4.

Previous examination (University of Cambridge)

Responsions (University of Oxford)

(Note. - An applicant may satisfy the conditions specified below by a combination of performances in any of the above examinations.)

#### (2) Standard of passes in the above examinations

(a) The following passes will be DISREGARDED:

(i) any pass in an alternative lower paper in a matriculation examination:

(ii) any pass below the standard of 'credit' in a school certificate examination:

(iii) any pass at ordinary level below the standard of 'credit' in the senior certificate examination of Northern Ireland;

(b) The following passes are regarded as being at ADVANCED level:

(i) any so described on a general certificate of education; (ii) any pass or higher standard in a principal subject

in a higher school certificate examination.

(c) All passes not referred to in (a) and (b) above are regarded as passes at ORDINARY level.

#### (3) Minimum number of passes required

The candidate must in any one or more of the above examinations have obtained passes which satisfy the requirements set out below:

Acceptable passes (see especially notes I and II below) which satisfy any one of the following conditions:

nu	inimum mber of passes	Level of passes required	Maximum number of sittings (see notes
(A)	Five	including TWO at the	III and VI) no limit
(B)	Six	including ONE at the advanced level	any three

Passes must be obtained in English language (see note IV) and in a mathematical subject (see notes II and V); if these particular passes have not been obtained within the number of passes and sittings referred to above they may be obtained as additional passes at earlier or later sittings.

ordinary level

#### Notes

(C) Six

I. Passes in craft or technical subjects (including account-

ing and book-keeping) are not acceptable.

II. Passes which are considered to involve an overlapping of syllabus or similarity of subject, whether at the same or at different levels, will be treated as being in one subject only. Two passes in mathematical subjects will normally be accepted if the syllabus of each is distinct from the other, e.g. 'mathematics' and 'additional mathematics' at ordinary level or two subjects, one at ordinary and one at advanced level. Similar considerations will apply to the acceptance of two passes in English subjects - see note IV.

III. A candidate may satisfy the conditions above by offering passes awarded by different examining bodies. Such passes cannot be accepted as having been obtained at one sitting unless the examinations at which they were awarded were held in the same term.

IV. A pass at advanced level in English or in English Literature or a pass in a Test in English or Use of English paper awarded by a recognized examining body will be accepted as a pass in English-Language.

A pass at ordinary level in English Literature, however, will not be accepted as a pass in English Language but will

be accepted as one of the other passes required. Two passes in English subjects will normally be accepted if the syllabus for each is distinct from the other (see note II), e.g. English Language and a Test in English paper.

V. Arithmetic, being part only of the subject of mathematics, will not be accepted alone.

VI. The passes on which a candidate relies under section

(3) above must have been obtained within the maximum number of sittings stated. The fact that a candidate has sat on other occasions will not prejudice an application.

#### Admissions to Membership

The following were admitted to membership of the

Roads, Robin Warner Stanwell, A.C.A., a1962; Garth House, High Street, Bognor Regis.

Sutton, Brian Hague, A.C.A., a1962; 8 Emmanuel Road, Southport.
Williams, Richard Juxon, B.Com., A.C.A., a1962; 163 King-

standing Road, Birmingham 22c.

#### Fellowship

The Council acceded to applications from six associates to become fellows under clause 6 of the supplemental Royal Charter.

#### Incorporated Accountant Member becoming an Associate

The Council acceded to an application from the following incorporated accountant member for election as associate under clause 6 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Edwards, Alan Frank, A.S.A.A., aS1953; with Cooper Brothers & Co, Abacus House, 33 Gutter Lane, Cheapside, London EC2.

#### **Members Commencing to Practise**

The Council received notice that the following members had commenced to practise:

Anstead, Charles Murray, F.C.A., aS1946; Hibbert, Sier, Woods & Co, Capel House, 54 New Broad Street, London EC2.

Beckett, Brian Charles John, A.C.A., 21958; \*Coopers & Lybrand and Bernard Gadd & Co, P.O. Box 5539, 234 Bay Street, Nassau,

Bexley, Ronald Bertram, F.C.A., aS1951; †Rawlinson & Hunter, 51 Green Street, and 147 New Bond Street, London W1, and at Hamilton, Bermuda.

Bharoocha, Mohamed Hashim, A.C.A., a1960; \*S. F. Ahmed & Co, Halim Mansion, Strand Road, Chittagong, East Pakistan.

Burgess, Alfred Leslie, A.C.A., aS1952; Hibbert, Sier, Woods & Co, Capel House, 54 New Broad Street, London EC2.

Coles (Miss), Barbara Elizabeth, A.C.A., a1961; Percy Coles & Co, 24 Exchange Road, Watford.

Copley, Arnold Dyson, F.C.A., a1948; †Price Waterhouse & Co, The Royal Exchange, Manchester 2.

Da Costa, Philip Walter, A.C.A., a1962; 19 Norcott Road, Stoke Newington, London N16.

Dovey, George Trevor Ieuan, A.C.A., a1959; Birch Grove, Dunwood, Romsey, Hants.

Gaggs, Bryan Geoffrey, A.C.A., a1957; \*Faletti, Knapp & Jarabin, 21e Canon Perdido Street, Santa Barbara, California, U.S.A. Garnett, Ronald, A.C.A., aS1956; \*Thos Jennett & Co, 4 Essendine Crescent, Sheffield 8.

a Indicates the year of admission to the Institute.

aS Indicates the year of admission to The Society of Incorporated Accountants.

§ Means 'incorporated accountant member.'

Firms not marked † or \* are composed wholly of members of the Institute.

- † Against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and

Hough, John Patrick, A.C.A., a1954; Robson, Morrow & Co, 4 Copthall Avenue, London EC2.

Khan, Riaz Ahmad, A.C.A., a1962; Riaz A. Khan & Co, 88 Disraeli Road, London SW15.

Kingdon, Samuel Leib, A.C.A., a1962; Harold Everett, Wreford & Co, Harford House, 103 Great Portland Street, London Wr.

Leon, Farrell Stanley, A.C.A., a1962; 124 Middleton Road, Crumpsall, Manchester 8.

MacDonald, Kenneth Lister, F.C.A., a1938; Wells-Smith, Jones & Co, 6 Figtree Lane, Sheffield 1.

Mawson, Henry James, A.C.A., a1959; 3 Danescourt Road, West Derby, Liverpool 12.

Miskin, Walter James, F.C.A., a1938; †Gill & Johnson and ††Deloitte, Plender, Gill & Johnson, P.O. Box 261, Mbeya, Tanganyika, and at Dar-es-Salaam, Iringa, Kampala, Mombasa and Nairobi.

Narielvala, Navroze Mancherji, A.S.A.A., a1960; \*S. R. Batliboi & Co, 1-B Old Post Office Street, Calcutta 1, and at Bombay and Ranchi.

Pearce, Donald Sutherland, A.C.A., aS1957; Wall & Humphries, I South Parade, Bath.

Pratt, Maurice Arthur, F.C.A., a1947; 3rd Floor, Norfolk House, Smallbrook Ringway, Birmingham 5.

Rodger, John Harley, A.C.A., a1959; Wells-Smith, Jones & Co, 6 Figtree Lane, Sheffield 1.

Simkins, Peter William, A.C.A., a1955; Allen, Baldry, Holman & Best, Prudential Buildings, Guildford, Surrey.

Sitaram, Govind, A.C.A., a1962; 5 Mitchell Close, Warren Road, Wilmington, Kent.

Smith, Peter William, A.C.A., a1952; Roffe, Swayne & Co, 70 High Street, Haslemere, Surrey, and at Godalming and London.

Spedding, Alan, B.A., F.C.A., a1940; †Gill & Johnson and ††Deloitte, Plender, Gill & Johnson, P.O. Box 1795, Mombasa, Kenya, and at Dar-es-Salaam, Iringa, Kampala, Mbeya and Nairobi.

Stevenson, Derek, A.C.A., a1961; 30 Tuscan Road, East Didsbury, Manchester 20.

Stubbs, Kenneth Garton, A.C.A., a1954; J. B. Hughes & Lloyd, 3 Fenwick Street, Liverpool 2.

Sykes, Raymond, A.C.A., aS1956; \*A. E. Bevan & Co, 10 Corve Street, Ludlow, Salop, and at Hereford.

Targett, Peter George, A.C.A., a1956; Robson, Morrow & Co, 4 Copthall Avenue, London EC2.

Tate, David Alfred, A.C.A., 21957; Caldwell & Braham, St Stephen's House, Westminster, London SW1.

White, Thomas, F.C.A., a1950; Duncan, Watson & Short, B22 The Temple, Dale Street, Liverpool 2.

Whiteman, Richard John, F.C.A., a1937; Cotterill, Kirk, Salt & Co, Sun Building, Bennett's Hill, Birmingham 2.

Wood, Malcolm William, A.C.A., a1952; Cotterill, Kirk, Salt & Co, Sun Building, Bennett's Hill, Birmingham 2.

#### Re-admission to Membership

Subject to payment of the amounts required by the Council three former members of the Institute were re-admitted to membership under bye-law 38.

#### Change of Name

The Secretary reported that the following changes of name have been made in the Institute's records:

Beecham, Eric Marx to Beecham, Eric Mark.

Cook, John Jeffrey to Jeffrey-Cook, John.

Green, Michael Howson to Howson-Green, Michael.

#### **Deaths of Members**

The Council received with regret the Secretary's report of the deaths of the following members:

Mr Thomas Norman Baxendale, F.S.A.A., Leeds.

" John Norman Doran, A.C.A., Torquay.

,, Shakespeare Dyson, F.C.A., Mottram, Cheshire.

" John Parkinson Fare, F.C.A., Manchester.

,, William Henry Walter Greenslade, F.C.A., London.

Miss Marjorie Laycock, A.C.A., Dewsbury.

Mr Kenneth Lishman, F.C.A., Harrogate.

,, Richard Buxton Morrish, T.D., M.A., F.C.A., London.

.. John Boustead Saint, F.C.A., Carlisle,

,, Walter Roland Tracy Whatmore, M.C., B.A., F.C.A., London.

#### 'Fleming Birch' Prizes

The Council noted with gratitude the generous gift by Mr T. Fleming Birch, F.C.A., of £1,000 to The Institute Prize Trust Fund to provide examination prizes in the area of The Leicestershire and Northamptonshire Society of Chartered Accountants.

Mr Fleming Birch was a member of the Council from

1934 to 1952.

#### The Small Practitioner Inquiry

The replies received through district societies in connection with the small practitioner inquiry indicate a willingness on the part of members to give information on an anonymous basis to the Institute on matters such as fees, remuneration and charging rates.

The Council has decided that a questionnaire should now be addressed to all practising members on such matters and intends to arrange for its distribution as soon as

possible.

#### Institute Staff

The Council decided:

- (1) that upon the retirement of the Secretary, Mr Alan S. MacIver, C.B.E., M.C., B.A., on October 31st, 1962, Mr F. M. Wilkinson, F.C.A., and Mr C. A. Evan-Jones, M.B.E., be appointed Joint Secretaries with effect from November 1st, 1962;
- (2) that Miss M. J. D. Reynolds, B.A., an Assistant Secretary who joined the staff on September 1st, 1947, be appointed an Under Secretary with effect from November 1st, 1962.

#### Presentation to Mr and Mrs A. S. MacIver

Sir Thomas B. Robson: Mr President, we welcome Mrs MacIver among us on this unique occasion.

We welcome also a number of former members of the Council who are here with us. [The former members of the Council who were present were Sir Harold Barton, Sir Bernhard Binder, Mr W. G. Campbell, Sir Harold Howitt, Sir Russell Kettle and Mr C. M. Strachan.] We have received messages of regret from others and from some of the present members of the Council who are obliged by

circumstances to be absent from this meeting. They would all like to express their apologies to Mrs MacIver for their absence and to join in our good wishes to herself and her husband.

When emotions are involved, as they are here, it is difficult for us to find words in which to express ourselves; and where I am concerned even if I have the right words, they are apt to get stuck on my tongue before they can be uttered.

This is very much the state of my affairs today. Mr and Mrs MacIver are dear friends of us all. (Hear, hear.) It is as their friends that we say how sorry we are that Mr MacIver will soon be leaving us officially, though our friendship and affection for them both will always continue. (Hear, hear.)

It would merely be stating the obvious to say that Alan MacIver has enhanced the prestige of the Institute throughout these islands and wherever he has gone on its behalf overseas. These places and the journeys to them have been innumerable and Mrs MacIver has made the journeys possible, going with him when her presence was desired in the Institute's interests, staying behind when the need

of the situation decreed otherwise.

No past president in the period since 1949 could have carried out his task without the help of these two people. (Hear, hear.) A president may well feel pleased with his own efforts during his single year of office, but the Secretary of the Institute who accompanies him on his extra mural activities as well as making separate expeditions of his own has to go on doing this year after year, learning the weaknesses and strong points of each successive occupant of the presidential chair and helping him to correct the former whilst making the most of the latter for the benefit of the Institute, winning the hearts of the members of our Institute and of other bodies as a permanent ambassador of goodwill from this Council, collecting impressions, conveying greetings, explaining policies, advising and helping in that unobtrusive atmosphere of friendship which it is his peculiar ability to create. Alan MacIver has these qualities in unique degree.

And as for his wife-we cannot tell her or him all that we feel about her. But this meeting would be incomplete without both of them. We are delighted that she has faced the ordeal of being a female Daniel in this den in which the lions are assembled in Council. Everyone of us will refuse to say goodbye to the MacIvers, but we want to give them on this occasion some tangible tokens of our affection in which have joined all those who now are or during Mr MacIver's secretaryship of the Institute have been members of the Council. The gifts have been selected by Mrs MacIver with some help from her husband and a little from

myself, and they are on the table before you.

They include Georgian silver articles made in London between 1800 and 1826, comprising a silver tea caddy, a pepper pot, a mustard pot and salt cellars and I hope that when Mr MacIver ceases his official activities for the Institute his wife will find that he is at least as good a cleaner of silver for her as he has been a secretary for us.

(Laughter.)

Lest he should make too long a job of his silver polishing activities in these days of time and motion studies, Mrs MacIver is to have the means of timing his work properly, for the gifts also include a fob watch for her own use. She deserves this if only because she has allowed him to spend such long periods away from her on Institute business without complaint, but not without cost to herself. We owe her a great debt and are delighted to acknowledge it

Mr President, I now formally move the following

resolution:

'As today Mr A. S. MacIver, C.B.E., M.C., is attending this Council as Secretary of the Institute for the last time before his departure on Institute business to North America and his subsequent retirement, the Council expresses to him and to Mrs MacIver the warm affection of its members and other members of the Institute for them both.

'The Council records its deep sense of gratitude for the selfsacrificing, distinguished and devoted service which Mr and Mrs MacIver have performed for the Institute since Mr

MacIver first became associated with it as Assistant Secretary in 1935, becoming Deputy Secretary ten years later and succeeding to his present appointment as Secretary in 1950.

"The Council offers to Mr and Mrs MacIver its sincere good wishes for their future happiness and asks them to accept the gifts which will now be presented by the President as a token from past and present members of the Council of the great esteem in which Mr and Mrs MacIver are held."

esteem in which Mr and Mrs MacIver are held.'

If this resolution is passed a copy of it will be included

in the record which we are giving to Mr and Mrs MacIver of the gifts and those who participated in them. May I ask, Mr President, that Mr Barrows will second the proposal? (Acclamation.)

Mr Leonard Barrows: Mr President, members of the Council, I think it would be quite inappropriate for me to attempt to add to the charming tributes that Sir Thomas Robson has paid to Mr and Mrs MacIver. I would only like to say personally that, as a member of the Council from the provinces, since 1941, I am most grateful to Mr MacIver for all that he has done for me and for all our members in the provinces. In order to put the matter formally on our records I second the resolution. (Acclamation.)

The President: Gentlemen, the resolution has been proposed and seconded. May I put that to the meeting? Those in favour? (Cries of 'All'.) Against? That is carried unanimously. (The gifts were then presented to Mr and

Mrs MacIver.)

Mr A. S. MacIver: I must first try to thank you all on behalf of Lolo and myself for the beautiful gifts which we will always treasure and use. The gifts will be a permanent reminder of your kindness to us and of twenty-seven very happy years with the Institute. I am particularly touched by the contributions of past members of the Council and the presence here today of so many of them. Lolo is absolutely delighted with her own personal gift and the thoughts behind it. Very kind things have been said about her and, if I may say so, they are well deserved. I would scarcely have been received in the United States or elsewhere abroad without her. She is indeed grateful to you and so am I. (Hear, hear.)

I now have to thank Sir Thomas and Leonard Barrows for proposing the resolution and you gentlemen for accepting it, and I thank Sir Thomas for the very kind things he

said.

I have no illusions that I have in fact been a very good secretary. Perhaps my only merit is that as Secretary I have made no enemies to the best of my knowledge and have indeed made very many friends. (Hear, hear.)

I have had twenty-seven very happy years and have served as Secretary under thirteen presidents starting with Sir Russell Kettle, whom I am so glad to see here today. I could not have been happier in my association with all of them. There is not one whom I was not sorry to lose

at the end of his year of office. Things have changed since I joined in 1935. The membership of the Institute was then very little over eleven thousand and the total staff was seventeen. Moorgate Place was then remarkable for an atmosphere of almost complete inactivity. Within a formight or so of joining I was left alone for four weeks after George Colville had gone and Wynne Bankes had gone on holiday. Nothing happened during those four weeks to give me a sleepless night or indeed a sleepless afternoon. (Laughter.) We now have a staff of about one hundred and twenty and a membership of getting on for

thirty-six thousand.

Thank you all, gentlemen, very much, for all your friendship, tolerance and support. It is appropriate that on this occasion I should say a few words about the staff and thank them as well. The only ones remaining who were with me when I joined the Institute in 1935 are Loveday, Thomson (the librarian), Everett, Brown and Mrs Amor. I must say a special word, if I may, about Mrs Amor who has been in turn my secretary and personal assistant throughout my whole time with the Institute and I could not imagine life without her. Wilkinson joined us before the end of the war and my debt to him cannot be expressed in words. Integration brought many good things including Evan-Jones and those who came with him from the Society. They have all fitted in marvellously. I wish my successors as happy a time as I have had and I am sure that you will be as kind to them as you have been to me.

Thank you again, Mr President, members and past members of the Council. I shall leave you in October with very happy memories and a very great measure of affection.

(Acclamation.)

#### FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-law appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on July 4th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Miles Cecil Rhodes, F.C.A., had been guilty of acts or defaults discreditable to a member within the meaning of subclause (3) of Clause 21 of the supplemental Royal Charter in that (a) despite promises so to do he failed within a reasonable time or at all to deal with requests made to him by the solicitors and accountants of a beneficiary in relation to the estate of a deceased person of which he was an executor and trustee: (b) he failed to reply or to take any action in response to four letters addressed to him by an Under-Secretary of the Institute, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Miles Cecil Rhodes, F.C.A., had been proved under both headings and the Committee ordered that Miles Cecil Rhodes, F.C.A., of Park House, Dollar Street, Circucester, be excluded from membership of the Institute.

#### **Overdue Subscriptions**

The Committee heard 129 formal complaints preferred by the Investigation Committee each to the effect that the member concerned had failed to pay within four months of January 1st, 1962, the subscription then due and payable by him so as to render himself liable to exclusion or suspension from membership. The committee, having found the complaint proved in every case,

- (a) ordered that each of the following twenty-four members be excluded from membership of the Institute:
- George Thomas Hanbury Allen, F.C.A., Lord's Hill, Frinsted, Sittingbourne, Kent.
- Kenneth Robert Arliss, F.C.A., Mount Dennis, Toronto, Ontario, Canada.
- Alfred Charles Axon, F.C.A., 55 Balsdean Road, Wooding-dean, Brighton.
- Harold Bullivant, F.C.A., Stoney Hall, Underberg, Natal, South Africa.
- Donald Harry Clarke, F.C.A., 84 Sandhurst Avenue, Ward End, Birmingham 34.
- Herbert William Coleman, F.S.A.A., 'Edmunds,' Deepdene Park Road, Dorking, Surrey.
- Arnold Thomas Davies, F.C.A., 31 Clifton Crescent, Folkestone.
- Wouter Matthijs De Clercq, A.S.A.A., 173 Columbia Heights, Apt 1, Brooklyn 1, New York, U.S.A.

- Philip Frederick Engelke, F.C.A., P.O. Box 5026, Nairobi, Kenya.
- Cyril Gill, F.C.A., Flat 5, 29 Earl's Court Square, London SW5.
- Harold Frank Gurney, F.S.A.A., 76 Botany Road, Margate, Kent.
- Arthur John Heal, F.C.A., 617A Walsall Road, Great Barr, Birmingham 22A.
- Arthur Alfred Jeacock, F.C.A., 10 Garden Close, Wallington, Surrey.
- Douglas Ernest Roy Matthews, F.C.A., P.O. Box 9276, Johannesburg, South Africa.
- John Arthur Maynard, F.C.A., P.O. Box 387, Umtali, Southern Rhodesia.
- Arthur Edgar Palmer, F.C.A., 4 St Nicholas Road, Uphill, Weston-super-Mare.
- Robert Percival Palmer, F.C.A., Chesterton Priory, Peterborough, Northants.
- Peter John Benjamin Paul, A.C.A., 84 Westcombe Park Road, Blackheath, London SE<sub>3</sub>.
- Frank Norris Pinder, F.C.A., 24 Harcourt Terrace, London SW10.
- Miss Evelyn May Smith, F.C.A., Lloyds Bank Chambers, Baldock, Herts.
- Alan Samuel Spiro, A.C.A., 7362 Ostell Crescent, Montreal 9, P.Q., Canada.
- Vyvyan Ray Symons, F.C.A., Co-operative Bank Chambers, Halifax Street, St Vincent, West Indies.
- James Henry Thomas, B.Sc. (ECON.), A.C.A., 49-53 Water Street, Georgetown, British Guiana.
- Cyril Ward, F.C.A., 29 Lejune Road, Agincourt, Ontario,
  - (b) decided that, of 105 members who had tendered the full subscription before the date of the hearing, twenty-three be reprimended and seventy-one admonished and that no action be taken against eleven, and that in all but four of these cases there existed special circumstances which justified the omission of the name of the member from the publication of the finding and decision. The following four members were reprimanded:
- William Milton Carter, F.C.A., 16 Frederick Street, Marshalls, Johannesburg, South Africa.
- John Brierley Fletcher, F.C.A., 125 Cliff Road, Hornsea, Yorks.
- Dennis Wynne Williams, F.C.A., P.O. Box 53, Isipingo Rail, Natal, South Africa.
- Roy Deiniol Youatt, F.C.A., 35 Pencraig, Llangefni, Anglesey.

#### PROFESSIONAL NOTICE

Messrs Pridie, Brewster & Gold, Chartered Accountants, of 2-3 Warwick Court, Gray's Inn, London WC1, announce that they have taken into partnership, Mr N. K. Grant, A.C.A., as from August 1st, 1962.

#### **Appointments**

Mr Arnold M. Dalton, F.I.M.T.A., has been appointed chief finance officer of Livingston New Town Development Corporation, as from the beginning of September.

Mr W. G. Frazer, F.C.A., has been appointed chairman of P. C. Henderson Ltd.

Mr Paul F. Granger, F.C.A., has been appointed to the board of Cook & Watts Ltd.

Mr J. M. Osborn, F.C.A., has been appointed to the board of Brooke Bond Tea Ltd.

Mr John W. Read, A.A.C.C.A., assistant director of accounts, British Transport Commission since 1958, has been appointed finance officer in the headquarters management organization of the Southern Region of British Railways.

Mr G. A. Riddell, B.COM., C.A., has been appointed joint managing director of English Electric Co Ltd.

Mr T. Sharpe, F.C.A., has been appointed a director of Greenhaven Securities Ltd.

Mr T. Alan Smith, B.COM., A.C.A., has joined the boards of Hobbs Saville & Bradford (Pensions) Ltd and R. N. Young & Partners Ltd, and has been appointed director in charge of the Birmingham operations of the two companies.

Mr Jack Vernede, F.C.A., has joined the board of Nedeem Tea Co Ltd.

Mr K. L. Young, T.D., F.C.A., has been appointed an additional director of Albert E. Mallandain Ltd.

#### IN PARLIAMENT

#### Company Law: Jenkins Committee

Mr Crosland asked the President of the Board of Trade if he will arrange for the publication of the names of those who submitted written evidence to the Jenkins Committee on Company Law.

Mr Erroll: No. Nearly four hundred persons and institutions submitted written evidence varying from a comment on a postcard to lengthy memoranda. I do not think that publication of the names of all these contributors would be justified. The Committee placed on record in their report their indebtedness to all who gave evidence, whether written or oral.

Hansard, Aug. 2nd, 1962. Written Answers. Col. 140.

#### **National Incomes Commission**

Mr WYATT asked the Chancellor of the Exchequer when he expects to announce the names of the members, and the starting date, of the National Incomes Commission.

Mr Boyd-Carpenter: It is our aim that the Commission should start work as soon as possible. But my right hon. friend the Chancellor of the Exchequer proposes to hold further consultations with representatives of employers and trade unions before the Commission is appointed, and I have therefore at present no announcement to make about its membership or about terms of service. None of the functions of the Ministry of Labour will be transferred to the Commission.

Hansard, Aug. 2nd, 1962. Oral Answers. Col. 777.

#### Income Tax Act, 1952: section 341

Mr D. SMITH asked the Chancellor of the Exchequer if he will state the number of cases of farming losses of persons dealt with under section 341 of the Income Tax Act, 1952, in the latest convenient year, and the estimated loss involved.

Mr Barber: About ten thousand individuals and about five hundred and fifty partnerships in the year to September 1961, with an aggregate loss of about £12½ million.

Hansard, Aug. 3rd, 1962. Written Answers. Col. 165.

### INQUIRY INTO DISTRIBUTIVE AND SERVICE TRADES

An inquiry into the distributive and service trades is to be taken next year by the Board of Trade under the Statistics of Trade Act, 1947, in respect of business done in 1962. The inquiry will be directed mainly to the collection of information about stocks and capital expenditure, similar to that obtained from industry in the Census of Production, though some additional information will be obtained at this inquiry from firms in the motor trades, which were not included in the census of distribution and other services now being taken in respect of 1961. All dealers in new motor vehicles will be asked for returns, together with a sample of other traders (e.g. second-hand dealers, repairers, and filling stations).

The form for motor traders will include a question about turnover in the year, with an estimated division between the following: sales of new motor vehicles, (a) motor-cars, (b) commercial vehicles, (c) motor cycles, scooters, etc; sales of second-hand motor vehicles; sales of spare parts and accessories and receipts from

MOTOR - FIRE - CONSEQUENTIAL LOSS

CAR & GENERAL INSURANCE LTD CORPORATION LTD

83 PALL MALL, LONDON, SW1

repairs and servicing, including materials and parts used; sales of petrol and oil; all other sales and receipts.

From the information gained it will be possible to improve both the estimates of stocks and capital expenditure, and the estimates of expenditure on motor vehicles. The information collected from the motor trades will also serve as the basis for a continuing monthly inquiry on a voluntary basis, starting in January 1964, which will provide an indicator of current activity similar to those now available for the retail and catering trades.

Further information about the inquiry including full particulars of the questions to be asked, may be obtained from the Board of Trade, Census Office, Lime Grove, Eastcote, Ruislip, Middlesex. (Telephone: Pinner 8771, extn 11.)

## EAST ANGLIAN SOCIETY OF CHARTERED ACCOUNTANTS

At the twenty-eighth annual general meeting of the East Anglian Society of Chartered Accountants held recently in Ipswich, Mr Alfred Kenneth Sheppard,

F.C.A., a partner in the firm of Bullimore & Co, Chartered Accountants, of Norwich, was elected President of the Society for the year 1962-63.

Born and educated at Salford, Lancashire, Mr Sheppard was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1928, after being articled to the late Mr Norman Abbott, F.C.A., of Manchester. The same

year he joined the Norwich office of Bullimore & Co and became a partner in 1945. He was elected to fellowship of the Institute in 1952.

Mr Sheppard holds several honorary appointments including the honorary treasurership of the Norfolk Nursing Association. From 1939 to 1945 he served with the National Fire Service and since 1952, has been a member of the Civil Defence warning organization.

Other officers of the Society elected for the ensuing year are:

Vice-President: Mr G. A. G. Oldfield, F.C.A. Honorary Secretary and Treasurer: Mr H. Robinson, F.C.A., Messrs Robinson & Co, 4 Elm Hill, Norwich.

#### **Annual Report**

The report of the Committee for the year 1961 records that membership of the Society at the year-end totalled 296 – a small increase over the previous year's

figure. It is pointed out that membership of the Society represents approximately half the members of the Institute in the area so that there is considerable scope for increasing the number of members of the Society. The Committee asks all members to assist in increasing the Society's membership.

An important feature of the year's work has been the organization in the area of the Institute's 'small practitioner inquiry' and meetings were held in various parts of the Society's area. A number of members also supplied information relating to fees and scales of remuneration but the response from practising members was disappointing, particularly as the results of the inquiry are to be made available only to those members who supply information.

The Ipswich and Colchester branch held regular meetings during the year which were very well supported. The Cambridge branch also held a number of meetings while in the Norwich area an autumn meeting was arranged to discuss the small practitioner questionnaire but was very poorly supported; the Committee

records its regret at the disappointing response to meetings organized in the area.

A week-end residential course for students was held last autumn and it is proposed to hold these courses annually in the future. The Students' Association held regular meetings in all parts of the Society's area which were quite well attended.

#### ECONOMIC CONDITIONS IN NORWAY

A further booklet in the 1962 series dealing with economic conditions in member and associated countries of the Organization for Economic Cooperation and Development has recently been issued covering Norway. Copies of the booklet are obtainable from H.M. Stationery Office, price 3s.

#### BANK HOLIDAY CROSSWORD: SOLUTION

The solution to the Bank Holiday Crossword compiled by Mr Kenneth Trickett, F.C.A., which appeared in last week's issue, is as follows:

# Tepid War on Tax Evasion

EARLY ten years ago THE COMPTROLLER AND AUDITOR-GENERAL in his report on the Inland Revenue Appropriation Accounts, drew attention to the loss of revenue resulting from non-disclosure of fees, royalties, etc., by persons engaged in various occupations and professions. The Committee of Public Accounts took up this matter, and in its third report for the session 1953-54 it mentioned the observations of the Inland Revenue, to the effect that while the department had power to require information from employers as to payment of wages and salaries, no similar authority existed to obtain details of fees paid. We might observe that although in those days there was no express authority of this kind, quite a lot could be done by way of asking, in the course of examination of trading accounts, for an analysis of fees paid to entertainers and the like. If the payer was unwilling to disclose the names of the recipients, the Revenue could, in effect, force disclosure by disallowing the deduction and putting the payer to the trouble of satisfying the Appeal Commissioners that the payments were made and were truly deductible expenses.

The Public Accounts Committee reported that the Revenue thought that legislation for such returns would be onerous both to the public and to the department, and that in any case the problem was not important in relation to the amount of revenue involved. However, the Committee expressed the belief that the existence of powers to require disclosure might not only be advantageous to the Revenue, but also have a beneficial effect upon public morale 'which is from time to time disturbed by reported cases of evasion of tax liability'. The Committee was influenced by what it called the remarkable results of the grant in 1951 of a statutory power to require returns of bank interest. It recommended legislation to give to the Inland Revenue discretionary power to require returns of fees. This legislation duly appeared as section 20 of the Finance Act, 1956.

The 1956 Act received the Royal Assent on August 2nd, and by December 18th, 1956, the Committee was back to the charge, for on that day Sir Henry Hancock, k.c.b., k.b.e., c.m.g., then Chairman of the Board of Inland Revenue, was answering the Committee's questions on the appropriation accounts. He was asked whether his department was taking active steps to use the powers given by section 20 and he replied:

'Yes. We are making full use of this for the future to get returns from the entertainment organizations and comparable bodies who in the past have not been prepared to give us the figures.'

Asked if the department was getting any help, Sir Henry said 'We do not anticipate any difficulty'. These references to the future in the replies were not surprising. Seeing that section 20 was confined to payments made after April 5th, 1956, and the Act had only recently received the Royal Assent, it is highly improbable that the Inland Revenue had issued a single inquiry under the section at the time that the chairman was giving these answers.

The story is now taken up by the Third Report from the Committee of Public Accounts for the session 1961-62, which was published last week<sup>1</sup>. The report says that comprehensive application of the section 20 powers has been confined to the entertainment and literary worlds. Information supplied by payers in response to notices issued by Inspectors of Taxes is collated and periodically distributed to the districts assessing the payees. Although the information may not reach the assessing districts until after the payee has in the normal course made his return and been assessed, the department told the Committee that the procedure had proved of great value indirectly. Since the section came into force it had been found that payees rendered their returns of income more promptly, and that there had been fewer discrepancies between the amounts actually returned by the payees and the amounts disclosed by the payers. It is perhaps a tacit admission that even before section 20, some payers were already making returns of the payments. It was certainly an admission that the Committee reporting in 1954 was right to suggest the new legislation, in spite of the lukewarm attitude of the Revenue. This is emphasized by the admission of the department that few back duty cases were now arising in the entertainment and literary professions. Although difficulties had been experienced in identifying and tracing certain payees, the department told the Committee that it did not regard the untraced proportion as high, and gave an assurance that not many payees were escaping their tax liability.

So much for the entertainment and literary worlds. In the more mundane fields of building and civil engineering the picture is not so rosy. The Comptroller and Auditor-General had drawn attention to the prevalence of payments to sub-contractors in these industries and to the

wide differences of practice within the Inland Revenue in inquiring into such payments. In one tax area, exceptionally comprehensive use had been made in this field of the section 20 powers. This operation had revealed thirty-five sub-contractors based within the tax district who were not 'on the tax register' together with forty-two itinerant sub-contractors of whom no trace could be found. In many instances these 'sub-contractors' were labourers or craftsmen, working either individually or in loose associations, who had frequently in the past been employees subject to P.A.Y.E. Subsequently, as sub-contractors under Schedule D they had been escaping assessment.

We have often complained of the disparity between Schedule D and Schedule E, to the disadvantage of taxpayers assessed under the latter schedule, but this was on the footing that the rules as to expenses were different. If Schedule D taxpayers are to escape tax altogether, then surely this is too much.

The Inland Revenue told the Committee that they were unable to state whether tax evasion of this nature was occurring outside the building and civil engineering industries. In those industries the practice of evasion had been coming to the Revenue's knowledge to a greater degree, recently. They had therefore initiated inquiries to discover its full extent. The same note of optimism appears, for the Revenue also said that they did not regard the problem as a very large one; locally based sub-contractors would in the end have been discovered by the normal procedures in tax districts. It was admitted, however, that itinerant labour gangs presented a real difficulty, because of the rapid and frequent changes of address.

The Committee found it disturbing that a special effort in merely one of some 700 tax districts should have produced so much evidence of evasion in a limited field. The Inland Revenue suggested that this one district might be exceptional but agreed that the same could happen elsewhere. The Committee concludes that there is a gap in the tax collection machinery. And although the Revenue doubted whether a wider application of section 20 would afford a practical solution they appeared to be unable to suggest any alternative remedy. The Committee recommends that the inquiries to ascertain the extent of these tax evasions be pursued with urgency.

# Short-term Gains - VI

#### MARKET VALUE INSTEAD OF ACTUAL CONSIDERATION

S indicated in our fourth article two weeks ago, computation of Case VII profit is arrived at, broadly speaking, by deducting from the proceeds of disposal the cost of the acquisition and the other expenses, on the footing that the acquisition and disposal constitute an adventure in the nature of trade. In the field of income tax as it was before the Finance Act, 1962, there were provisions for the substitution, in certain cases, of the market value of an asset for the actual cost of its acquisition or the proceeds of its disposal. The Case VII legislation also contains such provisions, but there are more of them; perhaps on the principle that the less yield there is from a tax, the more complicated it ought to be. Not only are there more provisions for the substitution of market value, there are provisions for exceptions to those provisions, and for certain rights of election.

Section 12 (3) provides that, with certain exceptions, a person's acquisition of any asset (and the disposal of it to him) shall for Case VII purposes be deemed to be for a consideration equal to the market value of the asset or of the interest or right in or over it received by him:

- (a) where he acquires the asset otherwise than by way of a bargain made at arm's length, and in particular where he acquires it by way of gift, or by way of distribution from a company in respect of shares in the company; or
- (b) where he acquires the asset
  - (i) wholly or partly for a consideration that cannot be valued, or
  - (ii) in connection with his own loss of office or employment or diminution of emoluments, or
  - (iii) otherwise in consideration for (or recognition of) his or another's services or past services in any office or employment, or
  - (iv) otherwise in consideration of any other services rendered or to be rendered by him or another; or
- (c) where he acquires the asset as trustee for creditors of the person making the disposal.

What is a bargain at arm's length? The White

Paper<sup>1</sup> says rather airily that a bargain not at arm's length is 'generally speaking at an artificial price'. The Shorter Oxford Dictionary says that 'at arm's length' means 'without fiduciary relations'. It would seem that 'bargain' must here mean 'contract' and it is a pity that the draftsman did not use that more precise word. It follows that the bargain, besides being at arm's length, must be an enforceable contract (cf. Montague L. Meyer Ltd v. Naylor (40 A.T.C. 31)). There is authority to support the proposition that distributions to shareholders are not at arm's length; see, for instance, Associated British Engineering Ltd v. C.I.R. (19 A.T.C. 468) and Wigan Coal & Iron Co Ltd v. C.I.R. (24 A.T.C. 30) as regards stamp duty; and C.I.R. v. Thornton Kelly & Co Ltd (36 A.T.C. 71) as regards surtax.

The provisions in (a) as to gifts must be read with paragraphs 3 and 4 of the Ninth Schedule, which will be dealt with in a subsequent article. However, it is worth noticing here that section 12 (3) applies to a 'gift in settlement' as a gift to the trustees of the settlement, notwithstanding that the settlor is one of the trustees, or even the sole trustee of the settlement (paragraph 4 (1)). No definition of 'settlement' is given, and it is clear that the definitions in the anti-avoidance provisions in Part XVIII of the Income Tax Act, 1952, do not apply, notwithstanding that paragraph 4 (1), like the rest of Chapter II of the Finance Act, 1962, has to be construed as one with the Income Tax Acts. The expression 'settled property' occurs in paragraph 4 and is defined in section 16 (1) as meaning:

'subject to subsection (4) below, any property held in trust other than property to which subsection (5) of section 12 of this Act applies'.

Section 16 (4) deals with unit trusts, while section 12 (5) applies to:

'assets held by a person as nominee for another person, or as trustee for another person absolutely entitled as against the trustee (or for two or more persons jointly so entitled)'.

<sup>&</sup>lt;sup>1</sup> Cmnd 1710.

180

#### ACCOUNTANT

The draftsman has not dealt expressly with genuinely settled property which the trustees have vested in nominees for the trustees. A literal construction of section 16 (1) would apparently take such property outside the definition of 'settled property'. For the purposes of section 12 (6), which deals with 'settled property', if part of the property comprised in a settlement is vested in one trustee (or set of trustees) and part in another, then 'they' (meaning the trustees as a whole) are to be treated as acting on behalf of a single body of trustees. However, according to section 16 (1), property vested in bare nominees is not 'settled property' at all.

Returning now to the categories where the market value is to be substituted for the consideration, if any, for the acquisition, one could say as regards (b) (i) that there is authority for saying that no consideration is completely incapable of being valued. However, given some uncertainty as to the value of the consideration, there is no hardship in taking the market value of the asset. Item (c) emphasizes that the misfortune of going bankrupt may bring with it the added misfortune of liability to Case VII tax on all the bankrupt's assets acquired after April 10th, 1962, and within the statutory six months (or three years) notwithstanding that the bankrupt had every intention of retaining the assets.

The remaining items in (b) must be read in the light of section 12 (4), to which section 12 (3) is subject. It postulates the following circumstances:

- (1) acquisition by a person of an asset;
- (2) the asset or an interest in or right over it is 'received' by him;
- (3) the asset etc., in (2), either:
  - (i) 'falls to be taken into account for purposes of tax as a receipt of an income nature (of any person); or
  - (ii) would fall to be so taken into account if the last-mentioned person were chargeable to tax in respect of the whole of his income;
- (4) the amount falling to be taken into account is not the market value.

In those circumstances, the first-mentioned person's acquisition is to be deemed for Case VII purposes to be for a consideration equal to (4).

We have left until the last the meaning of 'market value'. In relation to any property it means, according to section 16 (1):

'the price which that property might reasonably be expected to fetch on a sale in the open market'. This definition is a considerable advance on the definition for estate duty purposes contained in section 7 (5) of the Finance Act, 1891, which is:

'the price which, in the opinion of the Commissioners, such property would fetch in the open market'.

That definition must be well known to the draftsman and it seems almost that he came to the conclusion that reasonableness and the opinion of the Commissioners were unlikely to be compatible. Perhaps he had been reading the report of *In re Holt* (32 A.T.C. 402).

There is another aspect in which the situation as to the determination of market value is more favourable to the taxpayer than for estate duty. In relation to estate duty it was almost invariably in the interest of the Estate Duty Office to argue for as high a value as they could, and therefore they could enjoy a reputation for some degree of consistency in their approach. Under the Case VII legislation it will often be in the interests of the Inland Revenue to argue for a low market value. They will thus almost inevitably be led into putting forward arguments which can be turned against them on another occasion.

It is perhaps regrettable that this concept of substituting market value for what the taxpayer has actually received was introduced at all. The declared object of the Case VII legislation was to hit the speculator who was using his capital profits as income. The scope for using as income money which you have not received, but which is a fiction generated by the Finance Act, 1962, is somewhat limited, to say the least of it. Being so limited, it is questionable whether it ought to be taxed.

In any case, it is obvious that disputes about market value, which is always a matter of opinion, are going to waste a great deal of time and energy which could be better devoted to more worthwhile ends.

The new definition can also be compared with the provisions of section 143 of the Income Tax Act, 1952, concerning the valuation for Case I purposes of the closing stock of a discontinued trade. In certain circumstances the stock is to be valued at the amount 'which it would have realized it if had been sold in the open market at the discontinuance of the trade'.

#### JENKINS REPORT

# **Investor Protection**

HE tremendous growth in the number and operations of companies and unit trusts has greatly widened the field in which the investor is being invited to buy or sell shares. His protection from the unscrupulous, careless or incompetent company promotor or director has been one of the main concerns of a long series of company and other Acts and he is already in a strong position. Nevertheless, as time goes on, weaknesses in the system become more apparent, and new weaknesses are discovered. That is why the report of the Jenkins Committee contains quite a number of recommendations designed to strengthen the position of the investor vis-à-vis those who want his money, and their cumulative effect is considerable.

Public issues of shares for which a stock exchange quotation is not sought are, of course, rare. One of the attractions of a quoted security is the ease with which it can be sold or its present value ascertained. It follows that the oversight which the stock exchange exercises is of the greatest utility to investors. The threat of withholding or withdrawing an official quotation is a most powerful one, and the comparative rareness of the exercise of this power is perhaps an index of its efficacy. The Jenkins Report points out that, as well as stock exchanges, there are other influences at work to discourage the issue of questionable prospectuses: issuing houses, and the counsel, solicitors, and accountants who are consulted about the various documents to which a public issue gives rise.

Nevertheless, the Jenkins Committee thinks that there is scope for more protection. It recommends that the Companies Act Consultative Committee (already established to advise the Board of Trade) should meet regularly to co-ordinate the experience of the various bodies concerned with the protection of investors. This consultative committee could advise the Board of Trade of changes considered desirable in the administration of the law (including the use of the Board's rule-making powers), or in current practice, to protect the investor. The consultative committee would be free to advise amendments in the Acts,

thus providing, as it were, a continuously sitting committee on company law reform.

The Jenkins Committee's terms of reference confined it to companies and unit trusts. The statutory provisions for the prevention of fraud on investors are largely distributed between the Companies Act, 1948, and the Prevention of Fraud (Investments) Act, 1958, and the Committee would like to see these provisions concentrated in one Act. Industrial and provident societies were outside the Committee's terms of reference, but any reform of the law should surely cover them too. Another important aspect outside the terms of reference is the power of finance companies to make public requests for money on deposit. When a small saver has some money to invest, he is not particularly concerned with the precise legal nature of the body to which he entrusts it and there is certainly room for some more or less uniform code applying to all persons publicly seeking the investors' money.

One particularly blatant piece of deception, which could fool only the very unsophisticated, is to give a company a very large and impressive authorized capital, or even a very large 'issued' capital, without revealing that the amount paid up is very small. The report recommends that the one should not be given without the other. On the subject of advertisement, commercial television opens a new field for the share pusher. The Committee expressed itself satisfied by the rules imposed by the Independent Television Authority; it recommends, however, that the Board of Trade should be empowered under the Companies Act to make rules to control advertisement by broadcasting or television.

It is recommended that the definition of a prospectus be extended to cover the case where investors are invited to contribute not cash but securities, or some other consideration which is not cash. If, however, the prospectus is a take-over offer, it will be covered by different rules discussed below. Under the recommendations, a prospectus will require to contain even more information than it does now. One thing is turnover over

the five financial years immediately preceding the issue of the prospectus, with a statement as to the method of computation. To bring all prospectuses into line with the requirements of the London Stock Exchange in this respect, every prospectus should contain, according to the Committee, statements of the company's authorized, issued and paid-up capital; its loan capital, overdrafts, and directors' borrowing powers, the nature of the company's business, and names of the company's subsidiaries and holding companies. To save waiting another twenty years before the prescribed contents of a prospectus might be reviewed, the Committee would give to the Board of Trade power to amend the requirements of the Fourth Schedule of the Companies Act, 1948 (or the corresponding provisions of the next Companies Act), by statutory instrument. At the same time, the Committee would like the Board of Trade to have power to exempt a company in a particular case from requirements as to the information in its prospectus. Where a stock exchange quotation is being sought, the stock exchange has powers of exemption, and there seems to be no good reason why the Board of Trade should not have them too. How far they would exercise such powers in practice is perhaps another matter. However, the Committee was told that the stock exchange exempting powers had proved extremely useful.

Under the Prevention of Frauds (Investments) Act, 1958, only certain categories of persons are permitted to deal in securities. These 'authorized dealers' can distribute circulars containing invitations to invest, or containing information calculated to lead to investment. Among authorized dealers are members of twenty stock exchanges which are at present recognized by the Board of Trade under the Act. (The Act singles out the London Stock Exchange as needing no recognition.) The Committee thinks that fifteen of these are so small that it is improbable that they are able to perform, as adequately as the large exchanges, the two important functions of disciplining the members and scrutinizing applications for a quotation. It is not suggested that the operations of these small exchanges have led to serious trouble. Nevertheless, the Committee would like to see some rationalization, perhaps by amalgamation, together with the setting up of a compensation fund or a scheme of insurance to compensate investors who suffer loss as a result of default by members.

Another category of authorized dealers consists of 'exempted dealers', the definition of which was framed with a view to covering banks, merchant bankers, issuing and finance houses and the like, who can apply to the Board of Trade for exemption. The Committee thinks that the Act should require the Board of Trade to be satisfied about the reputation and business reliability of those concerns granted exemption. It should also be possible to grant provisional exemption to newlyconstituted concerns in this field. Yet another category of authorized dealers are 'licensed dealers' of whom there are only thirty-five. Few of them come within the range of persons for whom this category was designed, namely, small external brokers who are not members of a recognized stock exchange. They are mainly companies engaged in finance business who do not qualify as exempted dealers. The Committee deprecates this; it thinks that if a finance company does not attain the standards required of an exempted dealer, it should not be given a licence. Some licensed dealers do not deal at all, they merely use their licence in order to be able to issue take-over bids. In their case the Committee thinks the licences should not be renewed.

It seems that a person who is not an authorized dealer but who issues circulars containing investment advice, is in breach of section 14 of the Prevention of Fraud (Investments) Act, 1958. There may be an escape in the fact that a charge is made for the circulars. An investment advisory business which is conducted on the basis of charging by results is a business of dealing in securities within the meaning of the 1958 Act. The Committee thinks that legal provision should be made to allow the conduct of a bona fide investment advice business without infringing the Act. There can be no doubt that the Act was never meant to apply to such a business; it is only the enthusiasm of the draftsman of the Act that has brought them in.

There is nothing very revolutionary in what the report has to say about take-over bids, although it does contain a number of recommendations for tidying up the law. It recognizes that take-overs are an essential feature of economic growth and development. One is apt to look askance at this when thinking of the very large take-overs of the

183

# ACCOUNTANT

past few years, or of cases where there was fraud. However, it is well to remember that there are hundreds of small take-overs being carried out each year and they harm no one; indeed, they are in most cases economically desirable. The Committee rejected the suggestion that the consideration in every take-over should include a substantial amount of cash, rather than being confined to securities in the bidding company.

As indicated in the references above to authorized dealers, the control of take-over bids rests largely on the channel through which the bid is made. The control of prospectuses rests largely on the wording of the prospectus; anyone can issue a prospectus provided it complies with the statutory requirements as to its contents. It does not have to be issued through an authorized dealer or with Board of Trade permission. The Committee thinks that the regulation of take-over bids should be carried out broadly in the same way, including the giving of a civil remedy to investors who lose money through reckless or fraudulent misstatements in the offer, and the requirement that the offer be registered at the Companies Registry.

Another recommendation is that the Board of Trade should have power to make rules (by statutory instrument) applicable to all take-over offers and to recommendations by the directors of the offeree company that the offer be accepted. The Committee approves the Licensed Dealers (Conduct of Business) Rules, 1960, which lay down requirements as to the terms of take-over offers and which in general are followed in this respect not only by licensed dealers, but also by the recognized stock exchanges and other authorized dealers.

At present it is not necessary to file a take-over circular with The Registrar of Companies. As already mentioned, the Committee recommends that the circular (and any circular recommending acceptance of the offer) should be so filed, together with copies of the documents referred to, and these papers be made available on the company's file immediately after the circulation of the offer. The Registrar would have power to reject a circular which in his opinion did not comply with the statutory requirements as to contents, subject of course to the right of appeal. Issue of a take-over bid to the offerees without its having been first filed would be an offence.

It is the way of the take-over bidder to provide himself with an escape clause which enables him to cancel the contract if less than a specified percentage of acceptances are received by him. At the same time the offer is so worded that a shareholder who accepts cannot back out. The shareholder accepting may then have the mortification of seeing the first bidder pass on his acceptance to a higher bidder, and pocketing the difference. Nevertheless, the Committee does not recommend that there be any change in this respect. However, if the original bidder goes on to increase his bid, in order to bring in shareholders who were not tempted by the first bid, then those shareholders who had already accepted the first bid ought, in the Committee's view, to receive the increased price. It recommends a change in the law accordingly. This is in fact the common practice. The Committee also recommends that not only should an offer remain open for at least twenty-one days (unless totally withdrawn), but also that if the bidder has not made his offer unconditional at the end of thirtyfive days, shareholders who have accepted shall thereafter be free to withdraw their acceptances. When an offer has been declared unconditional. the Committee thinks that the bidder should be bound to disclose the number and proportion of shares of each class which he then has or controls, whether as a result of the bid or otherwise. This would enable non-acceptors to reassess their position and to decide whether or not to accept after all.

The information contained in take-over offers, besides covering the ground covered by the licensed dealers' rules, should, in the Committee's view, go further. The bidder should say what steps he has taken to ensure that any necessary cash will be available. Moreover, besides disclosing any special terms offered for directors' shares, the circular should state specifically the total amounts of payments of compensation for loss of office. Figures should not be described in the circular as 'audited' without the express consent of the auditor concerned; similar consent should be necessary for all references to statements by experts.

Finally, the report contains some minor suggestions for the improvement of section 209 of the Companies Act, 1948, concerning the compulsory buying out of a small minority.

# Network Flow Analysis - I

by A. BATTERSBY, B.Sc., F.R.I.C., F.S.S.

Yet another branch of mathematics has entered the world of the accountant: the study of flow through networks. Originally applied to electrical circuits, this theory has now been applied to the 'flow' of time – and therefore money – through the maze of individual jobs in large-scale projects.

'A mighty maze! but not without a plan.' - Pope.

S industry increases in size, its individual enterprises grow in scale. Building a dam, a bridge or a factory; installing a large computing system; designing and developing a new aircraft – these are all projects which employ men, machinery and money on the grand scale. Professor Ritchie Calder has suggested a new million-pound unit – 'The Megaquid' – for measuring the investment in such works. The total expenditure may be spread over a year or more, and in such cases, savings of a few months in time or a few per cent in capital outlay are well worth achieving.

The list of individual jobs which make up the whole undertaking will be formidable; the man who attempts to marshal them into an efficient working arrangement is indeed faced with a 'mighty maze'. The unaided human brain is no more an adequate instrument than is the naked eye in modern astronomy; as the eye needs the magnification of the telescope, so the brain needs the mental amplification which the electronic computer supplies.

Electronic computation has become so fast and cheap and its application to complex enterprises so rewarding, that a new technique has emerged which no conscientious accountant can afford to ignore. It is derived from what mathematicians call the Theory of Graphs and deals with the properties of networks, being particularly concerned with the flow through them: in this case, the flow of time or money. Network Flow Analysis is therefore appropriate as a general title, but different groups working in this field have evolved several variations on the theme, each with its own brand name.

#### PERT and 'Polaris'

Perhaps the most famous 'brand' is the United States Navy's PERT (Program Evaluation and Review Technique) which was applied with spectacular success to the development of the 'Polaris' submarine missile. PERT has since been applied to other weapons; it has proved so valuable that its application to major military contracts in the United States has become virtually a routine stipulation.

The United States Air Force has a similar system called PEP (Program Evaluation Procedure) and other consulting groups have developed CPPS (Critical Path Planning and Scheduling) and LESS (Least Cost Estimating and Scheduling)

The earlier military applications seem to have concentrated on completing a project in the shortest possible *time*, whereas civil versions will certainly have to put the emphasis on minimizing *cost*. In this country, it seems probable that the first applications of network flow analysis will be to large-scale maintenance jobs in oil refineries. Shall we see the same explosive expansion of network methods here as in America, where even the Broadway show *Morgiana* was planned in this way?

The mathematics are difficult – they involve both linear programming and the theory of sets – but standard computer routines are available to deal with them. On the other hand, by discarding technical niceties the method can be reduced to general principles which are easy to understand.

In order to show how network flow analysis works, take a schedule for a small and simple product – a book illustrated with line drawings. The indirect costs incurred in publishing, shall we say, Uncle Reggie's Revels (superseding Uncle Selwyn's Annual) have been assessed at £30 for every week spent on its production, and unless it is produced within thirty-four weeks it will miss the seasonal market and incur a heavy loss. The several activities which go into making and selling the book are listed in Table I: this table also includes their durations and costs. Some of the activities are done as a matter of course by the publisher's own staff, so their direct costs are reckoned as zero. The total direct cost using normal durations will be £1,130. Some activities can be completed more quickly at a higher cost, as the table shows.

#### ACCOUNTANT

#### Network Diagram

From this table we can draw a network diagram for the whole procedure. Each individual activity is represented by an arrow, the length of which has no significance at this stage. The head of the arrow indicates the conclusion of the job, the tail its beginning, and its purpose is to express the elementary fact that no job can end before it begins.

However, some sets of activities can run concurrently – illustrations can be prepared while the typesetting is going on, and so can the binding cases and the jacket. The publicity campaign for Uncle Reggie's Revels is to be based on dummy copies which show the style of binding and the

dust wrapper; this can also be going on at the same time as the main printing processes. By sorting out the activities which are subsequent to each other and those which are concurrent, we can build up the network shown in Fig. 1.

Several characteristics of this network are worth looking at in detail. The first is that it differs from the type of flow process chart used in work study; here it is the lines, not the circles, which represent activities or operations. The circles, called the 'nodes', represent 'events', an event being identifiable with the beginning or the ending of an activity.

The events are numbered serially and serve to

identify the activities, as shown in the first two columns of Table I. Imaginary activities may have to be introduced in order to avoid ambiguity; for instance, the extra node numbered 3 serves distinguish 'Forecast sales' (activity 2-3) which would otherwise have the same numbering 'Design book' (activity 2-4). The dotted arrow which indicates the imaginary activity between nodes 3 and 4 is given a direction which shows that 'Estimate cost' cannot begin until 'Forecast sales' has been completed. It also serves to close the network, which must have no loose ends. Another similar arrow is 14-15. (The term 'dummy activities' is often used for these, but it is avoided in these articles because of the possible confusion with dummy books.)

Even when the nodes define the activities without ambigu-Figure 1 ity, we may have to put in NEGOTIATE imaginary activities to pre-NETWORK OF ACTIVITIES CONTRACT serve the time sequence. # Taxation Aspects of Amalgamations and Reconstructions – II

by D. O. BAILEY, F.C.A.

#### **Acquisition of Business**

#### Income tax consequences

THE general rule laid down in section 19, Finance Act, 1953, is that a change of ownership of a business involves its being regarded as discontinued by the vendor and as constituting a new business in the hands of the purchaser. The result is to alter the basis of assessment to income tax in accordance with sections 128, 129 and 130, and both parties are affected accordingly. The effect will be disadvantageous at a time of rising profits and this may lead to unreasonable results where there is some continuity of interest. Certain remedies are, however, available.

- 43. An important change in relation to reconstructions was effected by section 17, Finance Act, 1954. This section rules out the treatment referred to in the preceding paragraph where a trade (but not a profession) is transferred by a company, or by a partnership of which a company is a member, if at any time within two years after the date of the change there is a continuing interest to the extent of not less than three-fourths. It is not material that the continuing interest referred to does not subsist immediately after the change or that it only remains in existence for a trivial period.
- 44. The section does not apply to a transfer of a trade by an individual or a partnership consisting solely of individuals notwithstanding the continuance of a three-fourths interest. It does, however, apply to a transfer to an individual or a partnership of individuals by a company or a partnership of which a company is a member.
- 45. In considering whether the necessary three-fourths continuing interest exists a trade carried on by a company is primarily to be regarded as belonging to the persons beneficially owning the ordinary share capital, or in the case of a subsidiary company to the persons beneficially owning the ordinary share capital of the parent company. Ordinary share capital for this purpose includes participating preference shares. Persons who are relatives of one another are to be treated as one for this purpose, as are persons

entitled to income under a trust. There is also a special provision relating to shares owned by a company to the effect that a person who has powers equivalent to voting control or actual control over that company's affairs may be treated as an owner of the ordinary share capital held by that company.

- 46. Where the section operates the effect is that income tax assessments on the profits of the trade continue to be arrived at on the preceding year basis. The assessment for the year of transfer will be apportioned between transferor and transferee 'as may be just', which appears normally to mean on a time basis. Capital allowances continue to be given as if no sale had taken place, and all rights to carry forward losses and unexhausted capital allowances automatically pass to the transferee.
- 47. The operation of the section is obligatory if the conditions are fulfilled. If profits decline after the transfer the purchaser may therefore find himself required to pay tax on the higher profits earned by the vendor. Similarly if the purchaser has acquired the plant and machinery at a price in excess of the written-down values for tax purposes he will be unable to obtain any allowance on the excess.
- 48. If the section is to apply there must be a discontinuance of the vendor's trade. The transfer of a part of a trade, the vendor continuing to carry on the remainder, involves a 'continuance' basis for the vendor and computation of the purchaser's assessments either on a preceding year basis or a 'new business' basis as the facts require. The section is, however, applicable where the vendor transfers part of his 'activities' and discontinues the remainder of his trade. In such a case the activities transferred have to be regarded as if they were a separate trade, and the computations of the vendor must be apportioned to ascertain the figures applicable to the transferred activities and the discontinued activities respectively. Similarly the section is applicable if the transferor's trade is transferred in parts to a number of transferees each being within the three-fourths continuing interest test.
- 49. Any losses and capital allowances carried forward by the vendor and capable of allowance to the purchaser as referred to in paragraph 46 are available only against profits earned from the transferred

existing business of the transferor apportionment of future results may be necessary to ascertain the profits against which the vendor's losses may be set. In effect the purchaser in such a case must be considered as carrying on two separate trades (Murray v. Aviation and Shipping Co Ltd (39 T.C. 595)<sup>1</sup>).

for the year of transfer will be allowed to the purchaser of a trade where the purchase falls within section 17, Finance Act, 1954, on the same basis as would have applied to the vendor, and that the conventional assumption that the accounting year coincides with the tax year may be adopted. In the recent case of C. E. Neale & Co Ltd v. Beak (40 A.T.C. 300), it was held that the vendor's and purchaser's figures must be added together if necessary to ascertain whether a loss had arisen within the year. The right to claim repayment under section 341 in respect of the vendor's loss for the previous year, under section 15 (3), Finance Act, 1953, is specifically given.

- 51. Where the basis of assessment referred to in paragraph 43 is inappropriate some relief may be obtained by the vendor and purchaser entering into partnership for a period. Notices would then be given under section 19 (3), Finance Act, 1953, on both the commencement and termination of the partnership, to the effect that the discontinuance rule shall not apply. This method, however, is of limited application where companies are concerned. The requirement as to registration of the names of partners and other particulars under the Registration of Business Names Act, 1916, must be borne in mind.
- 52. Where section 17, Finance Act, 1954, is not applicable the vendor may have difficulty in obtaining relief for any losses carried forward. He may, however, find some alleviation by way of a terminal loss claim under section 18, Finance Act, 1954. The effect of this section is to enable a loss for the last twelve months of trading, augmented by capital allowances, to be carried back (on a last in, first out, basis) against assessments on trading profits for the three years of assessment prior to that in which the transfer of the business occurred.
- 53. A further relief may be applicable where an individual or a partnership of individuals transfers a business to a company for a consideration consisting wholly or mainly of shares in that company. In such a case section 343 permits a vendor to carry forward past losses against any income he receives from the company, whether in the form of dividends or otherwise. The relief is dependent upon the individual continuing to own the shares representing the purchase consideration and upon the company continuing to carry on the same business.
- 54. If the whole of the vendor's stock-in-trade is not sold to the purchaser the valuation to be put on the remainder must be considered in the light of section 143. The effect of this section is to require the vendor

to bring into account the actual proceeds of sale of any stock sold or transferred for valuable consideration to another trader who will be taxable in this country on the sale of such stock, and to require any other stock to be included in the computations of the final trading period at its open market value. It should be noted that section 143 remains applicable in a case falling within section 17, Finance Act, 1954.

55. From the point of view of the purchaser, in a case where section 17, Finance Act, 1954, is not applicable, the question may arise whether, if he is already carrying on a business, the acquisition can be treated as a mere extension of that business and not as the setting up of a new business requiring assessments on an 'actual' basis in the early years. If the entire business of the vendor has been taken over the provisions of section 19, Finance Act, 1953, already referred to, clearly require that the latter basis shall apply and leave little scope for argument. In other cases the facts will require careful consideration. It is well settled that there can be no succession to part of a business (Stockham v. Wallasey U.D.C. (95 L.T. 834)), and therefore if an existing business is transferred in parts to two or more existing concerns already carrying on a business of a similar nature the question of assessment on an 'actual' basis may not arise. Similarity in nature is, of course, of prime importance in considering whether a new business has been acquired or an existing business extended. Apart from this, particular attention needs to be given to such questions as whether or not goodwill and existing customers were taken over and the wording of the vending agreement will be important. The nature of a trade is primarily determined by reference to its selling activities (or their equivalent in a concern providing services), but other factors may be material. In this connection it is interesting to contrast Briton Ferry Steel Co Ltd v. Barry (23 T.C. 414)2 with Laycock v. Freeman, Hardy & Willis Ltd (22 T.C. 288)3. Too much reliance should not, however, be placed on the latter decision where an existing merchanting concern acquires manufacturing interests as the case is sometimes thought to be of doubtful authority.

56. Another important question arising on the transfer of a business not falling within section 17, Finance Act, 1954, relates to assets on which capital allowances are claimed. Both vendor and purchaser are affected and their interests may be opposed.

57. Vending agreements frequently provide for a single payment to cover the acquisition of a number of different types of asset and apportionment will be necessary to arrive at the capital allowances due to both parties. It is very desirable that this apportionment should be agreed between the parties at the time of the sale, and an agreed apportionment will normally be accepted by the Inland Revenue authorities. They are not, however, bound to accept it; section 326 (1) requires the price of each piece of property

sold to be ascertained on a 'just apportionment', and all items sold as part of one bargain may be brought into account for this purpose notwithstanding that the parties have arranged for separate prices or even separate agreements. Section 329 provides for disputes concerning apportionment to be settled by the General or Special Commissioners.

- 58. It is important to bear in mind that where industrial buildings are concerned the purchaser's capital allowances may be restricted to the vendor's expenditure and may not therefore extend to the full price paid for the buildings. The balancing charges on the vendor will always be limited by reference to his actual allowances obtained, but where plant is concerned this will not restrict the allowances to the purchaser.
- 59. Complications may arise in connection with capital allowances under the Fourteenth Schedule which will apply:
  - (a) where there is control of one party by the other, or where both are under common control, or
  - (b) where transactions have been carried out with a view to obtaining capital allowances as a sole or main benefit.

The basic effect of the schedule is to substitute the lower of open market value and original cost of the assets concerned for their actual sale price. Initial allowances are not claimable by the purchaser except to the extent to which they would not exceed either the initial allowance actually obtained by the vendor or the amount of any balancing charge made on him in respect of the plant in question.

60. The Fourteenth Schedule also permits the parties, where the transaction falls within (a), but not (b), of paragraph 59, to elect that the assets ranking for capital allowances shall be treated as if sold for the lower of their written-down value for tax purposes and their open market value. In this event there is, of course, no claim for initial allowances open to the purchaser, but any liability for balancing charges is deferred until a sale to a non-controlled person is made.

61. Any machinery and plant which is not sold at the date of transfer of the business will be dealt with in accordance with the Sixth Schedule, Finance Act, 1952. Such plant will usually have to be treated as if sold for its open market price (paragraph 2 (1), Sixth Schedule, Finance Act, 1952). There does not appear to be any similar requirement where a balancing allowance is claimed under paragraph 1 (1) (b) of the schedule, i.e. where plant permanently ceases to be used for the purposes of a trade at some time before that trade is discontinued.

62. The investment allowances obtained by the vendor will not normally be in danger of withdrawal. This contingency might occur, however, if assets acquired within three years of the date of the sale were disposed of to a non-resident otherwise than for use

in a trade carried on in the United Kingdom or were retained for non-trading purposes (Second Schedule, Finance Act, 1954).

63. The purchaser of a business may find difficulties arising from the decision in the case of Law Shipping Co Ltd v. C.I.R. (12 T.C. 621) to the effect that repairs attributable to a previous owner's use of an asset were disallowable as being of a capital nature. This decision has no application to a case falling within section 17, Finance Act, 1954, but otherwise the Inland Revenue authorities regard it as applicable even though there is a succession to a business, the assets of which continue in use. It is not clear that this view is reconcilable with the decision in Morgan v. Tate & Lyle Ltd (35 T.C. 367)1 which appeared to proceed on the basis that regard should be had to the trade as an entity irrespective of its owners from time to time, and not to each particular owner. For instance Lord Keith said:

'Income tax legislation has at different times made different provisions for cases of discontinuance of a trade or succession to a trade. These are no doubt provisions relating to the manner or measure of assessment, but as they are a clear recognition of the common commercial experience of a business continuing through several hands, they indicate that "the trade", when used in the statutes, is to be construed as an entity in itself.'

The position can only be clarified by a further case; in the meantime the purchaser may well keep to a minimum his expenditure on repairs during the first year or two after the acquisition of a business.

64. The income tax position of a company which has disposed of its business requires consideration. Such a company will only thereafter be able to secure income tax relief for its expenses if it can comply with section 425 (1), that is to say it must be one whose business consists mainly in the making of investments and whose income is principally derived from investments. A company which merely continues in existence, after disposing of its business, for convenience of winding up its affairs may not qualify for relief under section 425 if its activities do not justify the conclusion that in fact it has set up a new business of making investments.

65. Such a company may be in further difficulties if it wishes to make or receive a subvention payment under section 20, Finance Act, 1953. Under subsection (9) of that section a company only falls within the section if, inter alia, it is carrying on a trade (the making of investments being regarded as a trade if that is the company's main business). It is therefore not clear that a company which has disposed of its business and become dormant can after the date of that event make or receive a subvention payment in relation to periods prior thereto. In practice no question seems to be raised if the payment is made by the end of the fiscal year in which the business was transferred.

<sup>&</sup>lt;sup>1</sup> 33 A.T.C. 184.

#### Profits tax consequences

66. It must be borne in mind that there is no provision in profits tax law similar to section 17, Finance Act, 1954, and that accordingly losses cannot be carried forward on the transfer of a business even though the transferee is a company under the same ownership.

67. If the vendor company has unabsorbed losses relief could only be obtained against the profits of another business carried on by the same company. Section 43, Finance Act, 1947, which covers this point, does not make it clear whether the right of carry forward subsists if two businesses are carried on successively, and not contemporaneously. The point was considered by the House of Lords, but unfortunately not decided, in the case of C.I.R. v. J. B. Hodge & Co (Glasgow) Ltd (40 A.T.C. 232), the case being decided on another point.

68. It will be remembered that a dividend only ranks as 'franked investment income' if it is paid by a company carrying on a business chargeable to profits tax (including a business consisting wholly or mainly in the holding of investments or other property, where that is the main function of the company). A company which has disposed of its trade and merely holds investments or other property without carrying on any real activity may not be carrying on a business for profits tax purposes (Henry Briggs, Son & Co Ltd v. C.I.R. (39 T.C. 410)1 and Carpet Agencies Ltd v. C.I.R. (38 T.C. 223)2). A dividend paid by a company which has ceased to carry on its former trade and has set up no new business may therefore become chargeable to profits tax in the hands of the recipient, and it may be as well to distribute the maximum sum possible before the date of cessation of trading.

69. Any grouping notice previously given by or in respect of a company ceases to have effect from the date on which the company ceases to carry on a trade or business (section 30, Finance Act, 1956).

#### Surtax consequences

70. The vendor company, if within section 245, will normally be unable to point to any requirements for the maintenance and development of its business as factors influencing the amount to be regarded as constituting distribution of a reasonable part of its income. The possibility of a surtax direction for the last accounting period in which the business was carried on is therefore to be regarded seriously. Moreover if the disposal of the business was in contemplation at the date on which the previous year's accounts were considered the Special Commissioners may be expected to take a more stringent view as to the 'reasonable part' than would be the case if the company were expecting to continue in business for an indefinite period. In considering whether increased dividends should be paid the interrelationship between surtax and profits tax needs to be borne in mind as a surtax direction accompanied by relief from profits tax may be the more acceptable course.

71. If the company, being a section 245 company, continues in existence after the sale of its business it is likely to be regarded from then on as an investment company the income of which would be subject to automatic apportionment (C.I.R. v. Parkhouse Collieries Ltd (36 T.C. 675)<sup>3</sup>). If, however, it goes into liquidation the special provisions of section 253 as to the last accounting period and the immediately preceding period will be relevant and will probably involve a direction for the last period, and possibly for the preceding period. On the other hand, if the liquidation takes place solely as part of a scheme for reconstruction or amalgamation, and if there is no withdrawal of funds, it is not the practice to make surtax directions under the terms of section 253.

72. Any income received by the liquidator of a trading company, as opposed to an investment company, is not subject to surtax direction.

#### Stamp duty

73. Stamp duty is generally payable at 2 per cent on the consideration for the sale of a business. The consideration for this purpose will include liabilities of the vendor assumed by the purchaser. There is, however, no duty payable on that part of the consideration which is apportionable to 'goods, wares or merchandise', an expression which includes all kinds of movable property. Duty is not charged on the amount applicable to bank balances on current account. It is a common practice to exclude debtors from a sale agreement, with a view to saving stamp duty thereon. If necessary the purchaser can be required to collect such debts as agent for the vendor.

74. Under section 42, Finance Act, 1930, stamp duty is not chargeable on documents transferring property from one associated company to another. Companies are 'associated' for this purpose if one of them is the beneficial owner of not less than 90 per cent of the issued share capital of the other or not less than 90 per cent of the issued share capital of each of the companies is beneficially owned by a third company with limited liability. In contrast to most taxation legislation, a foreign company is regarded as a company for the purpose of this relief. It is important to note that the test is beneficial ownership; indirect interests are irrelevant.

75. The relief provided by section 42, Finance Act, 1930, is under section 50, Finance Act, 1938, not available where the consideration for the transfer is provided directly or indirectly by a third party other than an associated company. This would, for instance, bar the relief where property is transferred to an associated company in consideration for an issue of shares as part of a scheme whereby a third party is to buy those shares from the transferor company.

<sup>&</sup>lt;sup>1</sup> 38 A.T.C. 180. <sup>2</sup> 37 A.T.C. 331.

<sup>&</sup>lt;sup>3</sup> 35. A.T.C. 157.

# Miscellaneous Points Compensation to directors and employees

76. It will frequently be the case that an amalgamation or reconstruction involves the payment of compensation to directors and employees, and the question then arises as to the taxation treatment of such payments both as regards payer and recipient.

77. Such payments will rarely be trading expenses admissible in the computations of the payer. If the payment is made by the purchaser it is clearly part of the cost of acquisition and therefore of a capital nature. If made by a company which has transferred its business it will be disallowable as being an expense of closing down the business rather than of carrying it on (C.I.R. v. Anglo Brewing Co Ltd (12 T.C. 803)<sup>1</sup>).

78. The other case for consideration is that where shares in a company are acquired, and the new controlling shareholders desire to make changes in the management. Here it becomes a nice question of fact whether compensation paid to the outgoing management is an allowable expense – was the payment made solely in the interests of the company's trade or was it made partly to facilitate the change of control? The position was summed up by Donovan, J., in the case of James Snook & Co Ltd v. Blasdale (33 T.C. 244)<sup>2</sup> as follows:

"The mere circumstance that compensation to retiring directors is paid on a change of shareholding control does not of itself involve the consequence that such compensation can never be a deductible trading expense. So much is common ground. But it is essential in such cases that the company should prove to the Commissioners' satisfaction that it considered the question of payment wholly untrammelled by the terms of the bargain its shareholders had struck with those who were to buy their shares and came to a decision to pay solely in the interests of its trade.'

This case may be contrasted with that of C.I.R. v. Patrick Thomson Ltd (in liquidation) (37 T.C. 145),<sup>8</sup> where compensation paid to a director by a company about to go into liquidation was held to be allowable. In that case the company's trade was transferred at the time of liquidation as a going concern to another company.

79. From the recipient's point of view his liability to tax will normally be governed by section 37, Finance Act, 1960. It will be remembered that tax is only chargeable under this section on the excess of any payment over £5,000, and that the Fourth Schedule, Finance Act, 1960, provides further relief both as regards the amount taxable and as regards the rate of tax. Liability to tax otherwise than under these provisions is only likely to arise where a service agreement contains a requirement that a payment shall be made on early termination of the employment (Dale v. de Soissons (32 T.C. 118)<sup>4</sup>).

#### Overseas trade corporations

80. The liquidation of an O.T.C. normally involves

<sup>1</sup> 4 A.T.C. 304. <sup>2</sup> 31 A.T.C. 268. <sup>3</sup> 35 A.T.C. 487. <sup>4</sup> 29 A.T.C. 125.

the payment of tax on so much of the distributions by the liquidator as represents profit accumulated whilst the company was an O.T.C. For this purpose profits must be recomputed on the basis of making adjustments on normal lines for capital expenditure, capital allowances, stocks and so on, as opposed to the general rule applicable to O.T.C.s of computing the trading profit on ordinary accounting principles. Difficulties may arise in connection with double taxation relief.

81. There is, however, relief where the winding-up of an O.T.C. is for the purpose of amalgamation or reconstruction, the conditions being:

- (a) that the trade of the O.T.C. is transferred to another company;
- (b) that the consideration for the transfer consists wholly or mainly of shares which are to be distributed to the shareholders of the vendor company, and;
- (c) that the two companies give joint notice of election.

The distribution of shares by the liquidator is then to be disregarded in arriving at the amount of the taxable distribution. The value of the shares is, however, to be set first against share capital and share premium, and only as to any balance is it regarded as representing profits. The amount exempted from tax in this way will be regarded as exempt trading income of the transferee company which will be treated as if it had itself been an O.T.C. when the income arose. There will accordingly be a tax liability assessable on the transferee company if and when the relative amount is distributed. It should be noted that if the consideration for a transfer consists partly of shares and partly of cash the shares are regarded as primarily to be set against capital and share premium.

82. There appears to be no way of winding up an O.T.C. without incurring a tax liability except as referred to in paragraph 81. If, however, an O.T.C. merely ceases to trade no such liability arises, provided the cessation does not occur after O.T.C. status has been lost (an O.T.C. holding company will, however, be taxable as on a winding-up if it ceases to be an O.T.C., irrespective of liquidation).

#### Conclusion

83. The circumstances of each case differ and nothing would be more likely to lead to error than an attempt to lay down hard and fast rules to meet the situations which arise on amalgamations and reconstructions. It is, however, usually the case that there is more than one solution to problems of this sort, and the considerations referred to above may assist in finding the most suitable solution in a particular instance. It is certain that to overlook the possible consequences of a scheme upon tax liabilities is to court disaster. We are told that 'the condition upon which God hath given liberty to man is eternal vigilance', and the standard of vigilance required of the professional adviser on amalgamations and reconstructions is almost as high.

#### TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

#### SOUTH AFRICA

#### P.A.Y.E. Scheme Approved

THE Select Committee appointed to inquire into the proposals for a pay-as-you-earn system of tax collection has recommended that the system should be introduced, and the Minister of Finance has announced his acceptance of this recommendation. The necessary legislation is to be introduced in the next session of Parliament, early in 1963, which means that the new system is likely to come into operation on March 1st, 1963. The original proposals of the Commissioner for Inland Revenue have been accepted in principle though various modifications have been proposed.

To provide for the fact that future tax will be collected on current earnings instead of on the income of the previous year to June 30th, there will be a 'tax holiday' for the period July 1st, 1962, to February 28th, 1963 for individuals whose taxable income for that period does not exceed £1,100 or 75 per cent of their taxable income for the year to June 30th, 1962, whichever is the greater. Where this exemption does not apply, the taxpayer will be entitled to a deduction of up to two-thirds of his taxable income for the year to June 30th, 1962. The effect of this is that all taxpayers with an income of less than £1,100 for the eight months to February 28th, 1963, and all those whose income, regardless of amount, is rateably no higher than that of the previous year, will enjoy the 'tax holiday'.

Similar provisions will apply to companies, dependent upon the date on which their annual accounts are drawn up. Thus a company whose financial year-end is June 30th will, for the year to June 30th, 1963, be allowed a deduction of eight-twelfths of its taxable income for the year to June 30th, 1962. A provision that the year of assessment of companies will be the same as their financial year — an arrangement which can also be claimed by individual traders—should assist considerably in staggering the work of professional accountants over the whole year. This should, in turn, result in a reduction in the time taken to produce audited balance sheets.

Objections to the scheme as it affects taxpayers, other than employees, were mainly on the grounds that estimates of profits on which provisional payments of tax would be payable in advance could present considerable difficulty, particularly in the case of seasonal fluctuations or unexpected losses. The Select Committee considered, however, that the discretionary powers to be granted to the Com-

missioner would be adequate to alleviate any cases of hardship.

In the case of individual taxpayers, it was clear that the scheme would result in most cases in a small overpayment of tax. This was due to the fact that the tax deductions will not take into account such allowances as insurance premiums, dependent relatives, and the maximum of £100 per annum allowed to taxpayers in respect of medical expenses incurred during the year. It was submitted by the Commissioner that since assessments would continue to be made at the end of each tax year, it would be a simpler matter to make repayments where tax had been overpaid than to complicate the table of tax deductions by giving effect to these variable allowances.

The general conclusions were that P.A.Y.E. would have a beneficial effect on the general economy, by curbing overspending – and over-trading – on money which should have been retained to discharge the taxpayers' liability to the State.

#### UNITED STATES

#### Opinions by Auditors on Opening Inventories

A NEW ruling of the Securities and Exchange Commission provides that a qualified opinion by independent accountants, in their first audit, referring to their inability to satisfy themselves as to opening inventories, will not be acceptable for filing with the Commission, in connection with the public offering of securities.

The American Institute's 'Codification of Statements on Auditing Procedure' requires the accountant to 'satisfy himself as to such inventories by appropriate methods'. Hence, it is said, an exception as to opening inventories cannot accompany the accountant's report 'that his examination was made in accordance with generally accepted auditing standards and accordingly included such tests of the accounting records and such other auditing procedures as he considered necessary in the circumstances...'. Alternative procedures must be adequate to support an unqualified opinion.

#### **CANADA**

#### Accountants' Exchange Scheme

THE Canadian Institute of Chartered Accountants in co-operation with the New Zealand Society of Accountants have announced an exchange scheme which will enable Canadian accountants to obtain

one to two years' experience in New Zealand and New Zealand accountants to spend a similar period in Canada.

At first, it is stated in the June issue of *The Canadian Chartered Accountant*, the scheme will be confined to recently-qualified members in their early twenties employed in public accounting. Members whose applications are endorsed by the Institute will be guaranteed employment in New Zealand by a leading firm of accountants in public practice for a period of from one to two years. Salaries will be at rates comparable to those earned by senior audit staff in New Zealand, but travelling expenses will be the responsibility of the member.

This interesting scheme, which is whole-heartedly commended to members by the Councils of the Canadian Institute and the New Zealand Society, affords an opportunity for members to advance their professional knowledge and to gain an appreciation of the way of life in another country of the Commonwealth. Growth of international exchange schemes on these lines would surely be beneficial not only to the individuals concerned, but to the accountancy profession throughout the world.

#### FRANCE

#### **Amalgamation of Accountancy Bodies**

THREE accountancy organizations in France were amalgamated recently to form the Institut Français des Experts Comptables. The organizations concerned were the Compagnie Nationale des Experts Comptables, the Chambre Nationale des Experts Comptables Diplômés par l'Etat and the Union Professionnelle des Sociétés Fiduciaires d'Expertise Comptable. The affairs of the new Institute are being conducted from the offices of the first-named of the three bodies at 139 Rue du Fauborg, St Honoré, Paris, 8 eme.

#### OVERSEAS TAX DEVELOPMENTS

The following notes have been made available by the Inland Revenue Library (Foreign Section).

#### Ceylon

One Act and two Bills contain proposals to amend the tax laws:

- (1) The Foreign Loans (Amendment) Act exempts from income tax the profits of approved bodies of persons outside Ceylon from aid granted to the Ceylon Government.
- (2) The Income Tax (Amendment) Bill includes the following provisions:
  - (i) The exclusion from liable income of the value of travelling facilities granted to a person not a citizen of Ceylon, or his wife or child, for visits to their home abroad is extended so as

also to exclude journeys on taking up or leaving the appointment in Ceylon.

(ii) The exemption of the emoluments and foreign income of certain scientists and technicians is extended to experts and advisers.

- (iii) The exemption of the profits of new industrial and deep sea fishing undertakings is to apply from April 1st, 1962, to the whole of the profits (i.e. the limitation to 5 per cent of capital employed is removed) and in the case of industrial undertakings is to begin from the year in which production or manufacture commences. As a result the limitation on the exemption of dividends when only paid out of exempt income is also removed and the provisions for the deduction of tax therefrom no longer apply.
- (iv) The exemption of any charity whose assessable income for the year does not exceed Rs4,000 with marginal relief so as not to reduce the assessable income less tax below that figure.

(v) The rate of interest on amounts carried forward in respect of lump-sum depreciation is reduced to 4 per cent.

- (vi) New rules regarding travelling and subsistence expenditure; as from April 1st, 1962, the amounts deductible from the profits of a trade, profession, etc., are limited to expenditure incurred within Ceylon calculated by reference to the scales laid down for public officers, with further limitations in the case of executive employees of the persons carrying on the trade, etc., including a maximum annual allowance for a person carrying on a trade or business of Rs2,000.
- (vii) Depreciation is only admissible on a vehicle used for travelling in connection with a trade, profession, etc., if the vehicle is used by an employee other than an executive officer.
- (3) The Finance (Amendment) Bill seeks to amend the Finance Act, 1961, as from the date that Act took effect.

It chiefly relates to the National Development Tax. The exemption from this tax of a person exempt from income tax is replaced by an exemption of emoluments which are exempt from income tax under the Income Tax Ordinance or under a double taxation agreement. The tax is normally collectible by deduction from wages, etc., but provision is now made for collection from the employee if necessary. It is made clear that employees liable include Civil Servants and company directors. Employers' contributions to approved pension, etc., funds are not added to the employees' liable emoluments. National development tax paid during one year is an admissible deduction from income for income tax purposes in the following year (not the same year).

The Bill also proposes some minor changes to surtax, rice subsidy withdrawal and business registration fee.

# Weekly Notes

#### THE INSTITUTE'S EXAMINATIONS

TOTAL of 3,889 candidates sat for the May examinations of The Institute of Chartered Accountants in England and Wales. Of 1,620 candidates for the Final examination, 814 (50.3 per cent) passed and 806 failed; in the November 1961 examination 813 (47.9 per cent) passed and 883 failed

The First Certificate of Merit, the Institute Prize, the W. B. Peat Medal and Prize, the Plender Prizes for the papers on Taxation (equal with one other), General Financial Knowledge, Cost and Management Accounting and English Law (Parts I and II) were won by Mr Roger Vivyan James Chadder, of London. The Second Certificate of Merit, the Walter Knox Scholarship, the William Quilter Prize and the Plender Prizes for the papers on Auditing and Advanced Accounting (Part II) were won by Mr David Edward Alban Morris, of London, and the Third Certificate of Merit and the Charles M. Strachan Prize were won by Mr John Kirby, of Widnes.

In the Intermediate, there were 2,062 candidates, of whom 1,015 (49.2 per cent) passed, and 1,047 failed; in the November 1961 examination, 939 (44.9 per cent) passed and 1,152 failed. The First Certificate of Merit, the Institute Prize, the Stephens Prize, the Frederick Whinney Prize and the Plender Prizes for papers on Taxation and Cost Accounting, Auditing and General Commercial Knowledge were won by Mr Ashan Rashid, of London. The Second Certificate of Merit was won by Mr Peter Regan, of Southend-on-Sea, and the Third Certificate of Merit, the Tom Walton Prize and the Plender Prize for the paper on Book-keeping and Accounts (Partnership), were won by Mr David Charles Brittain, of Weston-super-Mare.

In the Preliminary examination, 207 candidates sat, of whom 54 (26 per cent) were successful, and 153 failed; in the November 1961 examination 57 (26 per cent) passed and 161 failed.

A full list of successful candidates, together with a summary of the results, appears elsewhere in this issue.

#### **EUROPEAN ACCOUNTANTS' CONGRESS**

THE outline programme and the names of the speakers at the European Congress of Accountants to be held in Edinburgh from September 10th to 13th, 1963, have now been announced and full details are given on other pages of this issue.

At the Congress - which is being held under the patronage of H.R.H. The Duke of Edinburgh with The Institute of Chartered Accountants of Scotland as the host organization - four subjects will be considered and six papers will be delivered on each subject. The United Kingdom speakers will be Mr Charles M. Jennings, F.A.C.C.A. ('Accounting principles'); Mr F. Clive de Paula, T.D., F.C.A., F.C.W.A. "The impact of electronics on the accountant of the future'); Mr S. M. Duncan, F.C.A. ('Auditing'), and Mr A. S. Boyd, F.C.A. ('The accountant's contribution to small businesses, particularly in connection with specialized services'). The Continental speakers will be from France, Belgium, Germany, Italy, The Netherlands, Switzerland, Denmark, Austria, Spain, Norway, Sweden and Finland. It is planned to circulate the papers in the three Congress languages - English, French and German - to all participants, while at the business sessions simultaneous translation will be provided in all three languages.

The social programme will include a reception held by H.M. Government; a garden party given by the Lord Provost, magistrates and Council of the City of Edinburgh; a banquet; a ball; a symphony concert by the Scottish National Orchestra; and tours of parts of the Scottish Highlands, the Trossachs and the Border country. An exhibition entitled 'European Accounting History' is being arranged as part of the Congress. It will be open to the public and will be held in Chartered Accountants' Hall, 27 Queen Street, Edinburgh.

Consequent upon the recent amalgamation of three French organizations (as noted in *The Accounting World* in this issue) the number of accountancy organizations whose members are eligible to participate in the Congress is now reduced from forty-one to thirty-nine.

#### PROBLEMS OF ECONOMIC STIMULATION

THE urgency of the problem confronting Mr Maudling is underlined by the latest survey of the United Kingdom economy published in the current issue of the National Institute Economic Review. This foresees a continuation of the very slow expansion which has marked the British economy in recent years and it concludes that the time has now come for the Government to stimulate demand. The dominant feature in the economy is the failure of consumption to increase in real terms, and the consequent unwillingness of industry to invest. In fact, in the second quarter of 1962 factory building in the private sector of the economy fell to its lowest level since 1953. Only the expansion in public sector capital expenditure has maintained the overall level of investment.

Unfortunately, as we pointed out in a leading article in *The Accountant* of August 4th, any stimulus to the economy may initiate a wages-costs spiral which will completely offset such benefit as was gained from Mr Lloyd's policies. Nevertheless, it

seems increasingly likely that the Government will have to take a chance and increase consumer demand if the economy is to emerge from its present torpor. Recent events have shown that it will be easier to devise an acceptable incomes policy in a state of assured and continuous growth, than in the conditions of present stagnation. Whether the stimulus to consumption should be direct through the removal of the 10 per cent surcharge on outlay taxes, or indirect by means of more generous and speedier capital allowances to industry, is debatable. There seems little doubt, however, that the time has now come for a halt to the restrictive monetary policy of recent years. The Government should realize that it is as important to avoid creating the impression among industrialists that deflation is here to stay, as it was to convince them that inflation would be checked.

#### VISITORS FROM NEW ZEALAND

MR A. W. Graham, B.COM., F.R.A.N.Z., Secretary of The New Zealand Society of Accountants, arrived in London last week-end with his wife and 10-year-old son. Since leaving home in July they have visited Australia, Hong Kong, Bangkok, Amsterdam and Paris, being received and entertained in most of these places.

Mr Graham will be a guest of the Scottish Institute at its Summer School later this month, and at the English Institute's Summer Course at Oxford in September, before going on to the International Congress in New York. Thereafter he is to tour Canada, visiting the Canadian Institute and a number of universities.

#### SUBVENTION PAYMENTS BARRED

AN interesting point was raised before Mr Justice Stephenson on Monday, on the question of subvention payments under section 20 of the Finance Act, 1953. Mr F. S. McWhirter, c.A., receiver for The Bestwood Co Ltd and Plowright Brothers Ltd (both of Knightsbridge SW7), applied for directions as to whether Bestwood and its wholly-owned subsidiary Aerex should be allowed to make subvention payments of £78,000 and £43,750 respectively to Plowright, which was another subsidiary of Bestwood. It was said that Plowright was insolvent, and although it was a subsidiary of Bestwood it was not a wholly-owned subsidiary, as a lot of its preference shares were owned by the public. The subvention payments would reduce the overall tax liability of the group.

The proposed payments were contested by Aerex and shareholders of Bestwood, while an unsecured creditor of Plowright supported the proposal. His lordship said (according to *The Financial Times* of August 14th) that he would not give a formal judgment but would content himself by saying that the affidavits and other matters put before him fell short of showing that there was an enforceable agreement between the companies to make the payments, as the Finance Act, 1953, required. Readers will recall that

the same point was made in *Montague L. Meyer Ltd v. Naylor* (40 A.T.C. 31).

#### COMMONS FINANCIAL CONTROL

THE financial procedure of the House of Commons is based on the theory that money is never given to the executive unless it asks for it, and that it will ask for as much as it thinks it will be likely to get, and that the executive ought to be given as little as possible. But the modern reality is almost the opposite. according to Sir Edward Fellowes, K.C.B., C.M.G., M.C., writing in the July issue of the Journal of the Parliaments of the Commonwealth<sup>1</sup>. Sir Edward, lately the Clerk of the House of Commons, therefore speaks with authority on this topic. He points out that in practice it is the executive which has to resist the demands of Members of Parliament for larger expenditure, because it is members who want expenditure - until it comes to paying the bill, when taxes are still as unpopular as ever. The position is further complicated by the fact that the Budget is no longer solely used for money-raising, but also for economic ends.

Sir Edward asks whether the constitutional proprieties would, indeed, be greatly outraged if the Crown asked for a grant of money in quite general terms, and then the House decided how much to grant and by what means that amount should be raised - including not merely spending money but also money used for putting the economy right. It would be after this omnibus grant that the executive would present the estimates for spending the sum allotted. This radical change, says the writer, would involve much alteration, including probably a tax year ending about November 30th, instead of April 5th. But it would have the advantage of confronting the House of Commons with the probable size of the bill, and with the economic ability of the country to stand it, before the details of the expenditure had been irrevocably fixed. The Chancellor would be in a stronger position to resist what he thought was unnecessary expenditure, if the revenue had already been fixed. At present, we put the cart before the horse.

#### **BUILDING SOCIETIES' FUNDS**

THE reduction in Bank rate and the fall in yields on gilt-edged stocks have considerably benefited the funds of building societies over the past six months. A year ago most societies were complaining that the proportion of new savings being invested with them was exceptionally low. In the first six months of 1962, however, member societies of the Building Societies Association reported total new investments amounting to £300 million, a record figure. Even though withdrawals, at £180 million, were £10 million above the figures for the first six months of 1961, net receipts for the half-year at £120 million constituted a record

<sup>1</sup> Houses of Parliament, London SW1, 7s 6d net.

and were £47 million or 64 per cent more than in the corresponding period a year ago.

Although the rate was stepped up from £88 million in the first quarter of the year to £110 million in the second, advances to house-buyers were £7 million lower in the first six months of 1962 than a year ago.

This is attributed to the fact that there is usually a lag of two or three months between the promise of a mortgage and its completion. The demand for mortgages is still said to be heavy, and in spite of the improvement in the flow of funds no general reduction in interest rates is expected in the immediate future.

# This is My Life ...

by An Industrious Accountant

CHAPTER 133

DO we commercial types earn our pay too unadventurously, or does the routine salary cheque dull our initiative? I spent one evening recently arguing the point when, following a lecture on cost control, a bunch of us got together to talk about salary rates and increments. We decided unanimously that we jolly well earned every penny we got. We couldn't afford to gamble.

I came back by the early morning train, and settled down to my paper in an empty first-class compartment. At least, it was nearly empty. Just before we started, a little man slipped in from the corridor and sat down heavily. He waved cheerfully and said: 'Bung-ho, pal. Bottoms up and top of the morning. My name's Jackie; they all know me.' He shook hands ardently.

He wore one of those long peaked transatlantic baseball caps and a huge flowing Paisley scarf tucked into the front of his shabby blue-check suit. His face was brown and wizened, his eyes bright and friendly; even at that morning hour I could detect the faint odour of whisky. He put a huge binocular case, festooned with soiled race tickets, on the seat and commenced an interminable monologue in a peculiar hoarse accent. About horse-racing, of course. I could only understand a fraction of what he said, for race-horses leave me cold at the best of times, so I was rather monosyllabic, I'm afraid. Not that he minded. He was a genial little fellow who seemed quite content to hear his own voice.

He was talking about his days as a tic-tac man, and later as an assistant trainer. 'Five hundred quid the old man gave me when we pulled off the Derby that year.' He had been a newspaper 'scribe', as he called it, and tipped winners in unprecedented profusion. 'That "treble" won me £118 – a lot of money in those days.' I felt an acute stab of envy. At that stage the ticket collector looked in and clipped my ticket; my companion gave him a comradely grin and showed his binocular-case. Incomprehensibly, the collector passed on without comment.

The little horsey man moved up opposite me and tapped my knee confidentially. I tried unsuccessfully

to be absorbed in the contents of my brief-case. 'Got my card marked at Kempton Park by the boy himself,' he whispered. 'We're old pals, y'know. Look.' Across the centre of the dog-eared little booklet was a scrawl of names, race times, odds. 'You look a real nice bloke, you're good company,' he said without much justification. 'Just remember these, they'll bring me in a nice packet, you'll see.' A feeling of avarice arose and grappled with my professional distrust. 'Mark them on my paper,' I suggested helpfully, and he nearly had a fit. 'Not where they'd all see it,' he expostulated, so I ultimately wrote down two or three names on an envelope from his wheezy dictation. 'Manchester, 4.30, Saturday week . . .'

He sat back and licked his lips. 'I'm thirsty,' he said. 'Gimme something for a drink . . . gimme a note.' It was an ancient touch, of course; I felt righteously indignant. I offered to buy him a drink in the restaurant car later on, but he was persistent and somehow rather sympathetic. He seemed to have a simple and happy philosophy, up today and down tomorrow. 'Busted my leg in three places at Cheltenham, hadn't a tosser when I got out of hospital. He opened the binocular case, which seemed to be stuffed with an old shirt and socks, and extracted a coloured handkerchief. 'Gimme something, anyhow,' he grinned. 'I never mind anything s'long as I get my nip of Scotch regular-like.' I hadn't the heart to refuse; so I gave him some silver and he departed in the best of spirits.

One side of my mind told me urgently to fill him up, extract all the information he could produce, then stake my surplus funds on shrewd permutations of his tips. The other side, that seasoned by years of accountancy training, said sharply that I was old enough to have more sense.

How often, it remonstrated, had tips on other occasions from various pals fallen at the first hurdle or limped home late that evening? How rich would I be, could I get all that good money back again? Anyhow, only a mug tries to beat the bookies at their own game.

Before me at this moment lies the piece of paper bearing Jackie's three winners, at 8 to 1, at 9 to 4, at 100 to 8. After all, they were definitely written in his own race-card; presumably they reflect the triple-distilled, hard bought wisdom of the slickest confraternity of the sporting world. Maybe it would do me good to deviate from the norm for once; maybe I'll plunge this time; maybe . . . facilis descensu Averni.

# Finance and Commerce

#### Down to Earth

IT is not often that one reads such down-to-earth words from a company chairman to his share-holders such as Mr A. R. Duckworth, chairman of John Duckworth & Son (Blackburn) Ltd, sets out in his annual statement with the accounts reprinted this week. The company is in textile manufacture. In the year of these accounts to March 31st, 1962, it received the first instalment of re-equipment grant under the Cotton Industry Act, 1959, the amount, £4,009, being shown as a deduction from the value of the fixed assets.

This year, it shows a trading loss of £78,447 compared with the previous profit of £39,507. It is the first year since the company was made public in 1946 that it has not made a profit and paid a dividend. While domestic conditions are primarily responsible for the trading loss, 'new costing procedures which failed to give early warning of trading losses' comes under other reasons. And in outlining remedial measures, including extensive reorganization of management, Mr Duckworth says 'the costings of the company have been thoroughly reviewed and placed on an accurate basis'.

There was also a serious drop in the efficiency of their production, says Mr Duckworth, and his review of the counter-measures is what one might expect under the circumstances.

#### Decision

But what of future prospects? he asks, and in his answer brings shareholders face to face with the realities. 'All our efforts will be of no avail unless we can sell our production at some profit margin. I feel it would be foolish for me to make any forecast', he continues: 'competition at home and abroad is very intense, both in printed fabrics and in our own type output, jacquard cloths. The refusal, so far, of the Government to act effectively in the matter of cloth imports is a constant worry to the industry.'

Mr Duckworth assures shareholders that the board is determined to do everything they can to restore to the company 'the rewards of an efficiently-managed and forward-looking enterprise'.

But it is not the board's intention 'to fritter away the company's assets in unprofitable trading. If after this current year', Mr. Duckworth declares, 'the possibility of a fair return on your capital is not attainable within the foreseeable future, the plain truth will be put before you and you will be asked for your decision as to whether this enterprise is to be continued or not'.

It is not often that shareholders get the facts of business life put to them so bluntly.

#### Computer

AN NCR 315 computer is to be installed at the new head office at Oadby of the Leicester Permanent Building Society, whose general manager is Mr J. G. Hall, F.C.A. The plan is to give to the com uter all the Society's accounting processes. An indication of the work involved is seen in the number of borrowers from the Society – some 46,000 – and in the 78,000 investors in the Society.

Leicester Permanent has recently set a new line in building society finance by reducing its rate for new mortgages from  $6\frac{1}{2}$  per cent to  $6\frac{1}{4}$  per cent. A  $\frac{1}{4}$  per cent rebate for existing borrowers will be given, but from October 1st. The traditional move in rate is  $\frac{1}{2}$  per cent and it would have been  $\frac{1}{2}$  per cent this time but for the profits tax which the societies bear. Cut out the profits tax, says the Leicester Society, and the rate would be reduced a further  $\frac{1}{4}$  per cent.

Such a concession by the Chancellor, it is understood, would involve about £4 million a year.

#### Continuity

THIS year's accounts of Courage Barclay & Simonds Ltd, the brewers, show the effect of the concentration that has been taking place in the brewing industry. The consolidated balance sheet at March 31st, 1962, now adds up to £82,602,277, as compared with £44,632,339 a year previously. Next year's figures should bring in the Witney Brewery of Clinch & Co Ltd, for which an offer was made and accepted after accounting date. The issue of 237,500 Courage £1 Ordinary and 154,976 £1 Preference is involved. The effect will also be seen of the capital plan which subdivides the £1 Ordinary to 10s and by capitalization of reserves gives one new share of 10s for every £1 previously held.

Much of the statement by Mr R. H. Courage is given to the general reorganization and the settling into a united whole of the new constituents of the group, to the elimination of overlapping trading areas and rationalization, production, distribution and management. One thing such a long and detailed annual publication needs, however, is the equivalent of the 'continuity girl' in film production.

Mr Courage, for instance, says that the new Harp Lager brewery at Alton should be in production next year, as planned. Twelve pages later where the brewery, in construction, is pictured, the prospect is that it will be in production by the end of this year. It is a minor matter that a difference of twenty-four hours in actual time could harmonize. The 'continuity girl' would have spotted it.

# REPORT OF THE AUDITORS TO THE MEMBERS OF JOHN DUCKWORTH & SON (BLACKBURN) LIMITED

We have obtained all the information and explanations which we considered necessary. In our opinion the company has kept proper books, and the balance sheet of the company, which is in agreement with them and with the said information and explanations, gives with the group accounts in the prescribed manner the information required by the Companies Act, 1948. In our opinion the foregoing accounts give a true and fair view of the state of affairs as at 31st March, 1962, and of the loss for the year ended on that date of the company and of the group consisting of the company and its subsidiaries.

Blackburn,

21st May, 1962.

#### CITY NOTES

AFTER so long a recession, a rally of the size experienced in the past two weeks on the London market is naturally treated with some suspicion. What has happened in ten days to attract buyers to an equity market which has been weak and uncertain for so long?

There is little factual evidence to support the improvement, apart from evidence that the easier hire-purchase conditions allowed last spring, have helped retail sales. The American economic position remains doubtful and the Common Market negotiations are in abeyance.

It is the absence of bad news rather than the existence of good that has fostered a change of market and investment mood. A change of mood in a market short of shares at low price levels inevitably has quick and marked effect on quotations, more particularly if the London jobbers are hardly unanimous in considering the change of mood a correct one.

The mood could be given substance by early action towards economic re-expansion by positive Government measures. The authorities, however, seem more concerned with getting agreement on an incomes policy with the unions than with taking the economic steps which many consider already overdue.

#### **Assistant Directors**

SIR, – The practice seems to be growing of appointing 'assistant directors', the intention being to convey, I think, that persons so designated are executives in the last stage of their probation before actual appointment to directorship.

Now, so far as the domestic arrangements of a company are concerned there is no objection. It is only right that a person in such a position should acquire extra status and that this should be recognized within his own organization.

When the outside world is concerned, however, the matter becomes somewhat involved. Readers of your journal will have no difficulties in their assessment of such a title, but for those less skilled it could be very misleading.

If one receives a letter bearing the signature over the title of, say, 'Director', 'Chief accountant', 'Buyer' and so on, then the position is fairly clear, but where does one stand when it is signed by an 'Assistant director'? I am certain that most laymen will read into that title much that does not exist. Indeed, many directors will do the same, for some, whilst very able in their particular fields, do seem to lack a knowledge of their powers and personal responsibilities.

The difficulty arises when an 'assistant director' commits his organization in some material way. Whereas one could safely accept such a commitment without question if given by a director, one ought to be on one's guard and make an inquiry if the person signing is an 'assistant director'. Certainly one would be bound to do so if the title ever appeared in a document of some legal significance.

It seems to me that a person designated in this way is 'neither fish nor fowl'. Surely, a person is a director or he is not; there are no degrees of directorship. It would be both helpful and interesting to know if others are meeting this new situation and how they regard it.

Yours faithfully, London NW4. JOS. E. LINDO.

#### Advertising by Institute Members

Sir, – With regard to the restrictions on advertising by members of The Institute of Chartered Accountants in England and Wales, as imposed by the Council and publicized in your issue of August 11th, we feel that no distinction is made between advertis-

ing to the public and advertising between members themselves. It would appear to us to be unnecessarily prohibitive that the Council should forbid members who are in a position to accept subcontracting work, from making contact with practising members who could utilize their services.

From our experience there are a number of smaller firms who on occasions depend upon such assistance to tide them over awkward periods. We fail to see how such firms, or the members of the Institute as a whole, in any way benefit from this ruling.

Yours faithfully, LAURENCE J. GERRARD. MICHAEL LESTER.

London N3.

#### Whole Pound Accounting

SIR, — I would be very interested in the views of readers on the question of dispensing with shillings and pence in the entire internal accounting of industrial companies and financial institutions such as investment trusts. I understand that some well-known companies already keep their accounts in pounds only and it would be most helpful to hear of the opinions of accountants who may have been concerned with such a change in book-keeping procedure.

Yours faithfully, Sutton, Surrey. W. C. NOWELL.

[Perhaps to set the ball rolling it may be mentioned that 'whole pound' accounting systems are understood to be operated by Colgate-Palmolive Ltd, the Port of Bristol Authority and Coventry City Council, to name but three widely differing types of organization. An article on the subject appeared in *The Accountant* of July 23rd, 1960. – Editor.]

#### Tax Allowance: Specialist's Home Telephone

SIR, — I refer to your comments on the letter from 'Emergency' in the issue of July 21st and would be interested to hear how you reconcile those comments with the decision in *Hamerton v. Overy*, 33 A.T.C. 64; 35 T.C. 73, which appears to conflict. The reason I ask is that I have recently been refused any allowance whatsoever on home telephone in circumstances that are identical.

Yours faithfully, Keighley. K. MARSDEN, F.C.A.

[There is no question of reconciling our comments with the Hamerton v. Overy decision. In his letter in our issue of July 21st our correspondent stated that it was 'one of the conditions of his (client's) employment... that he shall have a telephone at his private residence'. In Hamerton v. Overy, on the other hand, the appellant contended that 'he was obliged to have a telephone in his house' but the question of it being an obligation laid down as a term of his appointment does not appear to have been argued — Editor.]

#### **Materials and Labour Variances**

SIR, - In his 'new approach' to materials and labour variances in standard costing, included in your issue of July 7th, Mr R. H. Parker refers to the use of a 'joint variance' as being more useful for purposes of cost control.

This seems too far removed from practical cost control to give any help at all. It is most disappointing to learn, from time to time, how theoretical are the practices that are devised and the thoughts behind their application.

Cost control starts before money is spent or time and materials used. It is a practical physical operation

and not an accounting exercise.

Accounts and statistical reports do not control costs. They are required merely to tell the approximate score in money and figures of the results of the physical control that has been maintained.

The simpler the method of approach is and the less fanciful the figures that are presented, the greater is the likelihood of achieving and maintaining the continued enthusiasm of the executives whose task it is (and not the accountant's) to control costs.

Yours faithfully, London WII. W. IAN GLASS.

SIR, - I am most grateful for your readers' comments on my article.

I should like to assure 'At Variance' (July 21st issue) that I do not subdivide variances 'for fun' nor did I think that my simple algebra would make anyone 'dizzy'. I agree that the buyer's job is to buy what we want at the right price and that if we want more than we ought to that is not his affair – in which case why hold him responsible for it?

Mr Halford's gloomy arithmetic (in the same issue) is not quite accurate. This may be illustrated in the case of overheads. It is necessary to express standard capacity in terms of some unit. If, for instance, we select direct labour hours, then the standard overhead rate will be:

Budgeted total overheads
Budgeted direct labour hours

and the actual overhead rate

Actual total overheads
Actual direct labour hours

Building on the illustration given in my article, we might have the following (assuming absorption costing and a fixed budget):

		Direct	Overhead	Total
		Labour	Rate	Cost
		Hours	S	£
Actual		1,100	21	1;155
Budgeted		1,000	20	1,000
Standard for	units			
produced		900	20	900

The total variance is £255 and assuming that we can ignore calendar, method and mix variances it is

possible to calculate volume, efficiency and price variances as follows:

Overhead volume variance=(budgeted hours-actual hours) × standard overhead rate=(1,000-1,100) × 20s=£100 Cr.

Overhead efficiency variance = (actual hours - standard hours) × standard overhead rate = (1,100 - 900) × 20s = f.200 Dr.

Overhead price variance=actual overhead-budgeted overhead=£1,155-£1,000=£155 Dr.

The effect of the overhead price variance (sometimes called the expenditure or budget variance) is to remove the *rate variation*. The volume and efficiency variances depend only on the relationship between actual, budgeted and standard hours and the standard overhead rate. They are analogous to a

sub-division of the materials usage variance. No joint variances, double or treble, can therefore arise. There will be a joint variance, however, if we use marginal costing and a flexible budget and attempt to calculate an efficiency variance and a price variance. However much we subdivide our variances there are only two variables – price and quantity.

I cannot agree with Mr Glass (this issue) that my figures are 'fanciful'. Certainly not as fanciful, anyway, as some of those produced by the advocates of absorption costing. On this point, at least, I think

Mr Halford would agree with me!

Yours faithfully, R. H. PARKER, Senior Lecturer in Commerce, UNIVERSITY OF WESTERN AUSTRALIA.

Nedlands, Western Australia.

# Twelfth National TAXATION CONFERENCE

#### Scarborough, October 19th-22nd

As already announced, the twelfth National Taxation Conference is to be held in Scarborough from October 19th to 22nd, under the chairmanship of Mr Percy F. Hughes, Editor of *Taxation*. The conference is open to members of the accountancy and legal professions in both public practice, and in industry and commerce.

The programme, which includes special attractions

for the ladies, is as follows:

#### Programme

All business sessions will be held in the Olympia Ballroom, Scarborough.

Friday afternoon, October 19th

Inaugural address by the Conference Chairman, Mr Percy F. Hughes, and a civic welcome by the Mayor of Scarborough, Councillor W. H. Smith. It is hoped that lady visitors will attend these exercises.

visitors will attend these events.

Address: "Taxation problems of family companies seeking public finance', by Mr E. H. Gordon, B.A., taxation consultant with Slaughter & May, formerly a Principal Inspector of Taxes, Board of Inland Revenue. Chairman: Mr G. L. Barker, F.A.C.C.A., Immediate Past President, The Association of Certified and Corporate Accountants.

Friday evening

Reception and cocktail party given by the Editor of *Taxation* in the Ballroom of the Grand Hotel; all members and their ladies invited.

Saturday morning, October 20th

Brains Trust: Questions on quotations from the Income Tax Acts and decided cases in the Courts.

Chairman: Mr James S. Heaton, F.C.A.

Panel: Mr J. Christie, A.C.A., Mr Maurice F. Coop, B.A., Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., Mr L. Varty, H.M. Inspector of Taxes.

For the ladies: By special arrangement with Marshall & Snelgrove – A demonstration of care of the hair etc. will be held in the Ballroom of the Grand Hotel.

Saturday afternoon

Address: 'Drafting the Finance Bill', by Mr P. H. Sée, C.B., Parliamentary Counsel. Chairman: Mr G. A. Usher, M.B.E., T.D., C.A., Immediate Past President, The Institute of Chartered Accountants of Scotland.

Address: 'Taxation and industry – with particular reference to tax problems concerned with United Kingdom entry into the European Common Market', by Mr A. Dale, F.A.C.C.A. Chairman: Mr A. E. Dawson, F.C.A., Immediate Past President, The Institute of Chartered Accountants in Ireland.

Saturday evening

Civic reception and dance to be given by the Mayor of Scarborough in The Spa Ballroom. Invitations will be extended to all those attending the conference.

Sunday morning, October 21st

Morning Service at St Mary's Parish Church, conducted by the Rural Dean of Scarborough, The Rev. Canon D. Oxby Parker, M.A.

Eighteen-hole Stableford Golf Competition for the Taxation Challenge Cup on the course of the South Cliff

Golf Club, Scarborough.

Monday morning, October 22nd

Address: 'History and work of the Ways and Means Committee of the House of Commons—with particular reference to the Finance Act, 1962', by Mr Geoffrey Stevens, M.P., F.C.A. Chairman: Mr Ernest Long, F.C.I.S., member for finance and administration, Central Electricity Generating Board.

Address: 'How fair is the United Kingdom tax system', by Dr A. S. Silke, M.COM., PH.D. (CAPE TOWN), C.A. (S.A.). Chairman: Mr F. M. W. Hird, F.C.A., F.C.W.A., Immediate Past President, The Institute of Cost and Works Account-

ants

For the ladies: Demonstration of flower arrangement by Julia Clements in the Ballroom of the Grand Hotel.

#### Registration Still Open

A limited number of places remain and readers wishing to attend the conference are urged to make early application for registration. The only charge (apart from hotel accommodation and travel) is a registration fee of two guineas per person.

Registration forms and lists of hotels are obtainable from the Conference Secretary, 98 Park Street, London

Wr.

# European Congress of Accountants

#### EDINBURGH, SEPTEMBER 10th-13th, 1963

ELEGATES from thirty-nine accountancy bodies in twenty countries of Western Europe will be participating in the European Congress of Accountants to be held in Edinburgh next year from September 10th-13th. The host organization - The Institute of Chartered Accountants of Scotland - has now announced the outline programme for the Congress, together with the names of the authors of the papers to be presented at the business sessions, and details are given below.

#### OUTLINE PROGRAMME

#### Monday, September 9th

Afternoon. Registration

Evening. Pre-Congress Reception for delegates and their ladies by the President and members of Council of The Institute of Chartered Accountants of Scotland.

#### Tuesday, September 10th

Morning: Registration.

Religious services (Protestant and Roman Catholic).

Afternoon: Opening Session (with simultaneous

interpretation) (in the Usher Hall).

Garden Party by the Lord Provost, Magistrates and Council of the City of Edinburgh (in the grounds of Lauriston Castle).

Evening: Symphony Concert by The Scottish Nat-

ional Orchestera (in the Usher Hall). Conductor: Alexander Gibson. Solo violoncellist: Jacqueline du Pré.

#### Wednesday, September 11th

Morning: Business Session I: Accounting Principles the accounting principles and conventions adopted in the preparation of statements of operating results and of assets and liabilities for purposes of management and for publication to shareholders.

(With simultaneous interpretation.) (In the Usher

Hall.)

Price 3d net.

July 19th, 1962.

# Notes and Notices

#### PROFESSIONAL NOTICE

Messrs Alexander B. Neil & Co, Chartered Accountants, of 4/7 Chiswell Street, London EC1, announce that their senior partner, Mr A. B. Neil, C.A., will retire on August 31st, 1962. He will be available to the firm in a consultative capacity, especially in connection with the work with which he has been identified. The practice will be carried on by the remaining partners, Mr C. C. Bigg, F.C.A., and Mr K. S. Carmichael, F.C.A., in association with Messrs Wilson, Bigg & Co, Chartered Accountants.

#### **Appointments**

Mr F. W. Browne, A.C.A., formerly chief accountant of Doulton & Co Ltd, has been appointed managing director of Doulton Sanitary Potteries (Australia) Pty Ltd.

Mr W. A. Crombie, c.A., A.C.W.A., has been appointed secretary of David Bridge & Co Ltd.

Mr W. O. Jolliffe, A.I.M.T.A., A.S.A.A., has been appointed Borough Treasurer of Blackpool.

Mr D. J. Kean, T.D., F.C.A., has been appointed a director of Henry Norrington & Son Ltd.

Mr H. C. Medlam, M.A., F.C.A., has been appointed chairman and managing director of British Syphon Co Ltd.

Mr T. G. Niven, c.A., M.A. (GLAS.), has been appointed secretary of The Birmingham Small Arms Co Ltd.

Mr W. H. Sharland, F.C.A., has been elected to the Council of the Institute of Directors.

#### **OBITUARY**

#### Mr W. R. T. Whatmore, M.C., B.A., F.C.A.

We record with regret the sudden death on Friday, July 27th, of Mr Walter Roland Tracy Whatmore, M.C., B.A., F.C.A., a senior partner in the firm of Peat,

Marwick, Mitchell & Co.

'Whatty', as he was known to his colleagues as well as his countless friends and business acquaintances, graduated at Christ Church, Oxford, in 1914 and immediately thereafter joined the Royal Warwickshire Regiment and served with distinction in the First World War, rising to the rank of Lieutenant-Colonel and gaining the Military Cross with Bar.

He joined the firm of Peat, Marwick, Mitchell & Co as an articled clerk upon demobilization in 1919, and was admitted as an Associate of The Institute of Chartered Accountants in England and Wales in 1922, becoming a partner in the firm in 1926 and continuing in active professional practice up to the day of his death

Not only was he well known throughout the profession in the United Kingdom, but also abroad, particularly in the United States and Canada. As a man of strong personality and great experience, noted for his logical and clear thinking, he will be long remembered for the wise counsel given to the financial and commercial undertakings which from time to time sought his advice and guidance.

A memorial service will be held at 12 noon on Friday, September 21st, at St Michael's, Cornhill, London EC3.

Sir Harold Howitt writes:

It is a privilege to be asked to add this postscript, and I gladly do so. My original contact with 'Whatty' was in the First World War when we served in the same Division, little thinking then that he would later join me in 'Peats' and that we should be happy partners together for thirty-five years.

He was a remarkable character, combining with a blunt common sense – often bluntly expressed – an intimate grasp of all the subjects of his profession and particularly of those which he made so much his own and on which he was an acknowledged expert until the date of his death. He died in fact only two months before he was due to retire and it is probably true to say, and certainly comforting to think, that he would have been glad to go in full harness.

A very great friend of partners, staff and clients, an unforgettable personality with unforgettable laugh and language, a rebel against authorities of all kinds, he remained his buoyant self until the end, well knowing since a recent illness that that end might come at any time. He gave us to the last a grand example of courage

as well as lesser virtues.

## THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Finding and Decision of the Appeal Committee of the Council of the Institute appointed pursuant to bye-law 108 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on August 2nd, 1962.

The Appeal Committee heard an appeal against the Finding and Decision of the Disciplinary Committee of the Council of the Institute upon a formal complaint preferred by the Investigation Committee of the Council to the Disciplinary Committee that Roy Jack Climpson, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of clause 21 of the supplemental Royal Charter in that notwithstanding (a) that he was by a decision of the Disciplinary Committee of the Institute made on August 3rd, 1960, reprimanded for failing to make to a widow monthly payments due to her in respect of an agreement made by him with her late husband and (b) that he was by a decision of the Disciplinary Committee of the Institute made on June 7th, 1961, reprimanded for failing to agree and settle the amount due in respect of the agreement, he had failed since September 4th, 1961 (being the date on which his appeal against the Finding and Decision of the Disciplinary Committee made on June 7th, 1961, was dismissed by the Appeal Committee of the Institute), to agree and settle the matters

in dispute between him and the said widow in respect of the said agreement, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee affirmed the Finding of the Disciplinary Committee that the formal complaint against Roy Jack Climpson, F.C.A., had been proved and the Committee, varying the Decision of the Disciplinary Committee, ordered that Roy Jack Climpson, F.C.A., of 58 Kingston Road, Teddington, Middlesex, be suspended from membership of the Institute for a period of six months from August 2nd, 1962.

#### Members' Library

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Anatomy of Britain; by A. Sampson. 1962. (Hodder & Stoughton, 35s.)

British Trade in the Common Market; plain facts about the Common Market; by C. Clark. 1962. (Stevens, 18s.) Compound Interest; by N. E. Sheppard and D. C. Baillie.

(Toronto.) 1960. (University of Toronto Press, 48s.) Country Counting House: the story of two eighteenthcentury clerical account books; by A. T. Hart. 1962. (Phoenix, 25s.)

Dividends under the Income Tax; by D. M. Holland. Princeton. 1962. (Princeton University Press, 36s.)

The Duty and Office of a Land Steward . . .; by E. Laurence: second edition. 1731. (H. W. Edwards, 84s.)

Economics: an introductory analysis; by P. A. Samuelson:

fifth edition. New York. 1961. (McGraw-Hill, 55s.)
Farm Accounting and Management; by F. Sturrock: fourth edition. 1962. (Pitman, 20s.)

Fidelity Guarantee and Contingency Insurance; by R. C. Howard and W. A. Dinsdale. 1962. (Stone & Cox, 25s.) Introduction to English Law; by P. S. James: fifth edition.

1962. (Butterworth, 22s 6d.)

The Lending Banker: a review of the principles of bank lending unsecured advances and balance sheets and the banker; by L. C. Mather: second edition. 1960. (Waterlow, 12s 6d.)

Leo and the Managers; by J. R. M. Simmons, 1962.

(Macdonald, 18s.)

Maritime Transport 1961: A Study by the Maritime Transport Committee. (Organization for Economic Cooperation and Development.) Paris. 1962. (O.E.C.D., 9s.)

Money, Income and Employment; by E. Schneider: translated by K. Klappholz. 1962. (George Allen & Unwin, 32s.)

Pension Scheme Precedents; by W. Phillips. 1957. First Supplement 1962. (Sweet & Maxwell, 84s and 12s 6d.)

Registration of Commercial and Licence Agreements in the Common Market; by A. K. Lewis and J. A. Kemp. 1962. (Butterworths, 30s.)

The Rule Against Perpetuities; by J. H. C. Morris and W. B. Leach: second edition. 1962. (Stevens, 70s.)

Sampling Tables for Estimating Error Rates or Other Proportions; by R. G. Brown and L. L. Vance, Berkeley, California. 1961. (University of California, 56s.)

Storage and Control of Stock for Industry and Public Undertakings; by A. Morrison. 1962. (Pitman, 30s.)

Studies in Accounting Theory: second edition edited by W. T. Baxter and S. Davidson. 1962. (Sweet & Maxwell, 63s.)

A Summary of Auditing Case Law; by E. M. Taylor, F.C.A.: eighth edition. 1961. (Textbooks, 8s 6d.)

Taxation in Western Europe 1962: a guide for industrialists: fourth edition. (Federation of British Industries.) 1962. (F.B.I., 30s.)

Tax Planning for the Family Solicitor; by J. P. Lawton. 1962. (Solicitors' Law Stationery Society, 15s.)

#### CONFERENCE ON DECIMALIZATION

A conference on decimalization of the currency is to be held in Guildhall, London, on Friday, October 12th. It is hoped that the Lord Mayor will open the conference, the speakers at which will include: Dr A. H. Hughes, Vice-Chairman of the Metric Committee of the British Association; Mr C. A. J. Martin, G.C., M.C., and Mr E. P. Jaggard, chairman and member, respectively, of the Metric System and Decimal Coinage Panel of the Association of British Chambers of Commerce; and Mr H. R. Reed, London manager, Standard Bank Ltd (formerly the Standard Bank of South Africa).

#### Programme

10 a.m. Official opening.

10.30 a.m. First session: Introduction to and history of the subject, with reference to possible systems; résumé of reports, comments and literature. including national and international aspects of the problem.

11.30 a.m. Second session: Reports on the experience of other countries which have recently adopted decimal coinage systems - particularly India

and South Africa.

2 p.m. Third session: Speakers will deal with problems to be overcome in industry and commerce in decimalizing the British currency, particularly in regard to banks, insurance companies, public utilities, local government, the retail trade, the Post Office and accounting machine manufacturers and users.

3.15 p.m. Question time: Questions from the floor will be answered by a panel of experts.

The conference is being arranged by The Chartered Institute of Secretaries primarily for members of the Institute, but interested members of kindred professional bodies will be welcome. The fee of three guineas includes morning coffee, buffet lunch and afternoon tea. Applications should be sent to the honorary secretary of the London Branch of the Institute, Mr J. H. Griffiths, A.C.I.S., 8 Ely Place, Holborn, London ECI.

#### STAMPING OF FOREIGN INSURANCE **POLICIES**

Under the Finance Act, 1962, a policy of insurance (other than a policy of life insurance) executed abroad and first received in this country on or after August 1st, 1962, may be stamped with a 6d adhesive Postage Revenue' stamp within thirty days of such receipt. The stamp must be cancelled by the person affixing it.

It is therefore no longer necessary to take or send such policies to an Inland Revenue Stamp Office for stamping unless impressed stamps are required.

#### DOUBLE TAXATION: PORTUGAL

The Double Taxation Convention with the United Kingdom and Portugal relating to shipping and air transport profits was ratified on July 10th, 1962, and has now been published as the Schedule to an Order in Council numbered S.I.1962 No. 1653.

#### FINANCE ACT, 1962

The Finance Act, 1962, was published this week and copies are obtainable from H.M. Stationery Office, price 5s 6d net.

#### ASSOCIATION OF INVESTMENT CLUBS

At the recent annual general meeting of the Association of Investment Clubs, which has its headquarters in Liverpool, Mr H. Macdonald Steward, Member of Parliament for Stockport, Mr T. T. Bennett, solicitor and treasurer of Bolton Investment Club, and Mr I. C. McAllester, A.C.A., of Manchester, were elected to the Council of the Association. They fill the vacancies caused by the retirement, at their own request, of Messrs C. C. Drews, J. Norton and R. A. Bailey who, since the formation of the company three years ago, have ably assisted it in its activities. The fourth member of the Council, Mr B. V. Groombridge, A.C.I.S., will continue to act as managing member.

The secretaries to the Association are Messrs William Chadwick & Co, Chartered Accountants, Pioneer Assurance Chambers, 31 Dale Street, Liver-

pool 2.

# THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

#### **Autumn Residential Course**

The autumn residential course for members of The Chartered Accountant Students' Society of London will take place at Balliol and Jesus Colleges, Oxford, from Thursday, September 20th, to Sunday, September 23rd.

The course is intended for those members of the Society who have taken their Intermediate examination. Over two hundred students have so far applied to attend, but there are still a few places for late applicants. The subjects of lectures and discussions are: 'Unit Trusts', 'In business with figures', 'Being a manager in industry', 'Why do we pay rates?' and 'Anglo-American relations'. Each lecture will be followed by group discussions and a final discussion with the lecturer at the end of each day.

The fee for the course is £6 10s and applications to attend should be addressed to the secretary of the Students' Society, Mr R. J. Carter, B.COM., F.C.A., Finsbury Circus House, Blomfield Street, London

EC2.

# CHARTERED ACCOUNTANTS' GOLFING SOCIETY

The Chartered Accountants' Golfing Society played its annual match against The Institute of Municipal Treasurers and Accountants at West Hill Golf Club, Brookwood, on Wednesday, July 25th. The course is an attractive and testing one, and was in excellent condition. In the morning the weather was ideal but in the afternoon a certain amount of thunder and lightning and some heavy downfalls of rain developed.

The teams consisted of four pairs each, and foursomes were played. At the conclusion of the morning round the result was  $2\frac{1}{2}$  to  $1\frac{1}{2}$  matches in favour of the Treasurers, but in the afternoon the Accountants retrieved the position by winning  $2\frac{1}{3}$  matches, and the contest ended all square. The results (Chartered Accountants' names first) were as follows:

#### Morning

- R. G. B. Drummond and J. V. Wilson lost to W. F. White and G. C. Jones, 2 and 1.
- H. W. Claxton and A. Coleman beat A. W. Mowbray and A. B. Ridley, 3 and 2.
- D. W. Gibson and E. Head lost to F. M. Walker and D. H. Crisp, 4 and 3.
- H. J. Finden Crofts and S. W. Penwill halved with B. Quick and T. Shaw.

#### Afternoon

- R. G. B. Drummond and H. W. Claxton beat W. F. White and A. W. Mowbray, 5 and 4.
- J. V. Wilson and A. Coleman beat G. C. Jones and D. H. Crisp 4 and 3.
- D. W. Gibson and H. J. Finden Crofts halved with A. B. Ridley and T. Shaw.
- E. Head and S. W. Penwill lost to F. M. Walker and B. Quick, r up.

#### CRICKET

The Birmingham and District Society of Chartered Accountants recently played the Birmingham and District Chartered Accountant Students' Society at Heathbrook, Wall Heath. The scores were as follows:

Students: 215 for 6 declared (J. Davis 81, J. Young 42).

Chartered Accountants: 84 for 6; rain stopped play.

# INSTITUTION OF WORKS MANAGERS New President Elected

Sir Bertram Waring, D.L., F.C.A., chairman and managing director of Joseph Lucas & Co Ltd, has been elected President of the Institution of Works Managers. He succeeds the Rt Hon. Lord Piercy, C.B.E., who has retired at his own request after holding the office for nearly ten years.

Sir Bertram has served as vice-president of the Institution for several years and is a past chairman of

the British Productivity Council.

#### COMMON MARKET BOOKLETS

In last week's issue, page 158, the price of a booklet entitled *The Treaty of Rome* – the first of a series on the European Economic Community published by the Federation of British Industries – was given as 2s. The price is 10s.

The second booklet in the series, Restrictive Trade Practices and the European Economic Community has

also been published, price 10s.

# Banks in the Headlines

VEN in a generation as familiar with take-overs as ours, movement amongst the monolithic giants that dominate the banking structure is news. All of us whose custom feeds these giants have a legitimate interest in their activities and the eighty-seven-word announcement last week that the National Provincial Bank may make an offer for the share capital of the District Bank sparked off something like that number of thousands of words of commentary in the Press.

Bank amalgamations have a longer history than most. A century and a half ago the banking needs of England and Wales were still served only by the Bank of England and a host of small private banks; the joint-stock banks, with branch networks, which had been legal in Scotland since the beginning of 'modern' banking, were outlawed south of the Border by the Bank of England's socalled monopoly. When they were at last permitted, in 1826 outside London and in 1833 in London too (incidentally, the District Bank was founded in 1829 and the National Provincial in 1833), they developed apace and throughout the rest of the century they grew in importance at the expense of the private banks, absorbing both one another and their private competitors.

This amalgamation movement reached its culmination in the very large amalgamations that produced the 'Big Five' at the end of the First World War. It was then that today's banking pattern was virtually set, with Midland as the biggest of the banks by balance sheet assets, a position lost to Barclays only a few years ago. Short of amalgamation, the relative strengths of the big banks - largely dependent for their business on their spread of branches is very hard to change even over a very long period.

The last spate of amalgamations produced some public concern lest a money monopoly should be created, and although in the event there was no prohibitive legislation, Parliament was assured that no further amalgamations would take place without the approval of the Treasury and the Board of Trade - approval which, it is assumed, has been obtained for the merger now proposed.

The accompanying table shows how very mixed a group the clearing banks are. They are the eleven banks that today operate the Clearing House, through the mechanism of which cheques drawn in Britain (including cheques on banks other than the clearing banks) are 'cleared' – i.e. passed through to the branches on which they are drawn. They have all, as it were, inherited their clearing house status; the list today is the product of history, or evolution, rather than of conscious planning. Three of the 'Big Five' have either Scottish subsidiaries or at least a Scottish interest.

but two of the clearing banks are themselves owned by a Scottish bank. Two of the 'Big Five' have Irish subsidiaries; but, by an odd quirk of history, one of the 'clearers' is for the most part an Irish bank with its head office in London. The 'clearers' include the biggest and some of the smallest banks in the country; the overseas banks with head offices in London, for example, which have never needed direct clearing facilities would by size come easily into the clearing table, one of them, Barclays Bank D.C.O., being in fact the sixth biggest British bank.

Many commentators have seen the reasoning behind the N.P.-District merger proposal as being the possibilities of rationalization and a better nation-wide branch distribution, the District's strength being in the north-west, where the N.P. is weaker. It seems doubtful, however, whether anything like the full benefits of rationalization can be obtained without a complete merger; whereas if the present proposal goes forward as planned, the District will remain a

Total

No. of

separate entity with its head office continuing in Manchester. The number of clearing banks will thus remain eleven; such public importance as the merger has lies rather in the fact that the number of independent clearing banks will drop from eight to seven.

Speculation has been plentiful this past week as to whether Martins will be the subject of the next bid. No one seems to have suggested that one or other of the 'Big Five', or indeed Martins itself, might want to follow Midland and Westminster into Ireland, by linking with the National.

Other questions have been asked. Does an amalgamation of the kind now proposed, looked at from the point of view of the shareholder, further undermine the majority view of the Jenkins Committee that the banks still need not disclose their real strength? Is the new amalgamation a first step towards further rationalization of a banking system that puts five branch banks in so many market-places? If so, to what figure can 'five' be reduced without losing the undoubted

#### THE CLEARING BANKS

	Assets December 31st, 1961	Branches December 31st, 1961	•	Principal associations within British Isles

Glyn Mills	77	3	1939	Acquired by Royal Bank of Scotland.
Coutts	58	7	1920	Acquired by National Provincial.

benefits of inter-branch competition for business? - a competition which has always been very real, within the limits imposed on the one hand by successive Chancellors and on the other by the banks themselves, in their interest agreement.

As the banking habit spreads, the banking system is bound to be radically changed. Computers are a part of the new banking; altered hours of business are being actively canvassed. Last week serves as a reminder that other kinds of change may come too.

# Exposé on the Common Market

THE trade unions have not been alone in harbouring niggling doubts and reserva-- tions about certain detailed aspects of Britain's application to join the Common Market. Accordingly, there is more than immediate interest in the closely reasoned ten-page statement in which Mr Edward Heath, the Lord Privy SEAL, has replied to a memorandum sent to him by the Trades Union Congress.

In spite of their critical observations, Mr HEATH must have derived some comfort from the opening statement in the T.U.C. memorandum, which said that they had consistently supported the principle of closer economic association in Europe. In his reply Mr HEATH seeks to allay trade union doubts on the question of planned expansion by quoting the explicit aims of the original signatories in the Article 2 of the Treaty of Rome:

'It shall be the task of the Community . . . to promote throughout the Community a harmonious development of economic activities, a continuous and balanced expansion, an increased stability, an accelerated raising of the standard of living and closer relations between its member States,

and he goes on to show that these aims are by no means inconsistent with the use of price control, neither do they clash with the use of State aids to industry rendered necessary by economic difficulties.

As to employment policy, Mr Heath stresses the fact that if the United Kingdom becomes a member of the Community, the Government 'would naturally use their influence, if necessary, to ensure that the policies of the Community paid proper regard to the need to maintain a high and stable level of employment'. Nevertheless, the maintenance of a high level of employment at an acceptable standard of living is essentially dependent on the realization of other aims mentioned in Article 104 of the Treaty (especially

the equilibrium of a member State's overall balance of payments together with the stability of price levels).

Turning to the thorny problems posed by the mobility of labour, and replying to the T.U.C.'s proposal that the Treaty's provisions for complete mobility of labour should be modified to bring them into line with British practice, Mr HEATH reminds us that the member States of the Community attach importance to the provisions of the Treaty dealing with the free movement of labour because they make it easier for workers who wish to do so to 'move freely within the territory of member States' for the purpose of 'accepting offers of employment actually made' and because they enable labour supply and demand to be brought into better relation within the Community. Thus, even with full employment, says Mr Heath, it still could not be argued that these Articles were 'unnecessary or irrelevant'.

Dealing next with a T.U.C. complaint that the social security provisions of the Treaty lack precision and that there should be a clear understanding that United Kingdom standards would not be lowered, Mr HEATH states that while the Common Market undoubtedly would favour harmonization of social systems, Articles 117 and 118 place no obligation on the Government to harmonize our system of social security with those of other members. In any event, the Government would keep a close watch on the real value of the various social benefits so as to guard against any fall in the standard of living of those dependent upon such benefits.

As the first substantial statement to come from Government circles on some of the conflicting issues involved, Mr Heath's exposé may be welcomed as much for its evidence that the Government seems at last to have recognized the need for such explanatory memoranda, as for its specific replies to the T.U.C.'s objections.

# Short-term Gains - VII

#### GIFTS AND CHARITIES

E have seen that where there is an acquisition (i) by way of gift or (ii) in some other way not being a bargain at arm's length, then for Case VII purposes the consideration is to be assumed to be the market value of the asset at the time of the transaction. This provision in section 12 (3) of the Finance Act, 1962, is subject to the provisions of the Ninth Schedule (ibid. and section 16 (8)) which contain several rules dealing with transactions of this kind. They distinguish between (i) and (ii) but give little guidance as to the precise whereabouts of the dividing line. Section 12 (3) (a) and paragraph 5 assume that a distribution by a company in respect of shares cannot be a gift. Section 16 (1) provides expressly that a donatio mortis causa is not a gift for Case VII purposes; it is a legacy. There must, it seems, be an animus donandi, but that is often present in such things as bargains between members of the same family. Guidance is obtainable from estate duty case law.

Dealing here with gifts pure and simple, paragraph 3 (1) of the Ninth Schedule sets out two sets of circumstances where, in relation to the interest taken by the donee, the donor's acquisition of the asset must be treated as if it had been an acquisition by the donee himself. It will be recalled that this statutory hypothesis imports the consequences described in paragraph 18 (1), namely, that the donee is treated as if

- (i) he acquired the asset on the same date as the donor acquired it; and
- (ii) for a consideration of such an amount that a disposal by the donor to the donee at that price would have produced neither profit nor loss on a Case VII computation, i.e. the provision in section 12 (3) as to market price does not apply.

We come now to the categories to which paragraph 3 (1) applies. In both of them the donor must be a person both resident and ordinarily resident in the United Kingdom at the date of the gift. The categories are:

 (a) where the donor had previously acquired the asset but there is no acquisition and disposal for Case VII purposes; or (b) where the asset is acquired by the donor as legatee.

As regards (a), section 10 (2) provides that there shall be no acquisition and disposal for Case VII purposes where the statutory time limit of six months (or three years) is exceeded. Of course, if the donor had acquired the asset prior to April 10th, 1962, then by virtue of (i) above the donee would be immune from Case VII. The significance of (b) lies in section 12 (8) and the second proviso to paragraph 18 (1). This proviso says in effect that if the donor acquired the asset as a legatee, then the donee is to be treated in the same way. Section 12 (8) provides that a person acquiring assets as legatee shall not be chargeable under Case VII in respect of any acquisition and disposal by reference to that acquisition, except as provided by section 14 which deals with shares in land-owning companies.

#### Example

A. inherits on June 1st, 1962, shares worth £1,000. He gives them to B. on July 1st, 1962, when they are worth £1,200 in the open market. B. sells them on August 1st, for £1,500. Assume no expenses.

As legatee, A. would be exempt from Case VII (section 12 (8)). Under the ordinary section 12 (3) rule, B. would have made an assessable profit of £300. However, under paragraphs 3 (1) and 18 (1) he is deemed to have acquired the shares as legatee and therefore is not chargeable. Moreover he is deemed to acquire them for no consideration. Apparently A.'s exemption is preserved and he is not deemed to incur any loss by the gift.

Gifts not within either of the paragraph 3 (1) categories will normally receive section 12 (3) treatment. However, if both donor and donee are resident and ordinarily resident in the United Kingdom at the date of the gift, paragraph 3 (2) provides for an election. If the election is made, then

(a) the donor is not chargeable to Case VII tax in respect of an acquisition and disposal by reference to the gift; and

(b) the donee is treated as if the donor's acquisition had been the donee's acquisition.

However, this does not bring in the full operation of paragraph 18 (1). Paragraph 3 (2) (b) goes on to say that the amount of the consideration for which the donee is treated as acquiring the asset is not to be increased by reason of paragraph 3 (2).

#### Example

A. buys shares for £3,000 on May 1st, 1962: expenses of acquisition £70. He gives them to B. on July 1st, 1962, when the market value is £900. B. pays the transfer costs £30. B. sells the shares without expense, on October 1st, 1962, for £3,500.

Clearly paragraph 3 (1) does not apply. Ignoring paragraph 3 (2), the computations are as follows:

Cost Expenses		•••	••	£ 3,000 70
			Total	3,070
Deduct market	value		••	900
Case VII loss	••	••		£2,170
B. Proceeds of sale				3,500
Market value or	n acqu	isiti		
Expenses			£900 	930
Case VII Profit				£2,570

Assuming an election under paragraph 3 (2), the computations are as follows:

A. Not chargeable (paragraph 3 (2) (a)) and therefore no loss (section 10 (4)).

B. As the notional cost of acquisition under paragraph 18 (1) would exceed the £900 market value, the cost of acquisition stays at £900 and the Case VII profit is as before (paragraph 3 (2) (b)). If B. had not sold until November 2nd, 1962, then an election would have negatived his liability, owing to the six months' time limit.

The election under paragraph 3 (2) must in general be exercised by both donor and donee jointly. However, the donee may exercise it alone if, apart from paragraph 3 (2), the donor would

not be chargeable under Case VII in respect of any gain from the acquisition and disposal, e.g. where his own acquisition was before April 10th, 1962 (paragraph 3 (3)). There is no right to an election at all if

(i) the gift is a gift of shares; and

(ii) the donor is, but the donee is not, within section 14 of the Act (dealing with shares in land-owning companies (paragraph 3 (4)).

The procedure and requirements of a valid election are set out in paragraph 19 and will be dealt with later; ample time for election is given.

If the gift is to

(a) a charity; or

(b) an association within section 449 of the Income Tax Act, 1952,

for the purposes of the donee, then the donor is not chargeable under Case VII (paragraph 3 (5)). 'Charity' means a body of persons or trust established for charitable purposes only (section 15 (1)). To be within section 449, the association must be, broadly speaking, an approved research association which cannot distribute profits among the members.

This is perhaps a convenient place to mention section 15 (1) of the Act which exempts from Case VII any gain accruing to a charity or to any of the associations mentioned. A superannuation fund approved under section 379 of the Income Tax Act, 1952, enjoys a similar exemption under section 15 (2). However, where only part of the fund is approved, the gain is to be exempt only to the same extent as income derived from the assets in question would be exempt. There are three other enactments providing for exemption from tax of superannuation and similar funds, other than those approved under section 379. They are:

- (a) Income Tax Act, 1952, sections 381, 382, 385;
- (b) Finance Act, 1956, sections 22 (5) and 40 (3);

(c) Finance Act, 1961, section 21.

Section 15 (3) of the 1962 Act exempts from Case VII tax the gains accruing from the acquisition and disposal of assets as part of the fund. The United Kingdom Atomic Energy Authority enjoys a subsection to itself. Exemption extends to its own acquisitions and disposals, and to the acquisitions and disposals of any pension fund provided and maintained by the Authority.

# Dividing the Balance Sheet — the Treatment of Future Taxation

by R. S. WALDRON, F.C.A.

T is noticeable that although the use of vertical profit and loss accounts is becoming so common as to be regarded as the normal form, especially since its endorsement by Recommendation No. 18<sup>1</sup> of The Institute of Chartered Accountants in England and Wales, the vertical balance sheet has not been so readily accepted. One reason may be the question of space. A 'conventional' two-sided balance sheet fills a double-page spread satisfactorily, while a vertical one needs either a larger page — unless it is 'continued' on to the next page, which largely defeats the object of the exercise — or has to be either cramped or condensed.

Undue condensing of the balance sheet does not make for understanding, and while simplicity is admirable in all statements to shareholders, one made up of a list of items none of which is explained adequately, may be 'simple' in one sense but is completely incapable of being understood by the layman; and surely comprehension by the layman is an essential ingredient of 'simplicity' in published accounts.

Both companies which were successful in obtaining *The Accountant* Annual Awards this year, namely, Rolls-Royce Ltd and Atkinsons Lorries (Holdings) Ltd, adopted vertical balance sheets. Several years ago the United Steel Companies Ltd had a similar style; in two of these cases the balance sheet was condensed into a 'main headings' statement, the explanatory detail being shown alongside on the facing page. Brightside Engineering Holdings Ltd has used a condensed form in 1962, and there are doubtless other examples known to readers.

Putting a double-sided balance sheet into vertical form is but a short step to take if the current liabilities are already deducted from the current assets, as often happens already. Of particular difficulty, however, as has been observed by other writers, is the position to be given to 'Future taxation'. Many companies show it as a deduction from net assets. Others include it with reserves.

### <sup>1</sup> 'Presentation of Balance Sheet and Profit and Loss Account', The Accountant, November 15th, 1958.

#### **Future Taxation**

The English Institute's Recommendation No. 19<sup>2</sup> states clearly that future taxation is a reserve. On the other hand, the same Recommendation includes the view that in prospectus statements the amount (if any) set aside for future taxation should be disclosed, which has led to many such statements showing the amount in the most convenient way, i.e. as a deduction from the net assets. (In many such cases the 'capital employed' statement is not produced.)

One way of endeavouring to find a solution is to consider the descriptive phrases included in such statements. Apart from the descriptions already well known to readers, such as 'capital and reserves', 'net assets', 'shareholders' funds', etc., a number of companies employ the phrases 'capital employed' and 'employment of capital'.

If thought is given to the meaning underlying these terms, it would seem obvious that the amount 'set aside' in the books to cover estimated future taxation must be part of the section described as 'capital employed' simply because it is unlikely to be treated as a sort of 'trust fund' represented by its own investments, unless it is immediately and fully represented by tax reserve certificates. On the other hand, many no doubt feel that because some future tax, probably approximating to the amount set aside, will become payable in due course, it is more prudent to set it off on paper by deducting it from net assets.

In their report the Jenkins Committee state (paragraph 307):

'sums set aside to meet future tax liability or for tax equalization should be shown in the balance sheet as separate items distinct from either reserves or provisions; if no such amounts or inadequate amounts are set aside for either of these purposes an explanation should be given'.

It would seem, therefore, that the Committee inclined to the view that future taxation is a unique item; so that its position on the balance sheet should depend on the facts of each case.

<sup>&</sup>lt;sup>2</sup> 'Treatment of Income Tax in Accounts of Companies', *The Accountant*, November 22nd, 1958.

#### THE ACCOUNTANT

#### Capital Employed

The real question to be answered, therefore, is whether the value of the future taxation is represented in the assets or not. In the absence of a deficiency, it must be so represented, but is this the end of it? If future tax is exactly represented by tax reserve certificates, or by a fund otherwise specifically invested, is it not clearer to show this by linking the two items in some way?

Some readers may have seen the most recent balance sheet of Loraine Gold Mines Ltd. In this case the balance sheet has been divided between fixed assets and net current assets, the fixed assets being balanced against an equal total comprised of share capital, capital reserves, fixed loans and other obviously related sums of a fixed nature, plus a balance representing sums advanced to meet expenditure on fixed assets out of current assets not specifically ear-marked by the creation of appropriated reserves for the purpose. Other companies adopting a similar practice often make specific appropriations in order to avoid showing this balance.

It is no doubt incorrect, on a strict view of a company balance sheet, to describe as 'revenue reserves' those reserves which have been invested in fixed assets, since - at any rate until the assets are fully depreciated out of revenue or realized in cash - they cannot be said to be 'available for distribution' so as to satisfy the test implied by the Companies Act definition of capital reserves. It would, therefore, appear correct for companies to see that the total of issued share capital plus capital reserves (including share premium account) is sufficient to cover the total value attributed in the accounts (or consolidated accounts), at each accounting date, to the fixed assets.

#### Some Effects of Dividing Balance Sheets

If a balance sheet is to be divided 'horizontally', however, is the distinction between 'fixed' and 'current' items the only significant one? Another possible way to divide a balance sheet, with the object of achieving a true assessment of the worth of the business, is to separate those assets which are employed inside the business from those which are invested outside. This step is possibly more logical than appears at first sight, because such a division would normally be made as a matter of course in a profit and loss account - external revenue being shown separately from trading revenue and described as 'sundry revenue', 'miscellaneous income', etc.

If such a division were adopted, then the item of future taxation' about which there is still some doubt as to its proper nature and position in the accounts, would become an easier problem altogether. If it is represented by assets currently employed in the business, then it must surely be a reserve and be classified as such. On the other hand, if it is specifically represented by an outside investment (e.g. tax reserve certificates), it may be set off against that investment in its own section of the balance sheet, as the following illustration shows:

EMPL	OTMENI	OF	CAPITAL
 within	hasinasa		

Employed within business CURRENT ASSETS (Detail)		
Less CURRENT LIABILITIES (Detail)		,
FIXED ASSETS	* .*	,
Employed outside business INVESTMENTS (Detail)	,	
CAPITAL EMPLOY	(FD	-
Share Capital (Detail) Capital Reserves (Detail)		
Revenue Reserves (Detail)		
Future Taxation Less Specific Investment in Tax Reserve Certificates		

It is interesting to see from the above illustration that several quite significant totals emerge from such a statement. Firstly, there is the total invested within the business (and here it would be obviously desirable that original capital and retained earnings be shown separately from any 'book' addition arising from revaluations – except. of trading assets). This total is directly comparable with earnings from trading activities. Secondly, there is the total of capital employed outside the business, which can be compared with its relative earnings. Thirdly, the balance of what is 'set aside' for future taxation which has to be financed in due course from assets within the business, is shown as a part of the total (net) capital employed. - as indeed it is. If to these facts is added the due date of payment of the future taxation liability (i.e. excluding the tax equalization element), then it is submitted that the balance sheet bears quite an interesting 'new look'.

# Network Flow Analysis - II

by A. BATTERSBY, B.Sc., F.R.I.C., F.S.S.

In this second article, the author continues his example of how this new technique – an aid to planning derived from the Theory of Graphs – may be useful to accountants.

Individual jobs which go into publishing a book can be built up into a network which represents the undertaking as a whole. By using this network, the set of normal durations given last week in Table I, a little common sense and trial-and-error, we find that *Uncle Reggie's Revels* cannot be published in less than thirty-eight weeks. Since the permissible upper limit was stipulated as thirty-four weeks, the whole production must be speeded up.

The obvious way to do this is to shorten the duration of some of the activities, even though the direct costs will be increased. The question is, which jobs shall be speeded up, and by how much? In order to investigate this, let us first suppose that we adopt all the 'rapid' durations listed in Table I, thereby putting up the direct costs from £1,130 to £1,725.

Figure 2 herewith, shows the resulting arrangement; this time the arrows have vertical lengths proportional to the durations of the activities, the horizontal lines being merely links which do not affect the time scale. In order to complete the network, we shall have to insert some more dotted arrows along certain branches: these represent periods of idleness and are technically known as 'floats' or 'slack times'; the durations of the several floats are marked in Figure 2.

#### The Critical Path

There is always at least one path with no float; in Figure 2 it is 1-2-4-22-23-24-25-26-28-29 and is shown by a heavy line. It is the sum of the durations along this path which determines the overall duration of the project; it is therefore called the 'critical path'.

Figure 2 also contains the 'ranges' and 'rates' for those fourteen activities which have a rapid as well as a normal duration. The range is simply the difference between the two durations and the rate is the cost, per week, of speeding up the job. As an example, consider activity 1-2 'Negotiate contract'. We have assumed that negotiating with the author, illustrator and designer usually takes four weeks: it is accepted as part of the publisher's

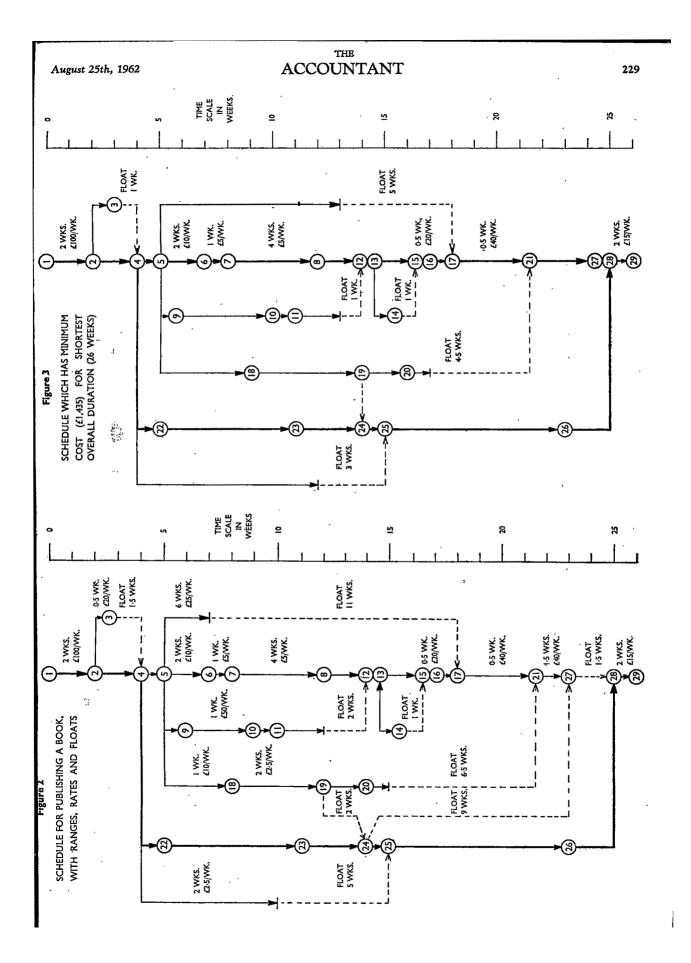

routine and therefore incurs no direct costs. If done in a hurry, it could be completed in two weeks but would then carry a risk of unfavourable terms for the publisher, estimated as costing £200. The range of this activity is two weeks and the rate £100 per week.

It is evident from Figure 2 that some of the activities have been unnecessarily speeded up; 5-17 and 2-3 are obvious ones which can be restored to their normal duration without affecting the overall duration. It is equally obvious that this cannot apply to any activity on the critical path, so let us begin by selecting the noncritical activity with the greatest rate. It is 9-10 'Compose type' which can be increased by one week; this cuts  $f_{.50}$  off the cost to make it  $f_{.1}$ ,675. The float between 11 and 12 is adequate and no other paths are affected, so we go back to the normal duration for this activity. The next highest non-critical rate is now 21-27 'Bind', which can be increased in duration by 1.5 weeks, reducing the total cost by £60 to £1,615.

This absorbs all the float between 27 and 28 and so a second critical path is created: it is 1-2-4-5-6-7-8-12-13-15-16-17-21-27-28-29. However, there are still other non-critical activities which can be restored to normal duration, and for the sake of brevity they are summarized below:

Non-critical			New total
activity	Range	Rate	cost
		· <del>-</del>	£1,615
5-17	6 wks.	£25 /wk.	£1,465
2- 3	0·5 wk.	£20 /wk.	£1,455
5–18	ı wk.	£10 /wk.	£1,445
4-25	2 wks.	£2.5/wk.	£,1,440
18–19	2 wks.	£2·5/wk.	£1,435

This is a fairly straightforward case. In more intricate networks, the effects of inadequate floats and parallel paths can cause difficulties. (For example, the manipulations become much more subtle if 23-24 'Print jacket' can be done rapidly in 2.5 weeks for £50.) The complications need not concern us – this part of the calculation can be set up in linear programming form and solved by one of the usual standard routines.

#### Avoiding 'Panic' Programmes

Some of the advantages of network flow analysis are now coming to light. It has shown that an undertaking may be speeded up by hastening only certain selected activities and provides a criterion for picking them out. The £1,725 which would have been spent in a 'universal panic' programme has been reduced to £1,435.

There are now no non-critical activities left; further savings can only be made if we allow the overall duration to increase. In other words, we have reached a schedule which has the minimum cost consistent with the shortest duration; this schedule is shown in Figure 3.

We now go on to consider what happens if we allow the duration of the entire process to lengthen; this will mean changing the duration of activities on the critical path. The procedure is similar to that already described. First we pick out the critical activity with the highest rate—it is 1-2 'Negotiate contract' at £100 a week. By expanding this to four weeks we shall increase the overall duration from twenty-six to twenty-eight weeks and reduce the total direct costs from

 $£_{1,435}$  to £1,235.

The next highest rate is for 17-21 'Machine' (that is, the actual printing) at £40 a week. Expanding this by 0.5 weeks, we arrive at 28.5 weeks and £1,215. It is interesting to consider what happens to the floats at this stage. That between events 20 and 21 increases from 4.5 to 5 weeks, which does not matter much. What is important is that the float along the path 22-23-24-25-26 increases to 0.5 weeks from zero. In other words, this path is no longer critical.

Suppose for a moment that there had been an activity in the sequence 22-26 which. was still capable of expansion; imagine 23-24 'Print jacket' had a rate of £20 and a range of 0.5 week. Then we should now be able to expand 23-24 without increasing the overall duration, so the effective rate for expanding 17-21 would be £40+  $f_{20} = f_{60}$ . If the ranges of 17-21 and 23-24 had been different, then the activity with the greater range would have had to be expanded in two stages, each with its own effective rate. Such potential complications even in a simple network like this give some indication of the need for electronic computation in real situations.

We now have a single

critical path, which is the vertical line from 1 to 29 in Figure 3, and successive reductions in cost do not change it; they are summarized in Table II. We originally stated that indirect costs were £30 a week, and they are also given in Table II, together with the totals.

The costs are shown graphically in Figure 4. The total costs are seen to be at their minimum value for an overall duration of 28.5 weeks. Allowing for errors of estimation, we can say that a target of between twenty-eight and twenty-nine weeks is a good one to aim at. (The least-cost schedule will not differ greatly from that shown in Figure 3, except that the path 22-23-24-25-26 will not be critical.)

#### Other Uses of Network Flow Analysis

This evaluation of the best schedule by no means exhausts the usefulness of network flow analysis. The time scale on the right of Figure 3 gives us a programme for the various events; a continuous comparison of actual and planned performances will indicate corrective measures in good time. Let us imagine that we are working to the twenty-six week schedule exactly as shown in Figure 3. During week seven we are told that a printing strike will delay composition (activity 9-10). The diagram tells us at a glance that any delay which lasts more than a week will affect the final publication date. Can we take some extraordinary action to shorten activities 10-11 and 11-12? If we cannot, shall we make the best of a bad job and delay the blockmaking (7-8) so as to save the  $f_{20}$  we had previously decided to pay for speed?

We may also use Figure 3 to re-examine the

TABLE II

Crit activ		Overall duration	Minimum direct costs	Indirect costs	Total costs
No. 1- 2 17-21 15-16 28-29 5- 6 7- 8 6- 7	Rate/ week £ 100 40 20 15 10 5	Weeks 26 28 28·5 29 31 33 37 38	£ 1,435 1,235 1,215 1,205 1,175 1,155 1,135 1,130	£ 780 840 885 870 930 990 1,110	£ 2,215 2,075 2,070 2,075 2,105 2,145 2,245 2,270

original plan. The same employees who read galleys (10-11) also check drawings (6-7) and block pulls (8-12). The last two activities are critical: the first is not. Perhaps by switching men from galleys to illustrations the publisher might shorten the critical path still further.

More implications begin to appear. If our network described building a ship instead of publishing a book, and a transfer of labour was indicated, what then? Against the reduction in cost and the prompt fulfilment of the order we must set the bogy of job-demarcation; here is a means of estimating its cost – the cost of a restrictive practice.

Again, complaints about delivery dates are so common as almost to be accepted as normal procedure. Network flow analysis can do nothing to relieve the disturbances to the schedule caused by outside influences — but at least it can minimize their effect on the completion date.

To sum up, we may say that this new aid to planning is important to accountants because:

- (1) it gives the means of preparing a systematic plan for a complicated 'one-off' undertaking;
- (2) it directs attention to those parts of the plan which are worth more careful study and possible revision;
- (3) it sets the entire working programme on a foundation of costs right at the outset;
- (4) it provides the means of controlling the costs as work proceeds, by adjusting the plan in the face of unforeseen disturbances;
- (5) it encourages the best utilization of the available resources; in particular, it enables money to be expended selectively so as to exert its greatest effect on the overall duration;
- (6) by doing so, it allows us to use a delivery date as one criterion for control;
- (7) it distinguishes clearly between direct costs and overheads and maintains a realistic balance between them;
- (8) by reducing much of the planning and control to routine calculations, it lets us delegate a large fraction of it to a computer;
- (9) it has proved its value in practice.

(Concluded.)

# Weekly Notes

#### COST ACCOUNTANTS' EXAMINATIONS

TOTAL of 6,882 candidates from the United A Kingdom and overseas - the highest number ever - sat for the June examinations of The Institute of Cost and Works Accountants and 2,407 were successful.

Of the 262 candidates for the Management Accountancy examination, fifty-five passed, the Lewton Coronation Prize for the best paper in management accounting submitted by an Associate of the Institute being won by Mr P. Hayden, A.c.w.A., A.A.C.C.A., accountant, Midleton Worsted Mills Ltd. Midleton, Co. Cork. The Beyer Peacock Prize for the best paper in management accounting by a non-Associate of the Institute was awarded to Mr M. Ashton, A.C.A., consultant, with W. D. Scott & Co (Pty) Ltd, Johannesburg.

There were 2,027 candidates sitting for one or both parts of the Final examination of whom 765 were successful. The First Place and S. Laurence Gill Prize were won by Mr P. N. Wickramasuriya, of London; the Leverhulme Prize, for the best paper in advanced cost accountancy, by Mr T. J. Slattery, also of London; and the Donald L. Moran Prize, for the best paper in management, by Mr J. A. Dickinson, of Teddington, Middlesex.

In the Intermediate there were 4,357 candidates for one or both parts of the examination, and 1,537 passed. The First Place and George Russell Memorial Prize were awarded jointly to Mr J. B. Booth, of Calcutta, and Mr R. M. Imrie, of Dundee.

There were 236 candidates in the Preliminary

examination, and thirty-five passed.

A summary of the results, together with the names of the candidates who were successful in the Management Accountancy examination and those who successfully completed the Final, appears elsewhere in this issue.

#### SCOTTISH CHARTERED ACCOUNTANTS' SUMMER SCHOOL

"HE tenth summer school of The Institute of Chartered Accountants of Scotland opens at the University of St Andrews next Friday, August 31st, and continues until Tuesday, September 4th.

The President of the Institute, Mr James C. Stewart, c.a., will welcome members on Friday evening and his address will be followed by a paper entitled 'The growth of public expenditure and its control', by Professor D. J. Robertson, M.A., Professor of Applied Economics at Glasgow University. The other papers to be presented are: 'A critical review of recognized accounting conventions', by Mr R. A.

Morison, M.A., C.A.; 'Financial controls in industry', by Mr. W. L. Spalding, B.SC., C.A., F.C.W.A., F.C.I.S., and "The young chartered accountant looks forward', by Mr J. C. Shaw, B.L., C.A., A.C.W.A., and Mr A. L. Stewart, C.A., M.I.O.M. With the exception of the latter paper, which will be followed by general open discussion, there will be discussion in groups after each of the other papers and at a subsequent session the author will review points raised by the groups.

Social functions will include a reception by the University Court - to mark the tenth anniversary of the holding of the school - when the Principal of the University of St Andrews, Sir Thomas Malcolm Knox, M.A., LL.D., F.R.S.E., will welcome members; a golf competition, and the Summer School Dinner at

which the following guests will be present:

Herr Dr W. Dieterich, Director, Institut der Wirtshaftsprüfer in Deutschland, e.V.; Mr A. W. Graham, B.COM., F.R.A.N.Z., Secretary, The New Zealand Society of Accountants; Professor A. A. Matheson, Q.C., M.A., LL.B., Master, Queen's College, Dundee, and Professor of Scots Law, The University of St Andrews; Mr R. P. F. Olden, F.C.A., Vice-President, The Institute of Chartered Accountants in Ireland, Mr W. Stuart Crr, B.A., LL.B., A.C.A., Secretary, The Institute of Chartered Accountants in Ireland, and Professor J. N. Wright, M.A., Master, St Salvator's College, and Professor of Logic and Metaphysics, The University of St Andrews.

A report of the Summer School proceedings will

appear in our next issue.

#### MANAGEMENT CONSULTANCY

"HE appointment by Imperial Chemical Industries I of the U.S. management consultant firm, McKinsey & Co, to conduct a large-scale survey of its operations, draws attention to the increasing use by British industry of specialist consultants, and in many cases of U.S. firms. A profits squeeze, such as many branches of British industry have experienced in the last few months, is inevitably a period when companies seek to discover whether they can restore profitability by internal economies and reorganization: many companies undertake such reorganization using their own internal resources, but a growing number prefer to employ consultants both on account of the wide experience accumulated by the leading firms and because what are often unpopular decisions can best be implemented if it is known that they have been reached by an independent organization, without being influenced by internal loyalties and traditions.

The growing employment in this country of U.S. firms is creating some surprise, particularly since in general the fees charged by U.S. consultants are higher than those of British firms. That this is not reducing the volume of work available for the leading British firms is shown by the latest report of Inbucon, the holding company of Associated Industrial Consultants, which notes that the number of consulting staff and the company's turnover have both

reached an all-time record. The reasons for the employment of U.S. firms no doubt vary from one assignment to another. It does appear, however, that one reason for the success of the U.S. firms may be their skill not only in selling the need for a survey but also in putting over to the employees the reasons for the main recommendations resulting from the survey. There is no doubt that a number of U.S. firms have recently intensified their efforts to increase the number of their assignments both in this country and on the Continent. Hitherto the use made of management consultancy in Europe has been considerably less than in either the U.K. or the U.S.A. and this represents a field with excellent prospects for both British and U.S. firms.

#### ESTATE DUTY ON BUSINESS ASSETS

COMPLAINTS about the effects of estate duty in its effect on the assets of established businesses, particularly those carried on by family companies, gave rise to some ameliorating provisions in the Finance Act, 1954, which, needless to say, lacked nothing in complexity. The Association of Certified and Corporate Accountants published a booklet which expounded the new provisions and gave very useful guidance. Of course, much was in doubt at that time and it was too early to give a final answer to some of the problems which were thrown up. Eight years have now passed and a good deal of experience has been gained of the working of the new provisions.

The time was therefore ripe for a further contribution on this important topic and we welcome a new booklet from the Association entitled *Estate Duty on Business Assets*. The subtitle indicates that the booklet sets out the effect not only of the Finance Act, 1954, but also of the Finance Acts of 1940 and 1960. The booklet is very clearly printed and is divided up into numbered paragraphs, with tabulations where appropriate. There are also some useful arithmetical examples, which do so much to clarify the obscure verbiage of the legislation itself. The price of the booklet is a mere 3s 6d.

#### GENEVA TARIFF NEGOTIATIONS

As a result of the Geneva Tariff Negotiations 1960 to 1962, tariff concessions will be made on products exported from the United Kingdom to a total value of approximately £425 million in 1959. Details of the results of the negotiations were recently published in the Report on the Geneva Tariff Negotiations 1960–1962.

Under the agreement with the United States the latter undertook to reduce by one-fifth their duties on products in which British trade in 1959 was worth about £73 million. Concessions made by the U.S.A. to other countries, particularly the European Economic Community, and extended to the United Kingdom under the most-favoured-nation principle,

<sup>1</sup> Cmnd 1804. H.M.S.O. 1s.

affected British trade with the U.S.A. to the value of over £100 million in 1959. The concessions are to be implemented in two equal stages, the first on July 1st, 1962, and the second a year later.

Reductions in the Common Tariff of the E.E.C. affect British exports valued at some £28 million in 1959. In addition the first stage of the conference was concerned with re-negotiation of prior tariff commitments of the E.E.C. Compensatory concessions were made by the Six in order to secure release from prior commitments where the application of the Common Tariff involved raising duties above the previous level of individual member States. Reductions in import duties under this head affected United Kingdom exports valued at about £36 million in 1959.

In the second stage of the conference, twenty-seven bilateral agreements for new concessions were concluded between existing contracting parties and Switzerland. Besides the agreement with the U.S.A. already referred to, the United Kingdom concluded such an agreement with the E.E.C. under which the latter undertook to reduce, generally by one-fifth, the Common Tariff on a wide range of products including some leather goods, marine engines, refrigerators, agricultural machinery, electrical equipment and commercial vehicles. The value of British exports to the E.E.C. affected by these concessions was about £184 million in 1959. In return British tariff reductions will be made on imports from the Community and the U.S.A. valued at about £115 million and £79 million respectively.

The concessions made by the E.E.C. will not come into full effect until the Common Tariff replaces the individual tariffs of the member States, and so far as British trade with the E.E.C. is concerned, the agreement may be overtaken by events if agreement is reached for the United Kingdom to join the E.E.C.

#### ECONOMIC GROWTH COMPARISONS

MEMORANDUM recently published by the Director-General of the Statistics Bureau of the European Economic Community provides some useful comparisons of current and future industrial production in the United States, the E.E.C. and Soviet Russia.

The memorandum concludes that in 1956 industrial production in the European Economic Community was about equal to that in the Soviet Union, and about 45 per cent of that in the U.S.A. On a per capita basis, industrial production in E.E.C. was roughly 46 per cent of United States output, whilst that in Russia was approximately 38 per cent. Between 1956 and 1959, industrial production in E.E.C. rose by 16 per cent; in the U.S.A. production in the latter year was 6 per cent above that in 1956. In the same period, the Soviet index of gross industrial production showed an increase of 38 per cent, but the Director-General prefers the more cautious estimate of a 26 per cent increase. This smaller figure implies that in 1959, industrial production in

the U.S.S.R. was at least 55 per cent of U.S. production. Production in E.E.C. had reached 50 per cent of its American counterpart.

Although the Director-General makes forecast comparisons for 1972, he does not provide actual comparisons for 1961. These can easily be obtained by linking the published 1961 figures with the comparisons made for 1959. Between 1959 and 1961 industrial production in E.E.C. countries rose by 19 per cent; in the U.S.A. by 2½ per cent, and in the U.S.S.R. the reported growth was 18 per cent. On the basis of these figures, industrial production in the E.E.C. was of the order of 58 per cent of that in the U.S.A. If Soviet figures of industrial growth are used throughout the 1956 to 1961 period, these imply that Russian production in 1961 was just over 70 per cent of that in America. If, however, the rise in the Russian index of industrial production between 1956 and 1961 is scaled down as before, the proportion falls to 63 per cent.

For the future, only arbitrary assumptions can be made about rates of growth. Moreover, in view of the statistical difficulties which are inherent in the U.S.S.R. indices of gross industrial production, the Director-General prefers to use his own indices based on forecast steel consumption. Between 1959 and 1972, industrial production in the E.E.C. area is assumed to rise by 4.2 per cent per annum, and in the U.S.A. by 3 per cent. In the twelve years, total production in the United States would then rise by 43 per cent and in the E.E.C. countries, taken as a whole, by 62 per cent. These rates would mean that industrial production in the present E.E.C. area in 1972 would be approaching two-thirds of the U.S. level. The Director-General suggests that in 1972 industrial production in the U.S.S.R. will have reached that achieved in the United States some sixteen years earlier, and amount to about 70 per cent of U.S. production in 1972. Many experts would, no doubt, suggest an appreciably higher figure. Per capita comparisons in 1972 are likely to favour E.E.C. countries, and be to the the further detriment of the U.S.S.R., than the total output comparisons.

# INTERFIRM COMPARISONS IN THE COTTON INDUSTRY

THE Cotton Board Productivity Centre's Scheme of Inter-firm Comparison is now available to all firms in the cotton industry. The scheme permits participating firms to compare their results with those of their competitors by means of some thirty ratios. The primary ratio is that of profit as a percentage of assets employed and participants are arranged in order of this ratio. The remaining ratios permit the firm to analyse its performance in particular sectors, and to determine where the main strengths and weaknesses lie.

While no scheme of comparison can be of much value if there are wide differences between the

activities of the firms participating, it is important that the ratios used should be such that minor variations in the nature of the businesses should not greatly invalidate the comparisons. A pilot scheme conducted by the Productivity Centre in the Spinning Section of the cotton industry provided valuable information and it is claimed that the full-scale scheme now being started provides a uniform and commercially acceptable method of valuing assets employed and calculating profit. In addition, in order to eliminate difficulties which might arise as a result of differing raw materials, profit and all cost items are expressed as a percentage of 'value added' (i.e. sales less raw materials) rather than of sales. In drawing up the scheme the Cotton Board Productivity Centre has had the advice of the Centre for Inter-firm Comparison Ltd, which has, of course, initiated a number of similar schemes in other industries.

# CHEAPER ALTERNATIVE TO REGISTERED POST

NE result of the recent passing into law of the Recorded Delivery Service Act, 1962, will be to ease the work and lessen the cost of mailing many financial and legal documents. Until this Act received the Royal Assent, the use of the registered letter service for the sending of many documents was obligatory. The new Act amends about one hundred public and general Acts and a considerable number of private Acts, and provides that the recorded delivery service may now generally be used as an alternative to the registered service for the sending or service of documents by post.

or service of documents by post.

Although the recorded delivery service was introduced in 1961 as in certain respects a cheaper alternative to the more costly registration service and is already being used at a rate of about ten million items a year, it could not be fully used, however, because many existing Acts of Parliament provided for the sending or service of certain documents by registered post. The new Act removes this restriction in most cases.

The amendment of the law affects both public and general Acts and local and private Acts passed before the end of the present session of Parliament, though not Acts of the Parliament of Northern Ireland, nor any local or private Act which extends only to Northern Ireland. Many of these, however, have already been amended by later statutory instruments to allow use of recorded delivery, and amendments to others will doubtless follow.

Of course, the recorded delivery service carries no compensation for loss in transit as the more costly registration service provides; it simply furnishes proof of delivery, the fee being 6d in addition to normal postage. (The minimum inland registration fee is 15 6d, which covers compensation up to £20; maximum inland registration fee of 35 1d covers loss up to £400.)

#### THE T.U.C. REPORT

IN a year which has seen the first Government moves towards economic planning and the attempt to enforce the pay pause it is not surprising that economic affairs should occupy a prominent position in the T.U.C. General Council's annual report. Rather it might have been expected that these questions would have taken up considerably more than the 10 per cent of the report which they in fact occupy

The report, which to a large extent sets the scene for the Annual Congress in September, covers a very wide range of topics and is a straightforward account of the activities of the T.U.C. over the past year. These include efforts on behalf of particular groups of employees such as those which persuaded the

Government to order an inquiry at a cost of £65,000 as to whether occupational deafness should be prescribed under the Industrial Injuries Act; discussions on dismissal procedures and sick pay agreements; the probable effects of automation in industry; views on the effects of the work of the Monopolies Commission and on decimal currency; and many others.

The main criticism of this year's report appears to be that in the broad field of politics and economics the General Council has been strongly opposing the Government's views on wages and incomes without having any detailed proposals of its own. There are signs that the need for such proposals will be strongly advocated at the Annual Congress, though they may well take far too long to formulate.

# This is My Life . . .

by An Industrious Accountant

CHAPTER 134

IT is rarely claimed that accountants as a tribe are of the bird of paradise group. They may be fine birds, but not fine-feathered ones. The black coats and bowler hats of the city, the briefcases and rolled umbrellas beside the boardroom table, all bespeak a serious and sombre approach to life. For them, the appropriate symbol is perhaps Poe's raven on its pallid bust, quoting its gloomy 'Nevermore' to all and sundry. So it used to be in our firm. Alas, it is no more.

It started with our engineer. A busy man, he sought an assistant to help with the specifications for our new wing, and ultimately found himself with a black-browed compatriot from Pembrokeshire. This hardworking youth, for ever clambering nimbly around scaffolding and roofs and whatnot, took to dressing the part. He sported a leather jacket with upturned fur-lined collar, and a gaudy cap which whispered of commandos and daring deeds in the deadly breach. He gained enormous prestige. The typists wilted and blushed as he stalked by; my darkly proper accounting staff nearly choked with envy.

Insidiously, the malign influence permeated my junior staff. Doffed first were the coats. Shirt-sleeved, holding in their waistlines for maximum impact, the men from costs swaggered through the corridors. The counting-house stalwarts displayed multicoloured sports shirts and spotted bow-ties. Frank, of the internal audit staff, sported a blazer with a magnificent embossed crest and a tie resplendent

with dragons. The ledger clerks, traditionally forbidden to go coatless, compromised on gaily checked sports jackets.

All to no avail. A spell of wet weather turned the new foundations into a quagmire; the Pembroke man, in high-laced boots and a red-and-white-check belted jacket, Yukon style, outshone them all. I thought back to my articled clerk days when two of us came to work in sports coats and flannels one day in mid-week; our august principal nearly had a heart attack at sight of our depravity. Actually, he ordered us home at once to change into more becoming apparel before inflicting ourselves on the firm's sensitive clients.

Came July with its short but torrid heat-wave. Came also a deputation to our office manager, a high-principled stickler in matters of discipline. "They all work in shirt-sleeves in America!" was the cry, clearly based on uncritical absorption of Hollywood's productions. The office manager was caught napping. That day he was wearing a silky lightweight coat of tussore, thus tacitly admitting the justice of the claim. He played it cute; he came to me for a ruling. I was sitting coatless in the midday glare when they arrived unannounced and I, too, was caught out.

It was hard to make the right decision. To be coatless had become a status symbol; they promised their shirts would be freshly laundered; even that they should be white in all cases. I had to be adamant. Those dealing with customers and their accounts must be fully dressed. The argument grew heated. We were all acutely but tacitly conscious of our one young and charming lady ledger clerk, whose costume was white, clean and fresh – what there was of it!

A wily delaying manoeuvre paid off handsomely. By Monday it was pouring with rain; furthermore, we heard that the engineer was in bed with blistered shoulders, having sunbathed to excess over the week-end. Amid general rejoicing, we adjourned sine die.

# Finance and Commerce

#### No Ill-Feeling

THIS week's reprint features the accounts of Cranes (Dereham) Ltd, trailer manufacturers and engineers, if for no other reason than to show that this column bears no ill-feeling. The cause of it all is pictured on the front cover of the company's annual report. Illustrated there, in all its hugeness, is: 'The first hydraulic suspension transporter in the world to employ as many as forty giant tyres in ten rows for the carriage of abnormal loads'.

It is further described as 'the biggest and most advanced road transporter in Britain (and for that

matter in the world, for there is nothing in Europe or America to match it) yet its flexibility and steerability is designed to cope with very difficult road conditions in the hands of its highly skilled crew'.

This column's Morris Minor encountered the monster on its first outing somewhere in the region of Barking, Essex, and humbly and patiently bowed its head for three-quarters of an hour waiting for an opportunity to overtake. No matter that 'the carrying frame is adjustable in length, in width and in height'; that 'the number of axles can also be varied according to the weight of the particular load and the limitations of particular bridges to be crossed'; or that it 'incorporates the results of close consultation . . . with the Ministry on questions of weight, number and spacing of axles', the mile-a-minute Minor had to take its place in the queue and give this unique vehicle best. May readers be preserved from such an experience.

#### Clarity

The accounts deserve a word of commendation for their printing, style and layout. It is impossible to do full justice to the two-colour original in the reprint.

The main use of colour is in the light blue for the comparison; blue is also used for the main headings giving them added prominence in their larger type. Trading profit, profit before and after tax are given this distinction which is also applied to the group headings in the balance sheet – fixed assets, current assets, etc. This, in fact, is a good example of what a little forethought can do in the interests of clarity in published accounts.

Turnover this year is below last year's record but Mr L. H. Allwood, the chairman, tells share-holders that he had prepared them for this in his last statement. The company, is not, however, among those which have advanced to the point of giving a turnover figure in its public reporting – a matter Mr Allwood might bear in mind for the future.

The profit fall to £53,200 before tax from £66,000, he says, is almost due to increases in overheads and, in particular, to increases in the cost of the sales organization. But it is to an increased sales organization that he attributes the fact that 'the accounts for the year show a reasonable profit'.

#### **Current Value**

THERE was a shareholder at the recent J. Lyons & Co Ltd meeting who wanted to know something about the current value of the group's properties. Did the chairman know the current value? The shareholder was evidently seeking to relate trading results in current money to the value of assets employed in current money. He referred to profits being 'static' and remarked that shareholders had never been given turnover figures.

He outlined the vast extent of the Lyons' empire - the Cumberland, Strand Palace, Regent Palace and Ariel Hotels, the Trocadero, Cadby Hall, fifty-seven acres of factory at Greenford, the Leo-Computer business, and business interests in Canada, South Africa, Rhodesia, Eire, Jersey and Tanganyika, and he asset figures given in the accounts. to the return to stockholders. Freeholds leaseholds, and

said, were lumped together in the balance sheet.

Mr B. A. Salmon, the chairman, admitted that it was not the first time the question of a property revaluation had been raised. But even if the properties were revalued, it would not add anything to profits or to dividends. The properties never had been revalued - it was an expensive business to do so. And stockholders should remember that much of the property was industrial.

As to the division of freeholds and leaseholds, this was a point the directors were bearing in mind. They had considered it before and had not adopted the idea, but they would go on considering it. On the matter of profits, the board itself was not satisfied. But, said the chairman, this was a highly competitive business and 'we strive very hard'.

#### Conservatism

238

The shareholder, returning to the fray, took up the point that revaluation would do no good. It would, he observed, probably show that they were earning even less than appeared to be the case on the stockholders' invested money. To which the chairman replied: 'I do not share the view that properties or any fixed assets should be valued periodically.'

That, of course, is a point of view which many may support. Many more believe that a change in the value of money, such as has been seen in the space of a comparatively few years, so fundamentally alters the situation that it is wise to give it practical effect. But whatever may be said about Lyons' business energy, it has had the name for being conservative in its published accounts; and once that sort of reputation has been established - once it is popularly regarded as a company tradition - the impression it leaves is not easily lost. Witness, for instance, what was said about Courtaulds' reticence with its shareholders at the time of the I.C.I.-Courtaulds affair.

It was once openly admitted in Lyons' circles that only sufficient profit was brought into the published accounts to maintain a 22 per cent dividend with a small margin. This might seem monotonous, said the chairman of those days, but it was not entirely unpleasant.

#### CITY NOTES

THE equity rally in the stock-markets has faded after having lasted longer than was expected. Obviously, the early pace of the rise was too keen to last and price gains tended to exaggerate the amount of buying support involved; but there was buying in fair volume both on small investor and institutional account.

That the rally faded without being tested to any great degree by bad industrial or economic news, indicates fairly enough that buyers are not prepared to buy anything at any price. To that extent the rally had a reasonably solid basis.

Movements in the market now provide an interesting test of conditions under the influence of the short-term capital gains tax. Had short-term gains still been tax-free, it is reasonable to assume that the rally would have attracted a great deal more professional short-term support and would have been more vigorous as a result, but so would have been profit snatching.

By the same token any drift downwards is likely to be more marked than it would have been under normal operational conditions. The market used to rely on short-term business to provide a dealing buffer against wide fluctuations. With such business pinched out by tax, the ebb and flow of prices within a basic trend will undoubtedly become much more marked.

A 10 per cent rise or fall under present conditions is not necessarily the yardstick of a trend change. The equity rally does not mean boom round the corner.

# Current Law

#### **Expulsion of a Partner**

CLAUSE 31 of a partnership agreement between three solicitors, E., N. and S., provided that if during the continuance of the partnership any one of them should commit or be guilty of any act of professional misconduct the others might by notice in writing expel him. E., purporting to act in pursuance of this clause, served on each of N. and S. a notice to expel them for their alleged misconduct.

In Re A Solicitor's Arbitration ([1962] 1 All E.R. 772) the case came before Russell, J. (as he then was), on appeal from an arbitrator who held that the notice was ineffective and that E. had no power to expel either of his partners save as a joint action with the other. E.'s case was that clause 31 should be read in the light of section 61 (c) of the Law of Property Act, 1925, which provides that in all deeds, unless the context otherwise requires, the singular includes the plural, and vice versa, so that clause 31 was made to provide that 'if during the continuance of the partnership any partner or partners shall commit' one of the defaults mentioned in the clause, 'then and in any such case the other partners, or partner, may by notice in writing expel him or them from the partnership'.

Russell, J., however, rejected the argument that section 61 (c) had this effect, while pointing out that, if one of the three partners died, it would operate so that where one partner could do something only with the consent of 'the other partners' those words would be read as 'the other partners or partner'. His lordship observed that the idea of a minority being able to expel a majority was inconsistent with section 25 of the Partnership Act, 1890. He accordingly ruled that E. alone had no power to expel N. and S.

#### Liability of Partners in Tort

IN Meekins v. Henson and Others ([1962] I All E.R. 899) the plaintiff claimed damages for an alleged libel contained in a letter signed by the defendant S., who was in partnership with the defendants H. and V., and who wrote the letter on behalf of the partnership. It was not disputed that the words complained of were defamatory. The occasion was one to which qualified privilege attached, but the jury found that H. – though not S. or V. – had been actuated by malice. It was contended for the defendants that none of them was liable on the ground that under section 10 of the Partnership Act, 1890, no tort by S. was established. Section 10 provides that

'Where, by any wrongful act or omission of any partner acting in the ordinary course of the business of the firm, or with the authority of his co-partners, loss or injury is caused to any person not being a partner in the firm . . . the firm is liable therefor to

the same extent as the partner so acting or omitting to act.'

It was argued that no partner other than the partner acting wrongfully and thereby causing injury could, in law, be liable to a greater extent than the partner acting, from which it followed that if the partner acting were not liable in law, the others could not be liable at all.

Winn, J., held, however, that if liability arose from a duty owed by a partner, other than the acting partner, which was personal to him or where he himself was involved actively in the commission of the act complained of, albeit the hand which did it was the hand of another partner, the injured person did not need to avail himself of the provisions of section 10; he complained of a tort committed by a partner other than the partner whose hand actually performed the deed. In the present case publication of the libel must be regarded as a publication by each one of the three defendants. Each of the three had a personal privilege with respect to the publication complained of, but in H.'s case it was destroyed by proof that he was actuated by malice; accordingly, liability attached to him, and to him alone.

#### **Remuneration of Professional Trustee**

N Re Wells, Wells and Others v. Wells and Others ([1962] 2 All E.R. 826) the Court of Appeal dismissed an appeal from the decision of Cross, J. ([1962] 1 All E.R. 812), in an action in which the beneficiaries under a will claimed an inquiry against an accountant and a solicitor, who were trustees of the will. The will contained a professional charging clause and the accountant and the solicitor had retained £1,983 178 3d and £3,072 respectively out of the estate for their charges and costs. The size of these sums, and also the manner in which they had been apportioned between capital and income, was challenged by the plaintiffs. The nature of the remuneration given to a professional trustee by a charging clause is that of a legacy, and Cross, J., pointed out that it is one of such sum as, in default of agreement between the beneficiaries and the trustee, the Court may decide is a reasonable amount for the trustee to charge for his services; furthermore, a beneficiary has an absolute right, at his own risk as to costs, to have the trustee's accounts investigated and the charges gone into.

In Re Wells, the defendant trustees sought particulars specifying what would be reasonable remuneration for their work. These would have enabled them, had they thought fit, to make a payment into Court of the maximum amount claimed by the plaintiffs as being an excess wrongfully retained, while the plaintiffs would have been restricted to recovering that amount, albeit independent tribunals to which (by agreement between the parties) the reasonableness of the payments was being referred might have determined that the excess was larger. The Court of Appeal agreed with Cross, J., in holding that the action was in substance an action for an account. Lord Denning, M.R., with whom Harman and Russell, L.JJ., agreed, said

that when the defendants had given the plaintiffs particulars of their charges, which they had not yet done, and the plaintiffs had taken their objections to them, the parties would be in a position to deal with such matters as payment into Court; but that at the present stage, when those particulars had not been given, the defendants were not entitled to the particulars for which they asked.

#### Winding-up Petition: Amount of Debt in Doubt

[N Re Tweeds Garages, Ltd ([i962] 1 All E.R. 121) La petition to wind up the company on the ground that it was insolvent and unable to pay its debts and that it was just and equitable that it should be wound up (see section 222 (e) and (f) of the Companies Act, 1948) was resisted on the basis that the exact amount of the company's indebtedness was in dispute, and that the company was not insolvent. So far as the second point of the company's case was concerned, Plowman, J., referred to the explanation of insolvency in the relevant sense in Buckley on the Companies Acts (thirteenth edition, page 460), namely, that a company which has not assets available to meet its current liabilities is commercially insolvent and may be wound up, albeit it has wealth locked up in investments not presently realizable: his lordship said that there was abundant evidence that the company was insolvent and he so found.

As regards the first point it appeared that there

was no direct authority on the question whether to come within the rule that the Court will not make a winding-up order on a disputed debt the existence of the debt must be disputed, or whether it was enough that only the amount should be disputed. Plowman, J., was satisfied that, whatever the exact amount involved, the company was at all material times very heavily indebted to the petitioners. His lordship referred to section 223 of the Act which provides that:

'A company shall be deemed to be unable to pay its debts . . . (d) if it is proved to the satisfaction of the Court that the company is unable to pay its debts'. . . .

and to section 224 (1) which provides that:

'An application to the Court for the winding-up of a company shall be by petition presented, . . . by any creditor or creditors. . . .'

From those provisions, said his lordship, it appeared that the only qualification which was required of the petitioners in the case before him was that they were creditors, and about that there was really no dispute. Where, as here, there was no doubt that the petitioner was a creditor for a sum which would otherwise entitle him to a winding-up order, a dispute as the the precise amount thereof was not a sufficient answer to his petition. It would be wrong to put the petitioners to the trouble and expense of quantifying the precise amounts owing to them, and accordingly the usual compulsory order would be made.

# Reviews

#### Common Market Law: Texts and Commentaries

by Allan Campbell, M.A. (Cantab.), and Dennis Thompson, M.A. (Cantab.). Stevens & Sons, London. 70s net.)

Few people, even at this stage, fully appreciate that entry into the Common Market would entail an industrial and economic revolution in the United Kingdom. Tariff barriers between member countries would be lowered and, eventually, would disappear. Prices and contracts would have to be radically revised to meet conditions of unrestricted competition. Companies and individuals would be at liberty to establish themselves within the geographical boundaries of the Market without formality. In consequence of these and other changes in the present insular way of life in Britain, countless legal and constitutional questions would arise which would keep the authorities continuously busy for a very long time.

Thoughtfully anticipating this last contingency, Mr Campbell and Mr Thompson, both barristers-atlaw, have provided an excellent commentary on the Rome Treaty (the text is given in full), together with an able analysis of the structure and policies of the European Economic Community which it brought into being. They also make instructive comparisons between the laws of the six member nations and those of the United Kingdom on such vital matters as company formation, patents and restricted trade practices.

Always mindful that their function is one of interpretation, the authors do not attempt to criticize the equity or otherwise of the conception of common trading but are content to clarify the stated aims of the Treaty and the means of attaining them. The result is a book of considerable distinction which should provide lawyers, accountants and business men with much that they need to know about the Market and its impact not only on commerce and economics but, also, on diplomacy and politics.

The publishers announce that supplements giving news of latest developments will be issued from time to time, an enterprising move which should help to keep the text of the present edition, read in conjunction with the supplements, topical.

#### June 1011 Marie Carppionis, Topico

The Clerical Function

by Allan A. Murdoch, A.C.W.A., A.A.C.C.A., A.C.I.S., and J. Rodney Dale, M.A., Ll.B., B.SC. (ECON.). (Sir Isaac Pitman & Sons Ltd, London. 30s net.)

The limited scope of this small book, written primarily

for students, can hardly be said to merit its allembracing title. Although providing a basic guide, it should not be considered as the answer to all problems since some aspects of the subject are dealt with in great detail whilst others, equally important, are dismissed in a few lines.

The examples quoted in the chapter entitled 'Machine aids' are limited to a restricted selection of equipment and may thus tend to colour the outlook of a student who should realize that there are other manufacturers than those mentioned in the text, producing machinery which will serve the same purpose equally well. Indeed, some of the equipment listed is not the most up to date and students and practitioners should consult the manufacturers before advising clients thereon.

The chapter on 'Clerical work study and progressing' is useful for students and practitioners alike, while the last chapter, entitled 'The physical environment', could be read with advantage by many employers, the working conditions of whose staff is by no means all that is to be desired.

To conclude, this book can be said to serve as a basic introduction to a subject upon which much has been written, yet much more has still to be learned.

#### Who Owns Whom (U.K. Edition)

(Compiled and published by O. W. Roskill & Co (Reports) Ltd, London. £7 post free (U.K. only)).

The design and scope of this compilation, described in its sub-title as 'a directory of parent, associate and subsidiary companies in industry and commerce', becomes more ambitious each year. In this edition, there has been a rearrangement of United States companies and their subsidiaries. It has been decided to confine the directory entirely to United Kingdom parent companies with their associates and subsidiaries and to United Kingdom associates and subsidiaries of foreign parents, and that henceforth its title will be Who Owns Whom (U.K. edition). Its counterpart, Who Owns Whom (Continental edition) will then be restricted to continental parents with their associates and subsidiaries and to non-European parents with their corresponding continental connections. The 1962-63 edition will appear in the autumn and will include, for the first time, all the six member countries of the European Common Market. The 1961-62 edition covered only France, Italy and Western Germany which means that Holland, Belgium and Luxemburg will be the new-comers.

An indication of the growth of commercial enterprise in the United Kingdom is given by the annual increase in the number of entries in the directory. In 1960, 16,000 United Kingdom associates and subsidiaries were listed and in each of the last two years this figure has risen by 3,000 to the current total of 22,000. The more complex the ramifications of 'big business' become, the greater is the need for a guide to its structure and this is being admirably supplied

by the timely appearances of the Who Owns Whom volumes whose publishers, judging by their preface, seem to have a perfect understanding of the needs of directors and executives of purchases and sales departments as well as those of accountants, economists and investment managers.

#### Theory of Money

by W. T. NEWLYN. (Oxford University Press, London. 18s net.)

This is a theoretical study of money intended primarily for professional economists interested in the debate initiated by the Radcliffe Report. The author is sympathetic to the Radcliffe Committee's rather restrictive views on the efficacy of monetary policy as an economic stabilizer in the modern economy. He considers that monetary policy should be used to provide the overall framework of economic conditions; violent changes in policy being eschewed in preference to the use of other economic weapons of control.

#### The Law List

Edited by LESLIE C. E. TURNER. (Stevens & Sons Ltd, London. 35s net, 37s 6d by post.)

This indispensable work of reference for the laywer is also of value to accountants and others outside the legal profession.

Queen's Counsel, officials of the various Courts and Government legal departments are listed, together with lists of barristers-at-law, members of the General Council of the Bar, the Council of The Law Society, Advocates of the Scottish Bar and Counsel of the Irish Bar. London, suburban and country solicitors are also listed.

The officials of the various areas and area committees functioning under the Legal Aid and Advice Act, 1949, are also shown, together with the names and secretaries of the provincial law societies and associations, the names of solicitors practising outside England and Wales and those of Scottish solicitors practising in England.

Dominion representatives and agents-general in London as well as judges of the International Court of Justice are given in an international section of the book.

#### RECENT PUBLICATIONS

Common Market Law: Texts and Commentaries, by Alan Campbell, M.A.(CANTAB.), and Dennis Thompson, M.A.(CANTAB.). xxii+487 pp. 10×6½. £3 10s net, U.K. only. Stevens & Sons, London.

MAXWELL ON INTERPRETATION OF STATUTES, eleventh

Maxwell on Interpretation of Statutes, eleventh edition, by Roy Wilson, Q.c., and Brian Galpin, M.A. cxxxii ×448 pp. 9×5½. £3 10s. Sweet & Maxwell Ltd, London.

FIDELITY GUARANTEE AND CONTINGENCY INSURANCE, by R. C. Howard and W. A. Dinsdale, Ph.D., B.COM., F.I.ARB. xii+297 pp. 8½×5½. 25s net. Stone & Cox Ltd, London.

These books may be obtained from, or through, Gee & Co (Publishers) Limited, The City Library, 151 Strand, London WC2.

A monthly feature designed to keep readers whether in practice or in commerce - abreast of the latest developments in the field of office equipment.

#### Microfilm Reader-printer

YUITABLE for use with 35 or 16 mm. roll microfilm, the Micro-Automat displays an image magnified ten times and can make a 10 by 7 in. print from any frame in less than half a minute. Nevertheless, as its base measures 32 by 26 in. and its height is 32 in., it can stand conveniently on an office desk or table.

The user places a reel of film on a spindle at the top of the instrument, where it unwinds automatically at a speed he controls by push-button. Alternatively, he may view the film frame by frame. A fine adjustment allows variation in focus and a small hood placed above and round the sides of the ground glass viewing screen prevents the entry of too much daylight.

If he wants a copy, the user presses another button. This activates an automatically operated Polyprint photocopier, which is situated to the right of the screen and is fed from a continuous roll from which it cuts a 10 by 7 in. sheet. Cost of the copy is less than 3d.

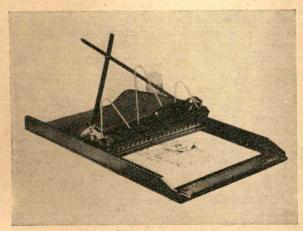

The Micro-Autotmat is finished in hammer grey. Basic price, including lamp and processor is £,520. To this must be added a further £65 for a lens and rectification prism for 16 mm. film; £75 for 35 mm. film. A table base is also available for £55.

E. N. Mason & Sons Ltd, Arclight Works, Colchester, Essex.

#### Laminating Machine . . .

EVEN in the cleanest office, frequently-used documents or those pinned to notice boards soon get grubby, faded, curled or torn. Their freshness can be preserved almost indefinitely by using a laminating machine - a device which applies to one or both sides of the paper a thin layer of tough, transparent plastic

The new Copysol laminator is very reasonably priced, since it uses the spirit process rather than heat to do its job. The sheet to be laminated is placed on the bed of the machine and plastic fed in. A solvent, stored and ejected from a fitted plastic bottle, combines with the adhesive on the under surface of the film, and

Copysol Laminating Machine

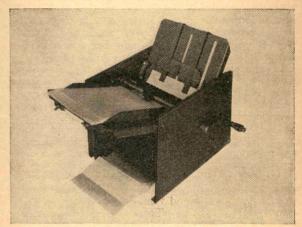

# New Offic

pressure applied by the machine welds the film to the

Price, with dust cover, £,23. With carrying case, £,27 10s.

#### ... and Folding Machine

Another new item from the same maker is an office folding machine. Hand operated, it offers a choice of

Copysol Folding Machine

twelve different types of fold or crease and takes sheets up to foolscap size.

The Copysol folder has an automatic paper feed which, the makers say, effectively prevents more than one sheet at a time from entering the mechanism but does not slow down operating speed. The latter depends chiefly, of course, upon the dexterity and energy of the operator.

Price, £21.

E. G. Solomon, 44 Worship Street, London EC2.

#### **Punched-card Storage**

EASIER transport of punched cards and their compact housing are accomplished in the new Accessadex series of storage units. These, which are available in desk-top, counter-high or tall cabinet sizes, hold from six to fifty-six trays, each of which has a 2,300-card capacity.

Three features make for easy tray handling. There is a hand-grip at either end; their design allows them to be stacked securely on top of one another without sliding; and an integral backstop prevents accidental withdrawal from the cabinet. Another novel feature is that contents are indexed with tabulating cards.

Left-to-right measurement of standing cabinets never exceeds 348 in., extra capacity being gained by adding height. On counter-high models there is a laminated plastic working surface. The slotted pillar construction of the cabinet prevents shelves sagging even when fully loaded and, as all parts are stove enamelled before

# quipment

assembly, rust-resistance is higher than usual, the makers say. The cabinets lock with a patent device.

Prices on application.

Punched Card Accessories Ltd, 58 Victoria Street, London SW1.

#### **Guide of Office Machines**

NE of the most difficult tasks confronting a purchaser of office equipment today is to decide exactly what make and model will best fit his purpose. A new data book due to appear this autumn should help considerably, since it will provide compact,

detailed specifications in classified form.

Business Equipment Buyers' Guide is to be published on a subscription basis, and instalments will appear three times a year. The first issue will cover type-writers, photocopiers, duplicators, dictating machines, adding machines and desk calculators. The second (January 1963) will revise the first and will add details on addressing, franking, book-keeping and telephone answering machines, filing and pocket paging systems, microfilm equipment and posture seating.

As every new issue appears, previous numbers will be revised, thus ensuring that the Guide is always up to

date - an important and valuable service.

Indexes will include office equipment makers and importers with addresses, telephone numbers, branches and names of branch managers; a town-by-town list of retailers; and current trade names. Size will be 10 in. by 6 in. and the first issue will have at least 120 pages.

Price: By subscription, three guineas per annum. Digest Data Books Ltd, 88-90 Chancery Lane,

London WC2.

#### Free Service with Photocopier

PURCHASERS of the new 40P office photocopier who also use the makers' paper are guaranteed free servicing six times a year. The service staff undertake to do chores like changing the developer and cleaning the machine as well as keeping it in good working order.

Suitable for documents up to  $15\frac{3}{4}$  in. wide and of any reasonable length, the machine exposes and develops. It will copy any matter, whether printed, typed, written or drawn on one or both sides of a sheet. Cost for a quarto copy is about 6d; other sizes pro rata.

Average copying time is eleven seconds. But to accommodate originals of different quality, exposure time can be varied by the operator. The light source is a 20-watt lamp.

The machine is 22 in. wide, 14 in. deep, 6 in. high

and weighs 45 lb. Price is about £130.

Remington Rand Ltd, Remington House, Holborn Viaduct, London EC1.

#### Self-inking Date Stamp

THE built-in ink pad of the Wixon date stamp holds sufficient for 60,000 impressions, the makers say. When exhausted, it can be replaced.

Ink colours are red, blue, green, black and voilet. The print area of the die which surrounds the date allows space for one line of quarter inch high type and containing nine characters/spaces to appear above the date, and a similar line below; alternatively, a smaller typeface allows two lines above, two below, each of twenty-six characters/spaces.

Price is 39s 6d, including purchase tax. Refill ink pads, 2s 6d each.

Wixon Supplies Co Ltd, 9-10 Finsbury Court, Finsbury Pavement, London EC2.

#### **Time-date Stamps**

A TIME-DATE stamp used on all incoming correspondence eliminates the haggling which sometimes occurs when a sender claims the recipient has delayed in answering his letter. For some businesses it is also useful in establishing priority on orders.

A range of time and date stamps made by American Simplex Time Recorder Co is now available through a British distributor. All the machines, which are electrically controlled, automatically print the basic details in a straight line. An extra word or two, such as a company name or 'received', can also be inserted, if required.

The numbering sequence may be consecutive, dupli-

cate or triplicate.

Prices from £50. General Signal & Time Systems Ltd, 73 Great Peter Street, London SW1.

Simplex Time-date Stamp

#### **Adding Machine Price Reductions**

MPROVED production methods is the reason given by Burroughs for reducing prices of add-listing machines in their f series. New prices range from £66 for the f.219 to £82 (£17 reduction) for the f.224.

All the machines are electrically driven and have

simplified keyboards.

Burroughs Machines Ltd, Avon House, 356 Oxford Street, London Wr.

# Notes and Notices

#### PROFESSIONAL NOTICES

MESSRS MAURICE SHERMAN & Co, Chartered Accountants, have removed to I Parkway, Camden High Street, Camden Town, London NWI. Telephone:

Gulliver 9548-9.

Messrs Russell, Fleming, Boys & Co announce, with very much regret, that Mr A. E. Russell retired from the partnership on July 31st, 1962. Mr Russell will, however, continue to be associated with the firm as a consultant, and his advice will be available when required. They also announce that Mr Richard S. Heaver, A.C.A., who has been with the firm for several years, has been taken into partnership, and the firm will in future practise under the style of Russell, Ohly & Co, Chartered Accountants.

Messrs Whinney, Smith & Whinney (incorporating Alfred Dobson & Co), Chartered Accountants, of Leeds, announce that their address is now Yorkshire

House, Greek Street, Leeds 1.

#### **Appointments**

Mr. R. A. J. Emery, c.A., F.C.I.S., Mr David Finnie, M.A., c.A., and Mr J. G. Hill, F.C.A., are members of the newly constituted board of directors of the City Fire Office Ltd.

Mr. P. W. Lewis, F.C.A., previously secretary and chief accountant of Whitworth Gloster Aircraft Ltd, joined Dennis Bros Ltd, of Guildford, on August 1st and has been appointed chief accountant.

Mr H. R. Ross, A.c.A., has been appointed a director of Dawe Instruments Ltd; he continues as secretary

of the company.

Mr John M. Stockland, F.C.A., has been appointed comptroller of the English Electric Group.

#### **OBITUARY**

#### Henry Mossop, F.C.A.

We have learned with regret of the death on August 10th at the age of 83 of Major Henry Mossop, F.C.A., former senior partner in the firm of R. F. Miller & Co, Chartered Accountants, of Barrow-in-Furness.

Educated at St Bees School, he served his articles in the firm's Manchester office and moved to Barrow in 1905, becoming a partner in 1910. As a Territorial Officer in the R.G.A. he was called up at the outbreak of the 1914-18 War, serving in France until being severely wounded in August 1918; he was mentioned in dispatches and was demobilized with the rank of Major. He took a keen interest in the British Legion and was 'Gunner's Friend' for the district.

Appointed to be a Justice of the Peace in 1928, he

later became chairman of the Bench and retired under the age limit at 75. He was the first president of the local Rotary Club.

#### LOCAL LOANS RATES

The Treasury have announced that as from August 18th, 1962, loans advanced to local authorities will carry the following rates of interest:

	1.0	CEILL
Loans for not more than five years	6	$(6\frac{3}{4})$
Loans for more than five years but not more		
than fifteen years	6₹	$(6\frac{3}{4})$
Loans for more than fifteen years but not		
more than thirty years	6 <del>§</del>	$(6\frac{3}{4})$
Loans for more than thirty years	6 <del>§</del>	$(6\frac{3}{4})$

The former rates of interest (shown in brackets) have been in force since April 7th, 1962. The new rates apply only to future loans; the rates of interest on existing loans are unaffected.

#### E.F.T.A. ANNUAL REPORT

The second annual report of the European Free Trade Association, now published, covers developments from July 1st, 1961, to June 30th, 1962. The report surveys the background to the negotiations now taking place between E.F.T.A. member States and the European Economic Community.

A survey of economic and trade developments shows that intra-E.F.T.A. trade measured in terms of exports in 1961 rose by 9.6 per cent, and that this was almost twice as much as the rise in total exports above the 1960 level. Total international trade of member countries amounts to more than one-seventh of world trade; on a per capita basis their trade exceeds that of the E.E.C. and that of the United States.

Progress in the development of the domestic economies of the E.F.T.A. countries was broadly in line with the general trend experienced in western Europe as a whole. The rate of expansion of total output was either constant, or declined moderately during 1961, but picked up again in the latter part of the period under review. Satisfaction is expressed at the progress made in establishing a free market among the Seven. At the end of October 1962 (in the case of two countries a few months later) tariffs within E.F.T.A. will be just one-half of what they were in July 1960, when the association began.

The report notes that the association with Finland has now worked satisfactorily for one year. Within that time, Finland has caught up with E.F.T.A. member States in the dismantling of barriers to trade.

### JOHN FOORD & COMPANY

56 VICTORIA STREET, LONDON SWI

REVALUATION OF ASSETS

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

#### HELICOPTER THE ANSWER

Mr Leslie Jones, B.COM., A.C.A., commercial manager of W. P. Butterfield Ltd, of Shipley, Yorks, spent his holiday this year learning to fly a helicopter.

This month, at Oxford airport, he became the sixth qualified Brantley B2 pilot in Britain and the first holder of a private pilot's licence to convert from fixed wing aircraft to the Brantley.

In the course of a year, Mr Jones travels an average of 30,000 miles between his engineering company's ten subsidiaries, and in present traffic conditions he is convinced that helicopter travel is the answer.

### LIVERPOOL SOCIETY OF CHARTERED ACCOUNTANTS

#### Intermediate Prize

The Committee of the Liverpool Society of Chartered Accountants announces that its Intermediate prize will be awarded to the candidate who, being a member of the Liverpool Chartered Accountant Students' Association or any one of its constituent branches, gains the highest place in the Institute's Intermediate examination held in May last. The prize will take the form of a book to be chosen by the President of the Society.

It is the responsibility of the student to apply for the prize. Applications should state the position gained in the examination and should be sent to the Hon. Secretary, the Liverpool Society of Chartered Accountants, B22 The Temple, Dale Street, Liverpool 2, within two calendar months after the announcement of the results of the examination.

### MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

#### **Residential Course**

The Joint Tuition Committee of the Manchester Society of Chartered Accountants and the Manchester Chartered Accountants Students' Society has arranged to hold its fifth residential revision course for students at Lyme Hall, near Stockport, from September 17th—21st

The primary object of the course is to assist students in their pre-examination revision and for this reason priority will be given to candidates in the Institute's examinations to be held in November 1962. Priority will also be given to students who live too far away from Manchester and Preston to attend Saturday morning lectures. Subjects covered by the syllabus will be dealt with by a team of lecturers and a separate series of lectures will be given for Intermediate and Final candidates. In addition, there will be opportunities for discussion with the lecturers and a resident tutor will be available throughout the course.

The enrolment fee is £12 12s and covers all charges in respect of tuition, board and lodging: a further 5s will be charged to members who use the special bus which has been arranged for the journey from Manchester to Lyme Hall and return. Further particulars are obtainable from the honorary secretary, 46 Fountain Street, Manchester 2.

#### SEVENTY-FIVE YEARS AGO

FROM The Accountant of August 27th, 1887

A Weekly Note

With reference to the note in these columns last week, and to the reply made by the Chancellor of the Exchequer in the House of Commons to a question put by Mr Gilliatt, relating to the proposal to entrust the collection of the income tax to Inland Revenue Officials, there appears to exist amongst competent authorities in the city, not pecuniarily interested in the question, a difference of opinion as to the wisdom of the change which Mr Goschen hopes to effect. The most serious argument against the proposal appears to be that Inland Revenue Officials would not have that intimate local knowledge of facts and circumstances which the present collectors undoubtedly possess, and which is of such immense assistance in arriving at a true or reasonable estimate of the profits of traders. We are bound to say there is some weight in the contention, but we are almost inclined to think its importance is exaggerated. We firmly believe in the principle of getting at the true amount of profits, and we are not less of opinion, that if, by neglect to keep proper accounts, a man believes himself over assessed it is purely his own fault, and that the difficulties of public officials should not be increased by the neglect of taxpayers. It may also be allowable to believe, that if the present collectors were dispensed with, the Officials would not be without very good data upon which to base an estimate of the income of people who will not render accounts, or who render unverified and unreliable accounts. The real opposition to the change will, of course, really arise from a very different source. The collectorships are valuable posts, and the disposal of them is not to be lightly given up. On the whole we believe the plan which Mr Goschen intends to carry out if possible is beneficial, and will go far to relieve the feeling amongst traders, however ill-founded it may be, that the collectors in the performance of their duties have a greater regard to their own poundage than to equity and

# Theory or Practice?

HE consequences of present day economics, like charity, begin at home. When Professor BAXTER's anthology of accounting studies first appeared in 1950 it ran to 450 pages and cost 23s 6d. The second edition, just issued, has 630 pages and costs 63s. Allowing for the expanded text, the price of the book has therefore doubled. This means that the reader who over the last twelve years has set aside two shillings per annum to buy the new edition will have to fork out a substantial extra sum mitigated marginally by the residual value of his first edition. At least he cannot say that he was not warned; the original edition contained a cluster of excellent articles on post-war price levels, and two of these are still of sufficient moment to justify their retention in the revised selection. Both are thoroughly realistic in their advocacy of the necessity for making fully adequate provisions for plant replacement and of the ways and means of doing so.

Professor Sidney Davidson, of the University of Chicago, has now become joint editor with Professor Baxter and although the contents come equally from British and American sources, this was evidently not a planned editorial compromise. Two traits are apparent – one, that the level of literary expression on both sides of the Atlantic is of comparable merit and, secondly, that accounting thought in the two countries seems to be developing along similar lines. In additon to contributions which have previously appeared elsewhere, the collection includes seven specially commissioned essays, two of them concerned with the relationship between accounting and economics. By this process of blending, the editors have ensured that a fully rounded picture of current topics and problems is presented.

In what respect do these topics and problems differ from those which were considered to be of importance in 1950? It is a compliment to Professor Baxter that all the subjects he selected in 1950 (with the exception of nationalized industries which, presumably, is of no interest to Americans) have been retained although some of the individual contributions have been replaced by others more in touch with the times. The main change of emphasis to be noted is that relatively less space is devoted to purely historical aspects of accounting and much more to considerations of improvements in techniques, to accounting as an instrument of managerial control and to the increased responsibilities which the accountant is being called upon to assume in our modern society. This, despite its rather academic title, is a very pertinent and practical book.

# Short-term Gains - VIII

#### TRANSACTIONS NOT AT ARM'S LENGTH

HIS week we move from out and out gifts to transactions 'otherwise than by way of bargain at arm's length' but not by way of gift. Paragraph 5 (1) of the Ninth Schedule of the Finance Act 1962 provides for an option in such cases to elect for the higher of

(a) the actual consideration; and

(b) such amount as will secure that neither a gain nor a loss accrues to the person disposing of the asset.

The election is not to increase the consideration for which the two parties are treated as disposing of and acquiring the asset. It will be recalled that this consideration is the market value (section 12 (3)) which is thus the overriding maximum, whether (a) or (b) applies, unless the case is within section 12 (4). This applies where the asset is an income receipt in the hands of the disponee (see the sixth article in this series<sup>1</sup>).

Prerequisites of the paragraph 5 (1) option are:

- (i) disponor and disponee both resident and ordinarily resident in the United Kingdom;
- (ii) disposition not by way of bargain at arm's length nor by way of gift;
- (iii) in such circumstances that there is an 'acquisition and disposal' by the disponor.

Section 10 (2) provides that where the statutory time limits of six months or three years are exceeded, there is no 'acquisition and disposal', except in section 14 cases.

Normally the election must be a joint one, but the disponor may exercise the election alone if the disponee would not be chargeable to Case VII tax on his own disposition of the asset (paragraph 5 (2)). An example of such a person would be a charity. Two kinds of disposal are excluded from paragraph 5:

- (i) disposal by a company by way of distribution in respect of shares in the company ('company' includes any body corporate, and 'shares' include stock – section 16 (1)); or
- (ii) the disponor (but not the disponee) is within section 14 in relation to his acquisition and disposal of the asset. Section 14 will be dealt with in a subsequent article.

It will be recalled that section 12 (3) (b) provides for the market value to be taken where

the disponee acquires the asset in any of the four separate sets of circumstances which we set out in the sixth article in this series. Assuming that the transaction is not by way of bargain at arm's length, any one of those four cases might fall within paragraph 5 (1). If it does, then one has to assume that the actual consideration is less than the amount which would secure that there was neither a Case VII profit nor a Case VII loss to the disponor; i.e. that (a) of paragraph 5 (1) is less than (b). Accordingly, provided that the market value has been taken under section 12 (3), and provided that it is more than the amount specified in paragraph 5 (1) (b), the latter amount is to be taken, whatever view might be taken of the value of the actual consideration (paragraph 5 (3)). If the acquisition and disposal falls within section 12 (4), i.e. the asset constitutes an income receipt, then instead of market value one must take, if different, the value attributed to the asset as an income receipt.

Legislation of this kind would not be complete without provisions aimed expressly at intra-group transactions. Paragraph 6 (2) of the Ninth Schedule provides, broadly speaking, that they shall be ignored. It applies the usual profits tax provisions, in section 42 of the Finance Act, 1938, for the purpose of defining what we here call a 'group'. These are complicated but are now well understood and can be approximately summed up as providing that a holding of three-quarters of the equity of a company makes that company the subsidiary of the holding company. Paragraph 6 (2) applies subject to the following conditions:

- (i) disponor and disponee both resident and ordinarily resident in the United Kingdom;
- (ii) both members of the same group at the time of disposal.

These conditions being satisfied, then

- (a) the disponor is not to be chargeable under Case VII; and
- (b) the disponee is to be treated as if the disponor's acquisition had been its own.

This, of course, imports the provisions of para-

<sup>&</sup>lt;sup>1</sup> The Accountant, August 18th, 1962.

graph 18, which have already been examined.<sup>1</sup> It also means that an asset can be passed round from one member of the group to another without interrupting the run of the statutory time limit of six months, or three years as the case may be.

Delicate questions of whether a husband and wife living together are at arm's length are burked by paragraph 6 (1) which in effect provides that they are to be treated in the same way as fellow members of a group of companies. There is no requirement as to residence or ordinary residence.

We come now (in paragraph 6 (3)) to the hybrid case of a person having control of a company in such circumstances that the two persons are not members of a group which brings in paragraph 6 (2), examined above. The person controlling may, of course, be an individual. 'Control' has the meaning assigned to it by section 333 (1) of the Income Tax Act, 1952, i.e. broadly speaking voting or other power given by the articles of association ensuring that the affairs of the company are conducted in accordance with the controller's wishes (section 16 (1)). However, for the purposes of paragraph 6 (3) the meaning of 'control' is widened. An individual is treated as having control of a company if his spouse has control, or if the individual and his spouse (not necessarily cohabiting) together control it.

Dispositions between controller and controlled are of course subject to the Case VII legislation, including the provisions of section 12 (3) and paragraph 5 as to transactions which are not at arm's length. Paragraph 6 (3) adds a further provision, which greatly restricts the opportunities open to controller and controlled of manufacturing Case VII losses for the purpose of setting them off against other Case VII profits. Such losses are available for set-off only against Case VII gains arising from dispositions between the same two persons (and in the same direction) while the control still exists.

The House of Lords decision in Sharkey v. Wernher (34 A.T.C. 263) emphasized that a person may affect his income tax position by appropriating an asset from one use to another. Such an appropriation is clearly not an acquisition or disposal at all, although it is equally clearly not at arm's length. Under paragraph 7 (1), an appropriation may be treated as though it were a disposal at market value. The sub-paragraph applies where

- (i) a person has acquired an asset;
- (ii) otherwise than as trading stock of a trade carried on by him; and
- (iii) appropriates the asset for the purposes of 'the trade';
- . (iv) as trading stock; and
  - (v) if he had then sold the asset at market value a Case VII gain or loss would have resulted.

'Trade' has the same meaning as in the Income Tax Act, 1952, i.e. it includes a trade, manufacture, adventure, or concern in the nature of trade, but not a profession. Although that Act of 1952 defines 'trading stock', it does so only for the purposes of section 143. The definition has been extended to Part II of the Finance Act, 1960, but the draftsman of the 1962 Act has apparently forgotten to apply it.

A person carrying on a trade which is assessed under Case I of Schedule D can in a sense opt out of paragraph 7 (1). He can elect instead that the market value of the asset at the time of the appropriation to the trading stock be treated as reduced, for Case I purposes, by the amount of the notional Case VII gain, or reduced by the notional Case VII loss, as the case may be. The Case I computation will thus absorb within itself the Case VII position. A partner in the trade cannot elect without the concurrence of all the other partners (paragraph 7 (3)).

Paragraph 7 (2) deals with the converse case, i.e. the Sharkey v. Wernher case. If a trader appropriates trading stock for some other purpose, or discontinues the trade, he is to be treated for Case VII purposes as having acquired the asset for a consideration equal to the amount brought in to credit of his trading account for tax purposes.

It will be recalled that in Sharkey v. Wernher the taxpayer carried on two activities, one a stud farm which was admitted to be chargeable under Case I as a trade, the other being entering horses in races, which was not a taxable activity. She transferred a horse from the stud farm to her racing stables. The taxpayer conceded, perhaps unnecessarily, that something had to be credited to the stud farm accounts for the horse taken out, since the cost of its breeding and rearing had been charged. She argued that the proper amount to credit was cost, but in the face of her concession the House of Lords held that the proper amount was the market value. That market value is not the universal answer is perhaps implied by paragraph 7 which contemplates some other valuation.

# The Role of Finance in the Developing Hospital Service

by CHARLES MONTACUTE, LL.B., D.P.A., F.I.M.T.A., F.H.A.

THE hospital service has entered a new phase – the third since nationalization in 1948. The first was a pause to shake down and recover breath after a hurried and somewhat ill-prepared 'take-over'; the second was a period of quite solid improvement and advancement, albeit on a 'make do and mend' basis because of the serious shortage of capital moneys; the new phase represents a break-through to more fundamental thinking and planning about the nature and size of the service likely to be required in the foreseeable future and the best and most efficient ways of providing and maintaining it. And at long last there is promise of fulfilment, for capital expenditure of  $f_{200}$  million in the quinquennium 1961-62 to 1965-66, and  $f_{300}$  million in the following quinquennium (1966-67 to 1970-71) is envisaged for England and Wales. This compares with about £157 million spent on hospital building since 1948-49.

The Minister of Health's plan was presented to Parliament as a White Paper<sup>1</sup> in January 1962. In the preface to the Paper it is stated:

"The moment has...come to take a comprehensive view of the hospital service as it is today and to draw the outlines of the service which we mean to create. This is a plan not merely for building, remodelling or improving large numbers of hospitals, but for modernizing the whole pattern and content of the hospital service and for integrating it still more closely with the great services which provide care and treatment outside the hospitals."

The core of the plan is the provision of district general hospitals providing comprehensive treatment and diagnostic facilities for populations of 100,000–150,000, though a few specialties, such as neurosurgery and plastic surgery, would need a larger catchment area and would be provided only at certain hospitals.

The scale of the programme may be indicated

by the fact that it specifies nanety new, and 134 substantially remodelled, hospitals to be started by 1970-71, apart from 356 other schemes costing over £100,000 each which make major additions and improvements to existing hospitals.

What is the role of finance in this new and in some ways exciting phase?

#### The Building Programme

First, let us consider briefly its function in the building programme. Here the hospital service has been influenced by the success of the special costing techniques developed in connection with the post-war school building programme. With schools, a planned attack on the design and structure of buildings was linked to an effective method of costing, in order to produce minimum standards of space and physical conditions which were laid down and published in building regulations, and also maximum limits of cost. Cost analysis in the nature of a post-mortem was used to examine the cost of schools already planned or built for which bills of quantities or tenders were available. The information thus gained was used by cost planning to maintain a surer control over costs of future projects. It has been calculated that the use of these techniques saved £290 million on the provision of school places between 1949 and 1958, and it is generally accepted that, alongside this economy, the schools that have been built are better than the more expensive ones that were being built in 1949.

The Ministry of Health has issued to hospital authorities a series of building bulletins and notes which have been prepared from similar studies, and a series of equipment notes will shortly be issued to parallel the building notes. These, together with a certain amount of standardization of design of building and of components and equipment, hold the promise of success equal to that obtained in the educational field.

<sup>1</sup> A Hospital Plan for England and Wales (Cmnd. 1604.)

Also coupled with this cost control of new buildings, are research studies (by the building research station), to predict the cost implications of building designs, not only as regards initial costs, but also 'costs in use'. Design obviously affects not only initial costs, but also maintenance and cleaning, and often heating, lighting, rating and personnel costs. What appears to be a cheaper building may in the long run be more expensive than one with far higher initial costs.

#### Revenue Expenditure

It is not only the new building programme which is claiming the attention of the financial side of the service. Economy and efficiency will have to be achieved in the running of the new and remodelled hospitals. Also, however fast the building programme proceeds, the bulk of revenue expenditure in the service will, for some time to come, be in existing hospitals.

Among the instruments used in the quest for efficiency and economy in management is costing. Indeed, one of the significant financial happenings in the service since nationalization was the introduction, in 1957, of departmental costing - the 'main scheme' for a gradually increasing number of the larger acute hospitals, and the 'modified scheme' for the remaining hospitals. The impact, in spite of teething troubles and other more serious problems, has been considerable - not so much in the actual savings which can be shown to have resulted, but in improved cost consciousness among members and staffs of hospital authorities. The production of tolerably accurate unit costs has focused attention upon the great differences in cost which exist between hospitals giving apparently the same service. And, inevitably, attempts have been made to discover whether they arise from differences in (a) the standard of service, (b) efficiency of organization or (c) local physical conditions; also, to what extent the level of budgetary provision has allowed them to continue.

Any adjustment to remove or diminish existing disparities can, however, involve facing up to some fundamental questions:

- (a) What constitutes a reasonable level of service?
- (b) What allowances should be made for local factors which affect costs in a particular hospital or department?
- (c) Should there be some form of quality appraisal?
- (d) Are adjustments to be enforced, if necessary,

through the budget allocation, and will adjustment be upward as well as downward?

Although costing has 'exposed' disparities, it has itself been shown to be, in its present form, a rather blunt and inadequate instrument.

#### **Need to Develop Cost Targets**

The history of costing in industry shows that historical costs - such as those now produced in the hospital service – suffered from the drawback of having been prepared after the event. What was necessary was to set up, in advance of events, a carefully calculated estimate of what a wellproduced article or a particular service ought to cost under normal conditions. I consider that, in spite of the peculiar difficulties in a humanitarian service of doing so, we should now take the logical step forward of trying to find out what the various parts of the service ought to cost and to measure performance against these standards. If this proves impracticable in, for example, some of the treatment departments, that should not deter us, for only partial success would provide us with better aids to efficient management than we now have, and, perhaps, with a budgetary aid as well.

The Ministry of Health have, in fact, recently made a moderate start on this task. It will be lengthy and difficult, for it is essential that any standards or targets should only be arrived at after the most thorough study. The procedure should include the detailed examination of properly selected sample departments of existing hospitals, so that the results will mirror actual, rather than theoretical, working. And more than cost studies will be involved; operational research must be brought into play as well.

#### **Adjustment for Local Conditions**

The targets or standards thus arrived at would, of course, be national ones. But to be of use in individual hospitals these must be capable of being translated into local language by adjusting them for local factors (such as type of building and equipment, standard of service, etc.) which lead to differences in cost.

Up to the present, these local factors have been a real stumbling-block in inter-hospital or inter-departmental cost comparison and any use of standards or targets, whether for efficiency or budgetary purposes, must take them into account. The problem is that their number is probably legion; but it may well be found that only a relatively small, manageable number have a

<sup>&</sup>lt;sup>1</sup> Report of the Working Party on Hospital Costing (1955) (see The Accountant of August 6th, 1955).

significant effect on cost, and an attempt should be made to arrive at a coefficient for each of these to represent its effect on cost. Thus, for each department or activity, the aim would be to arrive at a national target cost and then adjust it locally according to the presence or absence of factors which significantly affect cost.

For comparative purposes, the Ministry at present publish about six months after the year end, annual cost returns showing detailed costs for individual hospitals, together with regional and national average costs. Under the above proposals this publication could be dispensed with, for a hospital would be aware of its target, and its actual costs would be measured against it.

It must be admitted that all this may seem to be rather idealistic and impracticable. But I believe that the present crude, historical costs are so limited in their usefulness that the challenge of sharpening the instrument must be accepted. If the result of the exercise is negative in the sense that no clear-cut factors and coefficients emerge. it will demonstrate that inter-hospital comparison can only be a rough-and-ready concept and that the use of standards for efficiency or budgetary purposes in existing hospitals and departments, which differ so greatly in character, is scarcely justified. However, new hospitals and departments should be a more fruitful field, for in these there will be more standardization of design and technique.

Of course, it is always possible to abandon any idea of nationally fixed standards and rely solely upon local ones, fixed as a result of local studies. But the difficulty here is (a) the extreme shortage of staff – e.g. work study personnel – to carry out the studies, (b) the enormous length of time that individual detailed studies would take, and (c) the varying standards that would inevitably be reached. On balance, it seems preferable to concentrate first on independent, well-conducted surveys at the centre, for these, as well as producing standards and variance coefficients, could also provide information and advice which could be passed on to hospital authorities to help them to achieve the standards in their own hospitals.

#### **Quality Appraisal**

To set any form of monetary standard means that the quality of the service provided must come under review. Cost and quality are complementary. It therefore seems certain that in the developing hospital service, quality appraisal will become increasingly important. This is a field where comparatively little has been done in Britain, particularly on the clinical side.

In the United States attempts to do this include:

- (a) Accreditation of hospitals by a joint commission representing the colleges of surgeons and physicians and the hospital and medical associations.
- (b) Medical audit external or internal, but usually internal – representing a continuous review by a medical committee of the treatment given in a particular hospital.
- (c) The recording and processing by punched-card or electronic methods of clinical data relating to every case treated in a group of hospitals in order to throw up comparisons and relationships which would otherwise not be observable.

In Great Britain, the fact that the hospital service is highly integrated means that some of this ground is already being covered, but there is much room for development, particularly along the lines of the survey of casualty services carried out by the Nuffield Provincial Hospitals Trust<sup>1</sup> and the processing of clinical data.

In the non-clinical field, work already done on catering, domestic and laundry services, boiler houses, etc., will need to be expanded. These non-treatment services lend themselves more readily to objective assessment than clinical services.

#### **Budgetary Aspects**

Although there was statutory provision from the outset for hospital authorities to prepare and submit (usually via regional boards) to the Ministry of Health estimates of their expenditure, this procedure was really turned into an allocating procedure in which the previous year's expenditure played an important part. Accordingly, what an authority received could differ considerably from its estimates. Although this has provided rough justice for hospital authorities, certain changes are being planned.

The first of these has in fact just been partially introduced. This is the preparation of 'forward look' estimates for five years ahead. They are a natural corollary to a planned capital programme and will force the service to think ahead more than it has accustomed itself to do. This is undoubtedly a good thing, particularly if it enables the Treasury and the Ministry, knowing well in advance what is the realistic sum necessary

<sup>&</sup>lt;sup>1</sup>Casualty Services and their Setting (Oxford University Press).

for the proper functioning of the service, to make that sum – or something very close to it – available. It could restore meaning to the estimating procedure.

The second proposed change involves the working out of a closer relationship between costs and budgets. There can be two broad approaches to the problem:

- (a) the building up of hospital budgets as far as possible on the basis of accepted standard costs (as these become available);
- (b) the gradual reduction of existing disparities in cost between hospitals as the result of cost investigations etc., resulting in a more uniform level of expenditure.

The ultimate goal of both methods is, of course, similar, i.e. to achieve efficiency and to distribute as equitably as possible among hospitals the total funds available for the running of the service. (This, incidentally, is also the aim of the new capital programme: to distribute resources in the form of buildings and equipment fairly and according to need.)

It is difficult to quarrel with these proposals for they have considerable potential advantages; but they also have dangers which, unheeded, can do real harm. The indiscriminate use of standard costs can produce not efficiency and equity, but inflexibility and lack of initiative. And whilst, no doubt, there may ultimately be a place for coercion where goodwill and co-operation are absent, the emphasis must rather be on education and persuasion. Also, incentives must be built into the system. Above all, perhaps, it should never be forgotten that a good hospital can never be reduced to costs and statistics.

#### **Determination of Policy**

In a humanitarian service like the hospital service, policy should never be decided on financial considerations alone. But equally, these considerations should never be ignored.

Cost control and the 'costs in use' concept in designing and building new hospitals are examples where finance is already helping to determine policy. There is, however, considerable scope for this application of finance. Thus, where alternative methods of doing a thing exist, comparative cost should clearly figure in the choice. The use of destructible equipment; the justification for day hospitals; direct labour versus outside contractor; the optimum use of beds and other facilities, are a few examples.

In a dynamic service it is essential for finance

to make its full contribution to policy determina-

#### **Financial Tools**

In a service which is barely fourteen years old, it is natural that the tools of financial administration are still being added to and developed. The costing system needs to be refined, the possibility of an integrated budgeting-accounting-costing procedure looked into, the relationship between financial and other instruments of efficiency and control more clearly understood, and so on.

Most hospital authorities use keyboard accounting machines and/or have the use of punched-card and simple electronic equipment (such as calculators) installed at regional hospital board headquarters. Meanwhile, a Ministry of Health working party is considering the application of electronics to hospital accounting; experiments are being conducted under the aegis of this working party, and one or two computers are already installed at regional board headquarters. Second generation machines of greater flexibility now becoming available may well strengthen the case for medium-sized computers, although the indications are that tangible savings in staff and money are not likely to be great. The case will rather rest on intangible factors - better and quicker flow of information, inability to recruit clerical staff, etc. One might add that there is almost certainly much scope for computers in the field of medical statistics and research.

#### The Climate of Opinion

Perhaps the most difficult task facing the financial side of the service is to 'put over' to medical, nursing, technical and other staff, the essentially constructive nature of finance. At present they tend to view it as a negative art, practised with the main object of keeping progressive and enlightened people (like themselves) in check. The finance officer is an 'abominable no-man'.

It is difficult to convince them that by helping to secure the most efficient use of resources, finance can in an indirect though real way, play its part in improving the service the patient receives. Where attempts to explain and seek co-operation have been made, they have not been unsuccessful; but a great deal more than has been attempted or planned needs to be done.

It will be obvious that the role which finance needs to play in the developing hospital service, which in 1961-62 cost around £450 million, is a major, positive and progressive one.

## Insurance and the Accountant-I

by DAVID WILLIAMSON, F.C.A., F.C.W.A.

#### I. INTRODUCTION

THE biggest difficulty attendant upon compiling this paper has been the vastness of the subject. To treat in one paper the whole subject of insurance would not only be quite beyond my powers, but would mean presenting for your attention only the most superficial description of the subject. I feel that this conference requires a more detailed treatment of certain particular aspects of insurance—those that most closely concern the accountant and demand his attention. For this purpose 'accountant' mainly refers to the accountant in industry—but the matters discussed will be of interest to practising accountants as well, particularly in their role of advisers to industrial clients.

2. I have therefore selected certain aspects of industrial insurance - and have described some of the points that need thinking about before the policy is finally drawn up - also some of the day-to-day matters that the accountant will need to consider after the insurance has come into operation. And in case it be thought that this paper advocates excessive expenditure upon insurance, let it be said that wise insurance can prove a great economy; but above all it must be emphasized that insurance must not be regarded as standing aloof from other forms of industrial expenditure - it should form part of the pattern of expense designed to safeguard the industrial enterprise; insurance minimizes the risk in terms of financial loss, but other skills such as accident prevention and fire prevention also seek to protect the enterprise, by preventing the occurrence altogether.

#### II. THE ACCOUNTANT'S RESPONSIBILITY

3. The proper insurance of his company will always be a particular concern of the industrial accountant; we can recognize, of course, that in some companies insurance is regarded as within the domain of the secretary and not specifically of the accountant – also that in the largest concerns insurance may be the responsibility of a specialist who may be neither the secretary nor accountant – but in all these cases nevertheless the company's accountant will have a close interest in the operation of insurance regarding his company's assets.

4. The famous 'watchdog' definition was actually attached to the *auditor* as such – but all industrial accountants have long regarded themselves as watchdogs in a different sense – watchdogs of their companies' assets, goodwill and trading potential – and by that token it is obvious that they must be closely

concerned with the use that is made of insurance, as a means of protection against loss. And I submit that the good accountant should go beyond that stage: he should be more than watchful - he should concern himself with the expense of insurance and should consider how such expense can be saved perhaps by action at an earlier stage: to give three brief examples - the heavy cost of employers' liability insurance is to some extent related to the accident record in the works, which may be the special concern of the safety officer or the welfare department; the fire premium is often related to structural characteristics of the buildings and to fire-fighting installations that are the concern of the appropriate departments; and the rising cost of motor vehicle insurance is of immediate concern to the transport manager, who may find the accident ratio responsive to incentive schemes for 'safety first' drivers - and so on. In all these cases it is usually the accountant who will be the first to know the situation in terms of cost – and it is he, therefore, who should encourage the others to action.

#### III. FIRE INSURANCE

#### Introduction

5. I put fire insurance first, because the fire risk normally represents the most serious as well as the most commonplace hazard to which a factory is exposed. The fire risk can be said to demand attention even before the building begins to take shape; from the time that factory buildings are on the drawing board, it is important to consider the eventual fire risks. Indeed, the necessity for fire protection nowadays has a significant influence upon the selection of materials for construction and upon the incorporation in the design itself of fire fighting equipment and fire alarm systems. In today's conditions, which demand buildings of increasing height, it is obvious that fire

Mr DAVID WILLIAMSON, F.C.A., F.C.W.A., author of this paper presented at the Cambridge Summer Course of The Institute of Chartered Accountants in England and Wales, is Group Pensions Officer of Guest, Keen & Nettlefolds Ltd. Admitted to membership of the Institute in 1948, he has also been a member of The Institute of Cost and Works Accountants since 1945. He was a member of the British Management Accounting team which visited the U.S.A. in 1950.

protection devices will increasingly need to be decided on and incorporated in the structure itself, at an early stage in the development programme; indeed, where a building exceeds about eleven storeys in height, the fire prevention equipment that serves the top storeys must be completely independent of ground-level water supplies, as it is almost impossible effectively to pump ground-level water above this height—and it is probable that independent water tanks and auxiliary equipment will be positioned at various heights in the structure, for this purpose.

- 6. When considering a company's fire insurance requirements, you will have at the outset to decide:
  - (a) What assets?
  - (b) What values?

are to be insured against fire. Neither of these questions is quite simple to answer.

#### What Assets?

7. For a start, it will be best to schedule all buildings and all contents, plus goods stored in the open and goods held elsewhere than at the factory itself and then to consider whether there is any class of goods that is impervious to fire damage and to damage by water used in extinguishing a fire, that is also capable of definition in the policy as an exclusion. It is most important to appreciate that exclusions from cover, to be accepted by the insurance company as such, must be accurately defined in the policy and it follows that such exclusions must also be identifiable. The view is sometimes advanced that the foundations of a building do not need to be covered against the fire risk; on the other hand, although the foundations may be impervious to actual fire damage, would the foundations remaining after a serious fire retain any structural value?

#### What Values?

- 8. This is the question that dwarfs all others, as far as fire insurance is concerned. When you begin to consider values, you must decide which of the following alternative bases of valuation you wish to adopt: and if you decide to call in a professional valuer you should make known your choice to him before he begins his work.
  - (a) The reinstatement basis (known as 'new for old'): on this basis the insurance is intended to provide in full the cost of present-day replacement of the assets destroyed.
  - (b) The indemnity basis (known as 'like for like'): on this basis the insurance is intended to enable you to replace the assets destroyed, but after including a cash contribution from yourself, representing the improvement derived from having new assets in place of old.

You will also have to consider whether the policy is to be governed by average, or alternatively, by a special condition of average.

- 9. These questions are dealt with as follows:
- (a) Reinstatement basis. To arrange insurance on this basis there is a special clause available under which payment will be made of the cost of rebuilding or replacing after the damage, in a condition equal to that existing when the original property was new, provided, of course, that the total sum insured and the annual premium payable, were correctly calculated on this basis.

The reinstatement basis cannot be applied to the insurance of stock-in-trade, but it is now widely used in the case of buildings and plant. You should notice that the policy does not require the insured to rebuild in exactly the same way as before the fire – nor even on the same site; in the case of plant, moreover, the new machinery need not be of the same make or capacity as the old – but the reinstatement condition does provide that if the new building is larger than the old, or the new plant has a greater capacity than the old, the insured party is liable to contribute in respect of the increase in size or value of the assets.

You should also note that the reinstatement contract assumes that the insured will, in fact, reinstate: in fact, the additional sum it provides, over and above the indemnity basis, is only payable as and when reinstatement takes place, and then only to the extent actually incurred and within the limit arranged. But the fact that the insurance has been written on a reinstatement basis does not of itself compel the insured party to deal with his claims on that basis – he may if he wishes request a financial settlement on an indemnity basis – see next paragraph.

(b) Indemnity basis. This is the principle found in the normal type of fire policy, which undertakes within the limits of the sum insured to indemnify the insured party for an amount representing the value of the property destroyed - at the time of the loss. In other words, the value insured is deemed to be present-day, cost, less some allowance - often quite small, and not connected in any way with the monetary value that may have been written off for accounting purposes - to represent loss of condition owing to usage. The reference in the previous sentence to the non-suitability of the depreciation figure is emphasized; accountants should beware of arriving at insurable values by reference to written-down figures in the books of account; not only will these figures have been usually derived from original cost rather than present-day value, but the amount of depreciation written-off is often related to quite different considerations, and can lead to the written-down figure being very substantially below the real value of the assets - let alone allowing for the increased cost of replacement.

It is obvious that under the indemnity basis the insured will be required to contribute towards the cost of replacing the assets destroyed. Whilst in theory at any rate the insured should have available a cash reserve provided by his annual provisions for depreciation, he must appreciate that the consequence of a serious fire may require a very substantial cash contribution – and may therefore impose a serious drain upon his working capital. Against this possible disadvantage must be set the benefit he enjoys by reason of paying a lower premium than if he adopts the reinstatement basis.

258

Before deciding between the reinstatement and the indemnity bases, therefore, you should carefully consider whether your company can afford to carry the insurable risk represented by the difference; it is probable that many companies diligently seek to cover every single item in their inventory, yet give relatively little thought to the much bigger question involved by these fundamental alternatives.

- (c) Average. By 'average' we mean an expression in the policy stating that if at the time of loss the sum insured is less than the actual value at risk, then to that extent the insured party shares the loss with the insurer: for example, assume a building is worth £20,000 and due to negligence is insured for only £12,000, the policy being subject to average: if there is a fire which does damage to the extent of £5,000, then the insurance company will only pay 60 per cent of £5,000. The clause operates as a protection to the insurance company and as a guarantee that they receive a premium proportionate to the risk they are covering. It also operates as a warning to the insured, to notify the insurance company of the full value to be covered, in the first place, and to maintain this value and increase it whenever necessary.
- (d) Special condition of average. In certain insurances a special condition of average operates, often described as the '75 per cent condition of average' - or some similar percentage. This clause states that average will only operate if the sum insured is less than 75 per cent of the value at risk. The intention behind this clause is that the insured party shall have some measure of elasticity in the matter of providing full insurance cover; he is not required to adjust his cover for every fluctuation in the value covered by the policy, and provided he is at least 75 per cent covered, the policy will pay a claim in full, up to the monetary limit stated in the policy. But it should be appreciated that if a claim arises and the sum insured proves to be, say, only 70 per cent of the value at risk, the claim will only be paid to the extent of 70 per cent of the loss. Moreover, despite the advantages of elasticity, the insured must appreciate that if

he avails himself of the 75 per cent condition of average he will suffer a serious loss through under-insurance if his property is 100 per cent destroyed by fire, because the indemnification will be limited in any case to the sum stated in the policy.

On balance, the special condition of average can provide a useful saving of premium – providing the insured party realizes that in the event of a total loss he will be carrying a substantial portion of the risk himself.

#### Fire Fighting Equipment

ro. We shall not attempt to discuss the technical aspect of fire fighting equipment. The significance of the subject to the industrial accountant is twofold because, if an industrial building is constructed so as to be reasonably fire-resistant – see comments later – and if it is also equipped with suitable automatic devices such as sprinkler systems,

- (a) the likelihood of complete destruction by fire is substantially reduced;
- (b) the cost of fire insurance should be lowered by reason of the special discounts available in recognition of the structural and other steps taken to minimize the fire risk.

The phrase, 'fire-resistant', as applied to the construction of buildings, should be always regarded with caution. One of the greatest hazards experienced by insurers, for instance, is unbroken roofing containing inflammable elements, which in the past has led to serious fires. Further, it must be recognized that automatic fire alarm systems and fire fighting systems are subject to certain limitations, no matter how ingeniously they are constructed. Indeed, in the case of purely 'first aid' fire fighting equipment, such as fire extinguishers, the discounts offered do not normally exceed about 15 per cent – an indication perhaps of the fact that they represent no more than 'first aid'

11. More elaborate fire fighting equipment – including auxiliary and independent water supplies – will rank for higher premium discounts, according to the standard of reliability possessed. A first-class sprinkler installation – maintained and serviced regularly – will qualify for as much as 50 per cent discount on the fire premium.

#### **Additional Perils**

12. It is customary for fire policies to cover additional perils, as a matter of convenience – rather than for these to be the subject of separate policies. Amongst these additional perils, one finds:

explosion; riot and civil commotion; impact damage; storm, tempest and flood; water damage; aircraft and articles dropped therefrom. September 1st, 1962

By tradition, it seems, these additional peril insurances are handled by the fire offices – and although geographical considerations may render certain areas of a factory more vulnerable than others, it is usually desirable to include in the combined fire policy such of these additional risks as it is desired to cover. The selection of these risks is, of course, for individual companies to consider. Companies should also consider the various additional clauses available to meet special requirements, such as:

(a) Site clearance clause. This clause covers the expense of removing fire debris, shoring up and dismantling. Site clearance can be a problem fraught with the most unexpected complications. By way of some light relief, let me mention a case, where a fertilizer factory had to clear a site, on a part of which had rested a large dump of decomposing animal hides – not improved by having been soaked by the water used in extinguishing the fire: the hides had formed an obnoxious solidified mass – and it proved necessary to remove the entire mound and convey it to the sea coast, where it had to be re-loaded into a suitable vessel and 'dumped' far out to sea.

Other problems will arise where, for example, the destroyed building occupied unusually deep foundations, necessary perhaps to accommodate a piece of machinery requiring exceptional operating space.

- (b) Local authorities clause. It is desirable to incorporate a clause agreeing to pay for the additional expense incurred after a fire to meet the requirements of the local authority such as moving undamaged walls back to a building line, or rebuilding in a different material than the damaged property these requirements occasionally being made by a local authority in the interests of local planning.
- (c) Architects' and consultants' fees. Following a serious fire, expense will be entailed under this heading and it is desirable for the fire policy to include cover for this item.

If these clauses are adopted you must be careful to raise the sum insured to correspond with the additional sums involved: these clauses cannot just be 'tacked on', without endangering the sufficiency of the insurance.

#### IV. CONSEQUENTIAL LOSS INSURANCE

#### **General Considerations**

13. Along with fire insurance one should always consider the case for consequential loss insurance – sometimes referred to as loss of profits insurance. There is a direct connection between the two forms of insurance; whereas the intention of a fire policy is to indemnify the insured against material loss by

fire, the purpose of the standard consequential loss policy is to indemnify him against the loss resulting from the interruption to his trading, by reason of fire, lightning and explosion.

- 14. It must be understood at the outset that you cannot operate a consequential loss policy unless you also operate an ordinary fire policy, i.e. a material damage policy.
- 15. As a generalization it can be stated that the purpose of a consequential loss policy is to replace the following:
  - (a) the net profit assumed to have been lost during the stated period following the fire;
  - (b) the cost of standing charges for the period; these can loosely be termed fixed expenses, but are referred to in more detail below;
  - (c) the increased expenditure incurred by combating the interruption caused by the fire; these increased expenses may represent the renting of temporary premises, the subcontracting of certain processes interrupted by the fire; the additional cost of goods which may have to be obtained hurriedly in order to complete certain orders; the cost of hiring additional plant or equipment in order to carry on the more essential orders in progress and thus to maintain as much customer goodwill as possible;
  - (d) the cost of auditors' fees in connection with the production and certification of details supporting the claim.
- 16. The foregoing items are commented upon in more detail, as follows:
  - (a) Loss of net profit. For this purpose net profit is defined as the net trading profit (exclusive of all capital receipts and accretions and all outlay properly chargeable to capital) resulting from the business of the insured at the premises after due provision has been made for all standing and other charges including depreciation, but before deduction of any taxation chargeable on profits.

It should be noted that this definition does not necessarily tie the insured to his previous year's net profits – he can insure for an increasing trend of profits if desired.

(b) Payment of standing charges. The selection and definition of standing charges is at the discretion of the insured when he takes out the policy; it is up to him to decide, at the outset, which are the expenses he would have to continue to pay after a fire, in order to keep business in being. In addition to the more obvious 'fixed expenses', a substantial element of works wages will in today's conditions fall within this definition; the treatment of wages

for this type of insurance is separately dealt with later in this section.

In selecting standing charges for insurance, the accountant's opinion will be of importance; in general, you should be prepared to include all the running expenses of the company except those which might be held to become unnecessary following a fire – such as advertising in some cases. But it is important to appreciate that if certain insured standing charges are not, in fact, incurred following the fire, they cannot be claimed under the policy.

It will be understood that nothing has to be included in standing charges for tax – because the figure insured for net profit is deemed to be net profit before tax. Incidentally, any sum recovered under the consequential loss policy will rank as taxable profits, but conversely the premium is allowed as a trading expense.

- (c) Increase in cost of working. The normal consequential loss policy will cover the additional working expense that is always incurred immediately following a serious fire up to the monetary limit stated in the policy. The policy, however, does not give you a free hand in this matter and only such additional expenses as are necessary and reasonable will be allowed in the claim; their purpose must be to avoid or minimize the reduction in turnover that is the direct consequence of the fire.
- (d) Auditors' fees. This will represent a sum entirely outside the annual audit charge, and should be insured at a fully adequate sum, bearing in mind the special nature of the work involved.

#### Treatment of Wages

17. The treatment for insurance purposes of wages has in recent years undergone several important changes - resulting from the different industrial atmosphere in which we now live. Formerly, it was considered sufficient to treat as standing charges only the wages of key workers - whilst the bulk of the works payroll was regarded as an item requiring insurance for only a week or two, to enable the company to pay that amount in lieu of notice. But in post-war conditions, companies could not risk losing works employees to competitors for labour and it became customary to insure as a separate item a much larger proportion of the works payroll - and also to extend considerably the indemnity period for this insurance. On the other hand, experience proved that it was difficult to hold the balance between the portion of wages to be treated as standing charges, and the balance to be separately insured for a specified period: consequently, a new formula has been devised, called the 'dual basis' scheme. Under this method wages are excluded from the figure of standing charges and are separately insured. The insurance then operates on the same basis as for net profit and standing charges, i.e. the indemnity period is the same, and the indemnity is measured in relation to the shortage of turnover - with adjustments for increased cost of working and for standing charges not incurred. But the indemnity for wages is calculated by reference to two separate periods: during the first period, which is a minimum of four weeks, the full works payroll is covered, and during the remainder of the indemnity period only a reduced proportion is covered, as selected by the insured when he takes out the insurance. There are two important options, viz. the insured is allowed to 'carry over' from the initial period to the subsequent period any saving in wages effected by reductions of labour; and he also has an 'option to consolidate', under which he can condense the period of partial wages cover, and correspondingly increase the period of full cover within certain limits agreed upon when the policy is drawn up.

18. The foregoing is a brief description only, of a subject that merits more detailed study.

#### **Indemnity Period**

19. As regards the indemnity period of the consequential loss policy, accountants as well as engineers may be called upon to advise upon this; it is worth bearing in mind here that whilst this period should ideally be governed by normal commercial considerations as to how long the profit earning capacity might be interrupted - in practice this length of time may be dictated by such matters as governmental controls upon building work, necessitating a far longer 'recovery' period being covered by the policy. And there is a further advantage in providing for a fairly lengthy indemnity period; provided the period is not less than twelve months the insurer will include an 'accumulated stock' clause which provides that in assessing the trading results after the fire, due regard will be paid to depletion of stocks, and an equitable allowance made.

#### Extensions

- 20. In recent years there has been a demand for extending consequential loss insurance to apply to premises other than the insured's own. Hitherto, we have assumed that the consequential loss is caused by a fire occurring at the insured's own premises. It must be recognized that an equally serious loss may be incurred by a variety of other causes; we do not need to discuss these in full detail in this paper but they may be briefly stated as follows:
  - (a) Supplier's premises. It is obvious that a fire at an important supplier's premises can have a serious effect upon the insured's production and his consequential loss policy can therefore be extended to cover this risk; the rate charged

- will depend upon the limits selected, the perils insured and the nature of the outside premises involved.
- (b) Customer's premises. Similar remarks apply. There have been large claims paid in cases where a company's output has been curtailed in consequence of a fire at an important customer's premises.
- (c) Property of the insured, stored elsewhere. This, of course, refers to the insured goods stored in depots and warehouses outside the area of his principal works.
- (d) Property of the insured, temporarily deposited.

  This extension refers to property sent for processing.

#### Claims Settlements

- 21. The usual basis on which a claim is calculated will be in relation to turnover, after the fire. This assumes that the insured loss can be calculated by applying to the reduction in turnover the ratio which insured standing charges and net profit combined normally bear to turnover. Apart from special provisions which may be recognized when the insurance is arranged, the policy agrees to pay, on the amount of turnover lost, the percentage which net profit plus standing charges bore to the turnover in the last financial year before the fire. This percentage is called the rate of 'gross profit' - but you will appreciate that this definition may differ in several respects from the gross profit shown in the annual accounts; firstly, a significant portion of productive wages may be included in the insured standing charges - and secondly, there will be certain profit and loss account items of expense which will have been excluded therefrom when these standing charges were selected for insurance.
- 22. Similar calculations would, of course, be made in respect of shortage of *output*, if the output standard were the one selected for the policy.
- 23. Accountants will readily appreciate the extreme importance of watching the current figures of turnover or output because average will be applied to this policy, and if it be found that the annual rate of turnover or output immediately prior to the fire was, in fact, running at a higher level, then the claim will be reduced in proportion to the ratio of undercalculation. Moreover, it will usually be the accountant who will be held responsible for ensuring that the indemnity under the policy is kept in line with current trading conditions. Incidentally, a rebate of premium can be obtained each year if the certified results of the business show that there has been an over-insurance and it is obviously therefore better to over-insure than otherwise.
- 24. If it is considered desirable to arrange an indemnity period longer than twelve months, the sum insured must be proportionately increased.

#### **Explosion of Steam Boilers**

25. As a point of interest, not always appreciated, you will find that the standard consequential loss policy includes cover against losses resulting from the explosion of steam boilers or economizers; these particular risks are usually excluded from the standard fire policy – and just why they are covered by the consequential loss policy is perhaps a matter of history rather than strict logic.

#### Other Risks than Fire

26. Consequential loss insurance does not necessarily relate to the consequence of *fire*; hotels, for example, can insure against trading loss resulting from such local calamities as epidemics – and similarly for other industries, provided the risk can be acceptably defined and identified.

#### Consequential Loss not Covered

- 27. It must be appreciated that certain forms of consequential loss cannot be covered by insurance and these may be extremely heavy. In particular, you cannot cover:
  - (a) the loss of goodwill;
  - (b) loss of book debts but it is possible to cover by a separate policy the loss of book debts caused by the destruction of records in the fire;
  - (c) legal expenses relating to death or injury caused by the fire – these are usually covered by an employers' liability or public liability policy;
  - (d) financial loss due to under-insurance in the fire policy itself.

#### Description 'Consequential Loss Insurance'

- 28. Before completing this section of the paper, it may be of interest to reflect that the description 'consequential loss' has to a large extent superseded the title 'loss of profits' for this type of insurance. The latter title places perhaps too much emphasis upon 'profits', whereas the policy is concerned with more than profits it can cover additional expenditure incurred in order to minimize the loss of turnover, and it can provide the special options already described in connection with the insurance of works wages; indeed, the policy could operate even if there were no profits at all it could be of vital importance to a business that was passing through a period of trading adversity, by meeting standing charges and perhaps an increased cost of working.
- 29. The entire subject of consequential loss insurance is a complicated one and in a paper of this sort it has not been thought desirable to describe the subject in too much detail.

(To be continued.)

#### THE ACCOUNTING WORLD

# The Profession in Switzerland

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

THE training of the Swiss professional accountant is governed by law, with certain bodies authorized to hold examinations and award diplomas. The senior of these examining bodies is the Schweizerischer Kammer für Revisionswesen (Swiss Chamber for Audit Matters), which sponsors Intermediate and Final examinations covering accounting, auditing, commercial law, taxation and company organization. Six years of qualifying employment in commerce and/or professional accounting is prescribed, with emphasis being placed on auditing experience. The successful candidate is entitled to describe himself as Diplomierter Bücherexperte, which may be translated as 'certificated accountant', a title protected by law.

Examinations on a lower standard are carried out by the Schweizerischer Kaufmannischer Verein (Swiss Commercial Society), which prescribes five years' practical experience in industry and commerce during which the examinations for the Eidgenössisches Diplom für Buchhalter (Federal Diploma for Book-keepers) are taken. The successful candidate is entitled to describe himself as Diplomierter Buchhalter (certificated book-keeper), this title also being protected by law.

The examination syllabus for both groups is broad and the standards set are high. For the size of the country, accounting and business literature is of excellent quality, and it is possible to study all phases of the profession in universities or university colleges.

Individuals who pass the examination for Bücher-experte may join the Verband Schweizerischer den Bücherexperten (Society of Swiss Certificated Accountants) and are entitled to use the designation V.S.B. after their names. Those who pass the examination for book-keepers may join the Vereinigung eidgenössisch diplomierter Buchhalter (Union of Federal Certificated Book-keepers) and use the designation V.E.B. The headquarters of both these organizations are in Zürich.

Limited companies are required to appoint auditors in Switzerland, but it is not stipulated that these auditors be professional accountants. Accountants and auditors are permitted to practise in limited companies which may function as official auditors, and there are several such comparatively large organizations which operate in this capacity. Foreign

This is the fifth article in this series; others have appeared as follows: International Freedom: June 16th, 1962, issue; Belgium: June 30th issue; France, July 14th issue; Italy: August 8th issue.

accountants, if they can obtain a work permit, may practise in Switzerland.

Under the Swiss Companies Act, 1936 – on the whole a liberal law – there are several restrictions regarding the issues of capital and the presentation of balance sheets and profit and loss accounts. Limited companies in Switzerland are considered to be private businesses which account only to their members and, with the exception of banking and insurance companies, are not required to publish or register their annual statements.

There are few requirements in the law concerning the contents of financial statements. Usually these documents do not provide detailed information and, in general, financial practice exhibits a tendency in Switzerland toward conservatism. The balance sheet is usually an actual account of the ledger, and it must comply with the 1936 Act. Ordinarily the profit and loss account includes only the gross profit, together with certain administrative and financial charges.

Limited liability companies with capital exceeding 5,000 francs must have their annual financial statements audited by an accountant, who issues a report to the company controller and to the general meeting of stockholders. In his report, the auditor must express himself as to any important shortcomings in the management of the company discovered in the audit, the distribution of profits, and the efficiency of the accounting system. The influence of the report is somewhat restricted because Swiss fiscal authorities and the Chamber of Commerce do not actually require that this report be produced with the financial statements. The auditor has the right to be present at a company's general meeting.

#### BELGIUM

#### **Consolidated Accounts**

THE technique used to consolidate the accounts of a group can be considered under three headings:

- (1) Substitution replacement of the holding company's investments in subsidiaries by the assets and liabilities of the subsidiaries.
- (2) Elimination of inter-company transactions and unrealized profits.
- (3) Separation of the interests of minority share-holders from the interests of the group.

An article published not long ago in the Revue Belge des Sciences Commerciales reviewed the subject of consolidation in the light of observations made by a French mission which made a study trip to the U.S.A. The three headings given above are taken from the report of this mission, edited by the French Productivity Agency. The article pointed out that consolidation is required by law in Britain and Sweden, virtually obligatory in the U.S.A. by reason of S.E.C. requirements there, common in Germany and Holland, but rare in France and Belgium.

Although consolidated accounts are legally required in some States of the U.S.A., the S.E.C.

requirements are the principal source of practice across the Atlantic. These rules call for consolidation of the accounts of companies in which the holding company has an interest greater than 50 per cent of the voting capital. Accounts prepared at different dates can be consolidated, providing that not more than ninety-three days (or three months) separates them. The dates of each subsidiary's accounts must be explicitly stated and reasons given for such differences. In addition, inter-company transactions between the date of the subsidiary's accounts and that of the holding company's must be stated and their treatment explained.

#### UNITED STATES

#### **Lease Option Financing**

THE City of Los Angeles now has more long-term debt under lease-purchase financing than under general obligation bonds, stated a contributor in a recent issue of *The Journal of Accountancy*. The growth of such financing since the Second World War has been little short of phenomenal. The leasing of car fleets is rising at the rate of 20 per cent per annum.

The advantages are obvious – the lack of any down payment in many cases, the freedom from borrowing restrictions, the benefits of piecemeal financing, the fact that present accounting practice allows the contract to be omitted from the balance sheets and relegated to notes, with improved working capital and current ratio figures, perhaps making possible additional financing. The lessee may be able to avoid the risk of obsolescence and he may save in income tax. Against this there are the burden of fixed rental payments, while profits may be declining, and the necessarily higher rates of interest.

As yet the accounting profession has not accepted the necessity for disclosure of the lease commitments by insertion in the lessee's balance sheet of the resulting asset and liability at their present discounted values.

#### OVERSEAS TAX DEVELOPMENTS

The following information has been supplied by the Foreign Section of the Library of the Board of Inland Revenue.

#### Australia

No changes in rates or allowances are proposed for the year commencing July 1st, 1962.

#### Federation of Malaya

The Income Tax Act, 1962, makes the following provisions:

Tin Buffer Stock. If an election is made to have contributions under the Tin Control (Buffer Stock) Regulations ignored for income tax purposes, repayments under those regulations are exempt from income tax; otherwise such repayments are assessable in the year of payment.

Plantations. Capital expenditure incurred after 1961 on the clearing of land or on planting is allowable as to one-half in each of the year of expenditure and the next year, instead of being spread over ten years.

Tin mining. The initial allowance in respect of capital expenditure on machinery and plant used in tin mining is increased from 20 per cent to 60 per cent; this increased allowance may by Order be extended to other machinery and plant.

Shipping and air transport profits. The present exemption of such profits of non-residents, subject to reciprocation, is withdrawn as from 1962 unless provided for by a double taxation agreement.

#### Grenada

The rate of tax on companies is increased to 40 per cent for 1962; the rates for other persons remain unchanged.

# Weekly Notes

#### CANADIAN INSTITUTE'S DIAMOND JUBILEE

THIS week the sixtieth annual meeting and conference of The Canadian Institute of Chartered Accountants was held in Fredericton, New Brunswick. Some 700 members and their wives from all parts of Canada assembled last Monday, the joint hosts being the President of the Canadian Institute, Mr George W. Hudson, F.C.A., and Mr G. Andrew Oulton, F.C.A., President of the New Brunswick Institute of Chartered Accountants. Among the official guests were Mr Graham Usher, M.B.E., T.D., C.A., Immediate Past President of the Scottish Institute; Mr J. W. Queenan, C.P.A., President of the

American Institute of Certified Public Accountants; Mr C. W. Andersen, General Registrar, Australian Society of Accountants, and Mr H. Gerritsen, Honorary Secretary, Nederlands Instituut van Accountants.

The annual general meeting of members last Monday started three busy days of conference sessions, including even a breakfast meeting on Tuesday at 8.30 a.m. Two simultaneous sessions were held on Monday afternoon; five on Tuesday morning, including one in French; and three in each of two periods on Wednesday morning, besides a full morning session. A Provincial Government lunch took place on Tuesday at which the guest speaker was the Premier of New Brunswick.

The conference concluded with luncheon on Wednesday, when Mr James W. Abbott, F.C.A., was elected President of the Canadian Institute for the ensuing year. Mr Abbott is a partner in the Winnipeg

office of Peat, Marwick, Mitchell & Co, following the merging of his own firm in the partnership in 1960. He was President of The Institute of Chartered Accountants of Manitoba in 1955-57.

We hope to include a report of the diamond jubilee conference in next week's issue of *The Accountant*.

#### NINTH INTERNATIONAL CONGRESS 1967 IN CANADA?

AT its diamond jubilee conference held in New Brunswick during this week, the Canadian Institute issued an invitation for the Ninth International Congress of Accountants in 1967 to be held in Canada. This invitation will doubtless be considered, together with others which may be received, at the Eighth International Congress in New York this month.

## SCOTTISH INSTITUTE'S NEW APPRENTICESHIP GUIDE

REVISED edition of the C.A. Apprenticeship Guide just issued by The Institute of Chartered Accountants of Scotland incorporates recommendations approved at a special general meeting of the Institute held on June 25th last (The Accountant, June 30th). This helpful booklet for those wishing to make the profession their career, presents with clarity the conditions of eligibility for admission to member-

ship of the Scottish Institute.

A number of changes have taken place in the Institute's policy in the training and examination of apprentices since the publication of the last Guide in June 1961. The principle revisions reflected in the booklet are as follows. As from the date on which the Privy Council approves the amendment, registration dues will be increased from fio ios to £31 10s, of which the apprentice's master will pay £21, the balance of £10 10s payable by the apprentice remaining unchanged. Total remuneration for the normal five-year apprentice has been raised to £1,250, commencing at £150 per annum in the first year and rising to £400 per annum in the fifth year; this compares with the old scale of £100 per annum for the first three years, £200 in the fourth year and £300 in the fifth year. The new scale is designed, in the words of the President, in order 'not to make entry to the profession impossible to those with limited means'. There has also been a slight increase in all examination fees which come into operation in 1963 and total disbursements in respect of examination fees, university class fees and books have accordingly been increased to £200 from £175. The fee for admission to membership will be increased from forty to fifty guineas after the end of of this year.

A particularly interesting and important change reflected in the *Guide* is the intention of the Council that, in respect of indentures lodged after February 29th, 1968 for registration, the preliminary qualifications required will be an attestation of fitness for entry into a Scottish university or a university degree as at

present approved by the Council for reduction of the period of indentured service.

Also issued is the second edition of the Institute's Can I Become a C.A.? for distribution to schools and universities, which answers many such questions as Am I the kind of person to make a good chartered accountant? What would my prospects be? How do I become a chartered accountant? and What does it cost to become a chartered accountant?

#### REPORT ON COMPANY GROUPS

THE recent flurry of take-over bids once again brings to the fore the question whether large industrial groups can be said to operate in the public interest. Lately, the investigation of company grouping has been the subject of an exercise by a subcommittee of the Birmingham Junior Chamber of Commerce and their findings suggest that, in general, amalgamations and take-overs are beneficial to the community as a whole. In most cases, they say, not only is better use made of assets and labour employed but also the larger units are more capable of taking advantage of the benefits of automation, mass production and the co-ordination of research.

Although the subcommittee were fully aware that this trend could lead to a state of trade monopoly, they consider that this danger was to some extent counteracted by the development and expansion of the Common Market – and for countries outside the Common Market by the abolition of protective tariffs.

One word of warning, however, about the dangers of rapid growth is addressed to management in particular: it is always possible for a business to expand beyond the capabilities of its present management team and the subcommittee therefore make a strong plea for the training of executives in the higher levels of management – a point which will find ready support in many quarters.

As to industrial holding companies, although the subcommittee feel that there was less economic justification for these kind of groupings, they go on to say that perhaps the main public benefit is the prevention of complete monopoly in any industry in which the

group is represented.

# EXPLORING THE FOUNDATIONS OF ACCOUNTING

EVER since double-entry book-keeping first made its bow before the world of business, accounting methods have been developed in response to a wide variety of impulses and under a variety of influences. Some have been dictated by the nature of the environment; others can be laid at the doorstep of practitioners faced with technical problems for which the environment gave no clear direction signs. Development has been piecemeal; it could not have been otherwise and will doubtless continue in the same vein. It should not cause undue surprise, therefore, to find a number of different accounting systems running concurrently. Nor will it have

escaped attention that some of these systems seem to be contradictory.

The mere existence of a variety of methods along with their internal inconsistencies force the profession to reconsider underlying ideas and the constant search for a general theory was carried a step forward by Professor R. J. Chambers, Professor of Accounting in the University of Sydney, in giving the 1961 Annual Endowed Lecture of the Australian Society of Accountants in the University of Adelaide, which has recently come to hand in published form.

The paper does not take the form of a survey of accounting practices nor of an appraisal of the lore of teachers and practitioners of accounting. Instead, its purpose is to explore the economic and social foundations of accounting in pursuit of a body of general ideas on which the practice of accounting is or may be based, and to start with it considers at length just two cases – natural persons as producers and consumers; and simple trading enterprises. Constructing a coherent network of ideas out of the mixture of psychological, economic, legal, conventional and formal considerations is indeed a formidable task.

# This is My Life ...

by An Industrious Accountant

CHAPTER 135

IT started when I was signing some cheques for routine drapery purchases and noticed that we hadn't availed of some special discounts for payment within seven days of invoice date. Apparently, the section manager, in spite of reminders from the accounts department, hadn't completed the goods received record in time. A query to him elicited an angry grumble that the bales had been held up deplorably in our transport section, not for the first time either.

A visit to transport revealed a scene of confusion unparalleled in our history. Outgoing vans, incoming carriers' vehicles, casual hand trolley-carts, were tangled up inextricably. Our exit route had admittedly been overburdened by allowing some of the contractors' men to bring in supplies, but there was no excuse for permitting private cars to park near the outer loading bay. Traffic was at a trickle; no wonder the flow of purchased stocks was being delayed.

The transport manager seemed overwhelmed. Normally a very reliable type, he's nevertheless short of initiative; emergencies fluster him. 'I play it by ear', he maintained doggedly; this revolting piece of jargon really means that he hopes that chance, or some enterprising subordinate, will clean up the mess for him. It was impossible, however, to intrude on his domain; he had his own responsibility and wouldn't welcome interference. I could only murmur vaguely about the urgent necessity to earn our discounts.

A big railway truck was delivering crates marked 'Fragile – this side up'; the loading platform wasn't clear so some of the crates were diverted aside; they fouled the moving hook dangling from an overhead runway and toppled a stack of boxes. Everyone started shouting contrary instructions. The T.M.

told his assistant briskly to sort it out, and avoided my eye. He stood hesitantly, hands plunged deep in his brown overalt pockets, face unhappy, obviously beaten. Across the congested, dusty hall we could see the managing director sauntering towards us, his quiet little smile not necessarily indicating inward ecstasy. 'Oh, hell,' said the T.M., with deep feeling.

So it wasn't exactly a surprise to be asked later that day to review the organization of the transport section and recommend improvements. Our outfit doesn't have experienced engineers readily available to examine layout problems; such headaches are often tossed over to me as the Jack of all trades. This I find gratifying, not so much for empire-building as to give my internal audit chaps some practical operational studies.

So I sat down amicably with the T.M. to talk things over and agreed to second an internal audit man to transport to do an immediate survey. I selected Frank, a studious young fellow of academic distinctions. He was keen on the idea; it would enhance his prestige, and his section's, if we improved the system. The snag was that Frank notoriously runs to delusions of grandeur. His first idea was to stroll round with notebook and stopwatch – an independent master-mind on Goethe's style, reading each wound, each weakness clear:

'He struck his finger on the place, And said "thou ailest here, and here".'

It took some tact to bring him back to reality. He must work temporarily as a subordinate to the T.M., to keep the chain of command simple and optimize relationships with the transport staff. He would, however, have considerable freedom and would report independently. He accepted this compromise cheerfully and all seemed well...until the following morning, when Frank came storming in to me, flushed with insult. "That so-and-so wants me to wear brown overalls,' he raged. 'What does he think an accountant is?'

No fooling, tact is the main factor in attaining efficiency nowadays. It took a lot of eloquence to prevent Frank from really dropping a brick.

#### Metal Industries

£983.847

THE accounts of Metal Industries Ltd for the year to March 31st, 1962, are the subject of our reprint this week. This company's standard of reporting has earned good marks from commentators on company accounts. It is an example, as one said, 'which it is to be hoped more companies will follow'.

The M.I. group has a history that goes back to the salvaging of the scuttled German fleet from the Scapa Flow waters, and one of the group's four main sections is concerned with 'Metals recovery' and ship-

breaking. As M.I. has since developed, there are now other sections for 'Electrical and electronic control and instrumentation', for 'Electrical power and distribution' and for 'Hydraulic and mechanical engineering'.

Last year the company broke new ground, as Sir Charles Westlake, the chairman, reminds shareholders in his review, by publishing the individual profits of all the companies in the group – a fact that was noted with approval in this column.

It was a good way of giving shareholders more information, observed Sir Charles, in view of

#### CONSOLIDATED PROFIT AND LOSS ACCOUNT

- The comparative figures for the previous year in the consolidated profit and loss account include the results of companies in the former Lancashire Dynamo group for the fifteen months ended 31st March 1961 and of companies in the Alcol group for the nine months ended 31st March 1961. The equivalent trading profit for the year ended 31st March 1961, apportioned on a time basis, would have been £2,163,864.
- 7 The exceptional profit of £93,812 shown in the consolidated profit and loss account arises as follows:

132.853

39,041 £93,812

£

(Stock and work in progress of two further subsidiary companies remain to be adjusted to the consistent Group basis next year.)

#### CONSOLIDATED AND PARENT COMPANY BALANCE SHEETS

- Amount written off shares in a subsidiary, thus eliminating the premium 6,935,600
- Taxation:
  No provision has been made for United Kingdom taxation (less double taxation relief) which
  No provision has been made for United Kingdom taxation (less double taxation relief) which would arise in the event of overseas subsidiaries distributing reserves or unappropriated profits.
- 12 There is a contingent liability on the parent company, amounting to £45,000, in respect of the uncalled share capital of a trade investment.

their acquisition of the Lancashire Dynamo companies. But while this was an advance in company reporting, he was not 'wholly satisfied that it was enough to give figures of profit unrelated to turnover and to the proportion of our stockholders' assets employed in securing those profits'.

#### Optimum and Minimum

This year, therefore, the board decided to present results 'in a form which brings together individual companies into sections whose activities are closely related'. For each section, the company now gives not only the profits earned but also figures of turnover and the proportion of net assets employed in each section. This 'Analysis of results' forms part of our reprint and explains itself.

'I feel sure', Sir Charles goes on, 'that this modification of the form of presentation will be accepted as a real attempt to give the optimum amount of information to stockholders with the minimum of risk that their investment might be jeopardized by disclosure to competitors' - a sentiment which we cannot but endorse and applaud.

Also included in our reprint is an analysis of the Ordinary stockholding. Information of this nature in company reports is increasing, we are glad to note; of particular interest here is the evidence of the substantial increase in the holdings of institutional investors. At 58 per cent, their aggregate holding compares with 33 per cent of the equity ten years ago.

Sir Charles mentions the fact that all classes of the company's stock are now 'wider-range' trustee securities and scrutiny of the lists of stockholders who have come into the company in recent months, he says, suggests that quite a number are trustees who for the first time have been able to invest in Metal Industries.

#### Terminal Loss

"HIS year's accounts of John Thompson Ltd, the engineers, continue to reflect the unfortunate experience of the builders of the

Berkeley Atomic Power Station, in which the company was concerned in partnership with Associated Electrical Engineering. The main contractor was A.E.I.-John Thompson Nuclear Energy Co Ltd.

It was hoped that last year's provision for the anticipated loss on the John Thompson group's subcontract would be sufficient. But owing to the complicated nature of the contract, additional costs were incurred and emerged which it was difficult to foresee. Sir Edward Thompson, the chairman, adds that 'at this late stage of the contract as far as we can see, the further reserve we have made should be sufficient'.

The consolidated profit and loss and appropriation account for 1961 shows a provision for terminal loss on Berkeley Nuclear Power Station contract of £429,000; against which, however, has been immediately offset taxation relief of £227,907, leaving £201,094 which has been balanced off with a transfer of that amount from general reserve.

#### Deed of Covenant

Apart from this provision in respect of its subcontract; John Thompson has also to meet its obligation as a shareholder in the main contracting company which is responsible for the Berkely contract as a whole. To meet its one-third share of ascertained losses, it contributes annually by deed of covenant.

Sir Edward notes that in the 1961 accounts of A.E.I., it was stated that it was not possible to assess the financial outcome of this main contract. But on their part in 1959, he continues, John Thompson set aside £500,000 as a special 'Nuclear contracts reserve' from which the annual covenant payments are made to A.E.I.-John Thompson Nuclear Energy Co. A further £300,000 has been added this year as 'a precautionary measure'.

The consolidated profit and loss account includes payment under deed of covenant, less tax, of £49,654, which has been balanced off by the transfer of that amount from the nuclear contracts reserve.

The Berkeley Nuclear Power Station's first generator was switched on to the national grid on June 11th to become the first commercial nuclear power station to operate in Britain. Its erection was a new experience for all concerned. Sir Edward is able to report that at Dungeness - the next contract commitments were very much less than at Berkeley. 'The contract', he says, 'is proceeding well'.

#### CITY NOTES

THE prospect of a material reduction in interest rates and a further release of special deposits to the banks has injected considerable strength into the gilt-edged market. Undated stocks now stand at their highest levels for more than two years.

In contrast to the strong improvement in the giltedged section, the equity markets have tended to lose the fire with which they began their rally three weeks ago. New investment in equities is on an extremely selective basis and there is widespread acknowledgement of the fact that, although some industrial reexpansion is in prospect, there can be no early return to strong industrial company profit growth.

Common Market uncertainties also tend to dampen equity enthusiasm and the apparent contradictions in official statistics - the improvement in the industrial production index against the continued down-turn in bank advances, for example - make for defensive rather than offensive equity investment policy.

So far as the gilt-edged market is concerned there are now definite signs of a downward trend in longterm interest rates which, until recently, had stayed obstinately high despite a  $2\frac{1}{2}$  points reduction in Bank rate. Prospect of a reduction in long-term rates is the main driving force in the current strength of Government stocks.

The strength of the market currently being tested by a fro million New Zealand loan is expected to be subjected to further home corporation borrowing soon.

#### FOR STUDENTS

### VERIFICATION OF STOCK

#### Stock Reconciliations

THE verification of stock-in-trade is an annual headache. It is difficult for the auditor to satisfy himself as to the accuracy of the stock figure merely by inspecting a bundle of stock sheets. For this reason it is often advisable, particularly where raw materials are concerned and where sufficient information is available, to rely more upon stock reconciliations. These can be prepared either by weight, by value, or by both. They will look somewhat as follows:

Memorandum Stock Reconciliation Account

Opening stock Purchases less returns Goods issued Closing stock

The usual problem is to discover the issues figure, but this is available in a surprisingly large number of businesses if one knows where to look for it. Again, one must be careful where values are being used, to ensure that all figures are prepared on the same basis. A reconciliation of this type will not be exact but will quickly disclose any large discrepancies.

Much the same can be done for work in progress though, in this case, the information is likely to be less readily available. Here the account will appear:

#### Memorandum Work in Progress Account

Opening work in progress

Materials issued
Other direct expenses
Overheads where applicable

Value of completed work Closing work in pro-

The value of reconciliations such as these is considerable. True, the necessary data may not always be readily obtainable, particularly for work in progress, but where this information is available, it should surely be used.

#### **Physical Checks**

It is often suggested that the auditor should make a physical count of stock. In fact, the best way of ascertaining the existence of anything is usually to inspect it. However, it is worth remembering that while a physical inspection will discover the extent of the stocks held it will not establish how much ought to be there. This can only be found out by other means, the reconciliation being one of them.

Physical checks are not always feasible. In the first place it is necessary for the auditor to attend at the time when stocks are being taken. Secondly, the auditor is not normally sufficiently qualified, technically, to classify the various items in store. Nevertheless, there is no reason why he should not, where possible, apply the moral curb of attending the stocktaking as an observer and, particularly where a stores ledger is maintained, there is no reason why he should not make physical spot checks at various times.

The legal position as to the necessity for physical verification is slightly vague. There is a dangerous tendency to rely rather too much on the dicta in the Kingston Cotton Mill case where special considerations may be said to have applied, and there is no certainty that that decision would be followed in future. In fact the later case of Irish Woollen Co Ltd v. Tyson and Others deserves more attention. The stock error here was perhaps of a different type (arising from the suppression of invoices) but the decision went against the auditor.

Much reference is made to the famous McKesson & Robbins case in the United States. In fact this was more a case of auditors relying too much on certificates supplied from areas not visited, than of a mere failure to check stock by physical means. To this extent it has more in common with In re City Equitable Fire Insurance Co Ltd, than with the Kingston Cotton Mill case.

#### McKesson & Robbins

As the facts of the *McKesson & Robbins* case are not given in most textbooks it may be useful to summarize them here.

Frank Donald Coster (born Philip Musica) obtained control of McKesson & Robbins when it was still a small manufacturing concern. In a comparatively short space of time he had built it up into a giant company, the third largest of its type in the world, of which he was president. He also, during this time, swindled the company out of \$2,900,000.

The fraud was based on a fictitious trade in drugs and the collaboration needed at the McKesson & Robbins' end was provided by Coster's two brothers, working under assumed names, at key points in the organization. Drugs would be ordered from a fictitious company in Canada and a forged invoice therefrom would be placed in the file. A ticket would be made out showing the drugs as stored in a fictitious Canadian warehouse and a letter written to a non-existent bank, Manning & Co, ordering payment to be made.

The drugs (which were, of course, mere figments) would be sold through a firm called W. W. Smith & Co. This was, theoretically, a world-wide trading concern (or so the auditors of McKesson & Robbins believed) but in fact was a dingy back-street office kept by another of Coster's brothers, Vernard. McKesson & Robbins would receive a letter from W. W. Smith & Co stating that the goods were sold and a file of forgeries would then be built up recording the disposal of the goods. The file would include a statement from Manning & Co indicating that the purchaser had paid for the goods. A genuine cheque would then be made out to W. W. Smith & Co by way of commission and the cash would shortly find its way back into Coster's pocket.

All the phoney forms were pre-printed and typed by a girl in Vernard's office using seven different typewriters. Vernard also kept a girl at the Montreal address of Manning & Co. Twice a year she received letters from the auditors of McKesson & Robbins asking for verification of that company's balance in hand and a list of the stocks in the five (fictitious) warehouses. The letters were forwarded to Vernard who wrote the separate replies and parcelled them back to Montreal, where they were posted.

So it went on. Whatever happened to the rest of the company, the crude drugs division always made a profit. True, the paper profit kept on being ploughed back into more (non-existent) drugs but nevertheless,

the assets of the company continued to increase. The crisis came with the slump in 1937 when the directors ordered a general conversion of stocks into cash, including \$2 million of the stocks in Canadian warehouses. This of course was impossible and the truth gradually came out. In the event the assets of the company had to be written down by \$21 million or one-quarter of its wealth.

Unbelievable? Yet the story is nevertheless true.

Let the auditor beware!

#### Whole Pound Accounting

SIR, - The letter you have published in your issue of August 18th from Mr W. C. Nowell raises an interesting question and you refer to the Port of Bristol Authority as an undertaking which adopts this procedure. I take it, therefore, that you may be

interested in receiving my comments.

The practice of dispensing with shillings and pence in the internal accounting systems of large undertakings certainly has advantages both in saving time and avoiding errors. The opportunities for adopting whole pound accounting rest more with the larger undertakings with a certain degree of mechanization, because without mechanization it might be more trouble than it is worth. It is also to be remembered that in this electronic age a saving may not show itself in that part of the work that is processed through a computer which can deal with pounds, shillings and pence just as easily as pounds only and that the input is probably in full sterling even though the results are tabulated without shillings and pence. At the stage where postings take place to final accounts and costs records - and this varies with the degree of mechanization - posting in pounds only is in my view much to be preferred both for revenue and expenditure. The method of achieving whole pound accounting is simply by programming the machines to carry forward the odd shillings and pence and add them to the totals for the next day, week or month as the case may be. It is in fact very much the same procedure as paying wages without coin.

The elimination of shillings and pence not only reduces the risks of errors in posting, but produces

more compact and readable records.

There is a further gain in that when the annual accounts are being prepared for publication there is a worth-while saving of time because each part of the report can be sent to the printer as completed without

waiting for the whole and with the knowledge that a figure printed on one page will not have to be altered in another context to make it add up to a correct total. Whole pound accounting can go a very long way, but in as much as all accounts with third parties must still be in pounds, shillings and pence there is a point in the system where these must be accommodated and when your correspondent introduces the word 'entire' I doubt whether this is really practicable so long as the calculation of wages and accounts receivable are  $f_s$  s  $f_s$ .

Yours faithfully,

Yours faithfully, J. A. PHILPOTT, M.B.E., F.A.C.C.A. Accountant

Bristol, I PORT OF BRISTOL AUTHORITY.

#### **Television Rentals**

SIR, - The following observations are pertinent to the questions raised in a letter signed 'T. V. Hire' in your issue of August 11th. It is always better, where possible, to segregate the hiring from the normal selling side of the business through the medium of two companies - one to do each particular type of business. The hiring company could then acquire the TV sets from the selling company as these were needed and would claim appropriate capital allowances thereon. If capital allowances are to be claimed on the sets, they must be in use for the purposes of the hiring trade. The retailing of electrical goods will not have incurred capital expenditure on plant which would be the subject of capital allowances if the expenditure has been incurred on trading stock for sale in the trade.

So far as the hiring business is concerned, it would appear that this really consists of obtaining income by letting out the sets for a rental and not as a result of selling the sets. It may well be, therefore, that the sum received for the rental agreements is a capital sum as your correspondent suggests. Nevertheless, the case is bound to be made more difficult because of the dual aspect of the trade which might be said to be the turning to account of electrical goods and therefore all sums which are received in this connection are to be regarded as receipts of the trade for taxation purposes.

Yours faithfully, RENTALS.

# Electronics in the Office

#### **New Computer**

NEW computer - known as KDF 6 - has been added to the English Electric Company's range of data-processing systems. Based on magnetic tape and specifically designed for commercial organizations the system will cost as little as £50,000, or it can be rented.

To exploit completely the power of KDF 6, English Electric have written for it a new automatic programming language, "Talk'. With this programmes can be written in plain English, and these are translated by the computer into its own language. Executives with only a minimum knowledge of electronic data processing can write their own programmes. "Talk' takes full advantage of the most recent work on existing programming languages, a simplified presentation has been achieved, and many advances in automatic programming have been incorporated.

KDF 6 is capable of undertaking all types of commercial operations including production control, cost accounting, billing, banking, insurance, building society work, and hire-purchase.

#### Common Machine Language

THERE is more to characters printed in magnetic ink than meets the eye, as may be seen from the ninety-nine page booklet The Common Machine Language, issued by The American Bankers' Association, which contains the encoding recommendations of the Association's Technical Committee. Since British banks have decided to adopt the United States system of encoding, the present booklet will be found useful to all who are concerned with the implementation of the decision and with further developments.

The first chapters deal with the redesign of cheques, in particular with the bottom margin, reserved for repeating, in magnetic ink, what amounts to a translation of the normal language content into machine language. Under the heading 'Implementing the programme' there is an urgent request for the banks to read thoroughly the precautions contained in this chapter and to adhere closely to them in order to obtain the full benefits of mechanization of cheque handling, both for themselves and for others, i.e. not to hinder, by premature or ill-advised action, the uniformity required by mechanization of cheque handling. For it is in the nature of the problem that the objective cannot be reached until a very large

<sup>1</sup> Publication No. 147R, issued by the Bank Management Committee, The American Bankers Association, 12 East = 36 Street, New York 16, N.Y. Price \$1.50.

portion of the cheques – if not all – presented to the machine carry the necessary details in a precisely formulated and precisely printed manner.

Unfortunately, while the common machine language is simple enough, the language in which the specification is written and explained is highly technical, and it includes, among others, references to waveforms as they appear on the face of an oscilloscope. Banking terms disappear in the second half of the booklet entirely and give way to engineering terms, dimensional drawings of the numerals and symbols and their printing.

The fount which since Christmas 1958 became officially known as E-13B, managed to dominate the basic concepts of banking automation on both sides of the Atlantic and became a source of controversy. It is one of the declared purposes of this booklet to give in full detail all the requirements of proper cheque format and of encoding and whatever the future may bring by way of amendments or adaptations in the light of local or regional experience – the present booklet will be found of benefit to both bankers and engineers.

#### **Computer Brochures**

TO explain the various techniques they have developed to make their computers compatible with other systems, Honeywell's E.D.P. Division have produced a booklet entitled *Honeywell Talks Your Language*.

The brochure explains that the company provide equipment that can 'talk' more than one computer language, thereby making different machines easily and economically compatible. This equipment includes magnetic tape converters that facilitate change-over to a Honeywell system, tape translators that permit continuous interchange of data between computers of different makes, and communications control equipment that make transmission of data over long distance lines feasible between Honeywell or Honeywell and 'foreign' electronic data processing systems.

Also available is a brochure describing the company's new 1800 electronic computer system. Entitled, Honeywell 1800 Facts and Figures, it discusses the features of the powerful 1801 central processor, including parallel processing and orthotronic control, the 1801B floating point arithmetic option, the various input-output equipment and automatic programming aids.

Copies of these brochures are obtainable from Honeywell E.D.P. Division, Moor House, London Wall, London EC2.

#### Computer for Life Assurance Companies

THREE Scottish life assurance companies have arranged the joint purchase of an I.C.T. 1500 electronic computer. They are: The Scottish Equitable Life Assurance Society, Scottish Life Assurance Company and Scottish Provident Institution.

A subsidiary company is to be formed to manage and operate the computer, and installation is expected to be completed in the middle of next year. The machine will also be available to outside interests wishing to hire time.

# New Legislation

All new Acts are noted in this column, together with those Statutory Instruments which are of interest to the profession. The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective.

# STATUTES (10 & 11 Eliz. 2)

#### Chapter 40: Jamaica Independence Act, 1962

An Act to make provision for, and in connection with, the attainment by Jamaica of fully responsible status within the Commonwealth.

Price Is net.

July 19th, 1962.

#### Chapter 41: Colonial Loans Act, 1962

An Act to amend the Colonial Loans Acts, 1949 and 1952.

Price 3d net.

July 19th, 1962.

#### Chapter 42: Law Reform (Damages and Solatium) (Scotland) Act, 1962

An Act to amend the law of Scotland relating to damages and solatium by extending the entitlement of parents to sue in respect of the death of a child, and to remove a doubt as to the title of a child to sue in respect of the death of his mother while his father is alive.

Price 3d net.

July 19th, 1962.

### Chapter 43: Carriage by Air (Supplementary Provisions) Act, 1962

An Act to give effect to the Convention, supplementary to the Warsaw Convention, for the unification of certain rules relating to international carriage by air performed by a person other than the contracting carrier; and for connected purposes.

Price Is net.

July 19th, 1962.

#### Chapter 44: Finance Act, 1962

An Act to grant certain duties, to alter other duties, and to amend the law relating to the National Debt and the Public Revenue, and to make further provision in connection with Finance.

Price 5s 6d net.

August 1st, 1962.

#### Chapter 45: Appropriation Act, 1962

An Act to apply a sum out of the Consolidated Fund to the service of the year ending on the thirty-first day of March, one thousand nine hundred and sixty-three, and to appropriate the supplies granted in this Session of Parliament.

Price 3s net.

August 1st, 1962.

# Notes and Notices

#### PROFESSIONAL NOTICES

MESSRS HART, KELLAND & CO, Chartered Accountants, of 213a Monument Road, Birmingham 16, announce that as from September 1st, 1962, their practice will be amalgamated with those of MESSRS LITTLEBOY, GILLETT & Co and Messrs HAY MCDONALD & CO, Chartered Accountants. The combined practices will be carried on under the partnership name of: GILLETT, KELLAND & CO, 7 George Road, Edgbaston, Birmingham 15. Telephone: Edgbaston 5871 (2 lines) and the partners in the new firm will be: Messrs J. A. GILLETT, F.C.A., J. D. KELLAND, F.C.A., R. RAVENSCROFT, F.C.A., M. J. SHANNON, A.C.A., all of whom will be engaged therein full time.

#### **Appointments**

Mr H. J. Binder, F.C.A., has been appointed chairman of Central Wagon Co Ltd.

Mr R. Helliwell, A.C.A., has been appointed a joint managing director of J. H. Peck & Co Ltd.

Mr A. F. Taffs, F.C.A., has been appointed a director of Buries Markes Ltd; he continues as secretary of the company.

Mr B. B. C. Watson, B.A., A.C.A., has been appointed secretary of Courage, Barclay & Simonds Ltd.

#### MR C. A. WHITTINGTON-SMITH, LL.M., F.C.A.

#### New Appointment in Sheffield University

Mr C. A. Whittington-Smith, LL.M., F.C.A., has been appointed Dean of the Faculty of Economic and Social Studies in the University of Sheffield – not Southampton as published elsewhere. Mr Whittington-Smith will continue to be senior lecturer in charge of the Department of Accountancy and Financial Administration in the University. The new appointment takes effect from September 1st, 1962.

#### TAX RESERVE CERTIFICATES

The Treasury has announced that as from August 25th, 1962, tax reserve certificates of the ninth series issued under the terms of the prospectus dated March 21st, 1961, will bear interest at the rate of  $2\frac{1}{2}$  per cent per annum. The rate of interest on certificates of the ninth series subscribed before August 25th, 1962 will remain unchanged.

### NORTHERN SOCIETY OF CHARTERED ACCOUNTANTS

Mr J. C. Benson, F.C.A., a partner in the firms of Winter, Robinson, Sisson & Benson, and Deloitte, Plender, Griffiths & Co, of Newcastle upon Tyne, has

been elected President of the Northern Society of Chartered Accountants for 1962–63. Educated at Sedbergh School, Mr Benson was admitted an Associate of the Institute in 1938. He served in the Army throughout the last war returning to practice in 1945.

A member of the committee of the Northern Society from 1945 to 1953 (and again since 1959) he served as the Society's honorary

secretary and treasurer during the period 1947-49. The new Vice-President of the Society is Mr F. E. Proom, F.C.A., a partner in the firm of Graham, Proom & Smith, also of Newcastle upon Tyne. Other officers for 1962-63 are as follows:

Hon. Secretary: Mr R. W. Thoburn, F.C.A., Messrs Ridley & Ridley, 12 Windsor Terrace, Newcastle upon Tyne 2.

Hon. Treasurer: Mr T. M. Sadler, A.C.A.

Hon. Dinner Secretary: Mr R. L. Mills, F.C.A., Messrs Joseph Miller & Co, Mosley Street, Newcastle upon Tyne 1.

#### **Annual Report**

The Society's annual report records that membership at December 31st, 1961, totalled 435 – an increase of twenty members during the year. Sixteen local members of the Scottish Institute also participated in the Society's activities.

The committee reports that the informal lunches held at Newcastle and Sunderland during the year were well attended; the subjects considered at these meetings included 'Some thoughts on investment policy', 'Statistics in industry', and 'The procedure of income tax appeals'. An interesting programme of social functions included the annual dinner, attended by over three hundred members and guests; a pot pie supper with the local Inspectors of Taxes, which was very well attended, and the annual golf meeting held at Ryton.

Membership of the North Yorkshire and South Durham Branch again increased during the year and

MOTOR — FIRE — CONSEQUENTIAL LOSS

MOTOR UNION

INSURANCE COMPANY LTD

10 ST JAMES'S STREET, LONDON, SW1

numbered 195 at December 31st. Lecture meetings and luncheon meetings were arranged and a visit was made to J. W. Cameron Ltd, of West Hartlepool. The annual dinner, attended by 155 members and guests, was held at Middlesbrough.

The Cumberland Branch – with a membership of eighty-two – held two lecture meetings during the year and social events included the annual ball, held at the Royal Oak Hotel, Keswick, and golf meetings at Carlisle and Workington.

#### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES Finding and Decision of the Disciplinary Committee

Finding and Decision of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on July 30th, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that a clerk under articles to a Fellow of the Institute had been guilty of the following acts or defaults: Whilst previously under articles to another Fellow of the Institute he failed to comply with the provisions of the articles in that (a) in breach of Article 2 (i) he failed faithfully and diligently to serve his principal; (b) in breach of Article 2 (iv) he failed to conduct himself with all due diligence, honesty and propriety; (c) in breach of Article 2 (v) he absented himself from the service of his principal without his principal's consent first obtained, and otherwise conducted himself in a manner unfitting for an articled clerk, so as to render himself liable to be declared unfit to be a Member of the Institute under the provisions of clause 22 of the supplemental Royal Charter of December 21st, 1948, and bye-laws 104 to 111 of the Institute. The Committee found that the formal complaint had been proved under all headings and the Committee decided that the articled clerk be reprimanded but considered that there existed special circumstances justifying the omission of his name from the publication of the Finding and Decision.

#### CORRECTION

In an article for students on 'Traders' Payments in The Accountant of July 21st, it was stated under the sub-heading 'Mechanics of the system' on page 81 that the information on the credit slip should include '(d) the reference number of the remitter's bank'. This should have read 'the remittee's bank'.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of September 3rd, 1887 From a leading article

## THE AUDIT OF THE ACCOUNTS OF FRIENDLY SOCIETIES

The vast number of friendly societies, and the fact-that they are scattered all over the Kingdom, and are to be found in every village, town and city in the land, gives to the question of the professional audit of their accounts a general interest, which properly looked at is, perhaps, possessed by no other like subject, if we except the question of the audit of the accounts of local authorities. It should further be noted, that a Friendly Society Reform Association is now in operation. Its title suggests the objects it has in view. One of these objects is the independent audit of the accounts. It will be seen, therefore, that this subject has great importance for all chartered accountants, that that importance has been publicly recognised and publicly stated by responsible Government officials, that, moreover, voluntary efforts are being made to bring that importance into full public view. We therefore say, as has been already said, in effect, that amongst the matters demanding our attention as a body, this subject should be placed in the forefront.... The question of the audit of the accounts of Friendly Societies can, we firmly believe, be settled in a way which would be satisfactory to the community, beneficial to the Societies themselves as well as to chartered accountants, and in substantial accordance with the opinions of the ablest authorities on the subject. And, if its settlement took the shape which we hope it will, it would not be without importance in its influence on other great questions in which accountants are greatly concerned. . . .

### THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting of the Accountants' Christian Fellowship for Bible reading and prayer will be held at 1 p.m. on Monday next, September 3rd, in the vestry of St Mary Woolnoth Church, King William Street, London, EC3. The Scripture for reading and thought will be Galatians, Chapter 5, verses 16 to 26 (The fruit of the Spirit).

# End of Gourley?

It is over two years since the Finance Act, 1960, reached the statute book and during this time its contents have been anxiously pondered, if not always understood. There seemed, however, to be little doubt as to the significance of one segment of the Act which had been the subject of widespread publicity since its inception. References to the 'golden handshake' abounded in Press comment on the 1960 Budget and, although this phrase does not appear in the Act itself, a sober marginal note set against section 37 indicates that it relates to payments on retirement or removal from office or employment. The relevant charge to tax is subject to the exemptions and reliefs detailed in section 38, prominent among which is the exclusion in any given case of payments not amounting to £5,000.

We read with a certain sense of shock, therefore, that an award of £1,200 damages to an employee for wrongful dismissal (Parsons v. B.N.M. Laboratories Ltd) reported in The Times of August 31st, was required to be made gross by reason of the fact that it was within the ambit of section 37. We had, indeed, understood that the Finance Act, 1960, modified the area of application of the principle established in British Transport Commission v. Gourley (34 A.T.C. 305), but the report of the Parsons case ascribes to Master Jacobs the statement that section 37 had effected a fundamental change in the law which nullified that principle.

We recall that the decision in the Gourley case was given by the House of Lords on December 8th, 1955, by a majority of six to one after an exhaustive review of the place of taxation in the assessment of damages. The position where a plaintiff claimed loss of earnings because he had been prevented from fulfilling a contract of service was examined, and the view was expressed that a successful plaintiff was entitled to have awarded to him such a sum as would, so far as possible, make good to him the financial loss which he had suffered, and would probably suffer, as a result of the wrong done to him for which the defendant was responsible. Lord Goddand indicated that this involved the deduction of tax at the effective rate and declared that he could see no principle of justice on which the defendants should be called upon to pay more than the plaintiff would have received if he had remained able to carry out his duties.

The Gourley case, however, did not put an end to the problems inherent in this subject. The principle as to the deduction of income tax when assessing damages was, indeed, applied to compensation for compulsory disturbance of business in West Suffolk County Council v. W. Rought Ltd (35 A.T.C. 315),

and to lump sums paid by a liquidator in settlement of a company's pension obligations in Re Houghton Main Colliery Co Ltd (35 A.T.C. 320), while methods of assessment were dealt with in Beach v. Reed Corrugated Cases Ltd (35 A.T.C. 126) and Phipps v. Orthodox Unit Trusts Ltd (36 A.T.C. 267). But it was not long before the British Transport Commission again acted as pathfinder in this legal maze, in a case which illustrated the narrow area of application of the Gourley principle. It was made clear in Herring v. British Transport Commission (37 A.T.C. 382) that where the compensation awarded fell to be dealt with as part of the taxable profits of the recipient the award must be made gross. Again, Spencer v. Macmillan's Trustees (37 A.T.C. 388) and Diamond v. Campbell-Jones (39 A.T.C. 103), cases which related to compensation for nondelivery of property, reflected to some extent the principle reaffirmed in Gourley itself that an award is required to be made gross where it concerns subject-matter having the character of capital.

This review carries us up to the Finance Act, 1960, in which connection we recall with interest the prophetic observations delivered in the course of the only dissenting judgment in the Gourley case. Lord Keith of Avonholm suggested that for the judiciary to anticipate the incidence of taxation was to usurp the functions of the Legislature. If, he said, there was a case for thinking that assessing damages on a basis of gross earnings in actions for wrongful dismissal enabled the individual to escape his fair contribution to the national revenue, the position was one which in his opinion should be rectified by legislation. The question now arises as to the precise scope of the Finance Act, 1960. Master Jacobs indicated in the Parsons case that while it was basic to the Gourley decision that damages were not assessable to tax at all in the hands of the plaintiff, the Act of 1960 now regulates the incidence and extent, if any, of the tax chargeable and payable on such damages. The terms of section 37 were apt to cover damages for wrongful dismissal as being 'a payment made . . . in consequence of or in connection with the termination of employment'. The point was put beyond a peradventure by Schedule 4 to the Act of 1960. We note that this schedule supplements section 38 which relates only to exemptions and reliefs, but no doubt Master Jacobs had in mind the definition in paragraph 13 of compensation for loss of office, a definition which expressly includes a payment made in pursuance of an order of the Court in proceedings for wrongful dismissal. Master Jacobs, having assessed the damages for loss of salary and commission at the gross sum of £1,200 and the tax deductible at £320, said that it was the plaintiff's contention that the Gourley principle no longer applied by reason of section 37. Accepting this contention, he gave judgment for the plaintiff for £1,200.

We agree with the statement attributed to Master Jacobs that the point raised is of considerable importance on which there is as yet no authority. We observe that in the Gourley case Lord REID sought assistance from Mayne on Damages, and we note with interest the view expressed in the twelfth edition of this work that it is arguable whether the first £5,000 damages for loss of earnings should attract the rule in Gourley's case but not any sum in excess of f,5,000. Nevertheless, it appears to us that the Gourley principle continues to operate in respect of the specific exemptions in section 38 of which the most important concerns payments made in connection with the termination of the holding of an office or employment by the death of a holder or made on account of injury or disability. These exceptions are phrased in the same terms as those used to grant exemption from the first £5,000 damages, and the true significance of the Parsons case lies not so much in its treatment of damages under £5,000 as falling within the ambit of section 37 as in the doubts which it raises as to the applicability of the Gourley principle to the much larger sums currently awarded for the death, injury or disability of an employee.

In our opinion it would be most unfortunate if the law on this point should remain in a state of uncertainty. In *Parsons*'s case Master Jacobs said that the Act of 1960 had removed all questions concerning the tax payable by a plaintiff on his future earnings from the purview of the Court. In *Gourley*'s case Lord Keith commented that it was a strange turn of fortune's wheel that the intricacies and accidents of fiscal legislation should have its repercussions in the assessments of damages in the civil Courts. Thus the wheel has come full cycle. But can we rest assured that it has ceased to turn?

# Short-term Gains — IX

### **TRUSTS**

HE peculiarly English device of the trust, with its many ramifications, naturally complicates any legislation for taxing transactions in property. Chapter II of Part II of the Finance Act, 1962, contains many references to trusts. In effect it divides them into two kinds. On the one hand is the trust which exists where one person holds as nominee or bare trustee for another person who is absolutely entitled to the beneficial ownership of the property. This we will call a bare trust. On the other hand, there are the many forms of trusts which are not bare trusts. In relation to bare trusts, Chapter II is to apply as if the property vested in the bare trustee was vested in the person or persons absolutely entitled. In the same way the acts of the trustee or nominee are to be treated, for Chapter II purposes, as the acts of the beneficial owner(s) (section 12 (5)). It follows that Case VII assessments must, in general, be made on the beneficial owner, although in the case of incapacitated persons the ordinary rules as to assessment will apply. It also follows that if a nominee sells property without authority, before the statutory six months or three years have elapsed, he may visit his beneficiary with a tax liability which could have been avoided. No doubt he would be accountable to the beneficiary for this breach of trust; which adds a new terror to trusteeship, especially where the beneficiary pays tax at 17s 9d in the f.

Having dealt in subsection (5) with bare trusts, section 12 then goes on, in subsection (6), to deal with what it calls 'settled property', which is defined in section 16 (1) to mean

'any property held in trust other than property to which subsection (5) of section 12 of this Act applies'.

This definition is expressed to be subject to section 16 (4) which, however, is confined to unit trusts, which are a subject in themselves.

When new trustees are appointed, the trust property is transferred to them, but it would be absurd to impose Case VII liability on such a disposition, since the beneficial ownership does not change. Accordingly, in relation to settled property, the trustees are to be treated, for Case VII purposes, as being a single and continuing body of persons, distinct from the persons who may from time to time be the trustees (section 12 (6)). This is so even where different parts of the settled property are held by different trustees. A body of trustees may well dispose of trust property in the course of their administration, and unconnected with any change in the composition of the trustees, e.g. on a change of investment. Any gain on realization normally goes to swell the trust fund and is not available for enjoyment by any individual beneficiary. Bearing in mind the Government's justification of Case VII as being merely a means to tax what is in effect spendable income, one might reasonably have expected an exemption in favour of settled property. However, there is no such exemption. Indeed, section 12 (6) goes even further. It will be remembered that, as a sine qua non of Case VII liability, the taxpayer must be both resident and ordinarily resident for the year in the United Kingdom (section 10 (1)). Section 12 (6) throws difficulties in the way of legal avoidance by vesting settled property in non-resident trustees. It provides that the body of trustees shall be treated as being both resident and ordinarily resident in the United Kingdom unless

- (i) the general administration of the trusts is ordinarily carried on outside the United Kingdom; and
- (ii) at least a majority of the trustees for the time being are not resident or not ordinarily resident in the United Kingdom.

These are easy words to draft but the practical application of them is certain to cause difficulties. Over what period of time must one apply the test as to where the administration of the trusts is 'ordinarily' carried on? This provision, when it first appeared, must have caused some consternation to those trustee companies in the United Kingdom who earn foreign exchange for us by acting as trustees of settlements made by foreigners. It must also have caused some consternation to their foreign customers. The Government

introduced a proviso at the report stage designed to encourage foreigners to go on using the services of British trustee companies, although it hardly goes as far as one would have expected. The proviso is confined to trusts where the *whole* of the settled property

'consists of or derives from property provided by a person not at the time domiciled, resident or ordinarily resident in the United Kingdom'.

Presumably the phrase 'at the time' refers to the moment when the property was provided, not when the trustees acquire or dispose of chargeable assets. It is a further condition of the proviso that the trustee shall be

- (i) a body corporate;
- (ii) carrying on a business which consists or includes the management of trusts; and
- (iii) acting as trustee in the course of that business. All these requirements being satisfied, the proviso directs that the trustee shall be treated, in relation to that trust, as not resident in the United Kingdom. It follows from section 10 (1) that acquisitions and disposals of chargeable assets will be immune from Case VII.

Section 12 (7) directs that section 12 (6) shall apply in relation to property forming part of the estate of a deceased person and to his personal representatives as it applies in relation to settled property and to trustees of a settlement. However, personal representatives are not to be chargeable to tax in respect of an acquisition and disposal 'by reference to the vesting of the property of the deceased in them'. In other words, the vesting of the property in them is neither an 'acquisition' nor a 'disposal' for Case VII purposes. The phrase 'personal representatives' has the meaning assigned to it by section 423 (4) of the Income Tax Act, 1952. It will be recalled that paragraph 2 (5) of of the Ninth Schedule directs that nothing in paragraph 1 (which we have already dealt with1) is to apply so as to treat a deceased person as disposing of an asset on his death. The fact that section 12 (6) is to apply to deceased persons' estates is foreshadowed by the proviso to subsection (6) itself. The exemption granted by the proviso is expressed in words which indicate that it is to apply also to deceased persons' estates in the same way as to trusts. In the case of such estates, the deceased must satisfy the requirements as to residence and domicile at the time of his death. Properly drafted, section 12 would have included this provision in section 12 (7).

We have already mentioned<sup>2</sup> the provision in section 12 (8) that a person acquiring assets as legatee is not chargeable under Case VII in respect of any acquisition and disposal by reference to that acquisition, except as provided by section 14, which deals with shares in a landowning company. Section 12 (8) goes on to provide that a person shall not be chargeable under Case VII in respect of any acquisition and disposal of a beneficial interest under a settlement. However, this provision must be read subject to paragraph 4 (3) of the Ninth Schedule. This applies where, for a consideration in money or money's worth, a person becomes absolutely entitled to settled property. He might do this by inducing someone, whether the trustees or a beneficiary, to exercise a power of appointment in his favour. Or he may simply acquire interests from individual beneficiaries.

Having acquired the property in this way, then if there is an acquisition and a disposal by him, i.e. if he disposes of the property within the statutory period, he is chargeable under Case VII (paragraph 4 (3) (a). As regards the beneficiary who sells his interest in settled property, he is to be treated as if the acquisition by the trustees was his own acquisition (paragraph 4 (3) (b), with all the consequences provided for by paragraph 18, which we have already discussed.<sup>2</sup> This imposition of tax by paragraph 4 (3) (b) would seem to promise a number of anomalies. If a change of investments is followed within the statutory six months by a disposal by beneficiaries of their various interests, it would seem that the beneficiaries will be chargeable. If, on the other hand, there has been no change of investments by the trustees within the preceding six month, then the beneficiaries can dispose of their interests without Case VII liability. Paragraph 4 (3) is expressed to overrule section 12 (8). But, there is a general provision in section 16 (8) that sections 10 to 15 inclusive are all subject to the Ninth Schedule. Strictly speaking, therefore, the exemptions conferred by section 15 in favour of charities and the like are negatived by paragraph 4 (3) in the case of acquisitions dealt with by that sub-paragraph. However, this cannot have been intended.

# 'Know-how' Payments — the Tax Angle

by H. S. A. MACNAIR, F.C.A.

In this article consideration is given to the duties of a person who makes payments in respect of 'know-how' and the scope of relief from income tax and profits tax accorded to such payments; together with the concomitant charge to tax on the recipient.

N computing the profits of a trade for United Kingdom tax purposes, the deduction is permitted of any fees paid or expenses incurred in obtaining, for the purposes of the trade, the grant of a patent or the extension of its term, the registration of a design or the extension of the period of copyright and the renewal or registration of a trade-mark (section 139, Income Tax Act, 1952).

Moreover, where an application for a patent has been rejected or abandoned, the relevant fees and expenses are none the less admissible (section 23, Finance Act, 1952). A non-trader may likewise claim allowances so far as concerns patents, including maintenance of a patent (section 320).

Similarly an individual who, whether alone or with others, devises an invention which is patented may claim allowances in respect of relevant expenses. Such allowances take effect primarily by way of set-off against income from patents but there is an option, exercisable within two years of the end of the year of assessment concerned, to have them relieved against general income (section 324). Moreover, an individual inventor's income from patent rights ranks as earned (section 525).

### Royalties distinguished from Trade Payments

In the case both of traders and non-traders, capital expenditure on the purchase of patent rights may be amortized for tax purposes over the period (not exceeding seventeen years) in which the purchaser has an interest. Any proceeds of sale must, however, be taken into account (sections 316 and 317).

It appears at first sight that less liberal relief is available for revenue expenditure since, in computing profits charged under Cases I and II of Schedule D, no sum may be deducted in respect of any royalty or other sum paid for the user of a patent (section 137). In point of fact, however, this prohibition is of limited effect,

being designed for the purpose of collecting at source tax due from the recipient of the royalty. It is therefore important to distinguish royalties and annual payments from ordinary trade outgoings.

A problem arises where payments are made under the terms of an agreement whereby access to technical knowledge is given not only by the right to use patents, but also through the provision of services. In Paterson Engineering Co Ltd v. Duff (22 A.T.C. 62; 25 T.C. 43) a United Kingdom company undertook to pay sums at a minimum rate of £2,000 per annum to a United States company (with which it had no ties of ownership) in consideration for the use of the American company's patents and processes with the benefit of its advice, knowledge, experience and discoveries in relation to a chemical which both companies produced. The Revenue refused to treat any part of the payments as allowable in. the Case I computations and on appeal the Commissioners mistakenly upheld the view that any part not ranking as a patent royalty would be disqualified as an annual payment.

### Accounting to Revenue for Royalties

In reversing this finding the Court said that the right to use trade-marks, names or designs could indeed be so closely linked with the user of a patent that a tribunal of fact might conclude that payments for such a right were merely incidental to the use of the patent. In a narrow sense such payments would also cover incidental rights such as the right to any improvement of the patent made by the grantors during the currency of the agreement and the right to advice or assistance as to how best to take advantage of the patent. In the absence of such a finding, however, any sum paid otherwise than in respect of the user of a patent would be allowable.

Subject to an important exception, the person by or through whom a payment of royalties is made is required to deduct out of it a sum representing the amount of the tax thereon at the standard rate in force at the time of payment. Having done so, he is then under an obligation to account to the Revenue, submitting to an assessment under section 170 on an amount equivalent to the gross amount of the royalties paid, or rather that part not covered by his own income for the year in which payment was made. To the extent of the deficiency no immediate relief is obtainable by the payer. Even future relief is available only where a business is carried on, by analogy with trading losses under section 342, and subject to the conditions that the royalties are paid wholly and exclusively for the purposes of the trade and have not been charged to capital or borne by some other person (section 345).

The important exception noted above concerns the case where a payer has sufficient income for the year of assessment in which payment is made to cover the royalties and any other charges on his income for that year. In such circumstances, section 170 does not operate and immediate relief may be obtained under section 169 which authorizes the retention of an amount representing the tax on the gross payment at the standard rate in force for the year in which the amount payable became due. The exercise of this right is not dependent on the level of income for the earlier year (where arrears are concerned) since the obligation to compare income with charges relates only to the year of payment. The payee, however, must accept deduction at the rates in force at the original due dates although where he is entitled to recover such tax from the Revenue the repayment would also be made at those rates (section 524 (3)). Nevertheless, the possibility of hardship exists where a payer would have benefited under section 160 had payments been made at the due dates but in a later year his income is insufficient to cover charges. In such circumstances the Revenue apply an extra-statutory concession whereby an allowance is made, in fixing the amount to be paid over under section 170, for the tax which the payer would have been entitled to deduct and retain if payment had been made at the due dates.

### **Profits Tax Position**

As regards profits tax, it is provided that the income tax principles explained above are not to be followed (Fourth Schedule, Finance Act, 1937). Instead royalties are admissible as deductions if laid out wholly and exclusively for the purposes of the trade (section 14, Finance (No. 2) Act, 1940). However, deduction is not permitted

of royalties paid to any person carrying on the trade, a description which includes the directors of a director-controlled company (other than whole-time service directors).

Where a royalty is paid in respect of the user of a patent for a period of two complete years or more, the recipient may elect for a reduction in his income tax and surtax attributable thereto as measured by a formula (section 472). The formula postulates a spread-back of the payment or payments at annual intervals (equal in number to the number of complete years of user, with a maximum of six). Thus, in the case of the minimum period, one-half of the amount actually received would be treated as having been received twelve months earlier.

In considering the tax treatment of the vendor of patent rights, it may be relevant to recall an observation by the Royal Commission to the effect that tax on the inventor who sells his patent outright, instead of receiving royalties upon it, seems to be intended to put him in the position of someone who follows the calling of merchanting the legal titles to his ideas, just as the author of a literary work is taxed on the sums which he receives on any sales of copyright. Certainly the suggestion that letters patent, by their terms, grant exemption from tax in respect of the receipts to which they give rise, whether in the form of income or capital, was rejected by the Courts in the two cases of Kirke v. Good and Kirke v. C.I.R. (26 T.C. 208), and is specifically negatived by section 512.

### **Capital Receipts for Patent Rights**

The sale of patent rights for a capital sum by a United Kingdom resident gives rise to Case VI assessments which are to be made in equal amounts for the year of sale and each of the five tax years following (section 318). At the vendor's option, however, the charge may be consolidated in the first year. Where a non-resident is vendor the position is reversed, assessments in a single amount being mandatory unless election is made to spread the charge forward. However, the application of section 170 (which is required in order that tax may be collected from a person within the jurisdiction of the administration) is related to the lump sum in any event, the election merely giving rise to appropriate repayments over the period. It may be noted in parentheses that in this case the paying agent must hand over the whole of the tax deducted to the Revenue, irrespective of his personal circumstances. Where the period of spread-over is interrupted by death,

partnership change or liquidation, the balance outstanding may either be dealt with in the year in which the event occurs or, on notice being given by the party interested, spread over the period of accrual that has already elapsed.

As has been indicated above in relation to royalty payments, the arrangements entered into by a trader may be so extensive that the consideration derived under them reflects the benefits of patent user to only a minor extent. In Jeffrey v. Rolls-Royce Ltd (41 A.T.C. 17) the company made agreements whereby overseas Governments obtained access to its fund of 'know-how' derived from research and the development of engineering techniques. The company granted licences to manufacture a specified product and undertook to supply the necessary information and drawings, to notify improvements, to instruct personnel in its own works and to lend its own staff to the licensees, who, in effect, were taught how to make use of the licences. Such agreements represented a development of the company's general manufacturing trade, and the lump sums payable fell to be included in profits on an equal footing with the recurrent royalties paid as such. This case was differentiated from Evans Medical Supplies Ltd v. Moriarty (36 A.T.C. 277; 37 T.C. 540) where the sale of 'know-how' represented the loss of a fixed capital asset. The distinguishing test to be applied is that laid down in British Dyestuffs (Blackley) Ltd v. C.I.R. (3 A.T.C. 532; 12 T.C. 586):

'Is the transaction in substance a parting by the company with part of its property for a purchase price or is it a method of trading by which it acquires this particular sum of money as part of the profits or gains of that trade?'

### **Problems of Royalties Paid Abroad**

The special problems which arise when royalties are paid abroad have recently been the subject of study by the Fiscal Committee of the O.E.E.C. (Fourth Report, 1961). The principle of taxation of royalties by the country in which the recipient is resident is one which was adopted in the tax convention with the United States (S.R. & O. 1946/1327) of which article VIII reads:

'Royalties and other amounts paid as consideration for the use of, or for the privilege of using, copyrights, patents, designs, secret processes and formulas, trade-marks and other like property and derived from sources within the United Kingdom by a resident of the United States who is subject to United States tax on such royalties or other amounts and not engaged in trade or business in

the United Kingdom shall be exempted from United Kingdom tax.'

Evidently it would serve no useful purpose in such circumstances for tax to be deducted by the payer and subsequently repaid to the overseas resident by the United Kingdom Revenue. Hence the latter are empowered to notify a payer not to deduct tax at source. Where, however, arrangements for gross payments are subsequently discovered to have been inappropriate then another notice may be given requiring deductions at the rate of 100 per cent so far as necessary to rectify the situation (S.R. & O. 1946/466). Such deductions (validated by Case VI assessments on the non-resident) are accountable to the Revenue in full. In either situation, the payer is not able to avail himself of the benefit of sections 169 and 170 and the Revenue therefore credit him with the tax which he could otherwise have retained (S.I. 1954/1366).

### Inadequacy of Double Tax Relief

It may be noted that arrangements similar to those entered into with the United States (which are, of course, reciprocal in character) have been made with European countries as follows:

	Statutory Instrument	Article on
Country	embodying the Convention	Royalties
Austria	1957/598	ΫII
Belgium	1954/487	$\mathbf{viii}$
Denmark	1950/1195	$\mathbf{VIII}$
Finland	1953/191	IX ·
France	1951/1388	$\mathbf{X}$
Germany	· 1955/1203	$\mathbf{VII}$
Greece	1954/142	${f VI}$
Israel	1947/2871 & 1950/751	$\mathbf{VII}$
Italy	Pending	
Netherlan	ds 1950/1196	$\mathbf{VII}$
Norway	1951/1798	$\mathbf{v}\mathbf{n}$
Sweden	1961/577	IX
Switzerlar		VII

As regards possible future agreements the O.E.E.C. Fiscal Committee report indicates that Luxemburg, Portugal and Spain would insist on the right to tax royalties at source at the rate of 5 per cent (Turkey specifies 20 per cent). The general pattern of agreements with Commonwealth territories provides for complete reciprocal exemption of royalties from taxation, but only the European agreements (Israel excepted) deal with the right to tax capital sums received on the outright sale of patent rights. This is allocated to the country in which the recipient is resident.

The inadequacy of double tax relief arrangements was the subject of comment in evidence before the Royal Commission. One important step

towards the elimination of hard cases was taken in the Finance Act, 1961, which extended the credit arrangements to include overseas taxes levied under the authority of a province, state, municipality or other local body. The anomalies which remain include the case of Government royalties or export taxes which cannot be equated with taxes on profits or income, a situation illustrated in Ashanti Goldfields Corporation Ltd v. Merrifield (13 A.T.C. 641; 19 T.C. 52).

It is against this background that the Revenue have recently re-examined the position where royalties or 'know-how' payments are received from abroad (104th Annual Report; statement, July 1960). On a strict interpretation of the law these may have their source in the United Kingdom (see, for example, *International Combustion Ltd v. C.I.R.* (11 A.T.C. 120; 16 T.C. 532)), but

by concession they are treated for the purposes of credit, whether under double taxation agreements or by way of unilateral relief, as income arising outside the United Kingdom except to the extent that they represent consideration for services (other than merely incidental services) rendered in the United Kingdom by the recipient to the payer. In the latter case, however, only the net amount of the payments (after deduction of any overseas tax borne thereon) need be included in the computation of profits for U.K. tax purposes.

Finally, it may be noted that if the owner of a right such as a patent, trade-mark or copyright is not engaged in any trade to which the right relates, but derives income by exploiting the right, the source of the income may be regarded for the purposes of credit as located where the right has its existence.

# Insurance and the Accountant-II

by DAVID WILLIAMSON, F.C.A., F.C.W.A.

### V. PROFITS INSURANCE ON NEW PLANT

OME accountants may be unaware that it is now possible to insure against the loss of profit that occurs when the completion date of a new plant is postponed, for a variety of causes. Bearing in mind the tremendous cost of plant extensions today – and the vital importance of their profit-earning results being at least up to the standard assumed when the extension was approved – there is a sound case for this type of insurance.

31. Accountants will readily appreciate the great importance of timing, with regard to all large capital expenditure projects. The timing of the expenditure

must be right with regard to:

(a) the development of the market for the product in question;

(b) the acquisition of the site;

(c) the structural programme,
with all its attendant delays and frustrations,
the engagement, transfer and training of
suitable management and labour, the provision of office services and the like – all
leading up to the final stage, viz.;

(d) the commencement of the 'pay off' period.

32. It is obvious that if the date of (d) is seriously postponed – for whatever reason – the whole of the capital expenditure to date will be, in effect, lying

The second part of a paper presented at the Summer Course in Cambridge of The Institute of Chartered Accountants in England and Wales. The date of Mr Williamson's admission to the Institute was misprinted 1948 for 1928 in last week's issue.

idle, representing a maximum burden on the organization and calling for a revision of all the planned financing arrangements.

- 33. By means of an advance profits insurance policy you can indemnify your company to much the same extent as in a consequential loss policy, viz. for loss of net profit, specified standing charges, and increase in cost of working for a stated indemnity period. Certain important provisos must be understood with regard to this form of insurance, as follows:
  - (a) the circumstances in which the policy will operate must of course be clearly set out: these may include loss or damage to suppliers' goods – machinery breakdown – non-arrival of imported plant due to marine or air perils – and other causes comprising actual loss of or damage to the items intended to form part of the project; note particularly that the policy would not under this heading cover delays due to industrial strikes, or to mere failure by subcontractors to adhere to delivery schedules;
  - (b) the period of insurance must be clearly defined and understood; this will normally be defined as commencing on the date from which it is planned to go into production;
  - (c) the scale of standing charges and net profit will necessarily be based upon estimates – we are dealing not with past performance but with planned future performance of a new works or extension – but on the other hand it is probable that the forecasted standing charges and net

profit will have been estimated in considerable detail when the proposals were originally submitted for sanction, and in the absence of significant new factors these estimates should be acceptable as a basis for this insurance;

(d) the premium rating is a matter for the judgment of the insurance company to propose; it is quite impossible to imagine a fixed scale in relation to so many different factors; it is obvious that the rate suggested will be higher where the insurer sees a real likelihood of failure to keep to the planned period of construction – and in this connection he will pay regard to the time margins allowed in the construction plan. Also, of course, he will consider the risk is worsened if the planned programme has to allow for very long delivery dates for important sections.

34. This section does no more than indicate the outline of this type of insurance – as a policy of this description is usually specially drawn up to the insured's requirements after a good deal of technical

investigation into the risk involved.

35. The industrial accountant should realize that this type of insurance may be of real value to his company, according to the development programme it may be facing – but he should appreciate at the outset the difficulties attaching to it, and above all that the negotiation of a rate is something that will require considerable study of the development scheme in its technical detail, by the insurance company or its consultants, before a quotation can be put forward. We think it normal to insure the physical assets of a factory – we can similarly insure the profits it is intended to provide.

### VI. EMPLOYERS' LIABILITY INSURANCE

36. It is difficult in a paper of this description to know how far to go with regard to the immense subject of employers' liability insurance. Properly speaking, it is a subject on its own — and a large one at that! No year passes without the law making important extensions to potential liabilities. In this paper I propose to stress only the aspects of the subject which seem to be of outstanding importance, particularly to the industrial accountant — and in doing this I shall be aware, and so no doubt will you, that large tracts of this most comprehensive subject have been left undiscussed.

37. For a start we must regretfully leave out any consideration of the historical development of the law on this subject – fascinating though that is. In passing, we may perhaps observe that few subjects are more closely related to the life and welfare of ordinary people – we seem in the last 130 years to have struggled through different phases of thought, from the extreme *laissex faire* of the early nineteenth century, to the 'welfare state' of today.

38. Employers' liability insurance as we know it today, dates from July 5th, 1948, because the National

Insurance (Industrial Injuries) Act, 1946, repealed the Workmen's Compensation Acts and made it unnecessary for employers to insure in respect of payment of workmen's compensation benefits.

39. We must begin with a definition: Employer's liability – in the most restricted sense of the term means the liability of the employer to pay damages to his employees for personal injuries which they have sustained in the course of their work.

40. You must appreciate as a fundamental that an employer may incur such a liability in more than one way:

(a) he has a personal liability if the injury is due to

his own act or default:

- (b) he has a vicarious liability if the injury is due to the act of one of his employees. Formerly what was known as the doctrine of common employment safeguarded the employer from claims held to be due to the negligence of a fellow employee; but this doctrine was abolished by the Law Reform (Personal Injuries) Act, 1948 and the position today is that the employer is held liable in cases of this description.
- 41. You should appreciate that the employer may be held liable under two distinct headings:
  - (a) He may incur a common law liability, in which case generally speaking, the employee has to prove negligence on the employer's part or on the part of a fellow employee.
  - (b) He may be held liable for a breach of statutory duty, which means a failure to observe one of the various duties imposed upon him by Act of Parliament – such as those relating to the fencing of dangerous machinery, and the like.
- 42. There is, therefore, a wide-ranging liability which may arise not only from the personal acts of the employer himself, but also from a faulty system of working, from the negligence of employees other than the injured person, from defective plant or premises, or from failure to comply with some statutory requirement.
- 43. Under the foregoing general headings there is, of course, a vast amount of detail in the form of:
  - (a) Case law, defining the employer's duty at common law;
  - (b) Statutory regulations, defining his duty as an employer to safeguard his employees at their work – these regulations varying, of course, according to the type of work being performed.
- 44. At every stage you will find points of controversy what is 'reasonable care' 'negligence' 'contributory negligence'? None but legal experts can attempt to expound these aspects of the subject but accountants will the more readily appreciate the importance of ensuring that the company is fully and expertly covered for its possible liabilities as an employer.
- 45. The premium cost of employers' liability insurance will depend very largely on the type of

industry - no cut-and-dried figures can be given and in many industries the cost will considerably exceed the fire premium. It is therefore particularly important to keep some kind of check upon this premium. The insurance company should always be consulted over this - in the case of large customers they will be able to supply details for the last few years, showing the premium cost on the one hand, and the total claims payable on the other hand; between these two figures there will be a ratio struck, and this ratio, over a period of years, will be the factor that largely controls the premium rate requested by the insurance company. In these calculations the figure shown for 'claims' must of necessity include estimates for claims notified but not yet settled - and these estimates, or reserves, will often be of substantial size and have a considerable influence on the 'claims to premiums' ratio. By the very nature of this type of insurance, once a claim has been notified it may be months, or even several years, before the final cost of settlement is known - and hence the need for making a reserve as soon as the claim is notified. The premium rates are normally quoted in relation to the claims experience over a period of the past five years which, of course, reduces the chance of distortion by year-end estimates of outstanding liability.

46. There is disquiet in some sections of industry at the mounting cost of employers' liability insurance, but it would not be fair to criticize the insurers: they must, after all, balance claims against premiums. A solution depends in part upon industry finding more effective means of limiting the number and seriousness of claims; the waste of time, labour and money caused by accidents is of serious importance to the company concerned, and also to the community as a

wцоје.

47. It is a simple enough matter for an accountant to compare the figures of his company's premium cost for the last few years, with the claims cost in these years; a ratio is struck, conclusions drawn, and negotiations as to premium rates entered into with the insurance company. But is this going far enough? Insurance costs have perhaps been too easily absorbed in the buoyant post-war trading atmosphere, but with greater pressure on profits, closer attention must now be paid to these. Quite often, one finds that increased employers' liability premiums are simply passed through the books without the production executives or other interested parties being properly advised and this is where the accountant can serve his company, by ensuring that these people are advised, and that appropriate remedial action is considered. If the premium cost, instead of being merged with 'insurance' in the company's accounts, were described as 'cost of compensating employees in respect of injuries and disease' I rather think it would receive more critical examination than at present.

48. It does not fall within the scope of this paper to discuss the pros and cons of accident or occupational disease prevention – but it does seem that it is on these aspects that industry must concentrate if

the cost of employers' liability insurance is to be reduced or even stabilized. In fact, in very large industrial units the financial director or chief accountant may well weigh up whether the scale of this expenditure – and the possible savings to be made – warrant the appointment of a safety officer. The sums that can be awarded as compensation by the Courts is not limited by statute, and there are awards given today as high as £20,000 for one individual; and although these heavy claims may be borne by the insurer in the first instance, their weight will in due course be felt in the scale of premium charged.

### VII. PUBLIC LIABILITY INSURANCE

49. The object of public liability insurance is to provide indemnity in respect of claims made by members of the public who have sustained personal injury or damage to their property as the result of negligence on the part of an individual or firm. Negligence can mean careless conduct or the breach of a duty to take care imposed by common law or statute. Generally speaking the onus of proving negligence is on the injured person or the owner of the damaged property, but there are cases where the circumstances of the accident are more consistent with negligence on the part of the defendant than of the injured party. In such cases the onus is on the defendant to disprove negligence. A typical example of this latter category is one where a plank was being lowered from a builder's scaffold and fell on the head of a passer-by. The builder by the very circumstances of the accident was presumed to be negligent, and being unable to prove otherwise was called upon to pay substantial damages.

50. Owners of businesses are liable not only for their personal negligence but usually also for the negligence of their employees, provided that in the case of accidents caused by employees it is possible to show that the accident arose out of and in the course of the employment. Even if an employee is acting against instructions the employer may still be held liable if the work which the employee was doing at the time of the accident was for the benefit of the employer's business. The possibility of claims for which the owner of a business can be held responsible therefore increases in direct proportion to the number of employees, and this factor is an important one for

premium purposes.

51. Since the last war there has been a steady growth in the volume of public liability insurance transacted. This is probably due to several causes such as the increased tendency on the part of the public to make a claim whatever the circumstances of the accident, and the steps taken by trade unions to press claims on behalf of their members. There is also the tendency of the Courts to find in favour of the plaintiff, with the result that there have been more and more extensions of responsibilities towards third parties. Another factor which has been responsible for an increase in the number of public liability claims is the Legal Aid and Advice Act, 1949. This

287

# ACCOUNTANT

Act has provided legal aid for many persons whose claims under earlier conditions would not have been worth pressing. Many such cases are now able to go forward free of cost to the claimant. Whilst, therefore, public liability insurance is not compulsory, and has not been so much affected by specific legislation, as in the case of employers' liability and motor insurances, the need for it is obvious.

52. It is a class of business which is still in the process of development, with the result that the wording of public liability policies varies considerably as between insurers, probably more than in any other section of insurance business. For this reason it is essential to pay particular attention to the exclusions which appear in this form of policy. These exclusions are to a great extent accounted for by the effort to use a single form of policy for a variety of trades. Where required by reason of the trade, it is usually possible to have some of the exclusions deleted. Some risks, however, are excluded because they are normally dealt with by other forms of policy, e.g. passenger lifts, boilers and mechanically propelled vehicles. A common exclusion is liability arising from goods manufactured, repaired or supplied, but I have dealt with that aspect separately under the heading of products liability insurance.

3. An important point is to be sure that the public liability policy covers all the firm's operations away from the main premises. For example, a manufacturer may be installing some of his products in other firms' premises. There is always considerable hazard in carrying out work elsewhere, and the insurer will expect to be supplied with full details so that he can obtain a suitable premium. Another aspect of this work away is that it may be performed by subcontractors. Work carried out by subcontractors is normally excluded from cover, and firms habitually using subcontractors should therefore ensure that their policies are extended to give automatic cover for their contingent liability in respect of the negligence of subcontractors. A subcontractor is directly responsible for his own negligence, but as the main contractor has an overall responsibility he will usually be brought into the matter at the outset, even though eventually he may be successful in passing on the liability to the subcontractor.

54. Even if there is no work away in the ordinary sense, there may still be a potential liability in respect of the negligence of individual employees whilst visiting other premises, as, say, technical representatives. A policy should not therefore be accepted if it restricts liability to accidents occurring only at stated premises. As a further development of this point, attention should be paid to the territorial limits of the policy; many firms today have representatives travelling to all parts of the world, whereas the normal public liability policy restricts cover to accidents occurring in the United Kingdom.

55. Probably the most important exclusion in the public liability policy is that which excludes 'liability

which attaches by virtue of an agreement but which would not have attached in the absence of such agreement'; in other words, the exclusion of any special liability assumed under contract. Much of the work undertaken today is subject to special conditions of contract which appear either in the formal contract or as printed conditions on the order form. Some of them do not impose any additional liability, but there are many in use which enable the customer to transfer to the contractor or the supplier all liability for accidents occurring in connection with the work which is the subject-matter of the order. It is quite legitimate for a firm to adopt this procedure, and it is difficult for a contractor or a supplier to refuse to accept the condition as usually it would mean the loss of the contract. Contracts involving these special conditions should therefore be notified to the public liability insurer, with details of the work and a copy of the appropriate conditions. It should then be possible to have the public liability policy extended to cover the additional liability, in return for an extra premium.

56. An aspect which is likely to be overlooked where a public liability policy has been in force for some years, is the limit of indemnity. The amounts awarded as damage for personal injuries have increased to the extent that it is now possible for a single individual to be awarded £20,000, or even more. Also the value of property has increased enormously. In spite of this, many policies still carry maximum indemnities of only £25,000 or £50,000. These limits are clearly inadequate under today's conditions, and should be raised.

### VIII. PRODUCTS LIABILITY INSURANCE

57. Almost every business enterprise exists in some degree at the risk of being sued for damages allegedly caused by its products: damage that is, to property, or injury to persons. In consequence, the field of products liability insurance is extremely wide. This type of insurance is moreover fairly new, except in certain industries such as the manufacture of chemicals, cosmetics, fur goods and food products – where it has long been the practice to insure this risk.

58. You should particularly note that liability may arise upon a far greater scale than is apparently warranted by the size or value of the product: thus a defect in a small unit of an aircraft can be held to have been the cause of the entire loss of the aircraft and its crew and passengers, plus heavy damage to property caused by the crash. Nor is such risk limited to the more obviously spectacular examples associated with the aircraft or atomic research industries; a defect in a domestic article such as an oil heater may be held to have been the cause of a disastrous fire. And again, liability may arise not so much on account of a defect in the article itself, as due to the article being sent to a wrong address or otherwise falling into the hands of someone who is unaware of potential dangers that would have been known to the intended user; indeed it has been held that if a seller sells a

thing dangerous in itself he owes a legal duty not only to the buyer but to all persons who might reasonably be contemplated to be likely to be placed in danger thereby.

59. The trend today makes it more necessary than ever to insure this risk – because we are all of us steadily becoming more 'claim conscious' in our

attitude to everything we buy.

60. The general public liability policy excludes cover against injury or damage arising in connection with goods sold or supplied – and often also goods altered, repaired, worked upon, treated or processed. If the insured wishes to cover these risks he can either have the foregoing exclusions removed from his public liability policy, or he may take out a separate products liability policy: the usual practice is to include the risk in the general public liability

policy.

61. When products cover is effected for the first time, you should consider whether the cover should be made to include accidents arising from products already in circulation. The products liability policy covers legal liability arising from defective products after they have left the control of the manufacturer and are no longer in his custody. Thus months or even years may elapse before a claim arises; and you could easily have the position where a serious claim in respect of a product made some years ago could neutralize the effects of any advertisement campaign based upon, say, recently introduced quality control. It is advisable to ask for cover on the basis of 'accidents occurring during the period of insurance'. This will automatically provide cover in respect of goods already in circulation - and also has the advantage that you can subsequently transfer to another insurer without any break in the cover-if that course were to become desirable.

62. There does not seem to be a standard form of wording in use – but certain general principles are

already accepted, as follows:

(a) for a claim to be successful there must have been an accident – and the accident must have caused injury to persons or damage to a third

party's property.

You will see that this principle cuts out the possibility of a claim arising merely where, for instance, a customer claims that the goods supplied were below standard or failed to come up to expectations as regards performance. If these particular claims were to be admitted the potential risk assumed by the insurer would be very much greater – indeed the risk might be incalculable by ordinary means, particularly where the 'performance' complained of related to failure after several years' usage; or where a suspected defect in an aircraft caused a whole fleet of similar craft to be 'grounded' for several weeks; furthermore, the premiums of the more efficient manufacturers would, in effect, be subsidizing the producers of sub-standard goods

Note: There is room for controversy as to what constitutes an 'accident': numerous Court decisions

have dealt with the subject – and in a paper of this description it is obviously impossible to do more than indicate that for the policy to operate, the bodily injury or the damage caused to property must be 'accidental'.

(b) The insurers do not undertake to bear the cost of replacing or repairing the product complained of.

The principle here is that the quality of goods supplied, and their ability to perform the function for which they are designed represents a trading risk which cannot be made the subject of insurance. But you should appreciate that if your company's product fails to come up to specification, or fails in its function, the company may nevertheless be held liable for damages or compensation; and this, even though no accident has occurred.

Note: As the policy excludes indemnity for the cost of repairing or replacing the defective 'goods', you must recognize that it may be difficult to define the limits of that exclusion: take for example the case where the jib of a crane is defective, and collapses and in its fall strikes the tower of the crane and causes the whole structure to be unsafe so that it is subsequently demolished; or in the case where a defective steeringwheel causes a car to crash; what are the 'goods' whose repair or replacement are excluded under the policy? The whole crane, the whole car - or just the parts whose defect caused the accident? Opinion leans towards the exclusion applying to the whole product, i.e. the whole crane or the whole car - but you will appreciate that in many cases there will be room for argument, with an important bearing upon the extent of cover actually provided.

- 63. As a generalization you will expect to find that the insurer will insist upon the following limitations of his liability:
  - (a) a maximum limit in respect of any one claim;

(b) a maximum limit in respect of any one period of indemnity, i.e. the policy year.

- 64. In addition he may seek to impose territorial limits upon the indemnity provided dependent, of course, upon the precise nature of the risk, and the medium through which the goods are marketed abroad.
- 65. Premium rates are usually based upon turnover, and will vary according to the limit of indemnity. The normal method is to apply a rate per cent or per mille on an estimated turnover, and adjust the premium annually to conform to actual turnover. Thus, a return of premium would be made where the actual turnover did not amount to the estimated figure, and an additional premium would be charged where the 'actual' exceeded the 'estimated'. The turnover basis is not suitable for every trade, but a satisfactory unit can always be agreed upon.

### IX. ENGINEERING INSURANCE

66. There is an interesting history to the subject of engineering insurances – the *servicing* aspect of the insurance developed before the actual *indemnification* aspect, whereas the fire and certain other types of

insurance it has always been the indemnification aspect that has led the way.

67. The real beginning of engineering insurance can be said to have been the development of steam as a source of power. In the early part of the nineteenth -century the use of steam became widespread and was accompanied by a serious loss of life through boiler explosions - because at that time there was no recognized standard of maintenance and testing that applies today to boilers and all other mechanical uses of steam. Accordingly, the next development was the formation in 1854 of the Manchester Steam Users, Association, whose members agreed to have periodical inspections of their steam plant, and to act upon the recommendations as to repairs and safeguards that the Associations' engineers might submit. This was, in effect, an inspection service only, but five years later came the first boiler insurance policy, issued by the Steam Boiler Insurance Company; this lead was followed in a further five years by the Manchester Steam Users' Association introducing a monetary guarantee to its members, which, in effect, provided an indemnity in the event of explosion or mechanical failure of a boiler.

68. Other insurers then came into the field, but the practice continued under which the insurer undertook to carry out the required inspections and to prepare the necessary reports - on condition that the plant owner placed his insurance with them. By this time certain statutory obligations had been enacted, and the new insurance development enabled the plant owner to meet his statutory obligations by employing what became a specialist inspection service - and at the same time it indemnified him against possible legal liability for loss of life or damage to property caused by explosion or other forms of mechanical failure. This practice spread to other types of machinery such as gas and oil engines, electrical apparatus, lifts and cranes.

69. The insurance today can be said to fall into

four groups.

(a) boiler, where the main risk is explosion;

- (b) machinery, where the main risk is mechanical breakdown;
- (c) lifts, cranes and hoists, where the main risks are mechanical breakdown and damage to the insured plant due to toppling over, derailment and similar external causes;
- (d) miscellaneous, which covers various consulting and advisory services provided by the insurers and also time loss insurance, i.e. compensation for loss caused by stoppage of work consequent upon a breakdown of the power plant.

70. These can be briefly described as follows:

- (a) Boiler. The normal policy will provide cover for:
  - (i) damage to the boiler itself, to other specified plant, or to the insured's surrounding property;

(ii) liability for damage to property belonging

to a third party;

(iii) liability for death or injury caused to non-

employees arising as a direct consequence of the explosion or collapse of the boiler. or (in the case of (ii) and (iii) only) due to fire arising therefrom.

(b) Machinery. This type of insurance can be arranged for air compressors, steam-engines, pumps, oil engines, electrical plant, etc. The

risks normally covered are:

- (i) the breaking of any part whilst in operation, causing immediate stoppage and involving repairs before work can be resumed;
- (ii) damage to the machinery, caused by the above or by mechanical or electrical defects;
- (iii) damage to property caused by flying fragments, etc.
- (c) Lifts, cranes and hoists. The normal policy will cover:
  - (i) damage to the insured plant arising from internal electrical and mechanical defects;
  - (ii) damage to the insured plant due to topling over, storm, tempest, derailment and similar external causes;
  - (iii) legal liability for third party personal injuries and damage to property of third party (other than goods being lifted) arising out of the use of the crane, etc.

with optional extensions to cover:

(iv) accidental damage to goods being lifted;

(v) accidental damage to the surrounding property of the insured, arising out of the use of the crane, etc.

(d) Time loss. This type of insurance can be arranged to provide a specified amount of indemnity for each full day's work lost due to mechanical breakdown of the power plant. It is therefore similar in some respects to loss of profits insurance - but without reference to the actual figures of turnover or of standing charges.

It is also possible to provide for a proportionate indemnification in respect of a partial

stoppage.

71. The accountant must appreciate that today the subject of regular inspection and maintenance of plant is largely governed by legislation. It is unnecessary in this paper to specify the various Acts of Parliament concerned - full details can be obtained from the specialist inspection department of the leading engineering insurance companies whose business it is to observe the obligations laid upon the insured by these statutory regulations, and whose interest lies in ensuring as far as possible that the accident rate is kept to a minimum.

72. The wide subject of engineering insurance has so many branches, and is influenced by so many technical considerations that one can give no more than a general description in the foregoing paragraphs. It is always desirable to seek from your broker advice on your company's engineering insurance requirements. (To be concluded.)

# Weekly Notes

### THE INSTITUTE'S OXFORD COURSE

THE Oxford Summer Course of The Institute of L Chartered Accountants in England and Wales assembles at Christ Church and Pembroke College next Thursday afternoon and continues until Tuesday morning, September 18th. This will be the sixteenth summer course at Oxford and the attendance will be the largest ever - over 250 members will be present. In addition, the following distinguished guests from overseas are attending: Mr G. C. Tootell, F.C.A. (AUST.), President, The Institute of Chartered Accountants in Australia; Mr D. S. Cox, M.COM., F.P.A.N.Z., President, New Zealand Society of Accountants; Mr Howard I. Ross, c.a.(canada), Second Vice-President, Canadian Institute of Chartered Accountants; Mr S. J. Walton, General Registrar, The Institute of Chartered Accountants in Australia, and Mr A. W. Graham, B.COM., F.R.A.N.Z., Secretary, New Zealand Society of Accountants.

The course will open with a short welcome by Mr Donald V. House, F.C.A., a Past President of the Institute, in the absence - through International Congress commitments - of the President, Mr Percy F. Carpenter, F.C.A. A short talk on Christ Church and Pembroke College will then be given by Dr J. E. A. Mason, M.A., Librarian-elect of Christ Church. Three papers are to be presented at the course, the subjects and speakers being as follows: 'The problems of the smaller practice', by Mr R. W. Smith, O.B.E., T.D., F.C.A., of Day, Smith & Hunter, Chartered Accountants; 'Investment in stocks and shares', by Mr A. G. Touche, F.C.A., of Touche, Ross, Bailey & Smart, Chartered Accountants, and 'The training of accountants for industrial responsibilities', by Mr G. W. Searle, D.S.C., F.C.A., general manager, Finance and Accounts Department, British Petroleum Co Ltd. Each speaker will introduce his paper at a session of half an hour's duration and discussion in groups will follow. In the evening, the speaker, in general meeting, will answer questions raised, and afterwards group discussion will continue. Two sessions of particular interest will be the informal talks on subjects of their own choosing to be given by Mr Howard I. Ross and Sir Edmund Compton, K.B.E., C.B., Comptroller and Auditor-General, on the Sunday morning and Sunday afternoon respec-

As is customary, the afternoons will be free and visits have been arranged to the establishments of A. C. Nielsen Co Ltd, University Press, Oxford University Computing Laboratory and also to

Blenheim Palace. A golf competition will be held at Frilford Heath Golf Club.

The course will conclude with a Guest Night Dinner, presided over by Mr House, when the guests will include officers of Christ Church and Pembroke College.

A photograph of some of the personalities at the course will be published in our issue of September 22nd and we look forward to reproducing the papers presented.

## THE ASSOCIATION'S EXAMINATION RESULTS

THERE were 3,498 candidates for the June 1962 examinations of The Association of Certified and Corporate Accountants of whom 1,201 were success-

ful - fourteen passing with honours.

In Section II of the Final there were 392 candidates of whom ninety-seven (24.7 per cent) passed, the First Place and Prize being won by Mr T. C. Pasola, of London; Second Place was won by Mr M. Ray Smith, of Wokingham, and Third Place by Mr A. McNamara, of Gravesend. In Section I a total of 580 candidates sat, of whom 138 (23.8 per cent) were successful. The First Place was won by Mr R. C. Dendy, of London; Second Place by Mr F. W. E. Brown, of Marlow, and the Third Place by Mr H. A. Rose, of Basingstoke.

There were 824 candidates for Section II of the Intermediate examination, of whom 401 (48.7 per cent) were successful, the First Place and Prize being won by Mr H. J. Byrne, of Dublin; the Second Place by Mr R. Green, of Wolverhampton, and the Third Place by Mr J. H. Mawhinney, of Dundee. In Section I there were 1,555 candidates of whom 506 (32.2 per cent) passed, the First Place and Prize being won by Mr D. J. A. Sievewright, of Aberdeen.

In the Preliminary examination, there were 147 candidates of whom fifty-nine (40·1 per cent) passed.

The names of the successful candidates in Section I and II of the Final examination, together with a summary of the complete results, appear elsewhere in this issue.

### SERVICES FOR SCOTTISH MANAGEMENT

A BOOKLET has been prepared by The Institute of Chartered Accountants of Scotland called Services for Scotlish Management.<sup>1</sup> About 2,500 managing directors and over 1,000 chartered accountants were sent copies of this booklet last week throughout Scotland.

Referring to the booklet at a luncheon given in Glasgow, the President of the Board of Trade said that the booklet followed a recommendation in the Toothill report on the Scottish economy which included among its recommendations one urging management to make greater use of the extensive

<sup>&</sup>lt;sup>1</sup> Price 2s 6d post free from the Institute's Offices, 27 Queen Street, Edinburgh.

advisory services available. The President said that he drew two conclusions from the booklet. The first was that there is an increasing need for better communication between management and those bodies which have specialized information to offer. The second was that this information was of real help in dealing with management problems.

The booklet covers the activities of fifteen organizations operating in Scotland and it is equipped with a useful index. The pamphlet is attractively printed and laid out with a format to give busy people an easy

method of reference.

# INSTITUTE OF ACTUARIES WIDENS MEMBERSHIP

MEMBERSHIP of the Institute of Actuaries is to be made available to those who are engaged in the investment field, but who may not wish to become qualified as actuaries. The Institute has announced its intention to issue on request a special certificate to those who have passed its Preliminary examination in mathematics, Intermediate examinations in statistics and compound interest, and Associateship and Fellowship examinations in finance and investment. Although the certificate will not qualify holders as actuaries, they will, as members of the Institute, be bound by its code of professional conduct.

Tuition will be provided by correspondence courses (supplemented by discussion classes) as an integral part of the profession's extensive existing training arrangements. Those who have obtained the certificate will be given full credit for the subjects in which they have passed if they should decide to proceed with the further examinations required for full Associateship or Fellowship of the Institute. Details may be obtained from the Secretary of the Institute at Staple Inn Hall, Holborn, London WC1.

### CONFERENCE ON EXECUTIVE SALARIES

IT is well known that there are very big differences in the salaries paid to senior executives for comparative degrees of responsibility. This is partly due to the fact that salary arrangements at this level are very much a matter of negotiation for the particular case under consideration and also because such arrangements are by tradition confidential. In this country it is certainly true that there is no market price for a particular level of executive ability.

A detailed study of such salaries is to be made by Associated Industrial Consultants Ltd by means of a national survey covering, it is hoped, some five hundred firms. A questionnaire with ten headings is to be circulated and the answers analysed by size of company and region. The investigation will include fringe benefits. The key to the investigation is to be a breakdown into clearly defined categories of responsibility covering the range of executive salaries between £5,000 and £1,000 per year.

The results of the survey, which is confidential, will be made available to those companies taking part in time for the traditional annual salary review which most companies undertake at the beginning of each calendar year. Incidentally, if an upper limit of £5,000 is fixed the most serious imperfections in the labour market at the highest levels will be missed out.

A conference is to be arranged in October to establish a scale of salaries. The conference will be restricted to sixty representatives of firms employing between 1,000 and 1,500 people.

### A EUROPEAN MONEY MARKET

An article in Barclays Bank Review for August draws attention to the extent to which a genuinely harmonized European money market has already become a reality. While the author considers that it is wholly desirable that long-term capital should flow from areas where it is abundant and relatively cheap to those where it is scarce and dear, certain dangers are seen in the movements of short-term funds, particularly in connection with what are known as Euro-dollars, of which the amount outstanding at the end of 1960 may have been of the order of \$2,000 million.

Some of these large dollar balances maintained in private accounts are switched into local currencies and, for example, the resulting sterling used in an investment in the short loan market. The sudden withdrawal of an appreciable part of the foreign money might have serious effects on the domestic capital market, and if the exchange risk has not been fully covered, on sterling and the Exchange Equalization Account. This is, however, a special problem of a gradual internationalization of the money and capital market which, it may be hoped, will continue in the interests of international liquidity and the removal of remaining restrictionist pressures.

### CARTELS AND THE COMMON MARKET

THE latest broadsheet¹ published by P.E.P. examines the rules governing competition and monopolies in the Treaty of Rome and the first regulations putting them into force. The general conclusion is reached that if Britain joins the European Economic Community some strengthening of British restrictive practices legislation will be required. The author considers, however, that the differences between Britain and the E.E.C. in this respect are in fact less than would appear at first sight, because the method in which restrictive agreements are examined under British law increases the strictness of the latter. The broadsheet is likely to be of considerable interest to British industrialists whether or not Britain joins the Common Market, since sole

<sup>&</sup>lt;sup>1</sup> Cartel Policy and the Common Market, Political and Economic Planning, 16 Queen Anne's Gate, London SW1. Price 7s 6d.

agency agreements between United Kingdom exporting companies and European selling organizations, for example, are covered by the regulations implementing the Rome Treaty.

### CHANGE IN CO-OPERATIVE DIVIDEND POLICY

THE London Co-operative Society has announced this week two important changes in its traditional dividend policy. What this society does today, others might do tomorrow.

At its 170 self-service shops, the traditional dividend will be replaced by price cuts on a significant scale. At counter-shops, the dividend will be raised. It has guaranteed to raise its dividend at these shops

from 4d to 6d in the pound. It is therefore guaranteeing a higher dividend ahead of its trading results being known – an aggressive and confident step. The President of the Society has said: 'We are not going to be undersold by any grocer in any area'. It was indeed as recently as July that this Society announced that it would sell according to 'local High Street conditions'.

Formal intimation has now been given that one of the largest and most powerful co-operatives will fight the supermarkets and self-service chains on their own ground. It has risked cutting its savings on members' share-books, a major source of long-term capital for development. The step could, however, announce a new era of risk-taking and enterprise in co-operative management.

# This is My Life . . .

by An Industrious Accountant

CHAPTER 136

Our auditor, of many years standing, told us recently that he was going on a trip abroad and would consequently miss his annual chat with our directors when his report was considered. A partner would deputize for him, he said, and would do his best to explain things to us. I expressed polite regret and murmured deprecatingly that, of course, no one could replace years of specialized knowledge etc.

I was thinking of one of those earlier meetings which he attended many years ago. There he sat, intense and dedicated, his high-nosed countenance concentrated with the effort to make mathematical mysteries clear to us amateurs. Perhaps at the time I was a little biased against him. I was conscious of the desirability of the profession showing up in the best light and somewhat intolerant of his old-fashioned approach.

He went over his ten-page report on the year's accounts with meticulous care; three-quarters of it comprised voluminous analyses of various items in the profit and loss account and balance sheet. The directors listened with grave attention; polite explanatory comments circulated. Surely, I thought, he must know that they'd examined all these figures long before; he was dealing with transactions in a year finishing nearly four months ago. In fact, he was well aware of it, none better; he was simply following the time-honoured, standardized procedure of 'reviewing the accounts'.

He indicated delicately the need to amend the balance sheet and his listeners stiffened to attention. It was now desirable, he said, that we should deduct current liabilities from current assets to show the net liquid position clearly. The chairman asked Why? and was told it was the newest approach; he sat back unenlightened.

The auditor referred to the distinction between provisions and reserves, and expounded at some length on general commitments and specific accruals. I recalled going over the same theoretical ground with the directors long before. They were then cheerfully disinterested, once they got the general drift; their reaction was that it was a nefarious accountancy gimmick designed to alarm and confuse the uninitiated. Their attention languished.

Our chairman, sunk in a pleasant post-luncheon lethargy, was thinking of his speech at the forth-coming regimental reunion dinner. Provisions were a problem for the commissariat, he reflected, but reserves – ah, that was different. He broke in alertly: 'Jolly well right, by Jove. Adequate reserves vital, what? Never forget Jerry's big push at Amiens in 1918; not even a squad in support. We threw in orderlies, cooks; as my batman said . . .'

It was quite a good yarn; it was also interminable; he rode through Loos and Kut before he finished. By then there was a general disinclination to refer again to reserves of any nature. Our auditor had listened with his usual courtesy, though his nose occasionally twitched with impatience. He passed on to consideration of the declaration of dividend and of describing our profit as 'shareholders' surplus'. Whether we should say '4 per cent actual' or 'at the rate of 8 per cent per annum' seemed important to him; he developed the pros and cons exhaustively.

We stayed on this lofty level for the rest of the meeting. Believe it or not, he seemed quite oblivious to the more mundane trading problems that were currently contributing to the chairman's grey hairs. Going out, I overhead our managing director mutter resignedly something about 'a typical accountant', and I felt annoyed.

But all that, as I have said, happened some years ago; our auditor's deputizing partner is due to visit us next week; I wonder how he'll behave.

# Finance and Commerce

### **Avana Bakeries**

EXTRACTS from the report and accounts of Avana Associated Bakeries Ltd are the subject of our reprint this week. This company enjoys the benefit of a long association with Marks & Spencer. 'We have shared in the expansion of their food sections', says Mr I. R. Rees, Avana's chairman, 'and remain their largest cake supplier.' Turnover reached a new record but 'the momentum of sales increases tended to slow over the year'; however, this was more than offset by improved working methods which resulted in a 15 per cent increase in profits, subject to taxation, compared with a 10 per cent increase in sales - the 10 per cent being 'substantially due' to the Marks & Spencer connection.

Expansion has gone hand-in-hand with capital investment. The balance sheet shows the effect of a rights issue during the year of  $f_{0.50,000}$  of 1s Ordinary shares at qs each on a one-for-six basis, the major part of the new money going into the share premium account. And as so often happens in such circumstances, share premium is being moved up into capital account by a capitalization issue on the basis

of one new share for every ten held.

Expansion has been particularly marked in the jam-making side of the business run by the subsidiary, Ledbury Preserves (1928) Ltd. Mr Rees points out in his statement that, nationally, sales of jam have been declining but the Ledbury factory has moved against this trend and over the past ten years has nearly doubled output and sales. In the year under review, jam sales were up 32 per cent, the factory being 'fortunate to secure a valuable contract to supply Marks & Spencer'.

### Piped Egg

The whole field of food production of this nature has, in the years since the war, become a highly-organized and mechanized business. Nowhere can this be more clearly apparent, it is imagined, than in Mr Rees's review. For instance, at Ledbury, apart from the achievement noted above, or perhaps because of it, a new production line for specialized types of jam was expected to be working by the end of August; an automatic tart production plant at Dowlais was undergoing test runs; at Rogerstone, a new double swiss roll plant was on order; and on land previously owned by the company, a supplier had built a factory from which processed and pasteurized egg could be piped to the Rogerstone factory as required.

### Escape from the Past

EXPERIENCE has shown that a simple, straightforward capital structure is often better in the end and it is interesting to see an example of escape from the complications of the past. The company concerned

is United Gas Industries Ltd, an amalgam of a number of businesses engaged in the manufacture of gas and electricity meters, meter testing equipment, gas cookers, fires and water heaters. It is now putting straight a capitalization which was fashionable in 1929 when it was registered but has since been

proved to have its disadvantages.

The position to be dealt with concerned £638,591 in 7 per cent Li Cumulative Preference shares, £778,699 in Li Ordinary and £27,295 19s in 1s Deferred shares. Preference and Ordinary were entitled in that order to 7 per cent cumulative and 10 per cent noncumulative, respectively, the remaining profits belonging 50 per cent as to Ordinary and 50 per cent as to Deferred. In a winding-up, the three classes were entitled to repayment in order of seniority, with dividend arrears in the case of the Preference; remaining assets going 50-50 to the Ordinary and Deferred.

Mr H. H. Bates, the chairman, in his statement with the accounts to March 31st last, pointed out that the existence of two classes enjoying different rights in the equity tended to create a conflict of interests and added that though the board had no major project in mind, the existence of the two equity classes prevented expansion by acquiring interests in other companies except for cash.

### Two-pronged Equity

Simplified, the capital reorganization first gave an extra ½ per cent to the cumulative preference, raising the dividend to  $7\frac{1}{2}$  per cent, as a compensation for certain variations in their rights. Then came the most

important item -- the two-pronged equity.

The existing Ordinary and Deferred capital was converted into equivalent nominal amounts of 10 per cent Non-Cumulative Preference to preserve the ordinary's preferential right as to earnings and as to capital on a liquidation, and of the deferred as to capital in a liquidation. Then, 2,240,000 new 5s Ordinary shares were issued by way of capitalization of reserves, one-half going to the existing ordinary and half to the existing deferred.

Mr Bates pointed out that 'any distribution of profits to existing ordinary and deferred by way of dividends on the new ordinary, after the payment of the non-cumulative 10 per cent second Preference dividend equivalent to 10 per cent on the old ordinary, will consequently be received in the same proportions in which such distributions are shares at present'.

What the capital fashion of the 1928-29 boom did, of course, was to create a very highly-geared class of shares and the prospect it carried of a market valuation many times the nominal share value. The Ordinary dividend for the year to March 1962 was 13½ per cent and the Deferred 100 per cent. Within the last ten years, it has been as high as 200 per cent.

### CITY NOTES

THE prospect of economic re-expansion moves in October keeps the gilt-edged market strong and the equity market simmering. The Treasury's new long dated 'tap stock' exercise has had the effect of bringing long dated stock values towards the new tap stock issue price.

Strength in the market has allowed the Manchester Corporation to offer £10 million of 1973-74 6 per cent stock at only one point discount - the cheapest corporation borrowing on the market for a considerable time.

Action by the Chancellor of the Exchequer, once the International Monetary Fund and World Bank meetings are out of the way, is being so freely forecast that it has almost come to be accepted as fact. That being so, there is inherent danger to the economy if action is delayed beyond the prophesied time.

Certainly the various economic indications suggest that the sooner re-expansion action is taken the better. Sluggish bank lending, and hire-purchase and retail trade figures indicate the need for economic stimulus. Much must depend upon whether or not the Chancellor is determined to hold back any new measures until he gets trade union co-operation on his incomes policy. At Blackpool this week 'Nick' has had rough handling from the T.U.C. conference. The freely forecast October boom still seems to have more hope than substance.

### The Art of Administration

by A. Leslie Banks, M.A., M.D., F.R.C.P., D.P.H., and J. A. Hislop, M.A., M.D., F.R.C.P. (University Tutorial Press Ltd, London. 125 6d net.)

Administration – which is defined in this context as 'management, with particular reference to public affairs' – takes in a wide field; those who have had to contend with its more eccentric forms might say it covers a multitude of sins. In this book the authors have limited their scope to a review of administration in the public sector and they deal briefly with the machinery of Parliament, central and local government, the Judiciary, voluntary organizations and public corporations and universities. In less than one hundred pages is sketched the history and tasks of the different kinds of organization that link together

to perform the nation's administrative functions. Thus the book is primarily for the genuine student of administration who wishes to expand a dictionary definition to a general understanding of the different aspects of administration. Often one meets in reading, some government or semi-government organization, the name of which is familiar, but about which one knows little more than the name: the first part of this book provides a useful source of enlightenment when this occurs.

The second half of the book, on the art of administration itself, may be useful to the embryo administrator who comes to his post with little previous knowledge of the workings of an office; but such a person must surely be rare. The administrator of even short experience will find little in this book that is new to him and may be irritated by some of the rather glib remarks on office management. Much of what is said is obvious or even ingenuous, as, for instance, the remark that 'anyone who "raids" the petty cash should leave a note to that effect'.

The final chapters on the conduct of meetings are

more happily conceived and provide a very readable guide to the principles and conventions of the formal meeting. Additionally the standing orders which appear in the appendix could be a useful source of reference for an office manager. To summarize, this undoubtedly is a useful book for those seeking its specific type of knowledge and information.

### Launching and Managing O. and M.

by G. E. MILWARD. (Macmillan & Co Ltd, London. 15s net.)

This book has been written following the author's leading part in the production of the excellent standard work Organization and Methods, published by Macmillan in 1959 for the Organization and Methods Training Council, to elaborate one chapter in that book. The preface stresses that the present book is the author's own work, and not an official O. and M. Training Council publication. Mr Milward is nevertheless to be congratulated on the result which, while being simple, practical and readable, at the same time makes some controversial remarks and misses no opportunities of enhancing the status of organization and methods.

The layout, all within a hundred small pages, allows half the book for a brief discussion of the principles involved in putting organization and methods to work in a business, while the other half is devoted to practical examples of the application of organization and methods to business problems concerned with production control, sales, purchasing, accounts payable and personnel documentation.

Two faults of the book are a slight tendency to simplify into meaninglessness—it is really no help to be told that 'the subject of the (O. and M.) assignment can be almost anything'—and some irritatingly lax spelling. Its great merit is its ability to stimulate management to action, and to guide the reader to the basic O. and M. Council textbook.

### The Steel Industry, 1939-59

by Duncan Burn. (Cambridge University Press, London. 80s net.)

A substantial volume, of over 700 pages, this work should be compulsory reading for every one who believes either that steel should be re-nationalized or that nationalization was a mistake. Mr Burn's history of the industry between 1867–1939 written before the Second World War provided him with an unrivalled understanding of its evolution and problems. Thus when during the war he became a member of the iron and steel control authority, he had an excellent vantage point for the continuation of his story.

This book is not light reading, although the style is itself eminently readable. For any person who claims any knowledge of one of Britain's most important basic industries, Mr Burn's work is compulsory reading, not least in view of this country's possible entry into the European Economic Com-

munity, whose steel industries the author examines with care. In view of the frequent suggestions that the industry should be subject to control as a monopoly, the chapters on United States experience are especially interesting. This is the sort of economic research which has real value.

### **Design of Regional Accounts**

Edited by Werner Hochwald. (Johns Hopkins Press, Baltimore; Oxford University Press, London. 48s net.)

This symposium of papers, presented at a conference on regional authority accounts in St Louis, U.S.A., illustrates the development that has taken place in national income analysis in the last twenty years and the views of its potentialities held by many economists. Basically, the object is the same as that of national income accounts, i.e. to provide a flow of information upon which alternative policies can be evaluated. Such regional studies are of particular interest in the North American continent and specialists in the field of national income analysis will be interested to see what its potentialities are for localized issues.

### **Eighth International Congress of Accountants**

SIR, — The Chartered Accountants' Benevolent Association has chartered two aircraft from B.O.A.C. to transport its members (with eligible dependants) to and from New York for the purpose of attending the Eighth International Congress of Accountants which is to be held there from September 23rd to 27th, 1962. A few of the members who intended to travel on these aircraft now find that they are unable to do so and therefore I would like to fill their places. The cost per passenger is approximately £80.

Both aircraft will leave London on September 20th, 1962. One returns on September 29th, 1962 and the

other on October 12th, 1962.

If any member of The Chartered Accountants' Benevolent Association is interested, would he or she please inform me without delay. No other inquirers can be considered.

Yours faithfully,
ALAN S. MACIVER,
Honorary Secretary,
THE CHARTERED ACCOUNTANTS'
Moorgate Place,
Benevolent Association.
London EC2.

### Whole-pound Accounting

SIR, - Perhaps this case history will be of interest to Mr W. C. Nowell, whose letter appeared in *The* 

Accountant of August 18th.

When I was in charge of the overheads accounting system of a large branch of one of the large engineering groups, we considered whole-pound accounting, but not completely. While the total of purchases, wages, stores requisitions and the like were recorded in the financial books in full, the entire analysis by department and type of expense was done in round pounds. We found:

- (1) The difference was, of course, made up of lots of small ups and downs, and the final small difference necessary to reconcile with the financial books, which was never more than a few pounds, was written-off to some account where it did not show let us say on sundry expenses account of 'common services' department, and hence allocated over all departments. Not completely honest perhaps, but of so little importance as to justify overlooking.
- (2) The time saved by clerks who recorded the analyses by not writing the small change and by the comptometer operators who balanced up the analyses was very considerable and saved enough time at the end of the accounting period to enable the figures to be 'read' and a commentary supplied with the accounts which had to reach head office

by a certain early deadline. This, of course, greatly increased their value.

(3) By reducing the space required for each entry, we found it possible to re-design the paper-work so fundamentally that instead of several thousands of cards being in use at any one time there were about eighty. The new paper-work in turn enabled additions to be done and proved throughout the accounting period, and reduced still further the time needed at the end for processing the figures. In addition, the new records were now in exactly the right form for preparation of reports to departmental managers, which were therefore ready to be issued much more quickly.

We came across no snags which were not immediately cured, and the advantages were far more than we had originally expected.

Manchester 20.

Yours faithfully, R. S. FRASER.

### The Clearing Banks

SIR, - I am constrained to write you in connection with your leading article in the August 25th issue of *The Accountant*. In the table headed 'The Clearing Banks' which is attached to this article you quote as follows:

'Williams Deacons . . . 1958 (with Royal Bank of Scotland and Glyn's) British Wagon Co Ltd acquired.'

This, unfortunately, is an erroneous statement. Correctly stated, the Three Banks Group acquired in 1958 a 40 per cent interest in the British Wagon Co Ltd. This company, of which I am a director, is not controlled by the Three Banks Group.

Rotherham.

Yours faithfully, C. E. COPLEY.

[We are obliged to our correspondent for his correction to the table published in our issue of August 25th – Editor.]

### **Deferred Expenditure**

SIR, - A company producing expensive equipment offers customers rental terms, on four-year contract, as an alternative to outright sale. The initial administration, selling and installation expenses incurred to secure a rental contract and a sale are exactly the same.

If the whole of the initial expenses in respect of rental contracts are charged against income in the year the contract is secured the result will be a net loss followed by high profits in the second, third and fourth years of the contract. It is expected that continued expansion will multiply the effect of this, causing profits to be unfairly low for several years, followed by a period of unduly high profits. To counter this it was proposed that these expenses should be written off over the four-year contract period, but it has been argued that this would be contrary to the best current accounting practice.

Would any readers care to express an opinion?

Yours faithfully,

TRUE & FAIR VIEW.

### SCOTTISH INSTITUTE'S SUMMER SCHOOL

### Tenth Annual Event at St Andrews

The tenth annual summer school of The Institute of Chartered Accountants of Scotland, which assembled at the University of St Andrews on Friday of last week, and dispersed on Tuesday, was attended by 115 members including six ladies. Also present as guests of the Institute were Mr R. P. F. Olden, F.C.A., and Mr W. Stuart Orr, B.A., LL.B., A.C.A., Vice-President and Secretary, respectively, of The Institute of Chartered Accountants in Ireland; Mr A. W. Graham, B.COM., F.R.A.N.Z., Secretary, The New Zealand Society of Accountants; and Mr J. K. Port, A.R.A.N.Z., thirteenth travelling scholar of The Incorporated Institute of Accountants of New Zealand.

The school terminated a day earlier this year in view of the Eighth International Congress of Accountants to be held in New York later this month which many

members are attending.

To mark this tenth occasion of the holding of the school, the University Court gave a reception for members in the Younger Graduation Hall, United College, on Friday evening. A lectern, bearing the arms of the Institute and of the University in silver, was presented by the President, Mr James C. Stewart, C.A., on behalf of the Institute, and received by Sir Malcolm Knox, M.A., LL.D., F.R.S.E., Principal of the University. Later at dinner a toast to the guests was proposed by the President, and Mr Olden responded.

### **Public Expenditure**

After dinner the first address, entitled "The growth of public expenditure and its control', was given by Professor D. J. Robertson, M.A., Professor of Applied Economics, University of Glasgow. In the course of his address he explained that the total national expenditure was now about twenty-five thousand million pounds and that Government expenditure accounted for about one-third of this sum. After excluding interest on the National Debt and transfer payments, Government expenditure totalled almost six thousand million pounds, of which the central Government share was about four-fifths - local government accounting for the remaining one-fifth. Expenditure on defence, transfer payments, interest on the National Debt, the Health Service and subsidies accounted for about go per cent of total Government expense, and administration for only 1 per cent - a percentage which made any economy on administration of little significance. Professor Robertson suggested that an improvement would be to lengthen the budget period to three years. Any change in expenditure should take into account related expenditure, e.g. unemployment benefit and redundancy payments.

### **Accounting Conventions**

On Saturday morning, Mr R. M. Morison, M.A., C.A., a partner in Thomson, McLintock & Co, Chartered Accountants, London, introduced his paper 'A critical review of accounting conventions'. The matters to which Mr Morison gave attention included the treat-

ment of fixed overheads — particularly in relation to stock valuation; the fluctuating profits of businesses carrying out contracts lasting for several years; the provision to be made for future losses; stock profits; the disclosure of the results of various activities by one firm; gearing and obsolescence.

In the afternoon a golf competition against bogey was played over the New Course. The 'Summer School Trophy' was won by Mr Quinton T. Crichton, who was eight up on bogey. The booby prize was very narrowly won by Mr T. D. Lynch who was 17 down.

On Sunday morning a special service for summer school members, held in the Collegiate Church of St Salvator, was conducted by the Reverend James C. Stewart, M.A., son of the President of the Institute, who is Assistant Minister of St John's Kirk, Perth.

A car treasure hunt was organized on Sunday afternoon by Mr A. I. G. Farquharson, c.A., A.C.W.A. The winning car was driven by Mr David Paton and navigated by Mr J. T. Welsh and Mr Gordon Stuart.

### The Young C.A. Looks Forward

On Sunday evening Mr J. C. Shaw, B.L., C.A., A.C.W.A., a partner in the firm of Graham, Smart & Annan, Chartered Accountants, of Edinburgh, and Mr A. L. Stewart, C.A., M.I.O.M., finance director of Ethicon Ltd, Edinburgh, gave summaries of their paper The young chartered accountant looks forward'. There was a lively discussion of many important and controversial questions, including the provision of management services, the place of small firms in public practice, the pros and cons of specialization, as well as more domestic issues affecting the working of the Institute.

A paper entitled 'Financial controls in industry' was given by Mr W. L. Spalding, B.SC.(ECON.), C.A., F.C.W.A., F.C.I.S., assistant secretary of Decca Ltd, on Monday morning. In his paper, Mr Spalding considered the financial controls required to achieve a satisfactory rate of return on capital employed. The target rate of return, the measurement of capital employed both in the operating unit as a whole and its separate activities, the relationship of fixed and variable costs in relation to profitability, forecasts, capital investment projects, and budgetary control of assets were all matters which received detailed review and discussion.

### Course Dinner

The proceedings of the school terminated on Monday evening with the official dinner at which the toast of the University of St Andrews was proposed by the Vice-President, Mr W. L. Milligan, J.P., B.A., C.A. The response on behalf of the University was given by Professor J. H. Baxter, Officier de l'Instruction Publique, M.A., D.D., B.D., D.LITT., F.R.S.E., Professor of Ecclesiastical History. The toast of the Institute was proposed by Mr R. P. F. Olden, F.C.A., Vice-President of the Irish Institute. Mr James C. Stewart, President of the Scottish Institute, replied.

The role of the summer school is an important one,

providing as it does a valuable link between the Council of the Institute and members, as well as giving members the opportunity of meeting each other to discuss their problems. One of the foundations of the success and popularity of the school is the venue which charms the member attending for the first time and endears itself to those fortunate enough to have attended previous schools. Even so, it cannot go unrecorded that complete

success could hardly have been achieved without the devoted work of Mr G. D. H. Dewar, c.A., the Convener, and the other members of the Summer School Committee, the contributors of the papers, the discussion group leaders and the highly efficient secretariat.

The eleventh summer school is to be held at St Andrews from Friday, June 14th, to Wednesday, June

19th, 1963.

# Canadian Institute's Diamond Jubilee

### Conference at Fredericton, New Brunswick

THE Canadian Institute of Chartered Accountants this year celebrates its Diamond Jubilee. Since those early days at the beginning of the century, with a membership barely reaching three figures, the Institute has grown to a present strength of nearly 11,000. Growth has been particularly rapid over the last decade, during which time some 6,000 new members have been admitted.

As mentioned under 'Weekly Notes' in our last issue, a Diamond Jubilee Conference was held in Fredericton, New Brunswick, from August 26th–29th, when some seven hundred members and their ladies were present. Mr George W. Hudson, F.C.A., President of the Canadian Institute, and Mr G. Andrew Oulton, F.C.A., President of the New Brunswick Institute of Chartered Accountants, were the joint hosts.

The conference opened with the annual general meeting of members, at which Mr J. R. M. Wilson, F.C.A., Chairman of the Committee on Objectives and Organization, reported on highlights of the Institute's activities during the year. At the luncheon following the meeting, the conference was addressed by Mr R. A. Irwin, President, Bathurst Power & Paper Co Ltd, on the subject "The responsibility of Canadian industry in research'. Mr Irwin said that one reason why managements were reluctant to use company funds for research purposes was because it was customary for most companies to look at 'return on investment' as at least one criterion as to where the moneys should be spent and on this basis research expenditure fared poorly. Managements, he said, failed to realize that a return on an expenditure for research could not be expected in less than five years and more normally might take ten or even twenty years.

At the business sessions eleven subjects were considered and we summarize below some of the addresses presented.

### Sales Tax

Mr F. R. Irwin, Director of the Taxation Division, Department of Finance, speaking on the 'Federal sales tax' at the opening Panel Discussion, stated that critics had called the sales tax inflationary and discriminatory; supporters believed that it might have less adverse economic effects than a tax on earnings; while those who advocated its abolishment were faced with the fact that alternative methods of raising over \$1 billion in tax revenue per year looked even less attractive.

Mr Irwin said that although Canada leans fairly heavily upon the sales tax, which in recent years has produced about 15 per cent of total tax revenues and about 45 per cent of the revenue of the old-age security fund, there was even greater dependence on this source of revenue in many other countries. In France, Germany and Russia, for example, total tax revenues

derived from sales tax exceed 40 per cent and in ten other European countries exceed 20 per cent.

Compared with the tax in some other countries, said Mr Irwin, the Canadian single stage sales tax of II per cent imposed only once in the distribution process on the price at which manufacturers sell their goods looked simple. The fact that the tax was imposed on the manufacturer's selling price, or on the duty paid value of imported goods, had given rise to some of the most difficult problems in administering the Canadian tax.

Mr Irwin stated that a somewhat different but equally troublesome problem was that of exemptions. One of the prime reasons for exemptions was to prevent the tax having too heavy an impact on low income groups; exemptions had also been granted on religious, charitable, educational or cultural grounds or to prevent multiple taxation. Experience had shown, he said, that the more exemptions there are the more requests for new ones are likely to arise. As a result, the Government was continually in receipt of requests to add more items to the tax-free list. He contended that since the sales tax was meant to be a general tax it should be applied to every finished commodity unless there was a very good reason for an exemption. Even comparatively minor exemptions over the years, he concluded, could lead to a considerable erosion of the sales tax base.

Another speaker on the same subject, Mr M. J. Gorman, F.C.A., Director of the Excise Tax Branch, Department of National Revenue, said that department officers needed a vast amount of knowledge to issue rulings and regulations and this could not be acquired without close consultation with industry. Taxpayers, he said, were given extensive appeal rights on both the application of the tax and on cases where overpayment or underpayment had occurred. Appeals can be taken to the Minister and on to the Tariff Board; final appeals can be made to the Exchequer Court or the Supreme Court. He pointed out, however,

that appeals to the Tariff Board do not, at the present time, cover the value or basis on which the tax applies because this would involve disclosing confidential information.

Mr Gorman stressed the importance of manufacturers correctly applying the tax to the goods they produced. If this was not done it could be an adverse factor in competition, first, because of the rate of tax itself; secondly, because of the close scrutiny given by some purchasers to the tax being charged them by vendors; and, thirdly, if wrongly applied it might mean the difference between profits and losses. Some manufacturers sell their goods direct to users or consumers while a competitor may sell to wholesalers or retailers. If the tax was applied in all cases on the actual selling price an inequity would quickly arise; in order to produce equity, Mr Gorman pointed out, the department tried to equalize the tax as far as possible as the goods passed through the marketing process.

Mr Gorman said that chartered accountants could be of great assistance to their clients by helping them to present a more enlightened case to the department regarding the application of sales tax to goods, the value or basis on which the tax should apply or in regard to presenting a case in connection with an underpayment or overpayment of tax. He appealed also to taxpayers and associations to assist the department in keeping the Act and regulations up to date based on knowledge of their clients' operations and the marketing processes of the industries concerned.

Mr J. Eric Ford, c.A., of Toronto, criticized members of the profession for their indifference to sales tax matters. All too often, he said, sales tax work was left to the order clerk or assistant purchasing agent and while such personnel might well be expert in sales tax matters, they were not always gifted with sufficient imagination or importance in the company to influence corporate policy.

### Management by Objectives

Professor W. A. Thompson, Associate Dean of the University of Western Ontario's School of Business Administration, speaking on 'Management by objectives' at a later session, said that as a result of the need for truly responsible and able people in business, there was a growing interest in what was termed 'management by objectives', by which a company defined precisely where it wanted management to go before it decided how it should proceed.

Professor Thompson said that an approach of this kind started with a company setting out some specific overall objectives and defining the constructive role of the performer of the work to be done. 'When we talk about management by objectives we are interested in the results of the work rather than the listing of specific duties that the job holder must perform,' he said.

Objectives set up for particular jobs should be reasonably attainable – probably within a twelve-month period. They should be interrelated to objectives in other areas in the firm. He contended that the sequence of objective setting should start at the top and each lower level of management should know what its part was to be. It should not be arbitrary and there should be the maximum participation all the way through the organization.

Professor Thompson noted that one of the greatest

difficulties was the actual setting up of objectives. This called for skill and ingenuity. Another difficulty revolved around the scarcity of the kind of man who can operate as a subordinate in this kind of atmosphere. The system, he said, assumed high management competence throughout the organization and the whole process was an important facet to good superior-subordinate relationship.

### **Educational Policies**

Mr Peter S. Leggat, C.A., of Montreal, Chairman of the Institute's subcommittee on long-range educational planning, urged members to prepare for the time when the entrance requirements for the profession would have to be a university degree, in a paper entitled 'Are our long-range educational policies desirable and practicable?', at an early morning (8.30 a.m.) breakfast meeting of the conference.

He told the meeting that 1970 had been set as a target date by the committee and that answers to the problems that will inevitably arise will have to be found before 1965 in order to make a smooth transition. 'Competition has been one of the great strengths of the profession and we have been extremely successful in this area. Let us try our hand in a slightly different arena where the stakes are equally high,' said Mr Leggat

The accounting environment, according to assessments made by Mr Leggat, will require in the future men with broader and better disciplined minds and a much more extensive syllabus with a concentration of teaching over a shorter period of time. The high school student, he said, could not be expected to be ready for such training; his study habits, discipline of mind and reasoning powers had still to be rounded off and this process was completed at university.

He emphasized that the smaller practitioner would require a broader grounding if he was to continue to be the leader in the community and the champion of small business. 'Many practitioners will have to take a serious look at the audit techniques and procedures which are presently in use and assess whether these are up to date or necessary,' he said.

Mr Leggat stated that the question of how the profession can arrange its affairs to keep pace with the rapid developments of the present day was in the minds of accountants all over the world. The feeling in the United States, he said, was that the accounting profession was on the brink of a significant breakthrough. He felt that any improvement in the educational programme should be aimed at the development of a cultural professional man motivated to assume the social responsibilities and dedicated to a life of continuing study. This would mean expansion

### Systematic Approach to Data Processing

in the scope of the educational programme and its

modernization in quality.

Greater planning and study by management before the installation of a computer – rather than after – was the consensus of opinion during a panel discussion on data processing at a subsequent session.

Mr David Watson, of Toronto, said that a great deal more detailed planning than is being carried out at present should be completed by management before the final decision to use a computer was taken and the actual equipment selected. Until this happened, he said, there would continue to be comments from nearly every user that the computer was costing a great deal more than was estimated and that it was not producing the advantages which were expected. Mr Watson said that feasibility studies were sometimes conducted not as fact-finding investigations but as sales campaigns against top management resistance. He emphasized that a computer should be introduced into a company only if it could be used to do work that either reduced costs significantly or provided profitable information. He also stressed greater participation by management rather than leaving the development of business systems in the hands of the machine supplier and junior technicians who often did not show the plan to management until after the computer went into operation.

Mr Gordon H. Cowperthwaite, F.C.A., also of Toronto, said that there had been far too many instances where the use of computers had not come up to expectations and the high hopes of top management had turned to disillusionment and embarrassment. In deciding whether or not to install a computer, a complete analysis of the system and its requirements must be made rather than a study directed towards the use of one particular machine, said Mr Cowperthwaite. Costs of converting from the old system to the new must be estimated, the capacity and willingness of the company to assemble the staff to carry out the programme must be considered and a decision reached as to whether the management group will accept the new

system using the computer.

Mr Cowperthwaite said that up to the end of last year there were twenty large-scale computers and 250 medium-scale machines installed in Canada. In the future, however, a wide variety of smaller, faster, cheaper machines would be introduced and this, in turn, would lead to a greater standardization of programming techniques, better ways of evaluating programming staffs, more efficient installation and a closer relationship between management decision making and computer use. On the other hand, said Mr Cowperthwaite, no matter how sophisticated the system or how smoothly the installation is achieved, the use of a computer will remain an aid to and not a substitute for good management.

### Reduce to Survive

A reducing plan for over-weight businesses to ensure their healthy growth was proposed by Mr L. J. Smitten, controller of General Foods Ltd, Toronto, at a panel

session on the Tuesday afternoon.

Mr Smitten said that over-expansion was one of the greatest single causes of business failures and that unhealthy bulges can appear in a business as a result of too many products being made, unprofitable distribution methods, unneeded facilities, over-organization and over-management. He said that managements spend a disproportionate amount of time either dealing with problems that should never have arisen or correcting things of questionable value which would probably be better eliminated.

Parkinson's Law, which exposed over-organization in Government, can be applied equally well to many companies, said Mr Smitten. He suggested that management should investigate the work being done in all administrative departments in order to eliminate duplication of effort and then determine what staff

### NEW PRESIDENT

AS briefly announced in our last issue, Mr James W. Abbott, F.C.A., was elected President of the Canadian Institute for the

ensuing year at the closing session of the conference.

Mr Abbott, who is a partner in the Winnipeg office of Peat, Marwick, Mitchell & Co, qualified in 1939 and served in the Department of National Revenue, Winnipeg, from 1939-1946. He then formed his own practice under the

style of J. W. Abbott & Co which was subsequently merged - in 1960 - with Peat, Marwick,

Mitchell & Co.

A member of the Council of The Institute of Chartered Accountants of Manitoba from 1946–1957, he held office as President from 1955–57. Outside his professional interests, Mr Abbott has served as honorary treasurer of The Winnipeg Community Chest and as governor of the board of directors of Winnipeg Winter Club. His hobbies are curling and golf, and this year he is President of the Manitoba Golf Association.

were required to perform essential work in the cheapest and simplest way. He emphasized that this was not as easy as it sounded and required the experienced judgement and co-operation of the entire management and staff.

Mr Smitten stressed also the importance of pruning product costs, by maintaining not only a close study of all manufacturing operations but also by concentrating on improvements in the product itself.

### **Advantages of Incorporation**

Professor William G. Leonard, F.C.A., of the School of Commerce, Queen's University, and Mr D. F. C. Burton, C.A., of Halifax, were the two speakers at a panel session on "The pros and cons of incorporation".

Referring to the fact that by incorporating the

Referring to the fact that by incorporating the business the income could be effectively split into two—the proprietor's own yearly salary and residual corporate income after deduction of salary expenses—Professor Leonard said that it could be argued that this merely deferred tax from earlier to later years and that the accumulation of undistributed income postponed the day of reckoning with the Department of National Revenue but did not avoid it. He pointed out, however, that if the business continued to grow and the proprietor made adequate provision in his personal estate for his beneficiaries, accumulated earnings might never

need to be withdrawn and the tax saving was permanent. Furthermore, a business which was profitable in its earlier years might run into later years of loss. To the extent that losses of later years eat into retained earnings of earlier years the tax postponement arising from incorporation became a permanent tax saving, whereas if a business concern were unincorporated, the only relief for business losses of later years was a loss carry-back of one year for the first year of loss. Professor Leonard contended that for the individual with extensive business interests the high rate of tax on the graduated rate structure made the use of the corporate form imperative.

Mr Burton advanced the theory that in Canada's present economy and democratic form of society there should not be any tax differences between two businesses contributing to the common good, where one happened to be a proprietorship and the other a corporation. If anything, he said, preference should be given to the proprietor since he was the individual who conceived and developed the business.

### **Public Relations**

Speaking at a panel session on 'Public relations', Mr William V. Victor, c.A., of Montreal, said that many chartered accountants failed to recognize that they were now facing a threefold professional, political and personal challenge. Mr Victor, who is the Immediate Past President of The Institute of Chartered Accountants of Quebec, told the meeting that to keep pace with industry, chartered accountants must broaden their horizons by being forward looking, imaginative and versatile. The development of the profession and of each individual member must parallel that of industry, he said.

In regard to the political challenge, Mr Victor stated that considering the Federal Budget was close to six billion dollars and Government was the largest business in the country, greater representation in Parliament by chartered accountants would unquestionably reflect to the credit of the entire profession. Members, he said, should not disassociate themselves from public life on the pretext that it might be too demanding on them.

Mr Victor said that there were many different kinds of institutions requiring volunteers who were capable and prepared to give freely of their efforts. Chartered accountants can add immeasurably to any board meeting whether the topic was budget, organization or the establishment of policy. The profession need have little concern for its public relations if its individual members meet their responsibilities in these three areas, he concluded.

### China - The New Puritans

Mr G. C. Andrew, Executive Director, Canadian Universities Foundation, Ottawa, was the guest speaker at the Members' Luncheon on the final day of the conference. Mr Andrew, who has recently returned from a visit to China, said that what impressed him most was the unity of purpose and widespread belief in what used to be called the homely virtues of plain living, high thinking, individual thrift, collective effort and, above all, an overpowering belief in education as the means of scientific, technological and social salvation, as well as cultural, moral and spiritual uplift.

There were at present some ninety million children attending school from grades one to six and starting at the age of 7, said Mr Andrew. Now there was agitation to begin education at the age of 6. There were some nine million attending academic schools and another three million attending vocational or technical schools. In addition, there were some 900,000 students at universities or in higher educational special institutes. These figures, he said, large as they are, were recognized by the Chinese as being thoroughly inadequate for a nation that aspired to cultural, social and industrial advance.

Mr Andrew stated that it was easy enough to draw attention to China's agricultural shortcomings but no one could deny her progress in preventive medicine, the fair distribution of food supplies and the development of education; the last mentioned not only in schools, universities and technical institutes but through a literacy campaign that had been conducted by educational agencies of all kinds, through industrial plants, trade unions, co-operatives and communes, correspondence courses, radio and television courses and night schools.

In contrasting China's faith in the future with that of the western world, 'Mr Andrew said that, despite differing political religions and cultural predispositions, there were certain problems which were recognized by most people as being world-wide in their application and implication. The most obvious of these were world population, world health, and world food.

"The fact is that we in the West have made only sporadic and frightened efforts to look some of these great world problems fully in the face and when we have looked at them, for the most part, we have recoiled on the grounds that we, the differing sections of the human race, have not the power to control the circumstances that would lead to a grappling with the total problem."

There was no hope for the world, said Mr Andrew, unless countries were willing to divert an adequate share of their time, energy, brains and resources to the problems which affected the whole human family and not only those that affected their own section of that family.

'Canada can no longer live industrially under the wing of a Commonwealth preference or an American indulgence', said Mr Andrew. Politically, we are too big a state with too important interests in the world to allow the British or the Americans to do out bargaining for us or to interpret through their own news agencies our interests abroad. We must show more enterprise, politically and socially no less than scientifically and industrially, if we wish to make use of our human abilities and to develop our total resources as a people. We have got to give more scope and opportunity to the more able of our young people. We have to invest heavily in research if we are going to make life in this country exciting enough to retain our most able youth and fulfil our obligations as a people to other peoples of the world.'

### SOCIAL EVENTS

A varied programme of social events included an opening reception for members and their wives and children, a family 'lobster boil' at which Don Messer and his Islanders entertained and provided squaredancing music, and a dinner-dance at Fredericton's Capital Winter Club. One afternoon during the conference was left free, when a golf tournament was held and tours were arranged to Camp Gagetown and the Lord Beaverbrook Art Gallery. In addition, there was an interesting programme for the ladies and a children's programme.

# Notes and Notices

### PROFESSIONAL NOTICES

MESSRS FRANKLIN, GREENING & Co, Chartered Accountants, of Broomspring House, 85 Wilkinson Street, Sheffield 10, announce that Mr J. S. Hoole, F.C.A., has retired as a partner. He will continue to be associated with the practice in a consultative capacity and will be available for appointments by arrangement. The style, telephone number and nature of the business will remain unchanged.

Messrs P. & J. Kevan, Chartered Accountants, of Bolton, announce that their Manchester office address is now Grampian House, 144 Deansgate, Manchester 3. The telephone number is unchanged.

Messrs Lingard, Wilson & Co, Chartered Accountants, of Manchester, announce that their address is now Grampian House, 144 Deansgate, Manchester 3. The telephone number is unchanged.

Messrs Thomson, Jackson, Gourlay & Taylor, Chartered Accountants, of 24 George Square, Glasgow C2, announce that Mr James Dempster Taylor, M.A., c.A., will retire from the partnership as from September 30th, 1962. As from October 1st, 1962, they will assume as partners Mr David Duncan Gibson, c.A., and Mr Iain Johnston Gilchrist, c.A. The name of the firm will remain unchanged.

Messrs Tiplady, Brailsford & Co, Chartered Accountants, of 36/38 New Broad Street, London EC2, announce that as from September 1st, they have admitted into partnership Mr S. G. Maynard, A.C.A., who has for a number of years been a senior member of their staff.

It is announced that a firm to be known as Annan Impey, Morrish & Partners, has been formed and will practise from 21 Ironmonger Lane, London EC2. The partners are Messrs C. I. Bostock, F. Boydell, B. A. Clark, W. H. Dawe, J. W. Hills, R. P. Matthews, H. S. Renton and T. E. Sweetman.

### Appointments

Mr Nigel J. Bennett, D.F.C., F.C.A., has been appointed group managing director of Tecalemit Ltd and chairman of Foamite Ltd, British Oil Burners Ltd, Industrial and Domestic Heaters Ltd and a new company – Tecalemit (Developments) Ltd.

Mr William Hayhurst, C.B.E., F.I.M.T.A., F.S.A.A., lately City Treasurer, Westminster City Council, has been appointed a director of Sterling Estates Ltd.

Mr F. J. S. Lord, F.C.A., secretary of Bear Brand Ltd, has been appointed a director of the company and becomes group financial controller, while retaining the position of secretary.

Mr F. W. McGuinness, T.D., F.C.A., has been appointed a director of Wyvern Property Co Ltd.

Mr D. G. A. Owen, B.COM., F.C.A., has been appointed a director of Gomme Holdings Ltd.

Mr W. D. T. Tapley, F.C.A., has been appointed to the board of The Avon India Rubber Co Ltd as works director.

Mr R. C. Thompson, F.C.A., deputy accountant of the English Sewing Cotton Co Ltd, has been appointed accountant of the company.

Mr R. L. Tiffany, F.C.A., has been appointed chief accountant of M. Vanger Ltd and Elmo Stores Ltd.

Mr Charles Wallis, F.C.A., has been appointed to the board of I. B. E. Ltd.

### CENSUS OF PRODUCTION FOR 1963

The next Board of Trade full and detailed Census of Production will be taken in 1964, in respect of business done in 1963. A detailed census of this kind is now taken once in five years, those of intervening years being of a simple character.

In this census information is being obtained about certain business expenses, including in particular transport expenses. Hitherto, there has been little systematic information about the importance of transport costs to different industries.

The census forms for 1963 will include questions on:
(1) working proprietors, (2) employment, (3) wages
and salaries etc., (4) stocks, (5) capital expenditure,
(6) work done by other firms, transport costs and certain
other expenses, (7) materials, goods and fuel purchased,
(8) sales and work done.

In sections (2) and (3) separate particulars will not be required for males and females; nor will figures be required for a pay-week in October in addition to figures for the year as a whole. In the purchases section (7), firms will be asked for details of the items purchased as well as their total cost, information which has not been obtained since the census for 1954; but the number of items for which particulars of the quantity purchased will be required as well as the value has been kept to a minimum for 1963. Questions are included about the number of persons engaged on transport work, and about the costs of operating road goods vehicles. Other business costs on which questions will be asked include employers' National Insurance contributions and payments to superannuation and other pension funds; payments for rates, and the cost of plant and machinery hired.

Small firms with fewer than twenty-five employees will be required in this census to state only the nature of their business and the number of persons employed, except in a few industries in which they contribute a substantial proportion of total output; in such industries a sample of firms will be asked to complete a simplified version of the standard form.

Inquiries should be addressed to the Board of Trade, Census Office, Lime Grove, Eastcote, Ruislip, Middlesex.

### EXCHANGE CONTROL Use of Sterling Notes Abroad

The Treasury has announced that from August 30th, 1962, residents of the United Kingdom who travel abroad are allowed to spend or exchange anywhere abroad up to £50 in sterling notes if they wish. An Order (The Exchange Control (Payment in Currency Notes) Order 1962 - S.I. 1962, No. 1847) giving effect to these changes was published on August 20th.

Previously, a traveller was permitted to take out of the country up to £50 in sterling notes but not to spend the notes abroad; they were intended only for use on British ships or aircraft, and to meet the traveller's expenses on his return to the United Kingdom.

### LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

### Meetings on the Common Market

The Committee of the London and District Society of Chartered Accountants have arranged a series of three meetings on the European Common Market to be held in the Oak Hall of the Institute as follows:

October 30th: "The European Common Market and the Treaty of Rome', by Sir Graham Cunningham, K.B.E., LL.B., latterly chairman, Triplex Holdings Ltd.

November 13th: 'The Common Market's challenge to the

City', by 'The Hon. Arthur Maxwell Stamp, director,

Philip Hill, Higginson, Erlangers Ltd.

December 4th: 'The practice and the profession of accountancy within the Common Market', by Mr J. Kraayenhof, Past President, Netherlands Institute of Accountants.

Each meeting will commence at 5.30 p.m. and addresses will last for approximately half an hour and about the same amount of time will be devoted to questions and discussion. It is hoped that there will be a good response from members and that the meetings will be well attended. Further information is available from the secretary of the Society, Mr J. W. G. Cocke, T.D., M.A., F.C.A., 2 Norfolk Street, London WC2.

### THE MANCHESTER CHARTERED ACCOUNTANTS' STUDENTS' SOCIETY

### Saturday Morning Lectures

A comprehensive programme of Saturday morning lectures designed to give Intermediate and Final students an opportunity of attending lectures on subjects covered by the examination syllabus, will commence later this month at the Chartered Accountants' Hall, 46 Fountain Street, Manchester 2. The same Intermediate and Final lectures will also be given in Preston, at The Reform Club, Chapel Street, Preston.

Further particulars are obtainable from the honorary secretary, 46 Fountain Street, Manchester 2.

### THE INSTITUTE OF INTERNAL AUDITORS **European Regional Conference**

The third European Regional Conference of The Institute of Internal Auditors is to be held at the Hotel Metropole, Brighton, on October 10th, 11th and 12th. The conference will assemble during the afternoon

of Wednesday, October 10th, and the opening address will be given that evening by Mr J. O. Davies, F.C.A., A.C.W.A., European Regional Director, followed by an address by Mr Bradford Cadmus, Director of Research and Education of the Institute, entitled 'Internal auditing in the world today - and the future'.

The speakers and their papers on the Thursday and Friday will be Mr C. S. Deverell, M.A., B.SC.(ECON.), B.COM., F.C.I.S., A.M.B.I.M., Head of Commerce and Management Studies Department, Brighton Technical College, whose subject will be 'Communications'; Mr D. W. Hooper, M.A., F.C.A., President, The British Computer Society, and chief organizing accountant, National Coal Board ("The impact of E.D.P. on audit techniques'), and Mr J. E. Wall, O.B.E., managing director, E.M.I. Ltd ('Management problems of size'). These three papers will be followed by syndicate meetings and at subsequent sessions questions raised by syndicates will be answered by the speaker. Other arrangements for the conference include a banquet, a meeting of the Chapter Presidents of the Institute with Mr Bradford Cadmus, and an open forum.

### **London Chapter**

The next meeting of the London Chapter of The Institute of Internal Auditors will be held on Wednesday next, at The Kingsley Hotel, Bloomsbury Way, London WC1, at 12.30 p.m. The speaker will be Mr E. A. Carr-Hill, of the British Productivity Council, and his subject will be 'A survey of the field of work study'.

### Birmingham Chapter

The inaugural meeting of the 1962-63 session of the Birmingham Chapter of the Institute of Internal Auditors will take place next Thursday, September 13th, at 6.30 p.m., at the Chartered Auctioneers' and Estate Agents' Institute, Regent House, St Philip's Place, Colmore Row, Birmingham, when Mr R. H. Pitchford, A.A.C.C.A., A.O.M.A., chief internal auditor, West Midlands Gas Board, will speak on 'Dynamic auditing'.

Further particulars of Chapter activities may be obtained from Mr R. C. J. Lucas, West Midlands Gas Board, Wharf Lane, Solihull, Warwickshire.

### COSTING IN THE FURNITURE INDUSTRY

The Furniture Development Council has been notable during the last decade for its establishment of an accounting and statistical consulting staff which has done valuable work in advising individual firms on costing methods and problems, and in making available comparative cost data.

The Council has recently published two new booklets which, though addressed primarily to furniture manufacturers, could be of interest to many in other industries. The approach in each case is direct, undogmatic, and not confused by unexplained professional terminology, so as to appeal to the manager without specific knowledge of accountancy.

The first booklet, Batch Size Calculations, is a précis of the Cranfield Research Report on the same subject. It explains the use of a formula for determining the 'minimum cost' batch size; and then suggests alternative lines of investigation into the cost of varying

batch sizes.

The second publication, The FDC Product Costing System, contains a clear and simple explanation of the sort of cost information a manager can use, and of how he sets about obtaining it. There are eleven full-page illustrations of forms for assembling budget information and establishing product costs, such as could be adapted by the accountant of any small or mediumsized business.

The offices of the Council are at 11 Adelphi Terrace,

Robert Street, London WC2.

### CHARTERED ACCOUNTANTS' HOCKEY CLUB

A most enjoyable game was played by the Chartered Accountants' Hockey Club against the Bank of England on August 8th, which not unfairly resulted in a draw two goals each. The accountants started off at a pace which should have resulted in two or three scores in the first ten minutes, but a scrambled goal midway through the first half was their only result at halftime. The Bank equalized soon after the restart and the accountants regained the lead when Hines converted his second long corner into a goal. This spurred the Bank to greater efforts and with the accountants' goal in siege, they equalized with a fine goal. The following represented the accountants:

P. Angus (Harpenden), W. M. Caldwell (Royston), N. Odams (Rickmansworth), M. J. Hodder (Berkhamsted), G. A. Davis (Merton), J. S. L. Bewers (Bishop's Stortford), M. A. Charlton (Rickmansworth) (Captain), A. C. A. Myers (H.A.C.), A. J. Hines (Bury Y.M.C.A.), W. E. Lawes (Richmond), B. E. Taylor (Tulse Hill).

### GOLF

The London Chartered Accountant Students' Golfing Society recently played a match against the Kent and Sussex Students' Golfing Society which resulted in a win for London by eight matches to five.

The results (London students' names first) were as

follows:

A. Fells and Leon Nahon beat A. Hudson and N. Rimmer, 5 and 4.

A. Wright and I. Richards lost to H. Reed and D. Jagger, 3 and 2.

M. Amos and J. Lyttleton beat D. Wheeldon and N.

Betteridge, 5 and 3.

A. Bolsom and A. Hawthorn beat P. Foreman and A. Pettitt, 5 and 3.

B. Colman and A. Ross beat C. Pollock and C. Pollock, 9 and 7.

> Nahon beat Pettitt, 3 and 2. Richards lost to Reed, 1 hole. Lyttleton beat Wheeldon, 2 and 1. Hawthorn beat Foreman, 2 and 1. Ross lost to Wright, 5 and 4. Bolsom lost to Hudson, 2 and 1. Fells, lost to Rimmer, 7 and 5. Amos beat Betteridge, 9 and 7.

### SEVENTY-FIVE YEARS AGO

From The Accountant of September 10th, 1887

A Weekly Note

If an incident related to us the other day is true, and we are inclined to believe that in substance it is, the Institute of Chartered Accountants received a few months ago the most grievous and decided snub ever inflicted upon it. The occasion was an important enquiry before a lawver (a Court official) as arbitrator, into charges of malversation and irregularity preferred against some of the members and officers of a well-known public body. Accountants were employed on both sides, one side having the benefit of the services of an old experienced and able chartered accountant, noted for his admirable common sense; the other having secured a gentleman who had had about three years' training in the office of a well-known firm, his previous experience in accounts being unknown. Anxious probably to ascertain what the qualifications of the latter gentleman were, counsel for plaintiffs asked: "Are you, Mr. X., a member of the Institute of Chartered Accountants, or of the Society of Accountants and Auditors?" "I am neither, sir," said the gentleman questioned, with a look and in a tone which would have made Henry Irving sick with envy; "I ignore them both!"

### ANNOTATED TAX CASES

Part 2 of Volume XLI of the Annotated Tax Cases, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, has now been published and contains reports with notes on the judgments of the following cases: Jamieson v. C.I.R., Wills v. C.I.R. (C.A.); Monthly Salaries Loan Co Ltd v. Furlong (Ch.D.); Seaward Brothers v. Varty (Ch.D.); Bispham v. Eardiston Farming Co (1919) Ltd (Ch.D.); C.I.R. v. Hood Barrs (Ch.D.); Wellington v. Reynolds (Ch.D.); Walter W. Saunders Ltd v. Dixon (Ch.D.).

The annual subscription to the Annotated Tax Cases is 50s post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

### OFFICIAL RECEIVER APPOINTMENTS

The Board of Trade has announced that Mr Wilfred Whitehead has been appointed Official Receiver in bankruptcy attached to the High Court with effect from September 3rd, 1962.

It is also announced that Mr Ernest Charles Sherwood has been appointed Official Receiver for the Bankruptcy District of the County Courts of Croydon, Guildford, Kingston upon Thames, Slough and Wandsworth. The appointment took effect on September 3rd, 1962.

Notes and Notices

# The Oxford Summer Course

STANDREWS, Oxford, and New York will have one thing in common by the end of September and that, of course, is that in that month all will have been invaded by migrations of accountants. Perhaps a hundred accountants at St Andrews may appear to be as big a crowd (especially if they all gather simultaneously at the first tee of the Old Course after lunch) as 4,000 accountants lost in the vastness of New York. Poised between these two extremes are the 254 members of The Institute of Chartered Accountants in England and Wales, who together with a number of guests, are in residence at Christ Church and Pembroke College this week-end. Oxford in the late summer is the ideal place for quiet contemplation and the writers of the three papers now under discussion have certainly provided material in good measure.

Friday's paper, by Mr R. W. SMITH, O.B.E., T.D., F.C.A., is entitled 'The problems of the smaller practice'. We nearly wrote 'the perennial problems' because the subject is always with us and understandably so. On Mr SMITH's evidence, no less than 19 per cent of all Institute members practising in the United Kingdom are sole practitioners and another 23 per cent are in practice with one other partner. If three- and four-partner firms are considered small, then altogether about 72 per cent of the practising strength of the Institute comes into that category.

Mr Smith's approach to the subject is novel in that he considers in turn the relationships in which the smaller practitioner finds himself. These he lists as Government departments and officials; other professions; other practitioners; the Institute; his clients; his staff; and himself. Prominent in the first group is the Inland Revenue and he makes the excellent point that much work which might well be carried out by that department is, for reasons of speed and accuracy, done by accountants themselves. He would like to see a simplification of Government law and practice and he thinks that a campaign by accountants to achieve this would redound more to the credit of the Institute than would the efforts of a publicity committee.

One of the basic problems of the small practitioner is the question of fees. Mr Smith finds it 'bewildering' that there should be only a few lines in the *Members' Handbook* suggesting how fees should be based while no fewer than forty-five pages are given over to explaining how the accountant can contribute to business efficiency. Mr Smith devotes twenty-two of the ninety-five paragraphs of his paper directly to this topic and he comes to the conclusion, after reviewing the methods adopted by other pro-

fessions, that there is no real reason why the Institute should not issue an official directive indicating scales and charges – even under the guise of a recommendation. This disquisition, appropriately, comes under the section headed 'Relationship with clients'.

Investment in stocks and shares used to be inspired mainly by divination and occasionally by inside information of often dubious authenticity. Nowadays it is done mainly by mathematics and many firms of stockbrokers have actuaries, accountants, economists and statisticians on the strength to pin-point future trends by means of graphs and tables. If their methods were infallible then the speculative element would be removed from investment and the stock exchange would become merely an extension of that part of the Post Office which dispenses premium bonds and national savings certificates but, as Mr A. G. Touche, F.C.A., says at the end of his paper being given today (Saturday):

'The theory of investment will never be a complete guide to practice; the inadequacy of company accounts alone will ensure this. Even were a complete analysis possible, some unforeseen factor — possibly a stampede by other investors — might well upset the most careful and shrewd plans. The inadequacy of data means that intuition and luck will always count, and an art will be saved from degenerating into a science.'

Mr Touche divides investors into three categories according to their tax status and according to whether there is a sharp distinction between capital and income. There is the gross fund ('o per cent taxpayer') such as pension funds and charities; the standard rate payer ('40 per cent taxpayer') which includes most individuals and, ignoring profits tax, companies; and the highest taxpayer ('90 per cent taxpayer'). He defines in turn the types of long-term investments available ('equities' and 'money stocks'), considers the impact of inflation on both capital and income and reviews the factors which the investor should assess before buying. These include dividend and income yields, growth prospects, management and extraneous influences like the state of trade, the political climate, and the psychology of other investors. He concludes by indicating the possible effects of some of these on the fortunes of each of his three categories of investor.

Mr Touche compresses all this into fifty-eight

erudite paragraphs without apparently omitting an essential point. His paper makes hard but rewarding reading and if small practitioners need comfort, they must surely find it in the fact that if they take Mr Smith's advice (in his section on relationship with other professions) and refrain from acting as investment advisers to their clients they will not need to master, as Mr Touche manifestly has, the esoteric art of investing in stocks and shares.

Monday's paper will be 'The training of accountants for industrial responsibilities', by Mr G. W. SEARLE, D.S.C., F.C.A. He begins disarmingly by stating that his address is not the work of a specialist or the fruits of considerable research and then goes on to make a series of very discerning observations on the essential qualities which an accountant who sets out on a career on industry must possess and how he must deploy them. Mr SEARLE groups the industrial responsibilities into four sections - the purely accounting function; costing and budgetary control; trading and financial estimating and forecasting; and the treasury function, i.e. the management of the company's financial resources. He also makes many valuable comments on the most appropriate kinds of preparatory training for industry both before and after qualifying.

When commenting on the Institute's summer course at Cambridge in July, we made reference to the geographical and occupational representation of the 140 members attending. On that occasion, nearly half came from London and eighteen from Birmingham and district. At Oxford, about a hundred hailed from London, about fifteen each from Birmingham and Liverpool and ten from Manchester. Again there were seven members from abroad to whom may be added five guests of the Institute from professional bodies in Australia, Canada and New Zealand. The ratio of members in practice to members in industry rose from 3:2 at Cambridge to 4:1 at Oxford and, once more, the accent was on youth. The oldest member present was admitted in 1915 - before about threequarters of the other members in residence were born - and the youngest in 1962. Altogether, seventeen were admitted to the Institute or Society in the 1920s or earlier, fifty-three in the 1930s, thirty-four in the 1940s, 127 in the 1950s and twenty-three in the 1960s.

# Short-term Gains – X

### LOSSES: IDENTIFYING ASSETS SOLD

NE of the principal arguments against a capital gains tax is that once one leaves the field of the professional speculator, who is already taxed as a trader, the volume and amount of losses is so high that any provision for loss relief tends to reduce the yield of the tax very considerably; even in a period when the value of money is falling fairly rapidly. For that reason it was feared that the new legislation might grant either no loss relief at all, or a very limited amount of loss relief. This fear has not been realized, for section 10 (4) of the Finance Act, 1962, provides that

'the losses allowable under Case VII against gains accruing to a person in any year of assessment shall consist of any losses accruing to him in that or a previous year from any chargeable acquisition and disposal, that is to say, from his acquisition and disposal of assets in such circumstances that a gain accruing from it would have been chargeable under Case VII'.

The loss is to be treated as accruing at the same time as would the gain, and is to be computed on the same principles. It follows that where all the conditions for Case VII liability are satisfied, but the computation produces a minus figure, then that minus figure is a loss available to be set off in the same or any subsequent year. But this Case VII loss is available only against Case VII gains, and not against income generally. On the other hand, losses which are available against income generally, i.e. Case I trading losses on which section 341 relief is claimed, are available against Case VII income equally with other income (section 10 (5)). The subsection removes all doubt about double allowance by providing specifically that in so far as a loss has been allowed against other income, it is not also allowable against Case VII. Equally, where relief for loss has been allowed against Case VII income, it cannot be also allowed against other income. This neat and watertight system of loss relief may be compared with the similar provisions in the case of Case VI losses.

It will be recalled that Case VII liability is confined to persons resident and ordinarily resident in the United Kingdom. An individual so resident who is not domiciled in the United Kingdom is not to be charged in respect of Case VII gains arising to him outside the United Kingdom except on the amounts received in the United Kingdom. Such amounts are treated as income accruing on the date of receipt in the United Kingdom (section 10 (6)). The subsection provides expressly (and logically) that losses arising outside the United Kingdom are not available for relief. To complete the picture as regards this remittance basis income, one must refer also to section 16 (2) which deals with the construction of references to amounts 'received in the United Kingdom'. It says:

'there shall be treated as received in the United Kingdom in respect of any gain all amounts paid, used or enjoyed in or in any manner or form transmitted or brought to the United Kingdom'.

The draftsman has not followed the form of words in section 132 of the Income Tax Act, 1952, in relation to the Case V remittance basis. In any case, the difficulties as to identifying remittances with particular gains remain. However, section 24 of the Finance Act, 1953, which was passed as a result of the House of Lords decision in C.I.R. v. Gordon (31 A.T.C. 165) and deals with devices for avoiding tax by means of loans, is expressly applied to Case VII.

A gift in settlement falls to be dealt with under section 12 (3) (adoption of market value) and under paragraph 3 of the Ninth Schedule (gifts) as though it were a gift to the trustees of the settlement, even though the settlor is trustee. However, if the settlor or his spouse can by any means (even though it requires someone else's concurrence) obtain for himself or his spouse any beneficial interest, there can be no question of the settlor obtaining any loss relief by reference to his disposal by way of settlement (paragraph 4 (1)). This is so even if the two spouses are not living together. Where they are living together, and there is any transfer of an asset from one to another, the disponor is not chargeable under Case VII, and accordingly cannot claim any loss

relief either (paragraph 6 (1) (a) and section 10 (4)). At the same time, the disponee is to be treated as if the disponer's acquisition was the disponee's acquisition—with the consequences dealt with in paragraph 18 (paragraph 6 (1) (b)). The legislation says nothing about setting one spouse's Case VII loss against the other spouse's Case VII gain. However, provided that they are living together in the income tax sense, then such set off follows from the general rule as to treating a wife's income as belonging to her husband for income tax purposes.

It is no secret that the main target of the new tax is the casual speculator in shares. It is a peculiarity of shares that one share of the same class is indistinguishable from another; so much so that, in the case of fully-paid shares, companies have been relieved since 1948 from giving shares distinguishing numbers. It follows that a buyer of shares of a particular class is not normally interested in any specific shares. From the seller's point of view, however, it is obvious that the sale of shares which he acquired after April oth, 1962, and within the previous six months may have very different consequences from the sale of other shares of the same class. If he began April 1962 with a large holding of, say, Consolidated Britons, he might want thereafter to speculate in the same shares. If the speculation is successful, he purports to sell shares of the old holding; if the speculation is unsuccessful, he purports to sell the most recently purchased ones. Thus at will he could avoid tax on capital gains but obtain loss relief. However, the draftsman of the Finance Act, 1962, has foreseen this avenue of avoidance, and has taken counteraction in paragraph 8 of the Ninth Schedule. The paragraph speaks of 'shares' which are defined in section 16 (1) as including stock. However, paragraph 8 (9) says that paragraph 8 applies in relation to a disposal of any assets as it does to shares 'where the assets are of a nature to be dealt in without identifying the particular assets disposed of or acquired'. The cross-heading to paragraphs 8 and 9 is 'Dealings in marketable securities, commodities, etc.' which apparently is intended to cover shares and the assets referred to in paragraph 8 (9). The adoption of the expression 'marketable securities' as a general expression is not a very happy one. It seems to have been taken from the Stamp Acts, in which Acts it does not include shares. Moreover

the word 'marketable' has a specific and restricted meaning for stamp duty purposes. We will here refer to 'shares', as does the paragraph itself.

Paragraph 8 contains a complicated code of rules for identifying the shares which are the subject of a disposition; which rules override any purported identification by the disponor himself. Needless to say, the shares disposed of must in any case be identified with shares which could be comprised in the disposal. Moreover, paragraph 8 is not to operate so as to identify shares disposed of with shares which the disponor holds (or can dispose of) only in another capacity, e.g. as trustee. Identification under the paragraph 8 rules operates for all the purposes of Case VII. Where acquisition by one person is deemed to be an acquisition by another person (see e.g. paragraph 3 (1)) then the rules apply accordingly. Sub-paragraphs (3), (4), (5) and (6) of paragraph 8 contain the main rules for identification, the earlier taking priority over the later. The first rule is that earlier disposals must be identified before later ones, and the earlier identification accordingly determines what shares could be comprised in the later disposal (paragraph 8 (3)).

Paragraph 8 (4) is as follows:

'Shares disposed of for transfer or delivery on a particular date or in a particular period –

(a) shall not be identified with shares acquired for transfer or delivery on a later date or in a later period; and

(b) shall be identified with shares acquired for transfer or delivery on or before that date or in or before that period, but on or after the date of the disposal, rather than with shares not so acquired.'

The 'particular period' which the draftsman has in mind is no doubt a stock exchange account; normally a fortnight. However, it is not expressly confined to that, and sub-paragraph (a) seems to have some strange implications. Suppose the taxpayer sells one hundred Consolidated Britons for delivery 'in the three weeks ending December 31st, 1962' and he buys one hundred Consolidated Britons for delivery 'in the three weeks ending January 7th, 1963' these being the only two transactions the taxpayer ever had in Consolidated Britons. This might be an unwise transaction, since he may find himself unable to deliver on time. But disregarding this aspect, does subparagraph (a) mean that in this way the taxpayer may avoid Case VII liability? (To be continued.)

# American Profession's Founding Fathers

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

CELEBRATION of the seventy-fifth anniversary of the foundation of the American Institute of Certified Public Accountants coincides with the holding of the Eighth International Congress of Accountants in New York this month. This article has been prepared to pay tribute to some of the founding fathers of the American profession.

Early steps taken by practitioners in America to achieve professional solidarity were faltering and, in most cases, doomed to failure. After a preliminary meeting of accountants at the Astor House, the Institute of Accountants and Book-keepers in the City of New York was incorporated in July 1882, with the following objectives:

To elevate the standing and advance the interest of public accountants; and to direct attention to advantages offered by, and the safeguards attending, the auditing and adjusting of books and accounts by persons thoroughly skilled and experienced as public accountants, and of established personal reputation.

The society later shortened its name to the Institute of Accountants. Its membership included accountants who were not in public practice, but a considerable number of its charter and later members were so engaged. It has been described as an association of those 'interested in the advancement and improvement of the science of accounts and account-keeping'.

#### Achievement of Professional Solidarity

Membership of the body was open to all individuals who could pass rigid examinations, and Institute certificates, although not supported by legislative enactment, permitted members to designate themselves 'Certified Accountants'. In 1897, the Institute endeavoured to establish itself on a national basis but its efforts ended in failure. The general public had little conception of what public accountancy implied, and refused to accord it recognition as a profession. The importance of this initial effort at professional organization accrues from the fact that the Institute introduced fitness tests for those seeking membership, emphasized the role of the public accountant in business affairs, and worked to secure the enactment of State laws recognizing the accounting profession.

An important contribution to the promotion of professional unity was made by a Lancashire man. He was James Thornley Anyon (1851–1929), the American representative of Barrow, Wade, Guthrie & Co, who invited all practising accountants to his office at 45 William Street in New York City on December 22nd, 1886, to discuss the possibility of

organizing an American professional society comparable to The Institute of Chartered Accountants in England and Wales. Deserting their somewhat slender practices, six men appeared at the appointed place and Edwin Guthrie (1841–1904), who was visiting the United States, was accorded the chair because of his long experience as a member of the Council of the English Institute.

The eloquent Guthrie explained that when he had visited America three years before, he had discovered almost no accountants in practice, and the profession since that date had not materially progressed in public recognition. He described the steps taken by English practitioners to attain organization After prolonged recognition. discussion, John Heins (1836–1900), who had come from Philadelphia especially for the meeting, introduced a motion calling for the establishment of an association dedicated to the advancement and protection of the interests of the profession. James Anyon moved that the name of the new society should be the American Association of Public Accountants. Upon the adoption of these two motions, the first society of public accountants in the United States was formed.

#### **Early Objectives**

The certificate of incorporation of the Association, signed on August 20th, 1887, contained the following statement of objectives:

"The particular business and object of such society is to associate into a society or guild for their mutual benefit and advancement the best and most capable public accountants practising in the United States, and through such association to elevate the profession of public accountants as a whole, and to promote the efficiency and usefulness of members of such society, by compelling the observance of strict rules of conduct as a condition of membership, and by establishing a high standard of professional attainment through general education or otherwise; and to transact such business as may be necessary and incident to the establishment and conduct of an association for the foregoing purposes.'

James Yalden was chosen President; John Heins, Vice-President; James T. Anyon, Secretary; and William H. Veysey, Treasurer, of the new association. As the founding fathers of the profession were familiar with the designatory initials of The Institute of Chartered Accountants in England and Wales, they divided the membership of the American body into 'Fellows' and 'Associates', choosing the letters F.A.A. for the original incorporators of the organization and for those who subscribed to its constitution and by-laws, and also for all persons who had prac-

tised as public accountants for three years before seeking admission. The initials A.A.A. were selected for the Associates, the group consisting of individuals who obtained a certificate stating that they had successfully passed the examinations set by the Association.

At its 1894 meeting, however, the Association directed attention to the development of accounting standards by resolving:

"That the method of stating assets and liabilities on a balance sheet should be in the order of quickest realization . . . making the total of the same, and balance with the surplus or capital properly apportioned to the partners or stockholders as may be.'

At this same meeting detailed consideration was given to ethical questions, with the following resolution adopted:

'That all members of the Association be prohibited from advertising in any shape or manner their vocation and calling and setting forth the nature or special features of their business, but that the insertion of a card in any regular authorized journals or papers indicating their profession and giving address etc. is permissible.'

Professional accounting organizations continued to engage in wishful thinking rather than action, relative to the enactment of suitable legislation which would both recognize and promote the profession, bestow merit upon worthy practitioners, and permit them to use a descriptive title which would serve to separate them from non-qualified persons. Seeing that more progressive action would have to be taken, the President of the Institute of Accountants during the winter of 1894-95 had drafted a Bill providing for the professional education of account-. ants and the securing of the title for them of certified public accountant. By this Bill, which was to remain unaltered in future years, except in a few administrative details, the Regents of New York State were placed in charge of the C.P.A. certificate examinations.

The American Association of Public Accountants also had introduced a Bill in February 1895, but neither this measure nor the one sponsored by the Institute became law. In November 1895 the Association again introduced a Bill which was signed by Governor Levi P. Morton on April 18th, 1896, and this on August 17th, 1896, became an Act to Regulate the Profession of Accountancy in the State of New York.

#### First Examination Board

The first board of examiners was composed of Charles Waldo Haskins (1852-1903), of Haskins & Sells, a leader in the profession and in education for the profession, as chairman; the members being Frank Broaker (1863-1941), of Broaker & Chapman, the person who deserved the most credit for the enactment of the measure; and Colonel Charles E. Sprague, Ph.D. (1842-1912), President of the Dime Savings Bank and author of the classic volume *The Philosophy of Accounts*.

Under the New York law, the right to use the title, 'certified public accountant', was held out as a distinction to public accountants who voluntarily proved their right to it by satisfying the State requirement, and there was no provision for recognition or regulation of practitioners who did not seek the certificate or who were unable to satisfy requirements for it.

This permissive type of legislation was followed by the other States and territories until 1924, when modern regulatory measures were introduced in Maryland and later in seventeen other States, setting minimal standards of competence for all individuals seeking entrance to the accounting profession. Waiver clauses – obviously undesirable attempts to lower professional standards – have cast their doubtful shadows over professional development from time to time, in New York State as early as 1901 and as recently as 1947. But standards have been raised in some instances, such as in New York in 1938, when a college degree was made a prerequisite for admission to that State's C.P.A. examination.

#### **Professional Standards**

In the first decade of this century, the reputation of British accountants practising in the United States was unassailed, and their membership in recognized British societies entitled them to respectful attention on the part of fellow practitioners and business men alike. This state of affairs was the subject of several editorials in professional periodicals, of which the following quotation from the *Journal of Accountancy* for April 1907 is representative:

'While the young accountant is today beginning his career with an education equal to that of the young English accountant the same equality cannot be predicated when we compare Scotch and American requirements. A Scottish chartered accountant, in addition to examinations in all the subjects required in England, must also pass examinations in actuarial science and political economy. Scotland, therefore, must now be ranked as the pace-maker in the education of accountants. Let us hope that within ten years the educational standard in the United States will have risen from the English to the Scotch level, and perhaps have gone a few notches higher.'

Many American companies favoured the employment of British trained accountants, and this trend was noted by some struggling practitioners who bitterly resented what they called the intrusion of their sacred professional precincts. No one was more aware of prevailing conditions than the English periodical, *The Accountant*, which counselled forbearance in the face of 'the general prejudice on the part of the American public in favour of British professional accountants, which American practitioners may well hope to remove eventually by patient well-doing' (September 4th, 1909, issue).

For almost the first five years of this century, little attention was devoted by the accounting profession to the formulation of standards of ethical practice. However, after the American Association of Public Accountants began to publish *The Journal of Accountancy* in November 1905, a definite trend was evident toward the clarification of basic tenets of conduct in both editorial comment and signed articles.

Through his professional life, Joseph E. Sterrett (1870-1934) alligned himself with all movements devoted to the elevation of accounting standards. After playing a prominent part in the formation of the Pennsylvania Institute of C.P.A.s and the enactment of the Pennsylvania C.P.A. law, he was honoured by appointment to the State board of examiners and served as chairman of the Institute's committee on education which arranged for evening courses in higher accountancy at the University of Pennsylvania. He served as secretary of the Pennsylvania Institute from 1897 to 1900 and was President from 1904 to 1906. Sterrett delivered many papers on the necessity of outlining a professional code for C.P.A.s; his effort led to the Association's bye-laws including rules of conduct for the first time in 1907.

In 1902, George Wilkinson (1860–1932), then President of the Illinois Association of Public Accountants, reviewed the situation as it then existed; he pointed out the isolation of the State societies and their inability to cope with national affairs, and gradually unfolded a plan for the co-ordination of all existing organizations by the formation of a federation of societies of public accountants.

#### **National Federation Formed**

At this same meeting, members of the Illinois Association unanimously adopted a resolution to the effect that it was desirable to form a national federation, and appointed a committee consisting of A. Lowes Dickinson (1859–1935), John A. Cooper (1850–?), Allen R. Smart (1863-1940), Charles W. Haskins and Ernest Reckitt (1877-1955), to draft a plan for such a federation. All of these men, except Haskins, had been born in England. The plan offered by the committee was presented to a convention held in Washington, D.C., in October 1902, attended by duly elected delegates of all the established societies, and an organization entitled the Federation of Societies of Public Accountants in the United States of America was established. Officers were elected and a constitution and by-laws adopted. Subsequently the scheme was submitted to the constituent societies for ratification. As honest differences of opinion existed, the constitution and by-laws adopted differed from the project first prepared by the Illinois Association Committee. The following is a statement of the Federation purposes:

"To bring into communication with one another the several associations and societies of public accountants, organized or to be organized under the laws of the several States of the United States of America; to encourage the formation of State associations of public accountants in States in which they do not exist; to encourage State certified public accountant legislation on uniform lines; to

secure Federal recognition of the profession of the public accountant; to facilitate and assist the training of young members of the profession, and to establish a uniforn standard of efficiency in Federated societies; to disseminate throughout the United States a general knowledge of the objectives of the Federation and of the utility of the public accountant in the industrial and financial development of the country; to further the interests of the profession of the public accountant generally.'

Officers of the Federation were Charles W. Haskins, President; George Wilkinson, Secretary; and Robert H. Montgomery (1872–1953), Treasurer. As Haskins died shortly after assuming office, Farquhar J. MacRae, President of the New York Society, was chosen to fill the unexpired term. The contribution of the Federation to the profession's advancement cannot be over-emphasized.

#### First International Congress of Accountants

Under the auspices of the Federation, the first International Congress of Accountants was convened in September 1904 in the grounds of the Louisiana Purchase Exposition at St Louis. A. Lowes Dickinson was chosen chairman of the Committee on Arrangements which nominated Joseph E. Sterrett as chairman, and George Wilkinson as secretary of the Congress, while George O. May (1875–1961) served as chairman of the Local Planning Committee.

The 1904 Congress was one of the most important accounting conferences ever held in the United States. As it was convened at a time when the American Association had a membership of only 140 (living in fifteen States, of whom eighty-one held C.P.A. certificates), the New York Society, one hundred, and the State societies which were members of the Federation, 200, great courage was shown in calling an international meeting of accountants.

The following are pertinent extracts from George Wilkinson's paper on the C.P.A. movement, delivered at the 1904 Congress:

'During the early years of the C.P.A. movement grave doubts existed in the minds of some of the ablest accountants in the country as to the utility of a legal designation. "It will be an equalizer," they said. "The penny accountant on the side street will be placed on a legal equality with the best of the land." They asked, "Why should I exert myself, or contribute funds, in behalf of legislation that will only benefit the little fellow?" These are the questions of the short-sighted men who call themselves "conservatives" because they are content with the existing order of things, so far as putting forth any personal effort goes, but who are generally found among those who are bemoaning their sad fate and complaining that their business is going to the "bow-wows". . . . It is true that the little fellow has been benefited. In receiving his certificate he has felt the uplift of a legal designation; the best that is in him shall henceforth be devoted to the profession. But the accountant with the wellestablished practice has not suffered by the enactment of State laws, for what is good for the entire

body works to the advantage of each of its mem-

'If we are to advance our calling to the point where it shall be recognized by the Federal Government as a dignified and learned profession, we must advance by equal strides in every State - East and West, North and South. Our demand for recognition, to be heard in the legislative halls of our national capital, must come simultaneously from

every section of the country. . . .

'Before we seek legislation, we should firmly and fully establish the legal designation of C.P.A. After a majority of States and all the important ones have enacted C.P.A. laws, and the fact is recognized by the public that the best practitioners are certified, we can seek laws to compel corporations, in which the public are interested as investors, to have their balance sheets audited by legally recognized accountants.'

#### **Amalgamation of Societies**

Participants of the 1904 International Congress reached the decision that the American Association of Public Accountants and the Federation of Societies of Public Accountants in the United States of America should be amalgamated, with the aim of attaining greater professional solidarity.1 A committee was appointed to consider the proposition, and it subsequently outlined a plan of consolidation under which the Association was the continuing organization after amendment of its constitution and by-laws. Finally - just one year and one month after the International Congress - in October 1905, the merger was effected under a constitution which provided for individual and State society memberships, and with the objectives of elevating the profession and spreading the knowledge of C.P.A.'s usefulness in the business

The twenty-first annual meeting of the American Association at Atlantic City, in October 1908, proved to be the largest gathering yet held by the group. More than 230 delegates, members and guests registered, including forty representatives of the British and Canadian societies, and the papers delivered were of uniform excellence. At that time, the Association had a membership of 734 (United States population, 70 million) consisting of the members of the various State societies affiliated with the national group and of certain other individuals, not members of any affiliated society, who were known as members at large.

Sixteen of the States - California, Colorado, Connecticut, Florida, Georgia, Illinois, Louisiana, Maryland, Michigan, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Utah and Washington had enacted C.P.A. Bills; while four other States -Massachusetts, Minnesota, Missouri, and Tennessee although they had attained no such legislation, maintained associations of practitioners affiliated with the American Association. Of the former number, however, C.P.A.s of Connecticut, Florida, and Utah were not vet connected with the national body. As the internal laws of each State varied in regard to matters with which accountants were concerned, it was only questions of general professional interest which came under the purview of the Association.

#### **Outside View of Growing Profession**

The November 7th, 1908, issue of Collier's Weekly covered the Association meeting of that year with the following editorial:

'A fresh field for young men of ability is being opened up. The C.P.A.s of this country and of Great Britain and Canada met in convention a few days ago at Atlantic City. There were London worthies, with huge jewelled seals around their necks, as though they are going to a Lord Mayor's banquet - typical "City" men, those as Thackeray might have drawn them, rather proud of the fact their clerks feared the business would go to the bow-wows when the "governor" was away, convinced that the good old English employee is degenerating under the present-day love of ease and amusements. There were men from Edinburgh and Dundee - the Scots are great accountants, and it was in Scotland some fifty years ago that accounting as a profession was first established, and there were men from Montreal and Toronto and all over the United States. . .

"The growth of the profession has followed the growth of corporations and holding companies. It is the business of these painstaking and meticulous gentlemen to unravel and set in order the complexities which sound businesses produce. They will take a business which your grandfather set on its feet, and which you and his other decadent descendants are mismanaging, find out just where the dry rot lies, and put the house in order. It is uncomfortable for you, but good for the business. They will systemize anything, from a household account to the budget of a Government. This is a profession worth the consideration of young men with a turn

for mathematics.'

The American profession was to grow and flourish. The growing pains experienced in the nineties and in the beginning years of this century were essential to professional maturity and public recognition. A debt is owed by the present generation to those farsighted practitioners in eastern cities and, more recently, in the middle and far western sections of the country who laboured for State legislation and State societies. Without their efforts, American accountancy would have lacked the cohesive organization long enjoyed in Great Britain, as well as the unification of principles and standards which were important aspects of the development of the accounting profession in the twentieth century.

<sup>&</sup>lt;sup>1</sup> At that time practitioners without C.P.A. certificates were more numerous than those possessing them. The Federation had grown slowly chiefly because it admitted only one society from each State, and only if it were composed entirely of public accountants with at least seven regular members. As each State enacted its own C.P.A. law governing practice within its limits, and as there was marked divergency between these laws and almost no reciprocity between States, serious doubt had been expressed as to the ultimate success of the Federation.

# Forming a Company in Switzerland

#### CONTRIBUTED

VER a thousand American companies have based their European operations in Switzerland. Many more are now doing so, and some prominent American corporations are creating their world financial headquarters there. As other overseas firms contemplate moving into Europe, their accountants will increasingly be asked to explore the advantages of using Switzerland as a base.

There are many good reasons. Switzerland, though not a member, is at the geographical centre of the European Economic Community, with excellent communications. The country has a long record of political and economic stability and a banking system of international renown. The customer's interest is strongly protected by strict laws on banking secrecy. Swiss authorities are encouraging the development of foreign business by favourable taxation to companies who have no commercial activities in Switzerland. Such encouragement is based on a realization that the Swiss economy of the future will increasingly depend on its becoming a 'service centre' for the European Economic Community, whether Switzerland joins the Common Market or not. Switzerland has concluded double tax agreements with all the major industrial countries except Italy and Japan, a question of particular importance in licensing and certain investment holding operations. And finally, there is no exchange control in Switzerland.

#### Taxation of Foreign-owned Companies

Since more and more accountants are being asked for details of the international tax position of European operations, it is helpful to consider the major points concerning Swiss taxation of foreign owned companies and to bear in mind the variations in taxation of different types of companies. There are three types of companies of particular interest to outside commercial interests. They are:

#### 1. The investment holding company

In certain cantons an investment holding company can be formed and, provided the Swiss company holds 20 per cent or more of the equity of non-Swiss companies, no tax is levied on profits. The only tax to be paid is a capital tax of approximately 5 per cent on the paid-up capital. Since holding companies are usually formed with a capital of 50,000 Swiss francs (£4,100), this tax amounts to less than £25 per annum. Accordingly, any foreign company which has decided on trade investment or joint ventures in European companies as its method of entry into Europe would do well to consider the additional flexibility obtained at very little cost by forming such a holding company.

#### 2. The patent holding company

A company whose sole object is to hold and exploit patents or trade-marks can be formed as a domiciliary company in certain cantons; Federal defence tax of 8 per cent is paid on the company's profit but no cantonal or communal tax is paid. The capital tax of ·5 per cent is also levied. By virtue of the various double tax agreements, royalties are paid direct to Switzerland without deduction of withholding tax in the principal industrial countries.

Since Switzerland geographically provides an ideal operating base for the servicing staff of any licensing operation, the combination of geographical and fiscal advantages deserves serious consideration by any company conducting extensive overseas licensing operations in the European Economic Community or elsewhere.

#### 3. The export sales subsidiary

Any company exporting a volume in excess of £25,000 per annum should consider the possibility of forming a subsidiary sales company in Switzerland. Once formed, all export orders are sent by agents or customers to the Swiss company, who in turn order from the overseas parent company. The goods, of course, are shipped direct. The principal financial advantage in this operation lies in the subdivision of total profit into a manufacturing profit taken in the parent country, taxed accordingly, and a merchanting profit taken in Switzerland. This merchanting profit, due to special legislation in certain cantons, is taxed at only 13 per cent, allowing larger after-tax profits to be employed for expansion.

The financial advantage is not, of course, the only reason. In practice, companies which have set up this organization have found that the creation of their own subsidiary has created

opportunities which they would otherwise have missed. Furthermore, many continental customers have commented that they feel the creation of a Swiss subsidiary by an overseas exporter is evidence of a real determination to cater for their special needs. And finally, cheaper finance is usually available in Switzerland than, for instance, in the United Kingdom.

#### **Formation Costs**

To form a Swiss company costs about £300. The minimum capital required is 50,000 Swiss francs

(£4,100) and organizations exist which will initially administer the company for an annual fee of the order of £450 – a much cheaper proposition than setting up an office and employing well-paid full-time executives. At a later date, as the company becomes firmly established, expansion into its own offices with full-time staff can take place, but only when this is justified by results. In the United Kingdom, Bank of England and Treasury approval will usually be granted provided that there are genuine commercial reasons for the creation of a Swiss company.

# If it is not Trade, What is it?

by T. J. SOPHIAN

USEFUL illustration of the type of dividend-stripping transaction at which section 4 of the Finance Act, 1955, is aimed, is afforded by the case of Griffiths v. J. P. Harrison (Watford) Ltd (41 A.T.C. 36; [1962] 2 W.L.R. 909).

#### Facts of the Case

The taxpayer company in this case was incorporated in 1948 and carried on the business of merchants down to a date in 1953/54, when that business ceased. In the same year it had incurred a loss of £13,585 which would, cet. par., have entitled the company to have its income for the year adjusted under section 341 of the Income Tax Act, 1952. In October 1953, the company altered its memorandum so as to enable it to carry on the business of dealing in stocks, shares, bonds, debentures and other securities.

On December 4th, 1953, the company purchased for the sum of £16,900 all the issued share capital of J. B. Ltd, consisting of 1,000 £1 shares, J. B. Ltd having ceased business some four days previously, on November 30th, 1953. In order to purchase, the company borrowed £15,900 from another company, the shares being bought on a blank and unregistered transfer which, was passed on to a sub-purchaser from the taxpayer company, to whom, on or about January 16th, 1954, it had resold the shares for  $f_{11,000}$ , so that no stamp duty became payable on these transactions. Accordingly, the taxpayer company showed a loss of £16,900 less £1,000 (the price received on the sub-sale), i.e. a loss of £15,900, which was equal to the sum borrowed in order to pay for the shares.

J. B. Ltd, which had in the meantime altered

its name to C. Ltd, had considerable accumulated profits in its business. It was, in fact, to use the commonly used phrase, 'a company pregnant with dividends'. On January 16th, 1954, C. Ltd declared a dividend of £28,912 13s 3d less tax of £13,010 14s 0d, the net dividend being £15,901 which will be recognized as virtually the amount which the taxpayer company had paid for the shares in the company and had borrowed to pay for them. This dividend was then applied to pay the creditor who had lent the money to pay for the shares. All these steps were carried on pursuant to the necessary resolutions which the taxpayer company had passed on January 16th, 1954.

#### Is this Trading?

If the company could be regarded as having carried on a trade in the purchase and resale of these shares, then it would have made a trading loss of £15,900 which could be set off against income under the loss provisions of section 341 of the 1952 Act. This the company sought to do by claiming to set off the loss of £15,900 against the net dividend of £15,900.

The principal point for determination, therefore, was whether the company in entering into the transactions for the purchase and resale of the shares in C. Ltd was to be regarded as having carried on a trade or an adventure in the nature of a trade.

It should be observed that although this was the only share transaction entered into in the year 1953/54, the company had dealings in shares in the following year, and it was not disputed that in that year the company was, in fact, carrying on the business of dealing in shares. The Commissioners nevertheless held that the com-

pany was not carrying on a trade in purchasing and reselling the shares of C. Ltd in 1953-54. Their determination was based on the facts: (1) that this transaction was an isolated one; and (2) that the object with which the company entered into this transaction was to obtain a dividend against which it could claim to set off losses.

#### **Essentials of Trading Operations**

The question whether trading has been carried on is a question of fact, or rather, one might say, an inference to be drawn from all the admitted and proved facts of the particular case. Taking the first ground on which the Commissioners based their finding, viz. that the transaction was an isolated one, sufficient regard, it seems, was not paid by them to the fact that in the following years a number of similar transactions were entered into by the taxpayer company, which clearly constituted trading. Nor is authority wanting that even an isolated transaction may constitute trading. Thus, where a contract was entered into to purchase a large surplus stock of linen from the Government and take delivery of the whole in six months, and the taxpayer rented an office and set up a large and skilled organization to dispose of it in smaller quantities, the House of Lords held that the transaction, although isolated, nevertheless constituted trading. (Martin v. Lowry (6 A.T.C. 123; 11 T.C.

The point in the present case, however, which presented more difficulties was the extent to which, if at all, the object with which a transsaction was entered into can determine its character. It was clearly found as a fact that the object with which the company purchased its shares in C. Ltd was to obtain a dividend against which it could claim to set off losses. In other words, it was to enable the company to create a claim for the recovery of tax from the Revenue. Expense incurred for such a purpose has been held not to be a trading expense. In Smith's Potato Estates Ltd v. Bolland (27 A.T.C. 131; 30 T.C. 268) the House of Lords held that the costs of prosecuting a successful appeal against the disallowance of an increase of salary to a servant of a subsidiary company were not an admissible deduction for income tax or excess profits tax purposes, since the expenditure was not for the purpose of enabling the taxpayer to carry on and earn profit in the trade.

It was accordingly argued in Griffiths v. J. P. Harrison (Watford) Ltd, on behalf of the Revenue,

that as the object of the transaction was to create a claim for loss relief against the Revenue and not to earn a profit, the transaction was not of a trading character. Although this argument found favour with a minority of the Court (Lord Reid and Lord Denning), it was rejected by the majority.

#### **Majority View**

Viscount Simonds, for instance, pointed out that although many observations had been made to the effect that trade is carried on with a view to profit, such a proposition was not universally true; nor could it be tested merely by ascertaining the difference between the purchase price or manufacturing cost, on the one hand, and the selling price of the article on the other.

'For a dealer may seek his profit, if a profit is essential, otherwise than by an enhanced price upon a resale, as by a declaration of dividend, a repayment upon a reduction of capital or on a liquidation of the company whose shares he has bought. . . . It appears to me to be wholly immaterial . . . what may be the fiscal result or the ulterior fiscal object of the transaction.'

Nor is authority lacking of cases where it was held that there had been trading, although there was no intention or attempt to earn a profit, as in C.I.R. v. Incorporated Council of Law Reporting ((1888) 22 Q.B.D. 279; 3 T.C. 105); Carnoustie Golf Course Committee v. C.I.R. (8 A.T.C. 201; 14 T.C. 498); and C.I.R. v. Stonehaven Recreation Ground Trustees (8 A.T.C. 523; 15 T.C. 419).

Viscount Simonds stressed these important factors:

'Here was a company whose object was to deal in shares. [The company had expressly altered its memorandum to include this object.] It entered into a commercial transaction which, though it might be given a invidious name, contained no element of impropriety, much less of illegality. I can find nothing that enables me to say that it is not a trading transaction, and echo the question asked by the majority in the Court of Appeal, "If it is not that, what is it?".'

It was accordingly held by the majority that the transaction was a trading one, and the company automatically became entitled to set off the loss on the resale of the shares against the dividends.

It should be pointed out once again that this decision turned on an event which occurred before the introduction of the dividend-stripping provisions of the Finance Act, 1955.

# Insurance and the Accountant-III

by DAVID WILLIAMSON F.C.A., F.C.W.A.,

#### X. MOTOR VEHICLE INSURANCE

#### **Private Cars**

HE basic premium cost of private car insurance is governed by:

(a) the capacity of the engine;

- (b) the type of usage of the vehicle, i.e. business or private;
- (c) the type of district in which the vehicle is habitually garaged;

(d) the estimated value of the vehicle;

(e) the extent of the insurance cover, which may include a good deal beyond the statutory requirements; this is commented upon in the paragraphs that follow.

74. In dealing with the cover provided, I think you will agree that the standard 'comprehensive' private car policy is a remarkable document. Look at the differing nature of the various risks it covers:

(a) It provides unlimited cover for legal liability of the insured towards third parties, including

legal costs properly incurred.

This cover includes the compulsory third party insurance required by the Road Traffic Act, and, in fact, goes beyond the Act requirements in that it also covers passengers in the car, and damage to third party property.

(b) It indemnifies the insured for loss or damage to the vehicle itself – up to a specified limit; the loss or damage covered includes fire and theft, also loss or damage whilst in transit by rail or by a short sea journey, though not by air.

The accountant should note that the value of the vehicle declared has remarkably little effect on the cost of the insurance: it does not even represent the amount that would be paid if the vehicle were totally destroyed. Instead, the value declared in the policy represents the maximum liability of the insurers for indemnification of the insured for the loss of the vehicle; if the vehicle were a total loss the amount that could be paid – subject to that maximum – would be the market value of a vehicle of similar make, age and condition. Obviously, therefore, you should ensure that the values declared for your company's various motor vehicles are fully high enough – rather than on the low side.

- 75. Apart from these main forms of cover the policy will usually provide the following additional cover:
  - (a) it provides limited cover for personal property lost by fire, theft or accidental damage; it

The concluding part of a paper presented at the Summer Course in Cambridge of The Institute of Chartered Accountants in England and Wales.

- should particularly be noted that the maximum total indemnity here is usually £20 unless specifically increased;
- (b) it provides indemnity for medical expenses in connection with accidents – again subject to a somewhat low maximum indemnity unless specially arranged;
- (c) if the insured is a living person as distinct from a limited company – it indemnifies him for personal accident (capital benefits only) – provided that he is not over 65 years of age.

76. You should particularly note that the protection afforded by the entire policy is conditional upon:

- (a) The usage of the car, e.g. business, pleasure, etc., being in accordance with the description inserted in the proposal form on which the policy is based.
- (b) The driver being within the definition in the policy and being licensed to drive

and also that as regards liability to passengers for injury, you are only covered for *legal* liability – if you want to arrange personal accident cover for passengers which will come into force without their having to claim at Court, you must specially provide this cover.

77. Special considerations arise where employees are expected to use their own cars in the course of their duties; the matter can be of great importance, even where the usage is only occasional. It is worth setting out in some detail:

(a) The employee's own insurance position. This can be subdivided into two aspects:

(i) The employee's third party cover.

- (ii) The employee's fire, theft and accidental damage cover.
  - (1) Third party cover. For the employee's third party cover to be fully effective, his policy should cover business use of the car. Class I insurance policies normally give the following cover:

Use for social, domestic and pleasure purposes, also use by the policy-holder in person in connection with his business or profession, but excluding use for commercial travelling, or for the carrying of goods or samples, in connection with any trade or business, or use by surveyors, inspectors or collectors.

The employee should be advised to give his insurer details of the use to which he is putting his car whilst on company business, and to obtain confirmation that the policy remains effective.

- (2) Fire, theft and accidental damage cover. The mileage payment to the employee should allow for full comprehensive cover and the employing company should therefore advise the employee to arrange full comprehensive cover if he uses his car from time to time on company business.
- (b) The employer's own insurance position. This can be subdivided into two aspects:
  - (i) The employer's third party cover;
  - (ii) The employer's moral liability to driver or passengers, and dependants.
    - (1) Third party cover. Where the employing company sanctions the use of a vehicle for business purposes, they may be held liable for any negligent act of the employee arising out of such use. It is therefore important that the third party section of the *employee's* policy should be extended to provide indemnity to the company whilst the car is being used on company business. It is the normal practice of insurers to grant this extension without further charge. In addition, companies can arrange contingent third party insurance which will fill the breach if an employee's policy should prove defective in any way. The premium for this type of insurance is about 7s 6d per car per annum, and is adjusted by declaration from year to year, as to the maximum number of such cars in use at any time during the year.
    - (2) Moral liability. If an employee were to be injured whilst on a business journey, the employer's liability insurance would only operate where negligence on the part of his employer was proved, and it cannot therefore be relied upon to support a claim where a moral liability, as distinct from a legal liability, exists; the proper remedy is for the employer to operate a personal accident policy for the categories of employee likely to be affected.

#### Commercial Vehicles

78. The premium rating of commercial vehicles will be governed in the first instance by:

(a) carrying capacity;

(b) the type of licence required;

(c) \( (d) \rangle as for private cars - paragraph 73 above;

but if the insured party operates a fleet of vehicles the premium rating will be modified in accordance with the next paragraph.

#### Fleet Insurance

79. If a company operates more than about ten vehicles under one insurance – private and commercial vehicles combined – the premium rates from year to year will be based upon your claims cost ratio to premiums over the past few years. This is usually satisfactory in the sense that the cost is to some extent the result of your own control of the situation; you can do something to keep down the cost of claims by various incentive schemes for drivers, as well as by giving attention to such matters as the layout of the various works areas likely to be heavily used by the commercial vehicles in particular.

80. There are one or two points in a commercial motor vehicle policy that call for mention. For instance, the standard policy does not automatically provide cover for your liability to passengers – and you may be made liable in this way if some passenger were involved in an accident, even though he proved to be an unauthorized passenger; it is therefore a

to be an unauthorized passenger; it is therefore a sensible precaution to add this form of cover. Also you may find that the cover against accidental damage to property stands at something like £50,000 for any one accident or series of accidents arising out of one event; even this sum requires consideration in the light of possibilities — accidents at a filling station or an aerodrome can have enormously costly consequences in terms of damage to surrounding property.

#### XI GOODS IN TRANSIT INSURANCE

81. Goods in transit insurance began as a form of marine insurance – it then developed as an extension of the motor vehicle policy – but it is now more usual to find this cover provided by a separate policy. You will find that the normal commercial vehicle comprehensive policy will not cover the insured against damage to goods which are in his custody and control – unless, of course, the policy has been specially endorsed to that effect.

82. Under the present-day goods in transit policy, cover commences when the loading of the vehicle is begun – and it continues until the completion of the unloading at the other end. The policy can be arranged to cover 'all risks' of loss or damage during transit, including loading and unloading. From the insurer's point of view, the main risk is theft, but he must also allow for the risks of fire and collision – and in this respect the nature of the load will have some

influence upon the rating.

83. Whilst it is usually possible to insure a single load for a specified journey, companies making regular dispatches of goods sometimes operate what is known as a 'valued declaration' policy: under this arrangement the policy is in the first place issued for a stated amount, and the insured makes periodical declarations of the total value of the goods dispatched; at the end of the year the premium is adjusted in line with the total declared against the policy. The advantage of this arrangement is, of course, that the insured does not have to notify the insurers each time he makes a

322

convenient units.

84. You will find certain exclusions in the standard policy: goods of a dangerous or explosive nature are not normally covered – nor, of course, is consequential loss arising from non-delivery of goods. And goods that are abnormally fragile or susceptible to damage such as by scratching or jolting should be declared beforehand, as the premium will be specially rated.

85. Where a company operates its own fleet of vehicles, the cover may be restricted to road transport, but for most concerns all forms of land transit are usually covered by the insurance. Insured values should be regularly reviewed – losses both small and large are happening frequently; and consignors could help to arrest the present high rate of theft by selecting their carriers according to previous loss experience, otherwise you may find your insurance premiums are higher than they need be, and you may in addition have to accept a high compulsory 'excess'. It is by no means unusual to find that a firm with a bad experience has to carry the first £1,000 of each and every loss.

86. Firms which operate their own fleet of vehicles are in a position to control the situation more effectively, and where good control is exercised, losses by theft and by accidental damage can be kept to a minimum, and a saving secured on insurance premium outlay.

87. It is a sign of the increasing incidence of largescale thefts during recent years that the insurance market for this class of cover is contracting; some of the insurance companies which previously wrote this business have ceased to do so, or have curtailed the amount of business undertaken.

#### XII MONEY INSURANCE

88. At the outset you should appreciate that the normal burglary policy for business premises excludes cover against loss of cash - unless this is made the subject of a special endorsement. This is mainly because cash is a more attractive proposition for the thief, and also because the risk of loss of actual cash is not geographically restricted to the actual business premises - cash can be lost more easily by assault upon the employees carrying the company's money to or from the bank - or carrying money to distant locations within the works for pay-day distribution or collecting sums such as rents or small book debts paid at the door. The nature of the risk is therefore to some extent removed from the mere security arrangements provided at the insured's premises and the amounts at risk may show very considerable fluctuation from day to day - in consequence of which the insurance of money, sometimes described as cash in transit, has become the subject of a special policy which to that extent replaces the extended burglary policy.

89. Notwithstanding this, the structural nature of the building, and the internal security arrangements in force, will have some bearing on the risk, and

therefore on the premium rating.

90. In drawing up a money policy the accountant is certain to be consulted. Firstly as to the definition of 'Money' for the purpose: you must recognize that in addition to actual specie and notes your policy should normally cover:

- (a) open cheques, travellers' cheques, postal orders and money orders;
- (b) national insurance stamps, whether affixed to the cards or otherwise;
- (c) postage stamps, savings stamps and holidaywith-pay stamps;
- (d) luncheon vouchers, if these are of the variety that could be used by an unauthorized person, or sold.
- 91. With regard to cheques it should not strictly be necessary to insure crossed cheques, if these are automatically stamped 'Account payee only' as soon as received, but, in fact, insurers will usually include them for no additional premium especially where the policy already covers a large sum in real cash.

92. The normal premium basis is by periodical

declaration of the total cash carryings.

93. In defining the actual risk to be covered, you should envisage today's conditions, in which attacks are made upon employees whose movements have usually been observed beforehand. It is important not only to cover the risk relating to the journey to and from the bank - but to include attacks on pay offices, particularly if any of these are situated at distant parts of the works area. The policy should, of course, cover cash not yet paid to employees - and stored overnight in safes inside the pay office. You will find that the standard policy requires that after business hours the cover is only valid provided the money is properly locked away in a safe or strongroom. A geographical extension can be made if requested, to cover the company's cash whilst at or in transit to or from a director's home, or an employee's home - to suit the requirements of a small business. These remarks so far refer to the theft risks attaching to the money itself - but the policy should also include personal accident cover for employees who may be injured in attempted 'holdups', whether successful or otherwise; this cover should preferably relate to unnamed persons, and the amount in the case of fatal injury should, of course, be substantial.

94. The policy will probably refer to cash '... belonging to the insured or for which he is responsible'. This definition will probably exclude such items as social club funds, saving club funds – where these are run by employees as outside activities, and before

completing the policy you should consider whether you want such items to be covered.

95. The policy can also be extended to cover assault damage to safes and strong-rooms, whether the attempt was successful or not.

96. There is normally a limited amount of cover provided against the risk of dishonesty on the part of employees: this cover relates only to losses discovered within a short period (two days to a month) and is thus not so wide as that granted by fidelity guarantee insurance policies, which are the proper means of insuring against defalcations spread over months and even years before they are discovered. Fidelity policies are dealt with elsewhere in this paper.

97. The insurance of money is becoming dearer: it has been relatively cheap up till now, but the rates are stiffening. Perhaps this will have the effect of focusing greater attention upon security aids.

#### XIII FIDELITY INSURANCE

98. Some reference ought to be made to this type of insurance, because it is of particular interest to accountants on account of the importance attached to internal audit and security arrangements.

99. Basically the fidelity policy may be described as a contract between the insurers and the employer, under which the latter is indemnified up to a stated limit, against loss sustained by *him* through the fraud or dishonesty of the employee named in the

policy.

100. It is important to appreciate the contractual relationship between the employer and the insurer, because this means that the employer has certain obligations towards the insurer: the employer must provide a good deal of information regarding the position held by the employee, the basis of remuneration, i.e. whether the bulk of the remuneration is in The form of salary, or whether it is largely a 'commission' job - also certain personal information regarding the employee's family and financial status. The insurance company will also want to know the duties attaching to the job, such matters as whether the employee will have personal charge of large sums of cash - and the degree to which an independent check will be maintained upon the way in which these sums are handled; also, whether the employee himself is required to deposit his own security in connection with his appointment, or whether a third party stands as guarantor for him, and so on. The employer will also probably be asked whether in the first place he obtained satisfactory references regarding the employee on engagement.

ror. On all these matters the doctrine of 'the utmost good faith' will be held to apply, and any deliberate or innocent misstatement or non-disclosure can mean that the contract is voided. The policy is not therefore a substitute for the employer's duty to consider the suitability of the employee he engages and entrusts with the duties in question: but it undoubtedly reinforces the security of the

employer's position, and for that reason is a customary policy to find in connection with certain occupations.

102. As an extension, the policy can be made to cover losses of stock-in-trade through misappropriation – but not shortage of stock from other causes. Here again, the applicant for such cover would have to specify the nature, extent and frequency of periodical stock checks.

103. A modern development in this type of insurance is the collective policy, in which the cover is related not to a named individual but to a scheduled list of employees – usually performing identical or associated duties. The monetary limit of indemnity may be expressed as so much for each person named, or as a total sum for any or all of the names scheduled. An advantage of this latter form of policy is that you can include a number of employees who perhaps only occasionally have temporary charge of money – but who might conceivable abscond with it.

104. A further development is the impersonal policy – covering stated occupations without actually naming the persons concerned; this type of policy obviously imposes a greater risk upon the insurer, and attracts a premium about 50 per cent higher than where the individuals are named and their status scrutinized beforehand; moreover, the insurance company would need to be satisfied regarding the regulations observed by the employer as to references etc., when engaging staff – and default by the employer here could have the effect of nullifying the insurance. This type of policy can be made to cover all employees, if so desired.

105. The contractual relationship between the employer and the insurer also requires that the former must notify the latter immediately any defalcation is discovered or reasonably suspected – and there is no latitude allowed to the employer, who might in non-insured cases be inclined to take a lenient view of an employee's lapse. Furthermore, the policy may permit the insurer to compel the

employer to prosecute the defaulter.

106. Accountants should be-particularly watchful where such policies exist — because the insurance can be nullified if the accounting system or internal check is substantially altered without the approval of the insurer — and it is therefore important to keep the insurance company informed on the subject; this is no more than reasonable, seeing that they are indemnifying the employer against a risk which could be closely influenced by the internal checks maintained.

107. Fidelity guarantee is the rare kind of risk, it seems, where a loss may occur yet remain undiscovered for a long time. For this reason most policies are retroactive to dates that are agreed at the time the policy is first arranged.

108. Some unexpected difficulties of interpretation can otherwise arise regarding the maximum indemnity. Suppose for instance that the maximum indemnity stated in the policy is £10,000 and that the

policy has been renewed over a period of five years; suppose that towards the end of the five years it is discovered that the individual named in the policy has been embezzling funds for, say, four years, and that he has misappropriated £30,000 in this way. Does the policy cover the insured for yearly totals amounting to £30,000 or does it pay only up to £10,000? The indemnity would be the full £30,000 unless the embezzlement exceeded £10,000 in any one year of the insurance, in which case the recovery for that year would be restricted to £10,000.

109. As a further safeguard to the insurance company the policy sometimes limits the indemnity to claims notified within, say, twelve months after the expiry of the period of insurance. The insured party should, of course, be on his guard against this form of restriction, which may seriously reduce the value of the insurance, according to the nature of the risk

to be covered.

#### XIV PERSONAL ACCIDENT INSURANCE

rro. In dealing with personal accident insurance arranged by employers, we are not in any way concerned with insuring to meet a *legal* liability for accidents to employees; the employer's liability insurance policy takes care of your *legal* liability and if you effect personal accident insurances, it will be for other reasons, principally to ensure that a sum of money is available to meet a *moral* liability.

111. The following are a few matters which will probably be considered before a decision to effect

personal accident insurances is taken:

(a) Is the policy intended to indemnify the employer against the financial loss he is assumed to incur if an employee's services are lost temporarily or permanently by reason of some accident? In this event, it is probable that the employer will be liable for tax upon any resultant recovery under the policy being retained in the employer's funds.

(b) Is the policy intended to provide funds to the employer to enable him to compensate an injured employee, or the dependants of an employee killed by some accidental cause during

the course of his employment?

(c) Is the policy intended to give the employee a right to benefit – in which case the insurance may be regarded as part of the conditions of his employment, or is it intended that the employer should have discretion in order that the disposal of the policy moneys should be decided on the merits of each case, and to have regard to any 'legal liability' payments which might be made under the employer's liability policy?

(d) Does the company intend to be selective to the extent of covering only selected categories of

individuals?

(e) Is the insurance cover to be effective all the year round – day and night – at home as well

as at work – or is it only to apply to specified business activities, such as overseas journeys or journeys to the bank? If it is intended to cover business journeys only (on the principle that the employee is exposed to greater risk of accident and is acting on the instructions of his employer in undertaking the journey) then several further important questions arise:

(i) Is the cover to apply to selected journeys

only or to all journeys?

(ii) At what point does the cover begin and end? – The employer must recognize that many business journeys can be said to begin at the employee's home and end on the employee's return to his place of business.

(iii) Is travel by any means of transport to be

covered?

(iv) Is cover limited only to the *journey* out and the *journey* home? Or does it hold good throughout the *duration* of the visit?

In view of these difficulties of definition it may well be more satisfactory to cover senior employees all the year round on a twenty-four-hours-a-day basis regardless of actual travel undertaken — and possibly to include junior employees only for journeys involving air or sea travel (and then for the complete duration of the visit) — as a reasonable compromise.

112. As a generalization you will probably find that some restriction is placed on 'air travel' by the insurer: often non-business journeys in private aircraft are excluded – and journeys in chartered aircraft are often only included at a higher than normal premium rating.

113. A company should also, as a domestic matter, decide whether in any circumstances the insurance shall apply to an executive's wife if she accompanies him on a business journey – the regulations as to declaring such occasions will require to be carefully agreed with the insurer before he will accept the additional risk.

114. The foregoing can be loosely termed 'travel' insurance; yet a company must also consider whether to extend personal accident cover to the following further risks:

- (a) Drivers and passengers (whether employees or otherwise) in private cars owned or operated by the company; 'cars' to include such vehicles as ambulances, staff buses, and utility vehicles.
- (b) Drivers and passengers (whether employees or otherwise) in commercial vehicles owned or operated by the company.
- (c) Assault risks to employees carrying or guarding the company's cash this is separately dealt with elsewhere in this paper.

115. If one assumes that these various insurances are desired to allow the employer the maximum discretion as to what he does with the money arising from a claim, it is of prime importance to avoid

giving the employee a legal right and expectation of benefit under the scheme.

116. Finally, we come to the question of the amount of the cover. For this purpose, it should be assumed that no payment will be made under the employer's liability policy, but that death payments will be made under the company's pension and life assurance scheme. There is no single answer to this problem if for no other reason than that no two companies are alike in the extent to which they assume a moral responsibility for accidents; but as a rough guide, cover of from three to five times salary is met with quite frequently these days, and for some categories of employee, level benefits are common, e.g. £5,000 in the event of the death of an employee, with smaller sums for disablement.

#### XV FORGED TRANSFER INSURANCE

117. A company may incur heavy liability through registration of a transfer which subsequently proves to have been forged - and in consequence the insurance market is prepared to quote for policies of indemnification. It should be noted that indemnification will relate not only to the value of the shares in question, but also to payment of any dividends of which the true shareholder has been deprived by

reason of the forged document.

118. Before discussing the insurance aspect we should set out the legal aspect relating to the shares in question. The original owner of the shares, i.e. the 'transferor' named in the forged document, can compel the company to reinstate him in the register as the true owner. The company for their part have a right of indemnity against the party who presented the forged transfer for registration, as it has been held that the person tendering documents to a company in this manner gives an implied guarantee that they are genuine. But there may well be a further party involved, viz. an innocent transferee who has given value for the shares, on the strength of what proves to be a forged transfer: under the Forged Transfers Acts a company is empowered to pay compensation in such cases - and the purpose of the normal forged transfer insurance policy is to indemnify the company for such payments.

119. Whilst some companies have insured this risk for many years there are a large number of companies that have only recently adopted this form of cover to enable them to dispense with the use of transferors' notices: this dispensation is allowed under the Stock Exchange regulations announced in December 1957.

- 120. Companies are urged when considering this form of insurance to consult their brokers beforehand because the terms and conditions of various policies differ quite widely, on the following points in particular:
  - (a) Extent of cover. It is usually desirable to cover more than just forged transfers - the policy can be made to cover liability arising from forged powers of attorney, forged dividend

warrants, forged notices of change of address, forged probate documents - and indeed forged documents of all kinds likely to be handled in the share registrar's office. It is even possible to cover loss arising from forged documents of all kinds, such as forged documents of title to property - but this would be by means of a

separate policy altogether.

- (b) Precautions to be taken by insured. As in other policies of indemnification, the insurer may lay down conditions with regard to the precautions the insured must agree to take, to minimize the risk of a claim arising. Some policies merely require him to take 'the usual precautions', whilst others specify, for example, that every transferor's signature must be checked against a specimen obtained when the shares were originally issued to him. This is an onerous procedure for a large registration department to have to carry out, and an increasing number of companies resist the imposition of this condition.
- 121. It is important to appreciate that the law gives the company the right to be indemnified by the person who lodges a transfer that subsequently proves to have been forged. The great majority of such 'persons' are stockbrokers or banks, from whom the company may feel there is a good likelihood of recovery. There is a wide variance in premium rates charged; the rating will take into account the average value of the transfers over a period, the amount of indemnity required, and will also depend upon whether the company has adopted the provisions of the Forged Transfers Acts, under which it offers compensation to the shareholder in such cases.

122. Even if there is delay in making discovery beyond the period covered by the Limitation Act of 1939, such lapse of time does not effectively bar an action for reinstatement on the register; it has been held that time does not begin to run in such cases until a complete cause for action exists - and that cause only arises on the company's refusal to register

the shares in the plaintiff's name.

123. Finally it should be noted that a company's right of indemnity against a party presenting forged documents can be vitiated by negligence on the company's part, if proved. Whilst this makes it important for registration departments to adopt efficient methods of internal check, it also stresses the desirability of carefully considering this form of insurance.

#### XVI LONG-TERM AGREEMENTS

124. The accountant will naturally want to avail himself of the discounts which an insurance company may be prepared to offer, and which can sometimes be negotiated by the brokers. In particular, a number of insurance companies offer a discount, normally of 5 per cent, to a client who will undertake to place the insurance with them for a specified period of years -

usually three years, but occasionally, and for a higher discount, five years.

125. The premium rates are normally regarded as fixed for the period of the long-term agreement, unless there is a significant alteration in the risk. Alterations and additions to the policy can be made in exactly the same way as under ordinary annual contracts – and the premium is likewise paid annually in advance and does not have to be paid for the full term of, say, three years.

126. It is not every type of policy to which this arrangement applies: broadly speaking, the only tariff policies on which the long-term discount is at present offered are fire, consequential loss and engineering polices - but there seems no reason why the facility should not, in due course, be extended. From the viewpoint of the insured as well as of the insurer, there is the benefit that the insurance arrangements can be considered to be completed for the three-year period - and it will not be necessary for the insured to consider competitive quotations for renewal from alternative insurance companies at the end of the first and second years. Also there is the important goodwill factor which is bound to arise from time to time in any form of insurance - the insurer will be better disposed towards his client when he is assured of several years' 'run' of the insurance - and he

can afford to concede points that perhaps could not otherwise be allowed.

127. In general, the long-term agreement helps to achieve greater stability than where the contract is placed elsewhere at frequent intervals – and it enables a greater element of goodwill between the parties to be developed.

#### XVII CONCLUSION

128. In conclusion, I would point out that inevitably this paper has had to omit reference to several important branches of insurance; nevertheless, the subjects I have discussed represent a fairly comprehensive range, and moreover are topics on which the accountant should be ready to contribute his opinions. As members of our own Institute we recognize that the Chartered Insurance Institute demands high standards of knowledge, and conducts its own examinations before granting full membership. As accountants we do not claim expert knowledge of insurance – but this paper has endeavoured to show that nevertheless the accountant is concerned at almost every stage with his company's or his clients' insurance needs. It will often fall to him to consult expert opinion, and for this he will need to have a good working knowledge of the subject. (Concluded.)

# Weekly Notes

#### STOCKBROKERS' VIEWS ON SHORT-TERM GAINS

LEADING firm of stockbrokers has circu-Alated, in its Investment Letter, a four-page 'Practical Outline of the Short-term Gains Tax', in which it deals with purely commonplace stock exchange transactions, disregarding the complications which arise from bear transactions, options and contangos. It comments on the fear voiced in some quarters that if a taxpayer's next return contains details of a large number of short-term transactions, he will lay himself open to assessment not under Case VII but under Case I of Schedule D as a professional speculator, and thus be made to pay tax on profits accruing from the sale of shares he has held longer than the statutory six months. If this fear is well-grounded, the safe course for many to pursue would be to eschew short-term transactions altogether. The Letter does not entirely rule out the possibility of the Revenue taking such far-reaching action, but it makes three comments. The Revenue practice so far has been to avoid treating individual casual speculators as carrying on a trade. Secondly, its hands will be full with Case VII, without making this new

departure. Thirdly, a scrutiny of dividend vouchers in the past would have given at least a hint of the more active accounts, yet this has not been followed up.

The 'Outline' sets out ten 'basic rules', of which the sixth is perhaps the most interesting, since it deals with the matching up of sales with purchases where the taxpayer has several dealings with shares of one class. He does not have any freedom to allocate specific purchases to specific sales, but must abide by the rules laid down. According to the 'Outline', the broad principle is to apply the 'first-in, first-out' rule, subject to four main exceptions:

- (a) Where the holding comprises two purchases on the same day at different prices, a subsequent partial sale is regarded as coming equally from each purchase.
- (b) A sale is matched with shares bought for the same account, rather than with a purchase for an earlier account. In the case of cash transactions they are matched only if they occur on the same day.
- (c) A sale is regarded as coming from shares purchased within the tax period rather than shares purchased before April 10th, 1962, or more than six months ago.
- (d) A sale is only matched with inherited shares if there are no other similar shares available.

The 'Outline' sets out some practical examples of this matching.

#### EIGHTH INTERNATIONAL CONGRESS

#### Departure of First United Kingdom Party

THE Eighth International Congress opens in New York tomorrow week, September 23rd, and the latest registration figures indicate that there will be a total attendance of some 3,800 accountants and their ladies from nearly fifty countries.

The first party of accountants from the United Kingdom left Gatwick Airport on Wednesday of last week. All members of The Association of Certified and Corporate Accountants, they travelled with their wives on a charter flight and will have an opportunity of sightseeing in the United States before the Congress starts. Our photograph shows some of the members of the party at Gatwick. They were seen off by the President of the Association, Mr E. Spencer, F.A.C.C.A., the Vice-President, Mr V. R. Chennell, F.A.C.C.A., and the Secretary, Mr F. C. Osbourn, M.B.E., B.A., LL.B., pictured at the front of the group.

Details of the Congress programme were given in our issue of July 21st, and we now understand that the opening speaker when the business sessions begin on Monday week will be Mr Joseph Campbell, C.P.A., Comptroller-General of the United States. He will be followed (as already announced) by Sir Harold Howitt, President of the Sixth Congress in London in 1952, and Mr J. Kraayenhof, who presided over the Seventh Congress in Amsterdam in 1957.

# AMERICAN INSTITUTE'S SEVENTY-FIFTH ANNIVERSARY

On September 22nd, the day before the International Congress opens in New York, the American Institute of Certified Public Accountants will hold its seventy-fifth annual meeting at the Waldorf-Astoria Hotel. In the evening a large number of members will be attending the seventy-fifth anniversary banquet, at which this year's President, Mr John W. Queenan, c.p.a., will take the chair. The principal speaker will be Mr Maurice H. Stans, c.p.a., former Budget Director under President Eisenhower, whose subject will be 'Accounting and human progress'.

On other pages of this issue we have pleasure in publishing an article by Dr Mary E. Murphy, PH.D. (LOND.), C.P.A., giving a short history of the American profession's early days. Originating as the American Association of Public Accountants, formed by a small number of practitioners - mainly Scottish and English Chartered Accountants - in 1887, the Institute has grown to a present membership of 44,000. Its administration, under the direction of Mr John L. Carey, is conducted by a staff of some 170, divided into seven divisions - Accounting and Office Services, Accounting Research, Education, Professional Development, Professional Relations, Publications and Technical Services - each division being supervised by a director with his own assistants. We extend congratulations to the American Institute

on its remarkable growth and achievement during the past three-quarters of a century and our good wishes for its continued progress.

#### OMBUDSMAN IN NEW ZEALAND

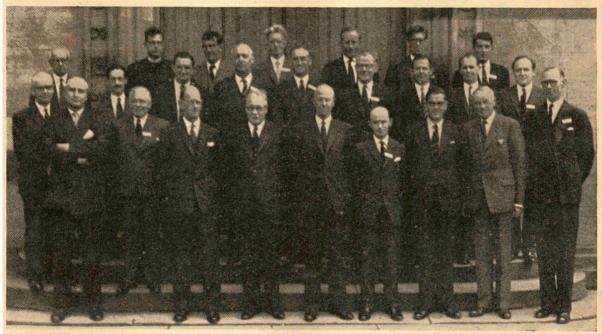

NEW ZEALAND has become the first country within the Commonwealth to appoint an Ombudsman. The choice has fallen on Sir Guy Powles and his appointment has been made unanimously by the New Zealand Parliament.

Sir Guy Powles was High Commissioner for Western Samoa from 1949 to 1960 when he was appointed High Commissioner for New Zealand in India. He originally practised as a solicitor and barrister in Wellington before the Second World War when he was a staff officer and later on active service with one of the New Zealand divisions.

The idea of an Ombudsman has found limited support in this country where it is widely felt that the processes of Government are sufficiently overt, thanks to the scrutiny of Parliament, not to make such an appointment necessary. A book by Mr T. E. Utley called *Occasion for Ombudsman* was reviewed in *The Accountant* on March 18th, 1961, page 322. This book is not in favour of such an office being exercised by one individual supported by a staff but rather by an anonymous central department presided over by a body of public figures.

It is of interest that the first appointment of this kind within the Commonwealth has occurred in a country which has had a mildly Socialist form of Government for many years and where a good deal of

#### Scottish Institute's Summer School

A report of the tenth Summer School at St Andrews of The Institute of Chartered Accountants of Scotland was published in our last issue, and we now reproduce a photograph of some of the personalities who were at the School.

Front row (left to right): Mr E. H. V. McDougall, Secretary of the Institute; Professor Robert Browning, C.B.E., M.A., Ll.B., C.A., Member of Summer School Committee; Messrs R. P. F. Olden, F.C.A., Vice-President of The Institute of Chartered Accountants in Ireland; James C. Stewart, C.A., President of the Institute; W. L. Milligan, B.A., J.P., C.A., Vice-President of the Institute; A. W. Graham, B.COM., F.R.A.N.Z., Secretary of the New Zealand Society of Accountants; W. Stuart Orr, B.A., Ll.B., A.C.A., Secretary of The Institute of Chartered Accountants in Ireland; Thomas Lister, M.A., C.A., a Past President of the Institute; G. D. H. Dewar, C.A., Convener of the Summer School Committee.

Middle row: Messrs A. McKellar, c.a., a Past President of the Institute; A. E. McCallum, B.L., c.a., an Assistant Secretary of the Institute; A. L. Stewart, c.a., M.I.O.M., Speaker; J. A. Crawford, B.A., c.a., A.C.W.A., Member of Council; H. Forbes Murphy, c.a., Member of Summer School Committee; W. K. M. Slimmings, c.B.E., c.a., Member of Council; H. McMichael, c.a., Member of Summer School Committee; W. L. Spalding, B.Sc., c.A., F.C.I.S., Speaker; Thomas P. J. Nicolson, c.a., Member of Summer School Committee.

Back row: Mr James Duncan, c.A., Member of Summer School Committee; Rev. J. C. Stewart, M.A.; R. M. Morison, M.A., c.A., Speaker; John A. Stewart, c.A., Member of Summer School Committee; T. N. Ritchie, t.d., c.A., Member of Summer School Committee; J. C. Shaw, B.L., c.A., A.C.W.A., Speaker; Kenneth J. Port, A.R.A.N.Z., Thirteenth Travelling Scholar of The Incorporated Institute of Accountants in New Zealand.

the initiative for new development and a wide field of public activity is in the hands of the Government. To some extent it may be that in this case the appointment of an Ombudsman will become an alternative to a periodic change of Government.

#### TAX RESERVE CERTIFICATES

THE latest quarterly bulletin of the Bank of England (September 1962) has been issued this week. As well as the usual running commentary on City affairs this issue has a special article on Tax Reserve Certificates, explaining what they are, how they have developed and their importance in Government finance.

Having started as a wartime expedient, Tax Reserve Certificates were continued as a device to minimize the effect of Government expenditure on the supply of money. Their big advantage nowadays is that they help to reduce seasonal fluctuations in revenue. Their effect in moderating seasonal fluctuations in the banking figures of liquidity ratios is, however, thought to be modest. Their probable effect is to increase the total of direct holdings of Government debt.

Who hold these certificates? In 1961 there were some 30,000 to 40,000 holders. About 15 per cent of the total value held was by private persons and this proportion has tended to grow slowly. Most other holdings have been by companies and these have not grown, partly because of little increase in the total of tax paid by companies. Company holdings are also affected by changes in interest rates. Broadly speaking, the cost of raising revenue in this way is considered to be modest and consequently economical.

# This is My Life ...

#### by An Industrious Accountant

#### CHAPTER 137

LEMERGED into the lunchtime sun-glare with a feeling of exaltation, like one of Chesterton's freed slaves – 'white for bliss and blind for sun and stunned for liberty'. I had just had the heady stimulus of witnessing our new auditor overwhelm the board.

He was presenting his firm's annual post-audit report and commentary to the directors – a function in previous years reminiscent of a post-mortem. The new auditor changed all that at one fell swoop. He has a broad humorous face, with keen grey eyes and a reputation for saying the unexpected. He glanced at his voluminous report, a week-old copy of which lay open before each resignedly-waiting director, and spoke up cheerfully.

'You needn't bother much with that report, you know, gentlemen. Your highly efficient secretary tells me you've had all these analyses from him already, so with the exception of the taxation section, which I propose to treat separately, I suggest we look at something more important.' The surrounding ears cocked almost audibly into attention.

'Let's look ahead for a moment. Firstly, sales are up but the gross profit percentage is down for the first seven months of this current year; I'd like to review your long-term forecast. Next, I'd suggest that you consider borrowing money more cheaply. Finally, your shares are quoted at a rather low figure; in view of which, do you feel that we should envisage take-over possibilities and plan accordingly?'

The impact of the new approach was terrific. A verbal free-for-all developed, ideas being aired which I'd never heard before; directors came out with

suggestions which surprised even themselves. Fingers were wagged and interruptions were cross-interrupted; inspirations sprang up full-grown. Best of all, I liked our auditor urbanely sitting back, explaining amid a barrage of questions how he had recently dealt with an outfitting client (anonymous) with similar low-margin trouble.

'We did a series of calibrated tests; arranged nearly fifty sample shopping visits daily to the store, to a preplanned time-table and route, during a period of two months. We noted numbers of customers, numbers of staff serving, follow-up sales talk, and waiting time . . . later we graphed them against sales and profits.'

The horrified chairman said something about 'damned expensive' and the auditor explained it cost the client nothing. 'Every one of our staff going on outside audits passed through the store at least twice daily, and usually bought something. We have the men; we used them appropriately.'

Our managing director, open-mouthed for once, queried unnecessarily costly purchasing: 'Not at all, I assure you,' came the reply, 'our people planned their needs in advance. Young Hobbs, for example, bought his dozen new handkerchiefs one at a time.'

He produced a series of graphs and the directorial heads clustered clamorously over them like children at the TV set. 'Here's where high waiting time indicates understaffing...,' explained the auditor, 'here sales divided by average customers highlighted the lowest return in the store.... My wife with three friends covered the ladies' section, though one day she ran amok and bought seven hats. Naturally, I billed them to the client as overheads.'

While the chairman enthusiastically suggested we continue the discussion over lunch, the managing director was whispering to me: 'Brilliantly inspiring ... provocative new approach ... genius with figures.' What could I do but smirk and reply 'A typical modern accountant'?

# Finance and Commerce

#### John Brown

OHN BROWN & Co Ltd - builders of the 'Queens' - provides this week's reprint. It is, of course, far more than a shipbuilding company. The report, this year in a new and improved form, lists the principal subsidiaries, their products and managements: Wickman (machine tools); Firth Brown Tools (drills, taps, milling cutters); John Brown Land Boilers; Markham & Co (colliery equipment); Cravens (railway rolling stock, fibre glass products); Constructors John Brown (chemical plants, oil installations); and aviation interests which include the Westland Hovercraft.

From the accountancy angle, the important thing about this year's John Brown accounts is the new basis for the holding company's balance sheet. What has been done is best summed up in the words of the

chairman, Lord Aberconway.

'For many years past', he says, 'it has been the policy of the board to leave in the books of subsidiaries a substantial amount of their profits, and only to withdraw from them by way of dividend rather more than enough to cover the dividends on John Brown's capital.

'This has meant, as I have previously pointed out, that the net worth of each subsidiary increases yearly by the amount of its retained profit, and over the years, as a comparison of the consolidated balance sheets shows, this growth has been considerable.'

#### Explanation

'Meanwhile', Lord Aberconway points out, 'the value at which its interest in subsidiaries is shown in John Brown's own balance sheet has not reflected those changes, but has in general altered only as and when a subsidiary has been bought or sold, or when John Brown has subscribed further capital to a subsidiary.'

'On this basis', he continues, 'the value in John Brown's balance sheet of its interest in subsidiaries has become increasingly unrealistic, indeed largely meaningless. Accordingly, your directors have decided that this year and in the future, it would be more helpful to stockholders to show in John Brown's balance sheet its interest in subsidiaries at the sum of the values of the net tangible assets of the subsidiaries, as shown by the balance sheets of the subsidiaries.'

Lord Aberconway, however, emphasizes 'that in making this change this year, your directors are in no way revaluing the assets of the group; no change at all is made in the basis of valuing assets in the books of

the subsidiaries. All that is being done is to adopt in the parent company's balance sheet the asset values shown by the accounts of the subsidiary companies.'

Those versed in accounting process will grasp the point at once, probably in fewer words. The statement, however, is addressed in the first place to shareholders and there is an interest in seeing how a change in accounting is expressed in the language of everyman.

#### **Contract Claims**

Lord Aberconway has deemed it necessary this year to emphasize the difficulties of Constructors John Brown in Persia by opening his statement on this point. Brief mention was made last year of the anxiety about the eventual financial outcome of certain Persian contracts with an assurance that 'provision had been made on what should be a sufficient scale'.

But he now reports that extras on contracts in respect of such items as changes in specification,

extra work required, delays outside the control of C.J.B., and so on, have now increased to substantially over £1 million. Despite repeated submissions and the exercise of much patience and co-operation, C.J.B. has not yet been successful in obtaining settlement of these extras. In the case of the largest contracts where the client is the Persian Government, C.J.B. has had to request the Government to submit to arbitration. The contract contained an arbitration clause in the usual form.

The Persian Government (now former) declined arbitration; it was illegal for a Government department to have signed such a contract containing an arbitration clause. But in this case, a decree permitting arbitration was being drafted although, says Lord Aberconway, it is still not clear whether it will be in accordance with the usual contract. And the recent change in the Persian Government, he adds, makes the situation no clearer. Following last year's practice C.J.B. is not taking credit for outstanding extras

until they are settled and 'by reason of this policy the accounts of C.J.B. show a substantial trading loss this year'.

#### Cost Stability

1011

A few words on the concrete benefits to overseas trade which have stemmed from the late Chancellor's policy are worth noting. Lord Aberconway refers to 'A welcome slackening in the speed with which costs of all sorts have risen in recent years' and states that 'this relative stability of costs, compared with the experience of some overseas competitors, has enabled subsidiaries to obtain more export orders and to secure a firmer hold on their export markets'.

One is, almost subconsciously, inclined to feel there are occasions when politics may colour chairmen's statements, but from the other side of the competitive fence there have been signs of sharp cost increases, particularly in the West German steel and engineering industries.

Lord Aberconway hopes that 'good sense and restraint on all sides will preserve these hard-won benefits, and that they will not be dissipated by a resumption of rapid inflation to the detriment, among other things, of exports and ememployment'. He mentions the recently negotiated 'moderate wage increase' as a possible pointer to 'the start of a trend towards the stability that is so much needed'.

# JOHN BROWN AND COMPANY LIMITED AND SUBSIDIARY COMPANIES NOTES ON THE ACCOUNTS-31st MARCH, 1962

5. There are the following contingent liabilities:-  The The Com- Company pany and its sub-	t t  Indemnities and guarantees 560,466 971,156  Partly paid shares 45,000 89,730	Total at 31st March, 1962	<ol> <li>The approximate commitments in respect of capital expenditure of the Company and its subsidiaries are £806,000 (1961—£1,070,000).</li> </ol>	7. The remuneration of the Directors of the Company for the year amounted to £43.215, made up of £5,000 for fees and £38.215 for management services and pension premiums. In addition, £800 has been charged in respect of former executive Directors.	8. Assets and liabilities of overseas subsidiary companies have been converted into sterling at the official rates of exchange at 31st March, 1962, except in the case of a Brazilian subsidiary where, because of unstable currency conditions, certain assets have been converted at their sterling cost, and sterling liabilities at the sterling amount thereof.	<ol> <li>The consolidated accounts include those of a home subsidiary company with overseas activities and of certain overseas subsidiary companies, whose financial years ended on 31 at December, 1961, and of two minor overseas subsidiary companies whose financial years ended on 30th June, 1961, and 31st January, 1962, In order to avoid delay in presenting the Company's Accounts it was decided not to after these dates.</li> </ol>
The The Com- Company pany and its sub- sidiaries	730,001 730,001	e,	173,875 173,875 88,851 88,851	2,101,461 3,955,326	1,893,315 1,893,315 48,074 48,074 — 49,598	£160,072 £1,953,206
I. Capital Reserves:-	(a) Share Premium  Balance at 31st March, 1961  Deduct: Amount capitalised and appropriated to Ordinary  Stockholders	(b) General Balance at 31st March, 1961 Add: Net profit on sale of:	S. N. Bridges & Co. Ltd Trade Investments	Deduct:- Amount capitalised and appropriated to Ordinary Stock-	holders Expenses re capitalisation issue and acquisition and sales of Investments Exchange differences less sundry credits	Capital Reserve of subsidiary sold during the year Balance at 31st March, 1962

- The increase in Consolidated Revenue Reserves of £484,112 arises from appropriations by subsidiary companies of profits of £502,362, less £18,250 applicable to a subsidiary company sold during the year. તં
- (a) Shares in subsidiary companies at 31st March, 1962 are valued at the aggregate of the values of the net assets, excluding goodwill, patents and licences, of the subsidiary companies as shown by the books of those companies at their most recent balance sheet dates. For this purpose Future Taxation and Taxation Equalisation in the books of the subsidiary companies have been treated as liabilities. m
  - (b) Trade Investments and Loans are at cost.
- Fixed Assets, before depreciation, are stated at cost, or at net book value at 31st March, 1948, this subsequent additions at cost, except assets sold to subsidiary companies after 31st March, 1948, which are at the written down value or at an independent valuation at the date of sale, with subsequent additions at cost. ť

- 30 ide up
  - at the rhere, erling
- vities 1961, 1961, t was
- The Taxation Equalisation Account of £649,003 represents tax upon the excess of the book value of plant over the written down value of that plant for taxation purposes. The deduction this year from this account of £15,964 is credited in arriving at the charge for United Kingdom ncome Tax. Ö.
- The 700,000 4% Cumulative Redeemable Preference Shares of £1 each, fully paid, of Wickman Intented, are redeemable at 21s, per share. The latest date for redemption is 30th November, 1998, but the company may redeem the issue in whole or in part on or after 1st December, 1968. The 94,628 7% Cumulative Redeemable Preference Shares of £1 each, fully paid, of Drury Vickman Limited may be redeemed by purchase of such quantity of them in the open market between 1st Octobber and 31st December each year as can be bought by the amount standing to the credit of the Capital Redemption Reserve Fund of the company. =
- The Trading Profit is stated after crediting the release by a subsidiary company of a provision before tax of £108,108 for exceptional expenditure on the re-organisation of Works, which has taken place during the year, and for which an amount of £50,000 was set aside out of taxed profits at 31st March, 1961.

ᅼ

Relief for Income Tax and Profits Tax amounting to £58,108 has been taken into account by the subsidiary in arriving at its liability for United Kingdom taxation.

#### CITY NOTES

THE Commonwealth Prime Ministers' Conference with the Common Market as the main issue, and the wait for the Chancellor to return from the International Monetary Fund meeting in Washington, have combined to numb the equity sections of the stock-market into inactivity. Prices have drifted lower through lack of support rather than from pressure to sell, and the top has also been taken off the rise in the gilt-edged market.

The 1963 stock-market and industrial boom, so optimistically forecast in some quarters, still seems a matter for investment conjecture rather than eager anticipation. Those forecasting optimistically for 1963 are inclined to think in terms of home domestic demand stimulus rather than fixed investment stimulus which is more likely to be provided through the new Chancellor's presumed plans.

Until present Common Market and economic uncertainties are resolved, the stock-market, as a whole, can hardly be expected to make worth-while headway, although any change for the better in the investment mood could have very marked effect on prices.

#### **National Savings Movement**

SIR, — Well over three million employees in industry are members of National Savings Groups producing a gross investment of nearly £120 million per annum.

This is testimony to the facilities which National Savings can offer to small savers and to the long-standing support given to National Savings both by employers and employees.

Many of these groups owe their origin and growth to the initiative of accountants in firms who organized deduction from pay facilities and other savings schemes as a welfare service, knowing that employees free from money difficulties make the best workers.

I have challenged the National Savings Movement this winter to further improve our position in industry by securing an additional 100,000 group members.

This target is realistic, being only some 3 per cent increase, but it is one we can only achieve with the co-operation of all who have a hand in sanctioning or providing savings facilities.

I am sure we can count on your co-operation in

this new drive.

Yours faithfully, MACKINTOSH OF HALIFAX, Chairman,

London SW7. NATIONAL SAVINGS COMMITTEE.

#### Scottish Institute's Apprenticeship Guide

SIR, — Your admirable summary of this Institute's C.A. Apprenticeship Guide (September 1st issue), refers to the Council's recommendations regarding apprentices' remuneration. Your summary omits, however, to mention the important point that these recommendations apply only to apprentices serving in Scotland. The Council makes no recommendations regarding the remuneration of apprentices serving elsewhere in the United Kingdom and is well aware that apprentices serving in London receive remuneration in excess of the scale applicable in Scotland.

Yours faithfully, E. H. V. McDOUGALL, Secretary,

27 Queen Street, THE INSTITUTE OF CHARTERED Edinburgh 2. ACCOUNTANTS OF SCOTLAND.

#### Whole Pound Accounting

SIR, - The recent correspondence on this subject is of special interest to me as I have campaigned over the years for a wider adoption of whole pound accounting techniques.

Mr J. A. Philpott, a 'fellow practitioner', put the

case admirably in his letter (September 1st issue) although I am convinced that it is not necessarily the larger companies with mechanized systems who stand to benefit most.

My experience has shown that there are three key factors in the successful installation of whole pound accounting:

- (1) Eliminate currency fractions at the earliest possible stage in the accounting records. For example, do this when purchase invoices are coded or sales are analysed and summarized.
- (2) Avoid the creation of fractions where none exist to start with. Examples - when processing accruals, pre-payments, and apportionments; when recording inventories and evaluating cost of sales; in asset and depreciation records.
- (3) Ensure that the plan is simple, fully understood and fully implemented by the staff involved. A half-baked, half-understood scheme may well result in unnecessary clerical effort.

If these key factors are borne in mind when planning the installation, the advantages will surely flow, however small the business.

> Yours faithfully, L. A. LYNCH, A.A.C.C.A.,

London W1.

Systems Adviser, Colgate-Palmolive Ltd.

#### **Entertainer: Formation of Company**

SIR, - We would be most interested to have readers' views on the following unusual circumstances:

Client X., an entertainer, whose activities include writing a record column as well as personal appearances, forms a company with his wife as co-director and member. It was our intention to 'tail off' his personal accounts whilst letting the company grow. In this way large penultimate assessments on him would be avoided and large commencing assessments on the company avoided.

The inspector refused to accept two sets of accounts and insisted that all the activities go into the company. We reluctantly agreed, and for two years now P.A.Y.E. has been applied and only the company assessed.

Client Y., another entertainer, is also a composer, and over the past few years his income from personal appearances has diminished whilst his income from writing tunes has grown (much from one source by whom he is commissioned to write songs). He, too, formed a company and, bearing in mind our treatment from the other inspector, we put everything into the company. (Neither X. nor Y. has an agreement with his company.)

The inspector in the latter case refuses to admit the existence of Y.'s company and states that Y. has not discontinued his profession and must still be assessed under Case II. He, therefore, requires Y.'s personal accounts and mentions that Y. has only used a company's bank account for convenience. We have given an undertaking that all the income received during the relevant period has been brought into account but he says that, without a contract between Y. and the company, he is not prepared to accept the position as we put it. We asked for head office opinion and he says that he has now referred to them and they confirm his view. We have said that a contract between Y. and the company that Y. should not do any outside work would never be enforced against Y. (whilst Y. was the 99 per cent shareholder) but the inspector will not move. Incidentally, P.A.Y.E. has been operating in Y. company for eighteen months - in fact, Y. is on all fours with X.

What do readers suggest?

Yours faithfully,

CERTINT.

#### **Deferred Expenditure**

SIR, - One cannot but sympathize with the writer of the letter published under this heading in your issue of September 8th. The company renting expensive equipment over a term of four years, with heavy initial expenses, must seek, like everyone else, to show a true and fair view in its accounts.

While, however, it is true that a case can be fairly made out for spreading the initial expenditure over four years by carrying forward what might be called the 'unexpired portion' of the expenditure over the period, surely this is only part of the problem?

Anyone renting equipment knows that there are various contingencies which may arise, such as:

- (1) the renter may not pay his rental;
- (2) recovery of the goods can prove costly;
- (3) the condition of the recovered goods may necessitate expensive repairs;
- (4) further expenses will arise on resale of partly used goods.

To these we may now add the balance of the 'unexpired portion' of the initial expenses mentioned above.

Surely it would satisfy the 'true and fair' intention of your correspondent if a profit were to be arrived at on the principle of deferment of part of the expenditure as suggested by him, after which a full reserve for all the contingencies enumerated above, and probably others not mentioned, should be made from the net profits.

There is, of course, also the problem of income tax. It is not normally possible to avoid taxation on reserves, and if a company wishes to show a true and fair view as outlined, the payment of taxes on the same basis seems unavoidable. It is, however, submitted that this is not so important as the proper presentation of accounts to shareholders.

Yours faithfully,

London EC2.

R. S. WALDRON.

#### BRITISH COMPUTER SOCIETY

#### Third National Conference at Cardiff

The third national conference of the British Computer Society was held in Cardiff from September 4th—7th and was attended by delegates from throughout the United Kingdom and countries overseas. Thirty-three papers were presented at eleven sessions, their subjects ranging from the mathematical and scientific application of computers to their use in Government and commercial organizations. The conference was welcomed by the Lord Mayor of Cardiff and the opening address was given by the President of the Society, Mr D. W. Hooper, M.A., F.C.A., chief organizing accountant of the National Coal Board.

We summarize below a selection of some of the papers presented at the conference.

#### Profitability of a Computer System

Speaking on the methods of costing used to assess the justification of computer systems in Government offices designed to meet the conditions of public accountability of Government departments, Mr J. D. W. Janes, of the Treasury's Organization and Methods Division, said that the problem was to determine whether alternative methods were worth while and, if so, which should be chosen.

In a typical computer scheme, he said, the main elements of gain and loss occur over a period. In such circumstances, he felt that some compound interest method of costing gave the most reliable results. In practice, however, there were, he said, some difficulties about this and the Government had used a costing system, based on simple interest, designed to calculate an average net annual return on capital. In examples of typical schemes relating to the incidence of gains and losses over the initial planning and the amortization periods, and figures for the return for these schemes calculated both by a compound interest method and by the standard automatic data processing costing system, it was shown that the amount of error that might arise from the simplified system was generally acceptable. He made an interesting analysis of the costings of a number of Government computer schemes which indicated the relative importance of some of the elements of cost, and the extent of saving which was expected to be achieved.

Mr Janes concluded by explaining that, although costings were based on direct savings, the possibility could not be excluded of a computer being justified by indirect advantages. But even in such cases, there was still a need for comprehensive costing.

#### From Cards to Magnetic Tape

Mr A. E. C. Hodgson, of Ferranti Ltd, dealt with the problems experienced during the first six months of conversion of existing card records to magnetic tape in the South African Mutual Assurance Co.

He said that during this period 1,800,000 Powers cards were converted to form a magnetic tape main file of 134 reels of electrodata tape—an operation which took about six hundred hours of computer time. In addition, two updating runs were performed, one in the middle and one at the end of the period. The

updating runs, he explained, consisted of amending the magnetic tape files – generated entirely by cards in existence at the time the machine was handed over – by new policies and changes to existing policies which had occurred since the start of the conversion. This updating work took approximately three hundred hours. The remainder of the available computer time was taken up in program development, of which a great deal was necessary during the early months of operation in a new installation.

In the first half of his address Mr Hodgson dealt with the broad outline of the framework of the four main conversion runs, with particular reference to the dump and restart problems which are peculiar to this type of work. The second was devoted to the difficulties inherent in dealing by computer with large card files which have been in use in a card installation over a period of many years. Such difficulties included: change of punching instructions at some time in the far past causing program failure; sensitivity of computer card-readers to slight off-punches, particularly when gang-punching had been used to produce the card; dealing with out-of-sequence cards, which were always likely to be present in large card files; and cards which had failed to pass computer consistency checks.

Mr Hodgson's address, whilst not concerned with the specific problems of insurance, stressed the general problems that may occur during the conversion of existing card records to magnetic tape.

#### **Recording National Insurance Contributions**

In his paper, Mr J. Drummond, of the Ministry of Pensions and National Insurance, dealt with some of the aspects of recording graduated national insurance contributions.

The initial legislation of the Graduated Pensions Scheme specified certain basic factors to be covered by the establishment of a comprehensive recording system. A quick decision, he said, had to be made as to whether the recording system should be based on clerical methods, punched cards or a computer. A survey of known factors and rough forecasts of possible complications indicated that a large-scale magnetic tape system would provide the best solution, and an Emidec 2400 system was ordered in mid-1959.

The system, he said, has to maintain over twenty-five million individual insurance accounts in such a way that full details of contributions and supporting documents may be produced at any time up to fifty-two years after receipt. In any week, 1,500,000 items may be processed but around 10 per cent of cases may contain wrong identity details and in a further 25,000 to 30,000 cases per week exceptional sets of circumstances may call for special action beyond the discretion of the computer. To meet all these and other requirements Mr Drummond explained that all incoming documents are merely divided to main types of computer input and fed into automatic numbering machines which print sequential numbers on them, after which the documents are micro-filmed.

Minimum essential data are then punched into machine cards which are fed into the computer system, but these data include the document numbers. All sorting and editing of input is carried out by the computer. Conversely, all output from the computer is sorted to the order most convenient to the recipient. For example, all items found to contain errors in identity detail are sorted to the sequence of the 'receipt' numbers on the original documents.

He emphasized that the quantity of information is not of itself the major problem. What, at first glance, is a relatively simple job of posting items into accounts and producing details of accounts on request is, in fact, very complex, involving a series of over fifty major interlocking programs. The active 'current generation' of magnetic tapes, he said, consists of over one hundred and sixty action groups covering more than one thousand five hundred reels. Special control programs have been designed to minimize the risk of human error in filing and loading tapes disrupting or delaying computer processes. The control programs also cater for the operation of the various items of peripheral equipment and the automatic rectification of certain error conditions.

#### **Production Control by Computer**

Mr R. G. Massey, of Richard Thomas & Baldwins Ltd, described the first stage of a long-term programme for the development of computer applications at his company's new works at Llanwern, Newport, Mon. The first stage, due for completion in mid-1963, consists of four systems covering:

- (i) order handling, order progressing and production scheduling;
- (ii) on-line information display and collection in the steelmaking and hot mill departments of the works;
- (iii) automation of the hot strip mill;

(iv) off-line data processing.

Panellit 609 systems based on Elliott 803B computers having extended core storage and using magnetic films are being used for (i) and (ii) and a further 803B was installed in December 1961 for (iv). This, he said, will be fitted with a punched-card reader in addition to the standard paper tape input. The hot strip mill automation system (iii) was being provided by the American General Electric Co and will be based on a G.E.412 process control computer with a 56,000-word magnetic drum.

Discussing how the four systems operate, Mr Massey said that the production scheduling computer accepts customers' orders and prepares schedules to meet them covering the major processes in the works from the production of steel ingots to the dispatch of finished product. In the steel plant and hot mill areas the schedules are transmitted automatically to the information display and collection system which actuates printers and visual displays in the plant to give the operators their detailed instructions. Progress data are fed back into this system from manually operated consoles in the plant and, in some cases, from automatic recorders. Any significant deviations from planned production are relayed back to the production scheduler for automatic re-scheduling. At regular intervals summarized information is printed out for management reporting purposes and punched cards prepared for statistical analysis on the off-line data processing computer.

In addition to the description of the work of each

system and the inter-connecting links, Mr Massey gave a short history of the project including its inauguration, the formation and organization of the systems analysis team, the development of the equipment and programming specifications and the establishment of the operating organization.

#### **Data Transmission**

Reviewing the Bank of Scotland's experience in transmitting accounting data, Mr J. Letham said that where the basic intention is to have a central point for the assembly and processing of data received from outlying stations, methods of transmission of the information may vary for a number of reasons. These include cases where it is economic to install equipment at the perimeter which can convert data at that point to the input medium required for the central unit, as contrasted with cases where other means of transmitting the data for conversion at the centre are preferable.

Originally, he said, the Bank's branch offices included in the book-keeping centre were all locally situated, and transmission consisted of physical delivery in one way or another of documents representing the entries to be recorded. The character of the Bank's branch system demanded a more effective method of long distance data transmission, and following discussions with the telecommunications branch of the Post Office, it was agreed to experiment over the public telex network using 'off-line' five-channel perforated paper tape and producing facsimile 'chadless' tape at the computer centre on a printing reperforator as terminal equipment. Entries were of variable length, between nineteen and twenty-eight characters in each case, and the use of 'chadless' tape allowed interpretation of the data to be printed on the tape, thus facilitating handling by the operating staff.

Prior to the commencement of transmitting operations the Post Office conducted an accuracy test over the intended route by sending some 500,000 characters. During this test not more than four errors occurred. The original full time operating link in this arrangement, Mr Letham said, was between Dunfermline and Edinburgh and most satisfactory results were obtained. The speed under standard telex automatic transmission rates was 400 characters per minute. Soon after this stage had been reached it was found that several electronic companies were conducting experiments into the possibility of high-speed transmission over the public telephone network, and the Bank undertook a field trial of one such type of equipment, by Ericsson Telephones Ltd, with Post Office cooperation. This link was set up between Glasgow and Edinburgh and came into operation in May 1961 and it has been in use since then up to the present date. The speed of operation is twenty-five characters per second and some error correction facilities are incorporated in the equipment.

Dealing with accuracy of transmission, Mr Letham said that operational working and the difficulty of determining in any specific cases whether errors have arisen in the original tape or during transmission had made it impossible to keep an accurate check on error rates. This, he said, was not so important in the case of the Bank of Scotland, as an integral part of the process was a 'validity' check on all data received at the centre before input into the system.

# Notes and Notices

#### PROFESSIONAL NOTICES

Messrs Edwin Bradshaw & Son, Chartered Accountants, of 3 Springfield Street, Warrington, and Messrs Bennett & Bennett, Chartered Accountants, of 13 Bold Street, Warrington, announce that a professional association has been arranged between the two firms. For this purpose, Mr P. Gandy, F.C.A., has joined the firm of Edwin Bradshaw & Son, as a partner. Mr D. J. Watts, A.C.A., who has been with the firm for several years has also been admitted to partnership. Mr F. Neatham, F.C.A., and Mr N. Neatham, F.C.A., have joined the firm of Bennett & Bennett as partners. The practices will continue in their separate names.

Messrs Lindsay, Jamieson & Haldane, Chartered Accountants, of 24 St Andrew Square, Edinburgh 2, announce that they have assumed Mr Patrick I. Woods, A.C.A., as a partner as from September 1st. Mr Woods will practise from their London office at 110 Cannon Street.

Messrs Macnair, Mason, Evans & Co, Chartered Accountants, of Capel House, 62 New Broad Street, London EC2, announce with regret the death on August 31st, 1962, of Mr H. H. Mason, F.C.A., who had been associated with the firm since its foundation over fifty years ago, and who had been senior partner until his retirement in 1958.

Messrs McLintock, Moores & Murray, Chartered Accountants, announce that their address is now 156 St Vincent Street, Glasgow C2. Telephone: Central 1496.

Messrs Norris, Gilbert & Co, Chartered Accountants, announce their removal from 93/97 Regent Street, London W1, to 70 Pall Mall, London SW1. Telephone: Whitehall 1933.

Messrs Pannell, Crewdson & Hardy, Chartered Accountants, announce that in conjunction with Messrs Howell, Wade & Co, they are opening an office in Bathurst, Gambia. Mr Terence A. G. Dendy, A.C.A., will be a partner in both firms.

Messrs Price Waterhouse & Co (European Firms) announce with regret the death of Mr John C. Dickinson, O.B.E., F.C.A., resident partner in Stockholm for many years.

Messrs H. S. Sussman & Co, Chartered Accountants, formerly of 3 Grosvenor Street, London W1, announce that as from September 3rd they have moved their offices to 12 Nottingham Place, London W1.

#### DOUBLE TAXATION: JAPAN

A Double Taxation Convention between the United Kingdom and Japan was signed in Tokyo on September 4th. The Convention, which is subject to ratification, provides for the avoidance of double taxation of income and profits and is expressed to take effect in the United Kingdom for income tax from April 6th in the calendar year in which the exchange of the instruments of ratification takes place. The full text will be published shortly by H.M. Stationery Office.

# OFFICIAL AND GENERAL BUILDING SOCIETY

The Chief Registrar of Friendly Societies has announced that on September 5th, 1962, pursuant to section 6 (1) of the Building Societies Act, 1960, he made an order applying subsection (2) of section 6 of the Act to the Official and General Building Society whose registered chief office is 406 St John Street, London EC1.

Under subsection (1) of section 6 of the Act, the Chief Registrar, if he considers expedient to do so in the interests of persons who have invested or deposited or may invest or deposit money with a building society, may, by an order made with the consent of the Treasury, apply subsection (2) to the building society forbidding a building society from (a) accepting the deposit of or otherwise borrowing any money or (b) accepting any payment representing the whole or any part of the amount due by way of subscription for a share in the building society, other than a payment which fell due before the making of the order.

# THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

At a recent meeting of the Executive Committee the chair was taken by Sir William Carrington, F.C.A., President of the Association, and six members were present.

#### Application for Assistance

Seven new applications for assistance were considered. In two cases a grant was made; in four cases a donation was given; in one case no grant was made.

One application was from a member, married with a young son, who is suffering from disseminated sclerosis. He can do some work at home when he can obtain it, but he has insufficient to make him self-supporting and a grant was, therefore, made to him.

Twenty-three applications for further assistance

# JOHN FOORD & COMPANY

56 VICTORIA STREET, LONDON SWI

Telephone: Victoria 2002 (3 lines)

#### REVALUATION OF ASSETS

WORKS, FACTORIES, PLANT & MACHINERY, Etc.

were considered. In ten cases the grant was renewed; in six cases the grant was increased; in four cases the grant was reduced and in one case no further grant was made owing to improved circumstances. Two cases were deferred pending further information.

#### Special Fund

One application for further assistance was considered; the grant was renewed and a donation was made.

#### W. B. Peat Memorial Scholarship Fund

Two grants of £30 per annum each for three years were made. One case was renewed for a further three years at £30 per annum.

#### Matters Reported

Eleven cases were reported where changes in circumstances had occurred and grants were adjusted or donations made in appropriate cases. In two cases the Hon. Secretary was pleased to report that no further assistance was required owing to re-marriage.

#### THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Members' Library

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Capital-Expenditure Decisions: how they are made in large corporations; by D. F. Istvan. Ohio. 1961. (Indiana

University, 24s.) Change of Name; by J. F. Josling: seventh edition, 1962.

(Solicitors Law Stationery Society, 7s 6d.)
Charlesworth on Negligence; by J. Charlesworth: fourth edition by R. A. Percy. 1962. (Sweet & Maxwell, 105s.)
Clerical Salaries Analysis. 1962. (Institute of Office Management.) 1962. (I. of O.M., 6os.)

The Clerk in Industry: a survey . . .; by J. R. Dale. Liverpool. 1962. (Liverpool University Press, 25s.)

Conference of Asian and Pacific Accountants: Proceedings: Canberra. March-April 1960. (Australian Society of Accountants.) Hobart. 1961. (A.S. of A., presented.) A Course in Applied Economics; by E. H. P. Brown. (1953).

Credits and Collections: management and theory; by T. N. Beckman: seventh edition. New York. 1962. (McGraw-Hill, 66s.)

Elements of Auditing; by R. G. Williams, F.C.A.: twelfth

edition. 1961. (Donnington Press, 178 6d.)

#### LONDON STUDENTS' WEEK-END COURSE AT OXFORD

The Oxford residential course for members of The Chartered Accountant Students' Society of London opens at Balliol and Jesus Colleges next Thursday and will be attended by over one hundred and fifty students.

The course will be addressed by a number of eminent speakers including Mr Edward du Cann, M.P., Economic Secretary to the Treasury, and Mr E. J. P. Lunch, F.C.A., chief accountant, Port of London Authority. Fourteen discussion groups will be working, comprising twelve to thirteen members each. Group discussions will follow each lecture with a final discussion with the lecturer at the end of the day. On Thursday evening, Mr J. A. Jackson, F.C.A., a Vice-President of the Society, will dine in Balliol with students and guests from the College and on the following evening Sir Harold Gillett, Bt, M.C., F.C.A., also a Vice-President of the Society, will dine in Jesus College. The course will disperse on Sunday afternoon.

#### MANCHESTER SOCIETY OF CHARTERED ACCOUNTANTS

#### **Discussion Group**

A meeting of the Manchester Society of Chartered Accountants' Discussion Group was held last Tuesday when the subject of discussion was 'Trials and tribulations of a receiver', led by Mr R. Jones, F.C.A., with

MOTOR — FIRE — CONSEQUENTIAL LOSS

INSURANCE COMPANY

10 ST JAMES'S STREET, LONDON, SW1

the chairman of the group, Mr R. P. Wilkinson, F.C.A., presiding.

The remainder of the autumn programme is as follows: October 9th: 'The industrious accountant', led by Mr J. C. Robinson, F.C.A.

November 5th: 'The Institute's statements on auditing with regard to stock', led by Mr W. R. Carter, M.A., F.C.A. December 11th: 'The public image of a chartered accountant', led by Mr T. L. Crispin, F.C.A.

The above meetings will take place in the board room, Chartered Accountants' Hall, 46 Fountain Street, Manchester 2.

Inquiries regarding the activities of the group may be obtained from the honorary secretary, Mr M. J. Croll, A.C.A., at the above address.

### MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

A comprehensive lecture programme has been arranged for the 1962-63 session of the Manchester Chartered Accountants Students' Society. Unless otherwise indicated, meetings will commence at 6 p.m. preceded by light refreshments at 5.30 p.m. at the Chartered Accountants' Hall, 46 Fountain Street, Manchester 2. The programme up to the year-end is as follows:

September 27th: 'Auditing', by Mr V. R. Anderson, A.C.A. (Caer Rhun Hall Ltd, Conway).

October 4th: 'Insolvency', by Mr J. Tye (Official Receiver in Bankruptcy).

October 5th: Afternoon visit to Burroughs Adding Machines Ltd (Applications to join the party should be made to the assistant secretary).

October 11th: 'Machine accounting', by Mr D. H. Hackett, A.C.A. (Accountant liaison officer, The National Cash Register Co Ltd).

October 18th: 'Management consultancy', by Mr F. G. Taylor (Supervising consultant, Associated Industrial Consultants 1 td)

Consultants Ltd).

October 25th: "The workings of the stock exchange", by
Mr C. R. Curtis, M.SC. (ECON.), PH.D., F.C.I.S.

November 1st: 'Machine accounting', by Mr D. H. Hackett, A.C.A. (Accountant liaison officer, The National Cash Register Co Ltd).

November 8th: 'Britain's entry into the Common Market', by Mr A. R. Ilersic, M.SC. (ECON.), B.COM. (Lecturer in Social Studies, Bedford College, University of London).

November 15th: 'Schedule D, Case I', by Mr N. G. Comber (Senior Inspector of Taxes).

December 6th: General debate. (Topic to be announced.)
December 13th: 'Management accounting', by Captain
M. R. Aries, c.A. (Accountant, Flight Operations,
B.O.A.C.).

December 20th: Afternoon visit underground to a Manchester Colliery. Applications to join the party, which is limited to twenty (all males), should be made to the assistant secretary.

#### Tickers Programme 1962-63

The Tickers Club opened its 1962-63 session with a 'River boat shuffle' on August 25th, and on Tuesday next there will be a 'Tickers Stomp' at the Bodega Restaurant. The remainder of the programme will comprise a luncheon on October 12th, a debate on December 6th (both at 46 Fountain Street, Manchester) and a dinner dance on February 1st at the Lancashire County Cricket Club, Old Trafford. Further particulars are available from Mr E. M. Crump, 2 Baldock Road, Didsbury, Manchester 2.

#### **TENNIS**

In a tennis match played on August 20th, three pairs a side, between the Birmingham and District Society of Chartered Accountants and the Birmingham Chartered Accountant Students' Society, the match resulted in a win for the senior society.

#### SEVENTY-FIVE YEARS AGO

From The Accountant of September 17th, 1887

A Weekly Note

A meeting of policy-holders in the Briton Medical and General Life Association was held in Birmingham last week, for the purpose of considering the scheme of reconstruction. The books of account of the association and the manner in which they had been audited were referred to. It was stated that proceedings had been commenced, the exact nature of which it was not advisable to indicate. One of the speakers said he believed half of the auditors "were a myth". The way they audited the accounts, he said, appeared to be that they went down to Richmond to a dinner party and then when the champagne had got into their heads they looked at certain documents. It seems to us that the question sensible and impartial people will ask is why qualified men were not appointed auditors? The people who talk, as the speaker just referred to talked, are just those who never think of raising the question of the appointment of trained auditors, whilst there is time to remedy matters. In fact it is they who are blameable, not the auditors (save as to fraud), whose qualifications for the duties of the office can be so easily ascertained.

# Proposals for Tax Reform

AST Monday a report was published of a committee set up by the Liberal party under the chairmanship of Professor ✓G. S. A. WHEATCROFT to examine the British tax system. All but two of the six other members of the committee were accountants, prominent among them being Mr LAWRENCE ROBSON, F.C.A., F.C.W.A., a former chairman of the Party.

The report recommends that the present five-schedule income tax with a 'standard' rate and also the profits tax should be replaced by the following four separate taxes on income: (a) Personal employment tax. (b) Personal business tax. (c) Personal property tax. (d) Company tax.

The committee also propose that there should be a new tax to replace estate duty, a tax 'graduated by reference to the aggregate wealth gratuitously acquired by the recipient'. A married woman would be separately charged to income tax, and the various personal allowances would be given by way of tax credits. The personal business tax would be confined to individuals and would be based on the accounting period, as in the present profits tax.

The committee seem to be much exercised about the possibility of avoidance by manipulation of the basis periods. The personal property tax would cover interest and annual payments, as well as rents. The company tax would be at 45 per cent of profits, which would be defined on a much wider basis than at present.

The report takes a justifiably strong line about the evils of tax evasion and tax avoidance. On the former, it recommends that tax inspectors should be assisted in their unenviable task, and that the wording and layout of Inland Revenue forms be improved. It also calls for the mobilization of all organizations which can influence opinion against 'the present corruption to which overhigh taxes and an unfair system have led us'. We have ourselves pointed out the social evil of an income tax system where the employee is rigidly bound by P.A.Y.E. deductions and an inflexible rule about expenses, whereas the trader can easily conceal receipts and obtain unreasonable expense deductions.

As regards legal avoidance, the committee contemplate that the new structure would greatly narrow the field of operation. In particular, the present system of allowing interest and annual payments as deductions from total income would be severely curtailed. Not all the recommendations are likely to receive general approbation, but there is no doubting the knowledge and sincerity which have gone into the report.

# Short-term Gains - XI.

#### IDENTIFYING ASSETS SOLD

AST week we began to deal with the rules laid down in paragraph 8 of the Ninth Schedule to the Finance Act, 1962, for identifying shares sold (or otherwise disposed of) with the shares acquired. This is important not only for ascertaining whether or not the disposition falls within Case VII at all, but also, where it does fall within Case VII, for ascertaining the relevant cost of the shares sold, for the purpose of computing the gain or loss. The rules reduce to a minimum the scope for manipulation by the taxpayer.

Paragraph 8 (4) (b) provides that shares disposed of for transfer on a particular date or in a particular period:

'(b) shall be identified with shares acquired for transfer or delivery on or before that date or in or before that period, but on or after the date of the disposal, rather than with shares not so acquired'.

The words 'on or after the date of the disposal' would seem to govern the word 'acquired', not the word 'delivery'. What is in mind here, evidently, is a 'bear' transaction.

Paragraph 8 (5) is comparatively simple: subject to the above rules, preference is to be given to the shares which the taxpayer did not acquire as a legatee. It will be remembered that section 12 (8) exempts a legatee of shares from being charged to tax in respect of the disposal of the shares so acquired, except in the special case of disposals of shares in a company which has had transactions in land (section 14). But for paragraph 8 (5) the legatee could acquire shares of the same class by way of speculation and then purport to sell the inherited shares.

The last of the four rules, contained in paragraph 8 (6), is a set of rules in itself. Subparagraph (6) says:

'(6) The shares disposed of shall be identified:

(a) with shares acquired within the six months preceding the disposal (but not earlier than April 10th, 1962), rather than with shares not so acquired, and with shares so acquired on an earlier date rather than with shares so acquired on a later;

- (b) subject to paragraph (a) above, with shares acquired on a later date rather than with shares acquired on an earlier; and
- (c) with shares acquired at different times on any one day in as nearly as may be equal proportions.'

Thus if the taxpayer sells shares, and he has acquired any shares of that class in the vulnerable period (other than as legatee) the shares sold are identified as far as possible with the shares acquired in the vulnerable period, and on a strict 'first in, first out' basis. In so far as shares disposed of have to be identified with shares acquired outside the vulnerable period, then the 'last in, first out' basis applies. Why should it be necessary to distinguish between shares all of which were acquired outside the vulnerable period? The answer lies in section 14 which provides for Case VII liability on certain disposals of shares (whenever acquired) if they are shares in a land-owning company and the company itself has acquired land within the vulnerable three-year period.

The strict chronological order becomes a little unreal when there have been a number of separate acquisitions on the same day, and therefore it is dropped (paragraph 8 (6) (c)). All the acquisitions will of course either be in the vulnerable period or not, since the law ignores part of a day. Although paragraph 8 (6) (c) does not say so, it can only have practical effect where the acquisitions were at different prices; in other words it affects only the quantum of liability.

#### Example

On June 1st, A. buys:				£
J AJ	•-•	• •		600
500 C.B.'s at £3	• •	••	· •	1,500
800				£2,100
				<del></del>
On September 1st, A. 400 C.B.'s at £2 10s	sells ••			£1,000

These are his only transactions so far.

The 400 sold are deemed as to 150 (three-eighths of 400) to have cost £2 and as to 250 (five-eighths of 400) to have cost £3.

The total cost of the 400 sold is accordingly:

150 at £2 ... .. ... ...  $\frac{300}{250}$  at £3 ... ... ...  $\frac{750}{1,050}$ 

Assuming no expenses, the Case VII loss is £50 (£1,050-£1,000) and A. carries forward the remaining 400 shares, 150 at a cost of £2 and the remaining 250 at a cost of £3 (paragraph 8 (3)). (There seems to be no corresponding rule for separate disposals on the same day).

The general rules of identification contained in paragraph 8(3), (4), (5), (6), (7) were intended to be comprehensive. However, when the Bill was published, someone who was perhaps not unconnected with the Stock Exchange must have pointed out to the Government that these rules standing alone might work unfairly against persons engaged in 'continuation' or 'carry over' transactions. Accordingly, at a very late stage in the Bill, a new paragraph 8 (8) was added at the Government's behest, and it overrides the rules in paragraph 8 (3), (4), (5), (6). To add to the mystification, paragraph 8 (8) scrupulously avoids any mention of any word which brings these contango transactions to mind. Before paragraph 8 (8) can apply, four conditions have to be satisfied:

- (i) the taxpayer acquires shares for delivery in period A;
- (ii) he disposes of them for delivery in period B;
- (iii) the acquisition and disposal form one single bargain; and
- (iv) the bargain is entered into under arrangements designed to postpone the delivery of shares already disposed of.

Where these conditions are satisfied then the shares disposed of at (ii) must be identified with the shares at (i) (paragraph 8 (8) (a)).

Now previous to the bargain at (i) and (ii) the taxpayer may have disposed of shares which, under the rule in paragraph 8 (4) (b) would be identified with the acquisition at (i) above, but cannot be so identified, by reason of paragraph 8 (8) (a). Therefore, these shares are to be identified with any other available shares of the same class acquired for delivery in period A; earlier disposals being identified before later ones (paragraph 8 (8) (b) (i)). If they cannot be identified in this way, the disposed of shares are to be treated as though they were disposed of for

transfer in period B (paragraph 8 (8) (b) (ii)).

The object of paragraph 8 (8) is to protect a seller (who is not carrying out a 'bear' transaction) from being taxed on the profit which would arise if he 'contangoed' on a falling market.

Suppose a taxpayer has acquired a large holding of shares as a long-term investment, regardless of day-to-day fluctuations. However, immediately after the acquisition the price drops heavily. Notwithstanding that he is a long-term holder, the taxpayer would be very tempted to sell his shares and promptly buy them back again, thus creating a Case VII loss which is available for set off against any eventual Case VII gains. To counter this, paragraph 9 (1) prohibits the allowance of the loss, except against the gain accruing from a second disposal of the re-acquired shares. The prohibition is confined to the case where the 'same' shares are re-acquired within six months after the disposal (one month in the case of a re-acquisition through a stock exchange).

In speaking of re-acquiring the 'same' shares, paragraph 9 (1) is not to be taken literally. If the taxpayer acquires 'like' shares within the statutory six months or one month, they are to be deemed to be the same shares. This innocent sounding deeming provision could have very unexpected repercussions and paragraph 9 (2) which contains it also cuts down its scope. In the first place there can be only one re-acquisition for one disposal of a share. If there have been two or more disposals, a re-acquisition attracts paragraph o (1) treatment only in relation to one of the disposals, preference being given to the earliest available one, on what we may call 'first out, first in' lines. Where there are several disposals on one day, the shares reacquired are apportioned among those disposals in proportion to their respective amounts. Where there are two or more separate reacquisitions, the same 'first out, first in' rule applies. Re-acquisition of the same shares but in a different capacity does not fall within paragraph 9 (1). One example is where a trustee of two different trusts sells shares of one trust and then buys them back on behalf of the other trust. In both transactions he has the capacity of trustee, but it is two different capacities. Otherwise the first trust would be treated most unfairly.

# Accounting Principles — a Re-appraisal

by H. HART, B.A.(Com.), F.C.A. Lecturer in Accountancy, University of Southampton

#### Introduction

T is probably true to say that in any book on accounting there will appear at some point in the text a reference to 'principles', but on few occasions have attempts been made to identify the nature of such principles. It is not of course intended to imply that no exploratory work has been undertaken in this field, and considerable credit is due to those pioneers who have 'blazed the trail' in what has been referred to as 'fundamental research in accounting'. Thus, in Britain we are particularly indebted to the inspiration and writings of such men as the late Mr F. R. M. de Paula, Mr Bertram Nelson, Mr Harry Norris, Mr F. S. Bray and Professor W. T. Baxter.

In the majority of textbooks it is obvious that the word 'principle' is used in the widest possible sense of 'working rule'; or it is perhaps even applied as a descriptive label to some practical procedure which has become hallowed by convention and constant usage, thus showing some affinity with, say, a principle of the common law.

However, apart from its use in this descriptive sense and its widely accepted recognition in the ethical and legal sense as applied to accounting statements, there can be no doubt that there are some accounting principles which are absolutely fundamental, basic, and permanent, but which are not necessarily solely applicable to the discipline of accounting. The main difficulty seems to be to segregate general principles from those which govern particular circumstances or systems, and it is here that accounting comes under fire, not only from within, but also from students and scholars in other disciplines who seek some acquaintanceship with the subject, or who, as in economic analysis, wish to apply its techniques in sectors extending far beyond the confines of the individual business unit.

At the root of this difficulty there lies of course the neglect to indicate the nature of any assumptions which have been introduced, or in fact the failure to state that any assumptions have been introduced at all. In the result, no distinction is drawn between fundamental principles and derived principles and procedures. A fairly obvious example may be taken from the statement:

'transactions of an economic unit are expressed in terms of a common medium of exchange',1

which E. L. Kohler regards as an axiom. As a general proposition this is presumably unassailable, but when applied to conditions of monetary instability some assumption is obviously implied, and unless such assumption is actually expressed, misunderstanding must inevitably arise in some quarters. Professor R. J. Chambers put it in this way:

"The unfruitfulness of exchanges between accountants and economists in the past seems to have been due to the neglect to discuss assumptions. A theory of accounting in which the assumptions are disclosed may help in this direction."

#### NEED TO IDENTIFY PRINCIPLES

The justification for this brief survey rests on two basic requirements, both of which it is considered must be fulfilled if accounting is to maintain – perhaps even attain – its rightful place among other branches of higher learning. These are:

- (i) The need for a rational exposition of basic principles and clearly stated assumptions so that some of the causes of misunderstanding between accountants and others may be removed.
- (ii) The need for students to distinguish basic principles from rules of procedure, so that their critical faculties will not be dulled by accepting without question what are in fact merely timehonoured practices, important though these may be.

The accountant who is fully engaged in practice or in industry has of course little time to speculate on questions of this kind, and there will no doubt be some who consider such a matter to be of purely academic interest. Others may

<sup>&</sup>lt;sup>1</sup>·E. L. Kohler: A Dictionary for Accountants. (Prentice-Hall.)

<sup>&</sup>lt;sup>2</sup> 'Blueprint for a theory of accounting', Accounting Research, Vol. 6, No 1. January 1955.

suggest that the 'Recommendations on accounting principles' issued from time to time by the Council of The Institute of Chartered Accountants in England and Wales cover all that need be said on the matter, overlooking perhaps the fact that the Council of the Institute itself makes no such claim. Thus, in the preamble to the Recommendations the hope is expressed that they will be 'helpful to members in advising, in appropriate cases, as to what is regarded as the best practice'. Surely these words indicate that it is in the context of 'best practice' that their importance should be evaluated.

I am reminded of an incident which occurred some few years ago when I was approached by an Oxford graduate, of considerable experience and ability as an administrator, who wished for the first time to make a study of accounting. His line of approach, natural in one of his background and training, was to try to discover the fundamental principles of the subject, leaving matters of detail to be introduced subsequently. He was therefore primarily concerned with finding some publication which dealt essentially with matters of principle.

In the U.S.A. the position in this respect is not so very different from that in Britain, and the layman or student of accounting may well think that there exists in that country some formalized published statement of principles when he sees in an audit report a reference to 'generally accepted accounting principles'. There is, of course, no clearly defined statement of this kind, although the American Institute of Certified Public Accountants and the American Accounting Association have, like the English Institute, made pronouncements from time to time which have affixed the stamp of authority to a substantial body of rules. The case against official pronouncements on theory, and the possible long-term effects which authoritative pronouncements of this kind might have on the independence of judgment of the individual, were forcibly expressed by Professor Baxter in 1953<sup>1</sup>, and it is not proposed to pursue this particular matter now. Suffice it to say that there is as yet little evidence to show that Professor Baxter's fears have been realized.

At this point it seems appropriate to attempt to indicate specifically those elements which can be construed as basic general principles on which the structure of accounting is founded, proceeding thence to some brief consideration of the nature of accounting theory.

#### GENERALLY RECOGNIZED PRINCIPLES

E. L. Kohler defines a 'principle' in this way:

'A proposition asserted to be controlling in a given system or domain of inquiry and having acceptance among members of a professional group deemed to be competent in a society; growing out of observation, reason, or experiment, a principle purports to be the best possible guide in the choice of alternatives leading to the qualities desired in an end product.'

The reference to 'members of a professional group' would seem to be relevant only in a particular context and there is some danger in the second part of the definition of confusing 'principle' with a rule to guide conduct, but subject to this the definition will serve well as a basis for discussion.

Reference to the various papers delivered at the Seventh International Congress of Accountants held at Amsterdam in 1957, and presented within the framework of the general topic 'Principles for the accountant's profession', provides very little help in the search for the fundamentals on which accounting is based since, as one might expect from the title, emphasis is placed rather on ethical principles such as 'truth' and 'fairness', and principles of design, such as 'clarity'. These nevertheless can be accepted as principles which are of general application to any situation in which accounting plays a part; in fact, it may well be argued that it is principles of this nature which provide the solid foundation for the structure of accounting.

Mr Maurice Peloubet, C.P.A., writing in the Journal of Accountancy (New York)2, recognized only three 'fixed and unchangeable principles of accounting - consistency, materiality and disclosure'. Replying to a suggestion that the term 'canons' be substituted for 'accounting principles', he argued that the choices constantly presented to accountants in their application of accounting principles, and the 'directness' and 'authoritativeness' associated with the word 'canon' made its use inappropriate in this context. No doubt he had in mind the difficulty of differentiating those principles which remain valid in all circumstances from those which are tenable only in relation to particular accounting situations; a difficulty which might, as previously stated, possibly be overcome by a clear indication of assumptions.

With the statement of principles which has so far emerged in this survey there can presumably be very little quarrel, and such principles may be

<sup>&</sup>lt;sup>1</sup> See 'Recommendations on accounting theory'. The Accountant, October 10th, 1953.

<sup>&</sup>lt;sup>2</sup> The Accountant, May 9th, 1959 ("The Accounting World - "Canons" of Accountancy?").

summarized as: truth and fairness; consistency; materiality; and disclosure. Truth and fairness, and materiality, are obviously very closely linked with disclosure, but are separately stated here for convenience.

From this point onwards, however, there is likely to be far less agreement on the topic of what can be properly classifiable as accounting principles, but certain it is that most, if not all, of those which it is proposed to consider, are by no means confined to the field of accounting and are equally applicable to other disciplines.

#### CRITICAL SURVEY

#### **General Principles**

Let us proceed then by examining what Mr Kohler has referred to as 'some of the "axioms" often employed in accounting reasoning', remembering that we are here concerned with the identification of those principles which will fit into the *general* framework of accounting. These 'axioms' (or, to maintain consistency, perhaps 'fundamental principles' is preferable) he summarizes in this way:

- (a) an economic unit has an identity apart from other economic units;
- (b) the life of a typical economic unit extends indefinitely into the future;
- (c) relations between economic units are carried on by means of identifiable, separable, and measurable transactions;
- (d) transactions of an economic unit are expressed in terms of a common medium of exchange;
- (e) transactions collectively measure both economic wealth and economic activity.

The first of these is obviously fundamental. It expresses in a different form what Mr F. S. Bray has referred to as 'the entity notion of accounting theory', or what Professor Chambers had in mind when he said:

'There is no such thing as accounting in the abstract; accounts are kept for entities which are recognized in other fields of discourse, chiefly in economics and Government.'

This, then, requires no elaboration unless it is preferred to put it more in the context of accounting, in which case it might be expressed in this way: 'Since accounting is a service function, the system of accounting and the form of accounting statements are dependent on the nature of the entity.'

The second of the 'principles' referred to above is the same as Bray's 'continuing entity concept'. This is probably universally accepted, but is not universally valid. Thus, a theory of profit developed on the assumption of a continuing entity will not be equally valid if applied to a 'liquidated' venture.

Possibly the word 'typical' is itself sufficient qualification, but in view of the assumption inherent in this 'principle', a re-statement would seem to be desirable in something like the following form: 'The concept of a continuing entity implies the necessity for periodic measurement of income and wealth, and as a corollary, the necessity to distinguish between capital and revenue and the need to match costs with revenues.'

The identification, separation, and measurement of every individual transaction is perhaps not essential to the process of measurement of the total periodic income and wealth of an accounting entity, but it is essential to the portrayal of the composition of such income and wealth. Since, then, the third proposition would seem to be fundamental in any accounting system, it may on these grounds be accepted as a basic principle.

The fourth proposition does not necessarily imply that transactions of an economic unit will in all cases be expressed in monetary terms, and it is therefore sufficiently general to admit the possibility of a medium of exchange other than money. It makes no reference to conditions of monetary stability, but nevertheless raises the implication that transactions are recorded in stable units of account. There is on this ground no cause to reject it as a statement of general principle, but unrealistic assumptions of monetary stability, unless clearly stated, can only evoke criticism of accounting statements on the ground that they are not compatible with the idea of accounting as a service function.

Kohler's fifth proposition is derived from the concept of periodic income and the concept of wealth which Bray referred to as 'two general economic concepts which are quite central and fundamental to the practice of accounting'. Indeed, Bray regards the measurement of periodic income and the measurement of wealth as 'the purposes which finally resolve the structure of all accounts'. Since no reference is made in Kohler's statement to 'periodic' economic activity, it is sufficiently general to apply to all forms of economic activity, whether continuing or completed, and whatever the nature of the entity. It has therefore the qualities of a basic principle. Indeed, possibly with some slight modification, it would seem that all five of Kohler's propositions can likewise be accepted as general principles.

#### Working Rules and Principles of Design

Bray makes no specific reference to the second and third of Kohler's propositions, but by implication would probably accept them as principles. In any event he would add the following:

(i) the concept underlying the double entry technique;

(ii) the principle of accounting design inherent in the necessity 'to measure periodic income; to show its transfer and disposition; to explain the application of retained income or saving and its effect upon wealth and capital changes; to measure and portray those resources which together make up the wealth of an entity'.

There would seem to be no objection to the inclusion as a principle of the idea behind the time-honoured double-entry technique. A statement to the effect that 'every transaction has a twofold aspect' needs no explanation here and can hardly be denied despite its lack of sophistication. The fact that in some particular entity single-entry may be preferred to double-entry does not affect the validity of the statement as a principle; it merely indicates the preference for some particular recording device.

The importance of accounting design to which Bray has referred cannot be over-emphasized, but I would hesitate to regard this as a principle. Matters of design, it would seem, fall more properly into the category of 'conventions'.

Writing in 1953, Mr Bray referred to 'two further working rules which are usually taken for principles'. He went on to say:

'I refer to the application of accounting periods from which we derive our notions of accrual and deferment, and the dependence of income measurement on realization involving a cost sterilization of uncompleted transactions.'<sup>2</sup>

A certain reluctance to accept these as principles seems to be implied by the reference to 'working rules' and it is in fact suggested that the latter description is more appropriate. It is obvious that they are derived from the continuing entity concept and a re-statement of that principle, as previously indicated, would seem to cover the point.

It should be emphasized that this discussion of accounting principles has been restricted deliberately to those which can be construed as basic, or of general application to all kinds of situations for which accounting statements might be required. Any reference to principles of asset valuation or principles of profit determination, essential in a theory of accounting, have been omitted advisedly on the grounds that there is no single principle relating to asset valuation which remains valid in all circumstances, nor it would seem is there any unique principle on which a universally applicable theory of profits may be built. The dependence of theory on basic principles leads us to a brief consideration of the nature of theory in the realm of accounting.

#### Nature of Accounting Theory

The essential object of seeking to build up a theory is to set up models, on the basis of certain defined assumptions, with which unsystematic practices may be compared, or, as Mr Harry Norris puts it:

'It is possible to derive "first principles" by a process of reasoning more or less abstractly, and then to compare existing usage in accountancy with a theoretical ideal.'3

There is in essence no reason to suppose that the term theory as applied to accounting differs from the meaning attached to it in other fields, although the fact that accounting is an applied field means that the basic principles on which the theory is based are also to be found in other disciplines.

Professor R. J. Chambers has argued with some force that a theory of accounting may proceed

'upon the same basis substantially as any other theory; that is, by building up a series of relevant propositions from a few fundamental assumptions or axioms'.

A parallel may be drawn with economic theory (or economic analysis) which, in seeking to explain the way in which an economic system works, assumes the existence of certain conditions in the economy which forms the subject of the analysis; for example, it introduces the assumption of 'economic rationality'; and then proceeds to draw certain inferences or deductions which are in the nature of economic theories. A theory of accounting must likewise, as Chambers recognizes, assume not only the existence of different forms of entities but also the rationality of management of such entities. He would also introduce two other fundamental assumptions, viz: the recognition of the monetary unit as a convenient common denominator in the presentation of accounting statements; and the recognition that accounting is a service function,

<sup>&</sup>lt;sup>1</sup> Accounting Principles - Four Essays in Accounting Theory, (Oxford University Press.)

<sup>&</sup>lt;sup>2</sup> 'An accounting progression', Accounting Research, Vol 4, No 2, April 1953.

<sup>3</sup> Harry Norris, Accounting Theory (Pitman).

implying, for example, the right on the part of management to have full and relevant information.

The existence of a formal information-providing system is, Chambers points out, a corollary of the assumption of rational management and such system should be not only logically consistent but also should yield information which is relevant. Consistency in the logical sense would imply that 'equal things should be represented by equal symbols'. This leads him to the problem of accounting under conditions of instability, in regard to which he concludes:

"There has been no recognition of the possibility that all that is involved is a regrouping of assumptions, or the substitution of a realistic assumption for an unrealistic one. It is not a question of working out entirely new "principles"."

Professor Baxter summed up the nature of theory in this way:

'By theory is meant the attempt to explain, in terms of fundamentals, what accounting is and what it tries to do; accounting is thus assumed to be a branch of knowledge, like law or physics, with basic principles that are worth exploring'.

#### Conclusion

It is probably fair criticism to say that even at the present time there is little justification for referring to 'a philosophy of accounting'. It is probably also fair to suggest that accounting has, as yet, not proceeded very far in the direction of acquiring a scientific outlook; more is required to be done to test the validity of propositions and to ensure that unreal assumptions are not admitted; more attention must be paid to the need for experiment and proof and to the need for approaching problems with a certain detachment and objectivity with a view to seeking truth for its own sake.

Nevertheless, it seems to be quite unjust to suggest that the rules applied in accounting are purely matters of convention unsupported by reason. Undoubtedly there are conventions, and perhaps these are often accepted without question, but as Mr Harry Norris pointed out: 'They are only admissible on grounds of convenience, and, in the last resort, are governed by logical principles.'

He supports the contention in this way:

"... our procedure means nothing if it does not aim at a truth which is determinate. That is to say that "net income" does mean something quite apart from what we do to measure it: it has objective significance, and our methods of measurement are only valid in so far as they subserve the principles of measurement".

When putting forward his system of propositions indicated above, Chambers would admit only one kind of convention, namely, conventions as to formal arrangement. 'Everything else', he added, 'is too significant to be treated as convention only'. Perhaps a suitable note on which to end!

# The Accounting World

#### TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

#### The Profession in Switzerland

A CORRESPONDENT states that the concluding paragraph in the article on "The Profession in Switzerland" in *The Accountant* of September 1st is not entirely accurate. The first sentence in the paragraph relates to examinations by independent professional public accountants (article 723 of the Code of Obligations) and should read as follows:

'Where a company has an authorized capital of S.Fcs.5 millions or more, or has issued bonds or debentures, or publicly announces that it accepts deposits from third parties, the management is required to have the accounts examined by independent accountants. The report on such an examination is to be brought to the attention of the board of directors and the statutory auditors.'

The remainder of the paragraph, on the other

hand, concerns statutory auditors. The information is in order with the exception of the reference to the Chamber of Commerce which does not, in fact, come into the picture as regards the statutory audit report.

We are indebted to our correspondent for the following (freely translated) extracts from clauses in the Swiss Code of Obligations relating to statutory audits and reports.

' 'Article 727. The general meeting must elect one or more statutory auditors.

'The statutory auditors may not be appointed, on the first occasion, for longer than a year and, subsequently, for not more than three years.

'Article 728. The statutory auditors are required to examine whether the balance sheet and profit and loss account are in accordance with the books, whether the books have been properly kept, and whether the financial position and the results of the

<sup>&</sup>lt;sup>1</sup> 'Recommendations on Accounting Theory'. The Accountant, October 10th, 1953.

business are presented in accordance with the legal rules as to valuation and, where applicable, with any

special provisions in the statutes.

"The management must make available to the statutory auditors the books of account and supporting documents and, at their request, furnish information regarding the "inventory" (statement of assets and liabilities) and the bases on which it has been established and give explanations regarding any particular transactions.

Article 729. The statutory auditors must present to the general meeting a written report on the balance sheet and financial statements submitted by the management, in which they propose either that the accounts be adopted, with or without reservations, or that they be referred back to the management; they must also express an opinion on the proposals of the board of directors as to appropriations of profit.

"The general meeting can take no decision regarding the accounts unless such a report has been sub-

mitted.

'Any irregularities or breaches of legal or statutory requirements which the statutory auditors may discover when carrying out their work must be notified to the departmental head to which the person responsible is directly subordinated and also to the chairman of the board of directors; in important cases, they are also to be reported to the general meeting of the members.

"The statutory auditors are required to attend at

the ordinary general meeting.

#### BELGIUM

#### Political Economy and Accounting

THE development of political economy as a study of macro-economics which found in J. M. Keynes its first great demonstrator, has resulted in a divorce between political economy and business economics. Those who belong to each of these two sectors no longer understand one another. For business economists, the professors are 'the others'; for the political economists, it is the accountants who are out of step. It is high time that macro-economics and micro-economics were integrated again, observed a commentator in the bulletin of the College National des Experts Comptables de Belgique.

There are, however, signs of a reconciliation on the Continent – business studies in the universities, formation of national productivity agencies, the development of national 'programmes' or plans in France and Holland. The change from static accounting to dynamic accounting, based on a study of the firm's functions, provides a means whereby the link between the two kinds of economics can be forged on a scientific basis. Thus, the important public sector is moving towards an improvement in its accounting techniques, and in some countries this is enabling national accounts to be made up.

For this purpose, it was stated, the following figures must be available:

(1) turnover, or rather the value added by the

firm, business or profession, in forming the gross national product;

- (2) analysis of the distribution of revenues into wages (direct and indirect) rent, interest, depreciation, taxes, dividends and retained in the business;
- (3) analysis of expenditure into consumption and investment.

Although some companies may not be inclined to make this information public, it would be possible to communicate them to a national or international statistical office to be used under conditions of secrecy. The statistical office of the European Economic Community is said to be conducting an investigation into this question. By taking cognizance of these developments, accounting can enter into a third stage of its history; first static, then dynamic, finally economic.

## **CANADA**

# Royal Commission on Taxation

MR KENNETH Lem. CARTER, F.C.A., a Past President of The Institute of Chartered Accountants of Ontario, a former chairman of the Canadian Tax Foundation and a partner in the firms of McDonald, Currie & Co, Cooper Brothers & Co and Coopers & Lybrand, has been appointed chairman of a Royal Commission on Taxation. The Commission's terms of reference will deal with the subject of Federal taxation as a whole including, in particular, its effect on the country's economy.

#### OVERSEAS TAX DEVELOPMENTS

The following information has been supplied by the Foreign Section of the Library of the Board of Inland Revenue.

### Aden

The Income Tax (Amendment) Ordinance 1962, effective from April 1st, 1961, makes the following changes:

Personal allowances are not available to an individual, part of whose income is exempt as being Forces pay from a Commonwealth country and the remainder of which is charged at the 'non-exempt individual' rate.

The child and dependent allowances are replaced by a general allowance of £70 for each dependant, up to a maximum of six, maintained by a resident tax-payer and coming within the following categories:

- (i) a male child under 16, or one over that age receiving full-time education, articled or indentured, or totally incapacitated;
- (ii) an unmarried, widowed or divorced female child;
- (iii) any wife in excess of the first;
- (iv) his parents or the parents of any wife of his.

The allowance is not given if the dependant has income over £170 excluding scholarships; and is limited to the actual amount expended.

An education allowance is introduced, being the amount of boarding or tuition fees paid in respect of a child of a resident taxpayer of at least 6 years of age, up to a maximum of £100. The allowance is also restricted to the excess of the fees over scholarships, employer's education grants and the child's own income in excess of £170.

Life insurance etc. The existing restriction of the allowance so as not to reduce the tax payable below certain amounts is replaced by a restriction of the premiums and contributions allowable to £200 plus one-half of the excess thereof over £200.

Payment of tax. The second half of tax over £100 is now due by the following February 28th instead of March 31st.

Under G.N. No. 58 of 1962 an investment allowance of 15 per cent for industrial buildings and 33\frac{1}{3} per cent for new plant and machinery is introduced from April 1st, 1962. This allowance is in lieu of the initial allowances of 10 per cent and 20 per cent respectively and is not taken into account in computing written-down values or balancing charges etc.

#### India

It is understood that the proposal to increase the rate of tax paid by Indian companies does not extend to income derived from exports.

# The Training of Accountants for Industrial Responsibilities – I

by G. W. SEARLE, D.S.C., F.C.A.

#### Introduction

S a preface to this address I must make the point that this is not the work of a specialist in the subject nor is it the result of considerable research. I write merely as one who has himself progressed through a period of service under articles, a period of service in a practising accountant's office and then (subject to a break caused by the war) into an appointment as an 'accountant in industry'. Subsequently I have seen many others follow a somewhat similar career and I have been in many cases interested in their ability to undertake quickly and efficiently the work expected of them in industry. The address I am writing contains nothing more than my personal views on the subject and these views arise both from my own career and from the observation of the careers of others.

2. A useful start to the address will be to define the subject more closely.

## **Definition of Subject**

- 3. I think the definition should be in three parts. Firstly there is "Training". We are training ourselves or being trained in some way for nearly all our lives but it is not my intention to try to relate any part of parental care nor the curriculum of school or university to the abilities of an accountant in industry. These may give the personal qualities and the education required for a career but they are not the training I wish to cover in this address.
- 4. The earliest point I wish to take is the period of service under articles: a period of training designed primarily to fit candidates for entry into practice but also utilized effectively as an introduction to industrial

accountancy. Service under articles is, in fact, the only initial training period for those who (perhaps unfortunately from the training aspect) take an industrial accountancy appointment immediately after qualifying as chartered accountants.

5. Whatever the training before qualification it is only the inexperienced articled clerk who thinks that, when his Final examination is passed, his training period is over. I borrow the slogan of a famous American business school when I say that education is a 'continuous voyage' and, therefore, when I speak of training I should not confine myself to any particular period of an accountant's career. I suggest, however, that the major part of training and the major advances in the acquisition of knowledge must normally be made on the younger side of thirty. While the 'over-thirties' who attend summer schools and many similar activities to further their training and education uphold the very proper principle that training never ends, I cannot miss the

Mr G. W. SEARLE, D.S.C., F.C.A., author of this paper, presented at the Oxford Summer Course of The Institute of Chartered Accountants in England and Wales last Monday, is general manager, Finance and Accounts Department, British Petroleum Co Ltd. He was admitted to membership of the Institute in 1936.

my nices

atture for which chartered
proyed by industrial organizate heading of 'specialized nature' I
Adnotions such as those relating to taxation,
investments, secretarial and registrars' duties and
similar matters for which one needs specialized
experience and which are outside the scope of this
paper. The responsibilities I shall refer to are those
of a general nature which normally fall within (or
should fall within) the province of accountants in an

(a) The accounting function: the books of account, the preparation of accounts;

industrial concern. I would list these as:

- (b) Costing and budgetary control in whatever form the industry finds appropriate;
- (c) Trading and financial estimating and forecasting;
- (d) The treasury function: cash and short-term investments, management of the company's financial resources.
- ro. In listing these as four separate headings I do not wish to imply that rigid dividing lines can, or should, be drawn between them. That is not so. Operationally, they form one system but it is convenient, I think, to make a separation for the purpose of my particular paper and these four parts seem an appropriate degree of separation.
- separation there is another division which can be made horizontally across all the four vertical lines. These 'horizontal' responsibilities, which I put at

planning and

- (f) Mechanization of proving accounting, techniques: in short, the operating enterency of accounting procedures;
- (g) Staff administration: which, though put last must be well carried out if any organization is to prosper and be the place where a competen individual is satisfied to make his career.

## Order of Address

12. The theme of this address is, of course, directed towards training. I have defined briefly the trainer who is the subject of my remarks and the duties for which I am considering his training. I now propose to go into rather more detail and, while I aim to conclude with my views on training itself, I would first like to review the 'Industrial responsibilities' and then the 'Accountant' with particular reference to the training requirements as I see them.

## **Industrial Responsibilities**

## The accounting function

- 13. If there is one thing on which an accountan should have a good grounding before he enters as industrial concern it is surely the function covereby the title 'book-keeping and accounts'. On thes matters he spends a considerable part of his time under articles and on these matters he is ver thoroughly examined at both Intermediate and Final examinations.
- 14. Of course, in industry, he is on the other sid of the fence and instead of seeing these duties from the standpoint of the practitioner he becomes directly involved in the organization of an accounting depart ment, the laying down of procedures and the accept ance of personal and direct responsibility for all the necessary actions of an accounting department or par of an accounting department. In general, however the competent man should find no great difficulty is the change of attitude nor in his new duties, although he may be handicapped by lack of organizing experience and by never having had to deal with an considerable body of staff. This is one of the matter on which training may be necessary in his nev appointment and such training is often by the hard way of practical experience and learning by mistakes
- 15. I think this is an appropriate place to commen on the difficulty which may be faced by industria concerns in finding competent accountants to under take this most important work which is the foundation-stone on which is constructed those parts of the accountants' edifice which are more evident to the outside world.

y, it does appear that accountants wish to do is business.

17. This is a great pity, and here I am thinking mainly of the younger men and those recruited as non-specialists, for there is probably no quicker way of obtaining a view of the business, the organization, its personnel and prospects than to take a position of reasonable, but by no means high ranking, seniority in the basic recording side of the accounts department. My remarks apply equally to the internal audit function. Yet it is a hard fact which has to be faced when recruiting young accountants that, if you want most of them to withdraw their application quickly, you have only to say that you want them to work on the keeping and preparation of accounts or that you want them to join the internal auditors.

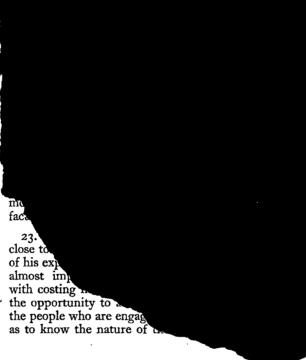

18. A chartered accountant with only a short time to his credit since qualifying has much to learn of industrial practice in general and everything to learn about the organization he joins. Particularly if it is a large organization which he is joining, a term with the basic accounting functions, or with the internal auditors who cover these functions, is a quick route to all-round knowledge provided that his employer is also prepared to participate in the operation by seeing that positions of appropriate scope and authority are given to the young qualified man.

19. It is unnecessary for me to say more in this address on the accounting function as one of the industrial responsibilities, so I have mentioned particularly its importance as training for other responsibilities. Nevertheless I have referred to the accounting function as the foundation-stone of the accountants' edifice and anyone who lays and maintains in good order such a foundation-stone, exposed to an unusual degree to the 'winds of change', is doing a job of great importance in itself, quite apart from the benefit he himself will derive from the process.

## Costing and budgetary control

20. The shelves of the Institute library groan under the weight of books on these and allied subjects, so any description of duties in this respect would be superfluous. It would also be foolish because costing is essentially a practical subject which must be tailored according to the needs of the particular industry or part of the industry.

21. I am going to suggest that, in general, newly qualified chartered accountants have little practical experience of costing and that their theoretical studies on the subject are by no means extensive.

# Trading and financial estimating and forecasting

24. I have listed this as a main function because it clearly is such, although in practice it may be so bound up with financial accounting, costing and budgetary control responsibilities that it does not appear as a separate function.

25. There is no need to emphasize that business has the need to look ahead and to plan: it has the need to record what it has done and to be selfcritical: it has the need to compare plan with performance. In all this the accounting department is the centralizing or co-ordinating factor. Naturally the accountants are not themselves the planners; they work with the functional departments and they translate the organization's aims into terms of financial expectations. There should be nothing here in principle which an intelligent qualified man cannot learn to do: and when I say 'learn' there is little doubt that this must be done in almost all circumstances. Maybe a young qualified man has done such work, but even if he is acquainted with the work in general there are always new aspects to take into account: a thorough knowledge of the business, a thorough knowledge of the individuals in the functional departments whether they are engineers or salesmen, and finally and most importantly an ability to work in a team with such other people. There is con-

sequently little experience or training here other than steady, intelligent and understanding application while on the job itself.

# The treasury function

26. The general run of qualified accountants have some general knowledge to a greater or lesser degree, according to the work they have done, on the treasury function of a business. The work of a cashier is known to them, the management of the financial resources of a large industrial concern may be new in scope but at least they know enough to consult specialists in this field and there is no reason to suggest any inadequacy in training for general day-to-day work. Anything more than this comes into the category of speciality which I am not intending to cover.

# The accounting service to management

- 27. In the four preceding sub-headings I have mentioned four responsibilities: accounting, costing and budgetary control, estimating and the treasury function. In all of these there is an implied and essential management service. In none of them is the operation performed solely for the professional gratification of the accountant or as an operation to be separated by a mystery of technique from the functional management of business.
- 28. I hope I have indicated this in the preceding paragraphs and it would be impossible in this address to describe adequately the assistance which the accountant should give to his management. Let me say that the accountant in industry should always have in his mind the object of his endeavours and such object is in part the carrying out of certain basic duties as accountant and in part the knitting of those duties into direct assistance to the effort of management.
  - 29. To revert to the four preceding sub-headings:
  - (a) the accounts must inform quickly and adequately the facts of business operations;
  - (b) the costs and budgetary control besides assisting detailed supervision by functional management at all levels must demonstrate in financial terms the plans and measure their achievement;
  - (c) trading and financial forecasting, properly integrated with budgets and properly drawn up from the plans of functional authorities are the essential background of the industrial policies of the management; and
  - (d) the treasury function, properly planned and reported, is the same check on financial forecasting as the accounting function is on the trading forecasts.
- 30. I wonder whether young qualified accountants who are in a practising office really have knowledge or appreciation of the ways in which the accountant

- should render such a service to management. Some firms, and perhaps some of the smaller a specialist service which is directed wards the provision of a management accounting ervice for their clients. But I suppose it is fair to say that the general run of professional firms apply themselves mainly to audit, the preparation of annual accounts and the provision of a taxation service. I have no doubt that many of those engaged on the audit have been heard to say 'If I were running this business I would do so-and-so' and I have no doubt that the partners give much useful (and possibly unpaid and for that reason unheeded) advice to the managers or owners of the business. This, however, is piecemeal activity without the spur of necessity or the benefit of long-term constructive planning.
- 31. The average young qualified man on general audit duties will consider the whole service of management accounting according to his inclination and according to the time he has available. He is chased, I expect, from one audit to another and, with his time watched by his principals and by the client, he may reasonably infer that he is not expected or encouraged to delve into the service which the accounts he is dealing with render to the management of the business.
- 32. Certainly it appears from the recruits an industrial organization obtains that they are anxious to join such an organization for the purpose of learning something of management accounting and rarely credit themselves with much experience in such arts. Which means this in short: that they have rarely, or never, been expected to think on the side of management of a business and they have rarely, or never, been faced with the question: 'What would you do?'
- 33. I remember one instance where a young professional man, who had recently taken up an industrial appointment, investigated a project and at the end he reported to the director in charge, and he reported clearly and in detail giving the points for and the arguments against. The director listened patiently and at the end said: "Tell me, what action do you recommend that I take as a result of your report.' At which the young man hesitated and then drawing himself up said: 'Sir, never in my experience have I been asked such a direct question.'
- 34. There is all the world of difference between advising and taking the decision. There is nearly as much difference between pointing out the arguments, for and against, and coming down squarely with a recommendation. I wonder whether we neglect the training of our young accountants by failing to inisst on a recommendation when we ask for a report on any subject which calls for a decision.
- 35. I wonder whether we neglect the training of our young accountants if we only ask them whether the audit is complete and do not ask whether in their opinion the management of that business is properly

and adequately advised and assisted by its accounting service. How will articled clerks or your mulified accountants be encouraged to interest such things unless their principals show that the expect such things to be considered? This field is of fundamental importance to industry and to the accounting profession and I can only hope that our, articled clerks and our young qualified men make the most of their excellent opportunities to see what is being done in this field.

# Mechanization or operating efficiency of accounting procedures

- 36. Mechanization is a specialized subject in its detailed application. To know how a machine operates, what its capabilities are and how to programme its work need a study beyond the general acquaintance which is all that many accountants have and the problem becomes worse as the variety of machines multiples each year. No accountant in an industrial organization can, however, carry out his duties without a general knowledge of such things, the ability to comprehend how machines can be used and sufficient acquaintance with their capabilities to be able to realize when the time has come to seek more expert knowledge.
  - 37. Not many newly-qualified chartered accountants have detailed acquaintance with a mechanized system over a reasonably long period. Planning the installation of a system or operating a mechanized system of any complexity therefore requires further experience and opportunities should be seized of acquiring such experience as part of training in the groundwork of industrial accounting procedures.
  - 38. The important thing is, of course, a properly organized 'accounting procedure'. With this objective clearly in mind the accountant should have sufficient knowledge to be able, with the help of specialists, to marry the required procedure with the mechanical or electronic possibilities. He will certainly have to weigh the operational advantages and the costs of alternative systems and, with the widening coverage of mechanized or electronic aids, few accountants interested in the improvement of their procedures and their service to management will feel able to neglect their continued education in this subject. I would make a plea that in their younger days they should prepare themselves adequately by obtaining experience in detail of the complexities of a mechanized accounting system.
  - 39. I mentioned electronic aids and it may be appropriate to add a few more comments on the subject of computers which, as I see it, may be roughly divided into two categories.
  - 40. Firstly the somewhat smaller mechanisms which, equipped with 'memory' and with remarkable speed and reproduction facilities, are nevertheless designed for routine operations and fit admirably the more elaborate and repetitive accounting tasks. Except

- for the greater degree of complexity and scope, the installation requirements are not different from those of a punched-card system or even a keyboard accounting machine. It requires a knowledge of the business and machine experience (but there has to be a first-time). It requires the ability and enthusiasm to plan and to pay attention to detail.
- 41. Secondly the larger mechanisms of the computer family which are designed more for the rapid solution of scientific or mathematical problems of considerable magnitude and complexity. It is these computers which industrial concerns are using to find better answers to operational problems: such work coming under the heading of operational research. This work can be of the utmost benefit to concerns with a large number of variables in their plan of trading and to have the best of a complex set of variables quickly solved by computer can clearly pay handsomely.
- 42. An accountant is not necessarily a statistician nor a mathematician, but if he is to assist in posing the problem to be solved by the computer he must be aware of certain basic statistical methods and mathematical techniques. There are some problems which do not involve costs but they are very few and normally no computer-directed operational plan can be achieved without the accountant supplying the costs which matter. A computer solution is as good as the facts fed into the programme and you will appreciate that, having fed a programme into the machine, the answer is not necessarily checked by noncomputer methods. I regard it as essential to have an accountant in the computer team who is responsible for the provision of appropriate and up-to-date cost information. To discharge these responsibilities he must have an all-round knowledge of the problem and the means being applied to its solution. Yet, and now I come to a point of training from its earliest stages, I have doubts whether in general young chartered accountants are, without further training, the most suitable to deal with this work owing to the qualifications of others who have studied more of statistics and who have a wider knowledge of mathematics than that demanded for the qualification of a chartered accountant.

## Staff administration

43. There are those who hold that these matters cannot be learned from books or from lectures. It may be true that the hard way of tough experience is the only way to learn leadership and to learn how to control, organize and direct staff. Probably the smaller accountants' offices have few opportunities of teaching such matters and the organization of any practitioner's office is so different from that of a large industrial unit that, until an accountant joins such an industrial unit, it may be fair to say that he can receive little practical training to help him in the administrative problems he will meet in industry. Nevertheless, an accountant with an industrial

of inter-firm comparisons, the following essential factors should be considered:

(1) that the ratios selected will be suitable and the most indicative for the particular purpose;

(2) that a consistent definition of terms should be established so that the information submitted by firms taking part will be comparable;

(3) that participating firms will be given sufficient comparative information to enable them to detect where improvements in their businesses may be made;

(4) that participants should be helped to draw useful conclusions from the differences between their own figures and those of other similar firms;

(5) that the confidential nature of figures submitted by participants should be safeguarded.

Mr Kendall went on to discuss the system organized by the British Federation of Master Printers. He stated that there were some four thousand firms in membership of the Federation covering all types of printing and bookbinding businesses and the scheme now had some four hundred participants. Since the introduction of the scheme in 1957, said Mr Kendall, there had been a greater willingness on the part of member firms to discuss their ratios with other firms and generally a greater readiness to exchange information.

## **Inventory Control**

On Thursday morning, Mr J. Borsay, F.C.W.A., of Associated Electrical Industries Ltd, and a Past President of the Institute, gave a paper on 'Inventory

control'. In any control system, he said, there must be a standard fixed cost against which performance can be measured. Capital employed was increasingly being used for profit measurement, and as inventory was a major constituent of capital employed it was useful to measure the profit/ capital employed relationship. Inventory eventually became output, that is if the business was to continue, and the relationship of

Mr J. Borsay

one to the other was the most commonly used yardstick for measuring inventory efficiency. This, he said, could be expressed in the number of times the inventory had been 'turned over' per annum or, alternatively, by expressing the inventory as a percentage of the output, e.g.

Inventory Output

Three distinct indices may be obtained by the use of this formula:

'(1) The moving annual average of inventory related to the moving annual total of output. This has the fault of not highlighting the present situation.

(2) The current inventory related to the moving annual total of output. This reflects the current inventory position but relates it to past output.

position but relates it to past output.

(3) The current inventory related to future output. It would appear that as the inventory of today is the output of tomorrow this index is probably the best.'

In a manufacturing organization, said Mr Borsay,

the variety of stock materials, parts and components may be legion and before introducing systems and procedures it is as well to survey the problem in the right perspective. It was well worth while carrying out an analysis of the stocks and classifying them into, say, three categories:

High value (H) Medium value (M) Low value (L)

Experience showed that in a given product the H items might be only 7 per cent of the number of parts yet represent 75 per cent of the value, the M items 22 per cent of the number of parts and 20 per cent of the value, whilst the L items were 71 per cent of the number and only 5 per cent of the value.

Concentration on the H items reduced the field considerably and can produce a high return. It might even pay to schedule these items on an 'as required' basis as an alternative to stocking. The M items could be controlled by the more orthodox methods of perpetual inventory with the use of order level, order points, etc. The L items, by far the largest in number, may be made 'free issue items' the control being effected by dealing with these physically in bulk.

Mr Borsay went on to say that a common cause of inflated inventory was the carrying of stocks of a product at varying stages of manufacture. Relative to a particular product, stocks might be carried as raw material, finished components, or sub and final assemblies. In many cases the decision to stock at one or more of these stages was a rule of thumb action brought about during a state of panic.

What then are the factors which influence the decision to stock at one or more stages of manufacture? he asked. The two principal factors were:

(1) The total cycle time relative to customer delivery requirements.

economic order quantity.

principle time could be segregated into (a) material principle; (b) component manufacture time; (c) 2 19 nb., ome.

If there was no cost advantage from purchasing and manufacturing a quantity other than that to satisfy the customer's requirements and the cycle time was less than the customer's delivery requirements, then no stock of any kind need by carried.

In conclusion, Mr Borsay said that for inventory control to be effective its purpose should be made clear at all levels. There were many ways in which this could be done, including lectures to supervisory staffs and shop stewards and possibly through the medium of a film for the employees on the shop floor. Each shop and stores, he said, should have a target set and the results displayed against that target.

#### SUMMER SCHOOL DINNER

On Friday evening the Summer School Dinner was held in Hall. The toast of 'The University and City of Cambridge' was proposed by Mr E. F. Brown, F.C.W.A., and responses were made by Mr T. R. Henn, C.B.E., M.A., President of St Catharine's, and Alderman G. F. Hickson, M.A., J.P., Mayor of Cambridge.

Mr A. R. M. Keddies, O.B.E., proposed the toast of "The Institute of Cost and Works Accountants' and Mr C. E. Power, F.C.A., F.C.W.A., a Vice-President of the Institute, replied.

# International Tax Conference

# Sixteenth Congress of the International Fiscal Association

The sixteenth congress of the International Fiscal Association was held at Athens from September 19th to 14th. A representative delegation from the United Kingdom was led by Mr Alun G. Davies, chairman

of the United Kingdom Branch.

In his address of welcome, Professor A. J. Sbarounis reminded the Congress that in the ancient Athenian democracy direct taxes were regarded as incompatible with freedom and that the contribution of the citizens was based on spontaneous gifts of blood, time and wealth. The American and French revolutions introduced the idea that the payment of taxation was a civic duty. Referring to the modern problems of international double taxation, Professor Sbarounis said that in the context of assistance from the developed countries to countries in the process of economic development, the priorities of the power to tax should be laid down. He argued that a state not possessing such priority should refrain from levying taxation.

#### Tax Harmonization

Professor Leif Muten, of Uppsala University, Sweden, gave a stimulating talk on the development of international fiscal law, and chose as his themes the harmonization of national tax systems and the fight against real and alleged international tax evasion or avoidance.

On the subject of harmonization, Professor Muten said that from the point of view of inter competition, some degree of harmon necessary but that institutional and politi made total unification impossible. On int taxation, he argued that the adoption of the principle that the country of destination of goods should have the right to tax, was liable to create dumping prices and would prejudice the development of industry in countries where indirect taxation was below the average. The principle of country of origin would be preferable because it would be possible to abolish fiscal frontiers; but the introduction of this principle would be impossible without a far-reaching harmonization of the national tax systems (and, he might have added, some measure of budgetary subventions to avoid fiscal disasters in some countries). The work completed last winter by the Neumark Committee and the fiscal subcommittees of the European Economic Commission were most important events in the progress towards tax harmonization.

#### Converging Tendencies Visible

While Professor Muten said it was permissible to entertain great expectations on the prospects of harmonization, he hoped that international organizations would take a firm stand against all pressure groups fighting for exceptions and loopholes. He added that if an 'added-value' tax was introduced (into the European Economic Community), which seemed quite likely, he hoped it would be really non-cumula-

tive. On this point he seemed to be pressing for the exemption of capital goods from the scope of the tax.

Even outside the Common Market, Professor Muten saw convergent tendencies in tax philosophy, and evidenced the introduction of some measure of capital gains taxation in Britain and Italy and the Belgian proposals for a globular personal income tax. He also mentioned the growing habit throughout the world of taking tax dividends at source in the country of origin. He noted the increasing tendency towards the weakening of the dependence on income and wealth taxes and towards greater emphasis on indirect taxation, and pointed out that the regression of the latter could provoke a possibly dangerous compensating graduation in what remained of direct taxation as well as in what he termed negative taxation (i.e. social security allowances).

## Tax Havens: Criticism of U.S. Proposals

In his second theme, Professor Muten said there was a definite temptation, if not to produce and sell, then at least to show the profits from production and sale in countries where the tax situation is favourable. This tendency still continued, despite the rules in most countries against the hidden export of profits.

He stated that the labelling of such arrangements as tax evasion was based upon principles which were not universally acknowledged, one of them being the principle of domicil which was opposed to the principle of territoriality. Greater authority attached to the latter principle, which imposed equal conditions on all those

competing in the same market.

Professor Muten said there was room for much more discussion on the question whether there was a recognized rule of international law on the territorial limitations of national tax authority. He asked this question in the context of the current United States proposals for taxing United States corporate shareholders on their contingent interest in the nondistributed profits earned by companies outside the U.S.A. He criticized the Kennedy proposals from the standpoint of international comity as violating the rights of other parties to tax agreements signed by the U.S.A. He put the question very bluntly: does the taxation of United States shareholders on the profits of foreign corporations amount to a downright evasion of the established rules of international law by the United States Government?

#### **Dangers of United States Action**

The danger of the United States precedent was also underlined. The United States administration had an extremely strong feeling of international responsibility and this might entitle it to make far-reaching tax investigations in other countries. This did not apply to certain other countries which might well be tempted to follow the United States example. Quod licet Yovi, non licet bovi. (This might be interpreted as saying

that not all tax administrators behave like gentlemen). It was recognized that the proposed rules to be operated by the United States administration arose as a result of the existence of tax havens. The problem would have been better solved by self-restraint. There was room for public discussion in bodies like the International Fiscal Association; a committee of the European Economic Commission was also studying it. Whatever the solution might be, it would be regrettable to try and think of it in terms of the current United States proposals or the termination of existing double tax treaties.

#### **Debate on Indirect Taxation**

The first subject of the Athens Congress was the 'Fiscal régime relating to the import and export of goods'. Under this rather forbidding title the Congress examined the problems of indirect taxation in the international sphere. The debate on this subject had a considerable topicality because of the approaching decisions to be made in the Common Market under article 99 of the Treaty of Rome, on turnover taxes and the possibilities of their early harmonization. The general reporter on the first subject was Professor Sbarounis, and his report showed more admiration of the British system of indirect taxation than was shown in the European Economic Commission in its recent report. He referred with apparent approbation to the heavy British taxation of what he termed 'vicecommodities' (i.e. alcoholic beverages and tobacco).

The resolution adopted by the Congress on indirect taxation recommended that in accordance with the provisions of G.A.T.T., imports should be charged with the same taxes as domestic products, and that exports should be subject to the reimbursement of all indirect taxes. Like most resolutions, it attempted the impossible, and the Congress was very conscious of the fact that one of the basic problems in the export trade today was that where cumulative multistage or 'cascade' taxation exists, it is virtually impossible to assess the amount of taxation paid along the whole line of the production process.

#### Patching up the 'Cascade' Systems

In fact, the resolution attempted to patch up the weaknesses of the current cumulative tax systems (found, for example, in varying degrees of complexity in Germany, Italy, Luxemburg, Holland and Belgium) in relation to exports by a 'pious hope' clause. More than anything else, the resolution reflected the profound German belief that the idiosyncracies of the 'cascade' system penalize exports, by contrast with the clear calculation of export reimbursement possible under the French T.V.A. If, as appears to be the case, the European Economic Commission is on the verge of recommending a tax on added value as the basis of the

indirect taxation in the Common Market, defenders of the 'cascade' system are fighting a lost battle and would be better advised to study the administrative problems of an 'added value tax'.

#### **Investment Trusts of International Character**

The second subject of the Congress was the taxation of investment trusts. As an introduction to the general debate, the general reporter, Mr E. G. Renk of Switzerland, delivered a masterly analysis of the growth of the investment trust movement, described the legal forms which had developed all over the world, and compared the fiscal treatment of investment trusts between one country and another. During the debate that followed it was clear that though there was considerable interest in the subject of the taxation of investment trusts, the very wide variety of treatment between one country and another prevented any real hope of present synthesis. The focus of the hope of reform was that an investor in an investment trust should be put on an equal footing taxwise with the direct investor. In the meanwhile, the Cahier (Vol. 47b) which contains the general and the national reports presented to the Congress forms a mine of useful information for those interested in the comparative international treatment of investment trusts and their shareholders.

## **Future Congresses and Subjects**

It was announced that the 1963 Congress would be held at Paris in the week beginning September 17th. The subjects to be discussed will be, firstly, the tax problems of mergers, and secondly, the fiscal relationships of capital-exporting countries and countries in the process of development. The latter subject is a further extension of previous Congress studies. At Jarusalem last year, a working group composed of re entatives from developed countries and from the Airo-Asian countries and Latin America, was set up entatives from developed countries and from the to prepare a report on the further researches to be made and to facilitate fact-finding.

The Congress for 1964 is to be held in Hamburg and the subjects for study being firstly, the international problems of depreciation in relation to the taxation of trading profits, and secondly, the delimitation, between countries of residence and other countries, of the power to tax corporations and/or their shareholders. In 1965 the Congress will be held in London commencing on September 13th; the subjects for discussion have yet to be fixed.

The United Kingdom branch has arranged an interesting programme for 1962-63. Particulars of I.F.A. and of the activities of the United Kingdom branch may be obtained on application to the Branch Secretary, Mr D. I. Main, F.C.A., c/o Messrs Pannell, Crewdson & Hardy, 9 Basinghall Street, London EC2.

# THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

# FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on July 4th, 1962.

#### Overdue Subscriptions

In addition to similar complaints on which the findings and decisions have already been reported, the committee heard five complaints preferred by the Investigation Committee each to the effect that the member concerned had failed to pay within four months of January 1st, 1962, the subscription then due and payable by him, so as to render himself liable to exclusion or suspension from membership. The committee found the complaint proved in every case and ordered that each of the five members be excluded from membership unless, in the case of four of the members, the subscription the subject of the formal complaint was received by a specified date; and the committee further ordered that if in those four cases the subscription was so received one of the members be reprimanded, one be admonished and no action be taken in the other two

cases and also that there existed in three of these cases special circumstances which justified the omission of the name of the member from the publication of the finding and decision. Three of the four subscriptions were received in the period allowed and the following decisions have therefore become effective:

- (a) Excluded from membership Harold Edwin Coate Davis, F.C.A., 178 High Street Street, Somerset. William Dudley Ward-Smith, F.C.A., 11030 Sandpoint Way, Seattle, Washington, U.S.A.
- (b) Reprimanded Clifford Edgar Levitt, F.C.A., 31 Princess Street, Manchester 2.
- (c) Admonished One member. (d) No action

One member.

## TAXATION AND RESEARCH COMMITTEE

The one hundred and twenty-third meeting of the Committee was held at the Institute on Thursday, September 13th, 1962, at 2 p.m.

Present: Mr J. Cartner (in the chair); Messrs F. W. Allaway, G. R. Appleyard, R. P. Brown, W. R. Carter, R. A. Chermside, N. Cassleton Elliott, C. R. P. Goodwin, A. P. Hughes, G. N. Hunter, H. Kirton, T.D., S. Kitch Yates Lloyd, J. W. Margetts, S. A. Middleton, P. Morgan-Jones, E. J. Newman, R. D. Pearce, T. B. Pritchard, A. H. Proud, J. D. Reekie, D. W. Robertson, H. G. Sergeant, H. C. Shaw, H. Eden Smith, C. C. Taylor, L. R. Turner, D. C. Urry, J. G. Vaughan and G. H. Yarnell, with the two Assistant Secretaries.

## Subcommittee

Reports of progress were received in connection with twenty-three matters.

#### Membership

The following appointments to membership of the Committee for the year commencing October 1st, 1962, were reported:

Nominated by the Council:

Messrs G. R. Appleyard, F.C.A., L. H. Clark, F.C.A., S. M. Duncan, F.C.A., W. F. Edwards, F.C.A., R. W. Foad, F.C.A., J. W. Margetts, F.C.A., G. P. Morgan-Jones, M.A., F.C.A., J. Perfect, F.C.A., D. W. Robertson, F.C.A., C. Romer-Lee, M.A., F.C.A., J. G. Vaughan, F.C.A., J. A. P. Whinney, A.C.A. Nominated by District Societies' Committees:

Birmingham: Messrs E. J. Newman, M.A., F.C.A., and B. G. Rose, F.C.A.

Bristol: Messrs H. P. Lawrence, F.C.A., and T. B. Pritchard, F.C.A.

East Anglia: Messrs H. Robinson, F.C.A., and G. Wadwell,

Hull: Messrs H. G. Sergeant, F.C.A., and H. C. Shaw, F.C.A. Leeds: Messrs J. T. Barraclough, B.A., F.C.A., and A. G. Martin, F.C.A.

Leicester: Messrs G. L. Aspell, T.D., D.L., F.C.A., and G. Thompson, F.C.A.

Liverpool: Messrs W. Shuttleworth, F.C.A., and C. C. Taylor, F.C.A.

London: Messrs F. W. Allaway, F.C.A., C. J. M. Bennett, B.A., F.C.A., N. Cassleton Elliott, M.A., F.C.A., A. P. Hughes, F.C.A., B. A. Maynard, M.A., F.C.A., and D. C. Urry, F.C.A.

Manchester: Messrs D. G. Bee, F.C.A., and C. Yates Lloyd. F.C.A.

Northern: Messrs H. Kirton, T.D., F.C.A., and S. A. Middleton, F.C.A.

Nottingham: Messrs K. A. Buxton, F.C.A., and J. S. F. Hill, F.C.A. Sheffield: Messrs F. L. Moulding, F.C.A., and L. R. Turner,

F.C.A. South Eastern: Messrs C. R. P. Goodwin, F.C.A., and R. D.

Pearce, F.C.A.

South Wales: Messrs R. P. Brown, F.C.A., and G. M. Metcalf, F.C.A.

Co-opted by the Taxation and Research Committee:

Messrs J. Cartner, F.C.A., K. P. Chapman, D.S.C., F.C.A., P. G. Craven, T.D., F.C.A., S. R. Harding, F.C.A., G. N. Hunter, F.C.A., S. Kitchen, F.C.A., A. H. Proud, F.C.A., and E. C. Sayers, F.C.A.

#### Chairman and Vice-Chairman

Mr S. M. Duncan, F.C.A., and Mr H. C. Shaw, F.C.A., were unanimously appointed Chairman and Vice-Chairman respectively of the Taxation and Research Committee for the year commencing October 1st, 1962.

#### Future Meetings

The next meeting of the Committee was fixed for Tuesday, October 23rd, 1962. A further meeting in 1962 was provisionally fixed for Thursday, December 13th, 1962.

# Notes and Notices

#### PROFESSIONAL NOTICES

MESSRS BUTLER, VINEY & CHILDS, Chartered Accountants, of 60 St Paul's Churchyard, London EC4, announce with regret the death of Mr EDWARD STANLEY THORN, F.C.A., on September 8th, 1962. Mr THORN was admitted to the Institute in 1911 and was senior partner in Messrs Butler, Viney & Childs and Messrs Thomson, Gregory, Thol. & Co until October 31st, 1961, on which date he retired on account of ill health.

Messrs William Chadwick & Co, Noon & Elsworth and C. L. & M. L. Kemp announce that, as from October 1st, 1962, they are amalgamating their practices and that the joint practice will be carried on under the name of Wm Chadwick, Noon, Elsworth & Kemp, at 11–17 Harrington Street, Liverpool 2. The partners of the new firm will be Messrs A. W. Lowe, O.B.E., F.C.A., J.P., William A. Lowe, A.C.A., G. F. Elsworth, F.C.A., A. C. Noon, F.C.A., C. L. Kemp, F.C.A., Martin L. Kemp, A.C.A., and David J. Lowe, A.C.A. Mr J. A. Beggs, F.C.A., and Mr Martin L. Kemp, A.C.A., will continue to practise as Kemp & Beggs at the same address.

Messrs Griffin Stone, Moscrop & Co, Chartered Accountants, of 21 Manchester Square, London W1, announce that Mr James Tumbridge, A.C.A., a senior member of their staff, has been admitted to partnership as from October 1st, 1962. The style of the firm remains unchanged.

MESSRS LEVER BROS & Co, Chartered Accountants, formerly of Candlewick House, Cannon Street, London EC4, announce that as from September 21st, 1962, their offices will be at Snow House, 103/109 Southwark Street, London SE1. Telephone: Waterloo 4026.

Messrs Silver, Altman & Co, Chartered Accants, of Napier House, 24/27 High Holborn, WCI, announce that as from August 17th, 19 have admitted into partnership Mr A. H. A.C.A., who has for a number of years been member of their staff.

Messrs W. E. & H. R. Stacey, Chartered Accordance that the address of their London offi September 24th, 1962, will be 180 Fleet Street, EC4. Telephone: Holborn 3546.

Messrs Thomas & Co announce that on Se 30th, 1962, they will amalgamate with Messrs & Son, Chartered Accountants, of 16 Buck Palace Gardens, Victoria, London SW1. The the new firm will be Mason & Son Thomas & Co), Chartered Accountants of the management of the second second

A.C.A., and W. FLOWER SYMONDS, F.C.A. (consultant). All correspondence should be addressed to the new firm after September 30th, 1962, at 16 Buckingham Palace Gardens, Victoria, London SW1. Telephone: Sloane 5528.

#### **Appointments**

Mr A. B. Irving, A.A.C.C.A., has been appointed financial accountant of Associated Electrical Industries (Manchester) Ltd.

Mr L. J. Matchan, F.A.C.C.A., has been appointed chairman of Harper Engineering and Electronics Ltd and Mr R. S. Cranston, B.A., F.C.A., F.B.I.M., has been co-opted to the board of the company.

Mr Charles Wallis, F.C.A., has been appointed a director of I.B.E. Ltd.

#### **OBITUARY**

### C. G. H. Midgley, M.C., F.C.A.

We have learned with regret of the death on September 2nd, at the age of 67, of Mr Charles George Holmes Midgley, M.C., F.C.A., senior partner in the firm of Clemons, Midgley & Co, Chartered Accountants, of London.

Articled to the late Mr Frank Clemons, F.C.A., Mr Mr by had been a partner in the firm for thirty-seven by the served in the First World War with the Gun Corps in France — where, in 1918, he ed the Military Cross — and was demobilized by Saptain. He was admitted an associate thartered Accountants in England as elected a fellow in 1928.

countants' Golfing only in May of ce-President of ed by all its

#### SW. LONDON DISCUSSION GROUP

The first meeting in the 1962-63 session of the SW. London Chartered Accountants' Discussion Group will be held at the Kingston Hotel, Kingston upon Thames, on Monday, October 1st, at 6.45 p.m. The discussion will be opened by the Group Chairman, Mr B. C. Berkinshaw-Smith, B.A., F.C.A., and the subject will be 'Aspects of the Jenkins Committee Report'. New members will be specially welcome, and no prior notice is required. The honorary secretary of the Group is Mr T. C. Backshell, F.C.A., A.T.I.I., Charter House, Claremont Road, Surbiton.

# UNION OF CHARTERED ACCOUNTANT STUDENTS' SOCIETIES

Members of students' societies are reminded that all students' societies welcome to their meetings members of other societies who are temporarily in their area.

There is also an arrangement for transfer of membership without additional fee for members who permanently change their district. The interchange should be carried out through the secretaries of the societies concerned. Students' societies hold meetings in the following towns:

Ashford (Kent), Bedford, Birmingham, Blackpool, Bournemouth, Bradford, Brighton, Bristol, Cambridge, Canterbury, Cardiff, Carlisle, Chester, Colchester, Coventry, Darlington, Derby, Doncaster, Dorking, Dorchester, Eastbourne, Epsom, Exeter, Faversham, Grimsby,

Guildford, Halifax, Hastings, Hereford, Huddersfield, Hull, Ilford, Ipswich, Kettering, Leeds, Leicester, Lincoln, Liverpool, London, Luton, Maidstone, Manchester, Middlesbrough, Newcastle upon Tyne, Newport (I.W.), Northampton, Norwich, Nottingham, Oxford, Peterborough, Plymouth, Portsmouth, Preston, Reading, Redhill, Salisbury, Scunthorpe, Sheffield, Shrewsbury, Sittingbourne, Southampton, Southend, Stockton-on-Tees, Stoke-on-Trent, Sunderland, Swansea, Taunton, Torquay, Truro, West Hartlepool, Wolverhampton, Worcester, York.

# THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The winter session of The Accountants' Christian Fellowship opens with a reception by the chairman, Mr D. L. Combridge, F.C.A., at 6 p.m. on Wednesday next, September 26th, in the Oak Hall of The Institute of Chartered Accountants in England and Wales, Moorgate Place, London EC2. After the reception and refreshments there will be a short address by the Rev. R. C. Lucas, M.A., Rector of St Helen's Church, Bishopsgate.

The Fellowship's object is to promote fellowship among Christians preparing for and engaged in accountancy, and by so doing to seek to extend the Kingdom of God. Membership is open to all accountants and accountancy students. The honorary general secretary is, Mr R. J. Carter, B.Com., F.C.A., Finsbury Circus House, Blomfield Street, London EC2.

Borough Bank and Barnet's Bank, two local institutions which had previously failed – special experience for the work. Since that date, the liquidation has been steadily, satisfactorily, and successfully proceeded with. The work has necessarily been of a protracted nature, but the shareholders, so far from being prejudiced by the delay, have been demonstrably benefitted.

79, for instance, an offer of £2,000, which clined, was made for assets, which have produced £15,000. Within the last few the last outstanding asset was realised. ing of the shareholders was held a few o, at which the liquidator produced his s, which were duly approved; a resolussed at the same meeting, authorised him oy the books of the bank after the lapse onths. All creditors and depositors have aid in full, and from the subjoined sumf the liquidators' accounts - which may terest to our readers – it will be seen that tion to the paid-up capital of £650,000 nt of £651,174 were made upon £251,981 was

# The 1962 Congress

HE week which has seen more than 3,300 accountants attending the Eighth International Congress of Accountants in New York is perhaps a fitting time to take stock of the progress of accounting thought in the world, and in particular the contribution towards the development of the profession of public accountancy made by such meetings.

The record of these congresses is in itself impressive, and it is of interest that the present tally includes three meetings (including the first) in America, two in London, two in Amsterdam and one in (pre-war) Berlin.

That the subjects for discussion in New York were worth while cannot be denied; they were all related to the important theme of 'Auditing and financial reporting in the world economy'. Eminent speakers have been heard, official delegations have been in attendance and the views of members of the profession in different lands have stimulated their hearers. In this world of ours which continually grows smaller in terms of travelling time this in itself is a great merit of the function.

What matters set, though, is its contribution towards the work and understrained ing of the average individual member and to the greater complete on of the profession by the public in all lands. This is the underlying purpose of such meetings, and it cannot be been unless members of professional bodies at all levels meet in a spirit of humility ready to listen with an open mind. If they do so they will return to their own shores refreshed and with an enlivened approach to their own problems.

First, therefore, among the lessons to be learned from these congresses is that they form a link between ordinary people in the profession from different countries, each owing an individual allegiance to his own institute, all owing common allegiance to their profession. The greater the numbers of such members who can attend, the more successful will the meetings become. Second, they focus attention within the whole profession upon certain major points selected because of their topical application. Third, they serve as a universal indication to the general public not only of the existence of the profession, but also of its virility and its appreciation of the needs of the complex modern world.

Perhaps it is reasonable also to hope that the congress will do two things for the accountation who has been unable to attend the congress itself; that it will evide a report of its proceedings which he can study with a sum of the congress will be report of its proceedings and we may here make the point that the papers will be report of in these pages) so that he will be enabled to cull for his over a variage what has been said; and

that it will remind him that this world-wide meeting of accountants is but an extension of the meeting together of fellow-professionals which occurs within his own country and his own professional society.

It is therefore the task of every accountant to set aside a moment of his busy day to reflect upon the theme of this week's meetings. We are all, whether we like it or not, part of the world economy and subject to it. None of us has a monopoly of wisdom: no country, no society, can claim for itself the right to dictate universal methods or to rest upon its laurels in a changing world. Auditing methods change, and accounting reports become more complex. A whole new field of management accounting awaits every practising accountant who is willing to accept the challenge – but business does not wait for too long.

Let us apply these thoughts to our individual situations. If accountants are to stimulate themselves to meet the challenges confronting there whole profession in matters such as auditing procedures, specialism, the training of clerks at the form of published and internal accounts and reports, surely they need regular contacts with their colleagues, with the sharing of problems experience so obtained. All professional b would welcome greater interest and servi their members. It is by such interest on the of the member and by such work as the ind into the problems of the small practitioner which was recently undertaken/by The Institute of Chartered Accountants/in England and Wales that the individual member will obtain the true benefits of membership. Societies also give services which are even less well-known, such as assistance to a small practitioner when he is prevented by illness from carrying on his own practice. Many of such benefits are the result of work in the society at the district branch level, and it is here that members can often begin to offer their services to their societies, to the benefit of both.

It is, of course, a long call from the small practitioner's office in the provinces of any country to the busy city office, and the problems and preoccupations of the two of the eem as far apart as their locations. To some may even seem that the 'top people' in the fession of each participating country have me

than these two classes in any one country. To a very large extent, however, this is a matter of the development of a philosophy which reconciles these two extremes – and all nationalities – into the unit, having one aim; to use all the knowledge, experience and varying talents of accountants in the service of the community as a whole.

The profession has a unique service to offer and a high standard of execution. If the 'man in the street' outside the profession finds in the record of this congress something that makes him more aware of the existence of this service and of its world-wide application, there will have been completed a most vital task of public relations. If, at the same time, the 'man in the street' within the profession is stimulated to a reassessment of his own standard of service, and to a realization that this may well be limited by a false parochialism where other accountants, other bodies and other nations are concerned, he will undoubtedly be thereby a better member of his profession.

In his reply to the address of welcome at the present congress, Sir HAROLD HOWITT said:

'Accountancy is a comparatively young profession and these congresses must therefore be invaluable as a means of stimulating thought and helping to bring the level of all professional work up towards the level of the highest, wherever it is to be found. We have also our responsibilities to train and to help the young accountants in the less developed countries of the world. The shrinkage of the world due to travel facilities, the closer integration of financial, industrial and political contacts between nations - of which the latest is the European Common Market - must place heavy responsibilities on the accountancy profession. We must accordingly in our dealings between nations, no less than internally, have an understanding of each other's conceptions in presenting that which in my country we call the "true and fair view".

'A great responsibility rests upon us in this context. Most disputes, even those which lead to wars and rumours of wars, originate out of economic and financial affairs, and ours largely is the responsibility for laying the foundation from which facts may be compiled on a comparable basis, and on which agreement may be reached if the will to do so be there.'

There is every reason to agree that in the world

of 1962 the economic life of many different countries is interdependent. The responsibility of any profession which supplies information which is used as the basis of decisions is therefore

obvious. By meetings such as this congress and others of a more regional character it may well be hoped to strengthen the aims of members: to be true to their ideals of service and fair to all men.

# Public Expenditure

NE of the most interesting sections of the annual Blue book National Income and Expenditure (H.M.S.O., 6s) is the one devoted to public expenditure. Tables 43 and 44 of the current issue deal with this subject. These tables do not, it is true, use the phrase 'public expenditure'; they refer to expenditure by 'combined public authorities'. By this is meant 'net expenditure by the central Government and local authorities on both capital and current account'. Lending and other transactions in financial assets are excluded. We shall not be very expenditure as 'public expenditure'.

For 1951, this expenditure is given as £5,260 million, an amount equal to just over 40 per cera of the gross national product. In 1961, expendit had grown to £9,161 million, a total represents just over 38½ per cent of the national product of £23,700 mill public expenditure as defined a than 37 per cent of gross rise since 1956 seems 1960 when the prop

The largest sig military defen million, or

services, therefore, have generally increased their share of public expenditure since 1951.

Other large items are 'promotion and regulation of industry and trade' with £412 million, compared with £196 million in 1951; agriculture and food, £396 million against £435 million; and housing,  $f_{411}$  million – an increase of  $f_{43}$ million since 1951. Subsidies loom large in these three items. Subsidies to transport absorbed £131 million in 1961 compared with £8 million in 1951 – a reflection, no doubt, of the growing losses on the railways. Agricultural subsidies have far from the truth, therefore, if we regard such y fallen from £375 million in 1951 to £325 million Alast year. Even so, last year's agricultural subsidies were £68 million higher than in 1960. Housing subsidies have steadily risen from  $f_{375}$ million in 1951 to £128 million in 1961. Roads and public lighting absorbed only 2 per cent of etal public expenditure in 1951; last year the ion was just over 3 per cent. Police and how a similar kind of rise from £87 sillion. # Short-term Gains - XII

# LOSSES ON SHARES

AST week we discussed paragraph 9 (1) (2) of the Ninth Schedule to the Finance Act, 1962. It restricts the allowance of a Case VII loss on a sale of shares where the shares are bought back within six months (one month if the transaction is through a stock exchange). Such loss can be set off only against a profit on the subsequent resale of the shares, identified in the manner explained. Paragraph 9 (1) (2) is expressed to be subject to paragraph 9 (3). It will be remembered that under the complicated rules in paragraph 8 for identifying shares sold with shares purchased, it is possible in certain circumstances for shares sold at one time to be matched with shares acquired at a later time. Such a matching may produce a Case VII loss. Paragraph 9 (3) directs that paragraph 9 is not to apply to such a loss, nor is the acquisition to be treated as a 're-acquisition' for the purposes of paragraph of The reason for this exemption is that paragraph 9 (3) deals with a bear transaction i.e. a sale made prior to purchase in anticipation of a fall profit on a bear transaction is of cours able: this is precisely the kind which Case VII aims at, alt! on general principles th on an adventure i therefore need no Be that as it m a bear

of explaining these additions to the House of Commons, and it is doubtful if his exposition of paragraph 9 (4) can be improved upon:

'The new sub-paragraph (4) deals with the situation which arises where a person contangoes a sale and under the amendment we have just passed<sup>2</sup> the contango purchased for one acount is matched with the contango sale in the later account. Sub-paragraph (4) in the amendment<sup>3</sup> provides that sub-paragraph (3) is to apply to the contango bargain as if the disposal had preceded the acquisition, that is to say, it ensures that any loss here is outside the ambit of paragraph 9. Sub-paragraph (4) is closely connected with sub-paragraph (3) and one might say that it spells out the intention of the sub-paragraph more precisely.'

So much for the case where a seller has contangoed his sale. Paragraph 9 (5) deals with the converse case of a purchaser contangoing his purchase. It is as follows:

(5) Where -

v) under arrangements designed to postpone the acceptance of shares acquired, a person by a single bargain disposes of shares for transfer vy on a particular date or in a pardand acquires them for transfer attendate or in a later period;

f by that bargain are eviously acquired the earlier date

- (iii) A. contangoes the purchase, i.e. he
  - (a) sells for immediate delivery at £800
  - (b) repurchases for next account at £800.
- (iv) The shares fail to rise and within six months he sells them for £800.

Under paragraph 8 (4) (a) the purchase at (iii) (b) cannot be identified with the sale at (iii) (a): instead it is identified with the purchase at (i). This shows a loss of £200 (ignoring expenses). Since (iii) (b) is a re-acquisition within paragraph 9 (1) there would normally be a ban on the allowance of the loss except against any profit shown by (iv). However, transaction (iv) shows neither profit nor loss, the shares sold being identified with the purchase at (iii) (b) at the same price. In its roundabout way, paragraph 9 (5) removes this ban. It says in effect that one is to assume that the disposal at (iii) (a) preceded the acquisition at (i); with the consequences laid down by paragraph 9 (3).

Instead of merely contangoing the purchase once, the purchaser may contango it in several successive accounts, i.e. in the words of paragraph 9 (6) the acquisition 'is more than once continued' by a contango transaction. Paragrap 9 (5) is to apply mutatis mutandis to each contact Although we have referred to 'shares', paragrap 9 (7) provides that the paragraph is to other assets which are of a nature to be dealt in without identifying the particular assets disposed of or acquired.

If a taxpayer has held shares for the statutory six months, then receives a bonus issue in respect of them and disposes of the bonus shares immediately, he does not have to pay Case VII tax on the proceeds, notwithstanding that there has been an acquisition and a disposal within six months. This is one of the results of the complicated provisions of paragraph 10 of the Ninth Schedule, headed 'Reorganization of share capital'. 'Reorganization' is defined to include

- (i) allotment of shares or debentures in respect of and in proportion to an existing holding of shares (whether in consideration of payment or not and);
- (ii) alteration of the rights of a particular class of shares.

The paragraph also applies to a reduction of a company's share capital. It uses two phrases which it defines as follows:

'original shares' shares hel

shares held before, and concerned in, the reorganization or reduction:

'new holding'

the shares and debentures which (as a result of the reorganization or reduction) represent the original shares.

If any of the original shares survive, they are included in the new holding.

Paragraph 10 (2) provides that (subject to the remainder of the paragraph) a reorganization or reduction shall not be treated as 'involving' any disposal of the original shares or any acquisition of the new holding or any part of it. The new holding is to be treated as the same asset as the original shares, and as having been acquired when the original shares were acquired. If consideration has to be given for the new holding, or part of it (as on a rights issue) it is to be treated as having been given for the original shares. If a new holding is disposed of with a liability attaching to it for such consideration, consideration given for the disposal is to be adjusted accordingly (paragraph 10 (3)). A proviso directs that the surrender or cancellation of shares, or rights, is not to be treated as consideration for the new holding; nor is any application of the company's assets in paying up the new holding. On a reorganization

reduction the holder of the original shares by become entitled to a capital distribution hich is not income in his hands and which at the same time is not of such a nature as to be part of the new holding. It may, for instance, be just cash or shares in some other company. In such a case, paragraph 10 (4) provides that he shall be treated as though the new holding resulted from his having disposed of an interest in the original shares and that the market value of such interest was equal to the value of the capital distribution. Nevertheless, the original shares and the new holding are still to be treated as though they were the same asset, in accordance with paragraph 10 (2).

The taxpayer may dispose of part of the new holding within six months after acquiring the original shares. The total cost of the new holding will be known. It will be necessary to apportion part of that cost to the part of the new holding which is sold. This apportionment has to be made by reference to market value at the date of disposal.

# Estate Duty Reduction

# SECOND OF TWO SPOUSES RULE

by CYRIL A. WILLIAMS, A.C.I.S.

T is of course desirable when advising clients upon estate duty matters to base one's scheme firmly upon one of the exemptions from duty which have been the subject of express legislation, rather than upon some obtuse point of law. A scheme based upon a bright idea may prove costly if, at the end of the day, it is found to be wanting.

An example of such an exemption which was introduced as long ago as 1894 (section 5 (2), Finance Act, 1894)1 and which has not been the subject of any material modification since 19142 (section 14, Finance Act, 1914) is the second of the 'two spouses rule'. Accordingly, it is surprising to find that the case of Re Hall, Holland i v. Attorney-General (20 A.T.C. 281), which made good use of this exemption, has not received greater publicity since receiving the favourable decision of the Court of Appeal just twenty years ago. The purpose of this article is to illustrate how the facts of Re Hall may be applied in a present-day situation, indeed more than this, since the basis of the case may some times provide benefits for a family which can be obtained by any other simple scheme.

#### **Division of Funds**

It is well known that a simple division of funds between husband and wife will go a long way towards improving the financial position of the survivor. For instance, on the death of a man possessing assets to the value of  $f_{200,000}$ , as little as £90,000 will be left for the benefit of his widow if the normal rates of estate duty apply. Moreover, it is likely that the income of the widow will be something in the region of  $f_{.5,000}$  gross per annum less than the amount which her husband had been receiving from the same investments during his lifetime.

Despite the modifications brought into operation by the Finance Act, 1961, as to surtax, the loss of £5,000 per annum gross would surely be

a noticeable reduction, possibly amounting to approximately £1,600 net spending money every year. If, however, the same funds can be reallocated during the lifetime of the husband, so that the husband and the wife each possess an estate worth  $f_{100,000}$ , then, on the death of the husband, the amount of estate duty payable would be (at normal rates) only  $f_{45,000}$  (as against £110,000 previously) and the amount of capital available for the benefit of the widow will thus be improved to £155,000. Although there must, once again, be some loss of income, the short-fall will be noticeably reduced – perhaps famounting to  $f_{12,000}$  gross, say,  $f_{1,000}$  net spending money.

It is not proposed in the course of this article to go into the merits of alternative types of gift by which the division of funds may be achieved, but it must be borne in mind that some types of uft will remain dutiable for up to five years ore these benefits become fully realized. over, the comparative ages and physical of the parties concerned are factors which receive full consideration before attempt-

ing any division of funds.

If the wife should happen to die first, then the amount of duty payable on her death, at normal rates, would also be £45,000 and the amount of capital available for the surviving husband would again be £155,000. The loss of income which will follow will again be to the order of £2,000 gross, or £600 net spending money.

If, however, the husband and wife leave their respective estates to each other outright, the combined estate of £155,000 will again attract duty on the death of the survivor, and at the normal rates of estate duty this would amount to £80,000 - thus whittling down the net residue to a mere £75,000. This disastrous state of affairs may be avoided if the husband and wife, by their respective wills, leave each other life interests in the residue of their free estates in lieu of the absolute interests previously considered. If this is done, then no estate duty will be payable upon the death of the surviving spouse in respect of that part of the combined funds which has previously borne duty. This means that although the duty payable on the first death would be £45,000 and

<sup>&</sup>lt;sup>1</sup> See also section 23 (16). Finance Act, 1894, as to the application of this exemption to Scottish entailed property; also see section 21 (1), Finance Act, 1894, where the prior duty payable is probate duty, inventory duty or account stamp duty.

<sup>&</sup>lt;sup>2</sup> See section 32 (2), Finance Act, 1954, extending the relief.

the residue of funds available for the benefit of the survivor would remain at £155,000, the amount of duty payable on the second death would be restricted to the free estate of £100,000, attracting duty at the normal rate of a further £45,000. These results may conveniently be expressed in tabular form as follows:

#### Re Hall - the Facts

Turning now to the case of Re Hall, it is interesting to note that considerable extra benefit was squeezed out of the second of the two spouses' exemption by means of a simple deviation from the general practice. The facts of this leading case as reported in 20 A.T.C. 281 were as follows.

The deceased husband was entitled at his death to certain leasehold and freehold property (hereinafter referred to as the Mornington Estate) which he devised to his wife, Mrs H., for life, with a power of appointment by will or deed in favour of children or remoter issue. Mrs. H. cout of her own money paid estate duty on his property amounting to £7,921 2s 6d. During her life, by deeds made in 1928, 1930, and 1936, respectively, she appointed portions of the Mornington Estate (or investments representing a portion of it which had been sold) to her granddaughter absolutely free of all trusts, but subject to her prior life interest. The appointments in 1930 and 1936 were given effect to by conveyances made in 1934 and 1936 respectively. Subsequently the rest of the estate was sold and the proceeds invested. By her will Mrs H. exercised her power of appointment in respect of the remainder of the funds. Mrs H. died on October 14th, 1938.

The Crown claimed estate duty on the sum with which Mrs H. had paid the estate duty on her husband's death, contending that a charge had thereby been created in her favour by virtue of the Finance Act, 1894, section 9 (6). It was contended that it had not been the intention of Mrs H. to create a charge on the property, and that this was shown by her conduct. It was conceded by all parties, however, that if such a charge had arisen it was released in 1920 by the terms of a letter of June 13th, 1920, in which Mrs H. used the words: 'which I paid out of my

own funds as I would not have a charge on the property'.

The Crown further contended that, if the charge had been released, estate duty was payable on the basis that (a) by not reclaiming the sum paid Mrs H. made a personal settlement of this amount to be held on the trusts of her will, or alternatively, (b) the settled property comprised in the husband's estate was increased by the sum paid by the wife in respect of estate duty which amount had not paid estate duty on the death of the husband, or alternatively, (c) that sum was a gift, and estate duty was payable on a proportion

# Decision of the Court of Appeal

under the Finance Act, 1894, section 2 (1) (c), in

that immediate enjoyment was not assumed by the

donee to the exclusion of the donor.

It was held:

(1) On the death of the husband duty was paid on the property unencumbered by any charge whether in favour of the Crown or of the tenant for life; therefore no further duty was payable.

(2) The tenant for life was not a person competent to dispose of the part of the settled property represented by the sum paid for death duties on

the death of the husband.

(3) The payment of such death duties by the tenant for life was a gift, but it was a gift 'to the entire exclusion of the donor, or of any benefit to her by contract or otherwise', despite the fact that the effect of the gift was to avoid her liability to pay interest on the sum charged on the estate for duties. The claim for estate duty on the sum paid by the tenant for life in respect of death duties failed.

The implications of the decision in Re Hall can be put to good use in any straightforward case. Taking again as an example a husband and wife who have divided their capital funds equally so that each has an estate of  $f_{100,000}$ : on the death of the first to die, normally the estate duty would be paid out of the estate of the deceased by realizing part of the assets. If, however, the survivor elects, quite voluntarily, to provide the estate duty out of his or her free estate, this will make no difference to the position which will continue during the life of the surviving spouse, since the estate of the deceased will remain at £100,000 and the estate of the survivor will be reduced from £100,000 to £55,000 giving a combined total of £155,000, the same as before.

On the death of the surviving spouse estate duty will be payable upon the free estate of the survivor – that is to say, on £55,000, the normal

rate for which is 35 per cent, which equals £19,250. Since the whole of the £100,000 remaining in the estate of the first spouse will be protected from further claims for duty by reason of the second of the two spouses rule, combined with the decision in Re Hall, it follows that the aggregate estate available for the benefit of the family will be increased to  $f_{335,750}$  – an increase of  $f_{25,750}$ .

It must be remembered that if real estate is included in the estate of the first to die, then the survivor must take active steps to release the charge for estate duty which would automatically accrue by reason of section 9 (16), Finance Act, 1894. If no realty is included it is useful to note that Hanson's Death Duties, tenth edition, at paragraph 694, states categorically that

'the principle of this decision is considered to be equally applicable to a bequest of personalty by way of settlement although the duty thereon is not a charge on the property'.

If a charge is allowed to appear in favour of the surviving spouse its release will attract duty if

within the statutory period.

It should be noted that in order to succeed in its object, the payment of duty should not be made out of the estate of the original deceased and thereafter reimbursed by the survivor, but instead should be provided by the survivor either direct to the Estate Duty Office or, alternatively, the payment might pass through the deceased's estate. If this happens care should be taken that the funds of the original estate remain intact.

Table IV EFFECT OF PAYMENT BY SURVIVOR OF ESTATE DUTY ON FIRST DEATH PER RE HALL.

# The Training of Accountants for Industrial Responsibilities – II

by G. W. SEARLE, D.S.C., F.C.A.

## The Individual - the Accountant

WHATEVER the training on the one side, and whatever the scope of the responsibilities on the other, there remains in between that most remarkable and unpredictable subject – the human being. This paper would not be complete without some comments on the personal qualities and requirements of an accountant in industry.

46. The old-fashioned view of the accountant as a book-keeper (with a quill pen to complete the picture) who sits in a secluded room from which he emerges once a year to announce that the books have balanced is, I hope, extinct. In the exaggerated form which I have described I am sure it is extinct but many examples not far removed from this form survive, I have reason to believe, and a combination of accountants who think that way, and managements who accept such a state of affairs do still exist.

47. Many chartered accountants submitting themselves as candidates for employment in industry clearly have no conception of the scope of their future duties. They know that some books have to be kept and they know that tax assessments have to be settled, but this is no advance on the thinking of the man with the quill pen to whom I referred above. These young chartered accountants may have read in books, but have never considered for practical application, the connection between their accounting figures and the day-to-day management of the business.

48. It is no good whatever for an accountant to take the view that if he goes into an industrial concern he can sit back and the organization will tell him what to do. It is no good his complaining that his skills are not used and that he is not given the management responsibilities which he thinks he deserves unless he has set out actively and constructively to show what he can do.

49. Therefore the individual concerned must have those qualities of 'drive and initiative' which are so frequently stated in advertisements that they have tended to become accepted as customary advertisers' jargon, devoid of real significance.

50. There is, of course, a considerable difference in the type and size of industrial or commercial post

The second and concluding part of a lecture presented at the Oxford Summer Course of The Institute of Chartered Accountants in England and Wales on Monday, September 17th, 1962. which the individual may undertake. He may be almost on his own in a small company or one of an accounting team in a very large one. Although, in the second case, he will have colleagues to help him and seniors who are accountants themselves to direct him into the (possibly) right paths, the fact remains that no help, guidance or direction is of much real avail unless the individual himself has the attitude of mind and the ability to do much more than to record historical facts tidily and meticulously.

51. This leads naturally to the requisite that he should be able to work as part of a team. There is no doubt that the pressure on the accountants to play a fuller part in management affairs brings its own critics. We may console ourselves that few, if any, constructive ideas or procedures have been accepted by mankind without bitter opposition from some quarter. Intelligent reporting to management and proposals for changes do not get far without some real or implied criticism. We do not live long in business life without realizing how strong is the feeling of resistance to change and how the launching of a shaft of criticism will-raise the defences against corrective action.

52. If the accountant is prepared to come out of his back room and produce some information designed to help the day-to-day and future management of the concern he is making a start but will not necessarily see a happy ending. He must work with and as part of the management team and, to do so, he must set out to understand the physical processes of the business and the personalities of those in charge. Help from the accountant must not be related exclusively to top-level reporting: it is team work on the horizontal levels which will achieve the best results in the long run, and the better the personal relationships the quicker the results.

53. Business men, and particularly busy business men, are rightly impatient of red-tape and pettifogging detail. They are also impatient of technical procedures and jargon which they do not understand. It is essential for accountants to be able to express themselves clearly and concisely both in writing and orally. To this end they must, in communicating with management, be able to deal with the principles without confusing the recipient with technicalities which only explain the accounting processes by which the answers were obtained. From my own experience there are still too many qualified accountants who cannot state the point at issue clearly, shortly and in terms which a non-accountant

will readily understand. Perhaps junior accountants are accustomed to report almost exclusively to other skilled accountants and this does not give adequate training in the art of reporting to non-accountants.

- 54. As regards professional training and a professional outlook, I have no doubt at all that such a foundation is not only desirable but is expected and welcomed by business managements generally. In our training we learn that we are the fortunate successors to the standards of professional integrity which have been so carefully built up in the past. It is our duty, and we are expected, to maintain these high standards whether we are in industry or in practice.
- 55. When a professional accountant is hired it is, I believe, not only his skills which are sought: he will occupy a position of trust, he will be expected above all to be reliable in his facts, secure in matters of confidence and impartial in his judgment. Professional integrity coupled with human understanding may be the best summary of his most desirable personal attributes.

#### Training

## Articles

56. The Report of the Committee on Education and Training received by the Council of the Institute on April 5th, 1961, considered the education and training of entrants to the profession and I should like to quote one paragraph regarding the various suggestions made as to the improvement of training for industrial responsibilities. This paragraph reads:

'In our view the right solution is to recognize that the newly qualified chartered accountant, like his counterparts in other professions, has many gaps in his practical experience and that, brought up in a professional office, he reflects at admission (as it is intended that he should) the characteristics of a member in practice rather than those of a member in industry.'

- 57. During articles the concentration of the articled clerk is towards his examinations. I suggest that only to a small degree does he consider experience directed towards the improvement of his knowledge and efficiency in his later career if indeed he knows what his later career is to be. As an example of this view I would refer to the reluctance to attend lectures which I have noticed among articled clerks, particularly if those lectures are not precisely directed to examination subjects. The wider experience, the personal contacts, the benefits of discussion and all that could be so helpful, but not immediately useful for examination purposes, are lost in favour of book-study and concentration on the syllabus.
- 58. I also believe it to be true that just as the articled clerk's own mind is filled with examination problems, so the atmosphere in which he works in a professional office is one of drive to complete audits and the pressure (caused, I expect, by impatient clients) of a busy practice. The Report of the Committee on

Education and Training rightly paid tribute to the manner in which practising members recognized a duty to share between them the responsibility to bring up the future membership of the Institute despite the fact that many of those future members would go into industry or elsewhere. It is the fact, I understand, that in many offices articled clerks comprise the majority of the junior staff. They obtain much and varied practical experience in the many tasks they are given and I am sure their principals carry out their side of the bargain by giving them variety and proper training in the exercise of responsibility. I know, however, from the replies I have had to inquiries on this subject, that in anything but a very small audit the articled clerk normally deals with just one part of that audit and often quite a small part. Is there ever time to consider why and how that particular business exists, how it is organized, how it is managed, how the figures the articled clerk produces fit into a bigger picture and what other figures might be produced to help that company? To counsel perfection is to become impracticable but I do suggest that every articled clerk knows his good seniors and would define the good senior as the one who tells him what is going on and why it is going on. I am sure that the training for industrial responsibilities starts by seeing how industrial companies work and it has certainly been represented to me that even on small to medium audits it is difficult for an articled clerk to see the wood for the trees.

- 59. This brings me to the question of secondment of articled clerks for a limited period to business undertakings. This I believe is a little used facility and comes under the category of what is 'permitted' rather than what is 'encouraged'.
- 60. I have personally been concerned with only one such case where an articled clerk has been seconded for a period of six months to the company for which I work. We decided that the following should apply to his training under the secondment:
  - (a) He should be brought into as much contact as possible with practical or industrial operations rather than the administrative side. For this reason we assigned him to work under the chief accountant of one of our refineries rather than in our London head office.
  - (b) That, although his secondment was for the comparatively short period of six months, the experience must be by way of being employed on various jobs in the refinery accounts department and that training by 'looking over other people's shoulders' was (as it usually is) inappropriate.
  - (c) He was therefore employed for a period on each of the following:

Wages payrolls and timekeeping;

Cashier's duties;

Stores stock accounting;

Purchase invoice control and settlement;

Costing: revenue and capital, including budgetary control;

General accounting: financial and general ledgers;

Internal audit;

and, since all procedures are mechanized under an integrated punched card system, each part of the programme led to the acquisition of detailed experience on mechanization.

61. I have subsequently had the opportunity of discussing this secondment with the individual involved, who has now completed his articles and taken his Final examination. I think I am expressing his views on the experience correctly when I say that it was of great help in enabling him to see an industrial unit working and to appreciate on the accounts side, and throughout the refinery, the broad picture of accounting procedures, the flow of accounting information and the working of control systems. On the other hand it was of no apparent help towards the passing of his examinations. It was encouraging to know that he realized there were many things he had not done: for example, the scope of the programme in the six months did enable him to see what figures were produced for the management but in the time available he was not able to see the use which management made of the figures and to judge his work critically in the light of this knowledge. However, six months is a limited time and I feel sure that a sound coverage of the groundwork of the accounting system is the first consideration and one most likely to give the best training at that stage of the articled clerk's career.

62. Of particular interest to me was the fact that he spent much time with engineering students and that they each gained experience by a mutual exchange of views on their respective sides of the industrial machine. I was told that he was at first regarded by them as a rare animal and interest was aroused when the engineering students found that he was as human as themselves and, indeed, had interesting views to communicate regarding the industrial unit to which they were all attached. Thus does management accounting grow and I cannot do better than repeat that without understanding, mutual respect and a feeling of working together management accounting is just another phrase without practical meaning because whatever is produced will not be readily accepted and acted upon by the management team.

63. I hope that, in the course of their work, the audit function is not too narrowly interpreted by articled clerks and that they will be helped to see the broader picture of business operations, and to consider critically the whole accounting system and not just the entries in the books. Having said that, however, I must say that the period of articles is short enough, especially if it is less than five years, to cover the practical side of professional work, and that it would not be right to place on articled clerks

any greater study of industrial requirements than that recommended in the Report of the Committee on Education and Training with respect to the examination syllabus: which reads:

#### Paragraph 24

- '(g) The examination syllabus should be amended (i) to give greater emphasis to the uses of accounts, particularly for the purpose of management;
  - (ii) to include certain elementary aspects of the subjects of economics and statistics (the latter subject primarily in its bearing on the use of accounting for the purpose of management).'

64. I think, for exactly the same reason, that it is right to 'permit' rather than 'encourage' the secondment to industry (paragraph 24 (f) of the Report). Let those so inclined take these opportunities, but let those others who find the going hard enough continue to concentrate their time within the practising side of the profession.

65. Articles being completed and examinations passed may the newly-qualified accountant realize that he has only entered on the threshold of his career and if he is to go into industry he must then apply himself to becoming fitted for the job which is the target of his ambition.

# After qualifying

66. Having passed their examinations it is now accepted that the practical experience of chartered accountants will vary to a considerable degree. I would like to refer to C. Northcote Parkinson's book called Parkinson's Law or the Pursuit of Progress which is, no doubt, as well known to you as it is to many business men who have wondered how far the humorously expressed criticisms apply to themselves. In the chapter on 'Pension Point' is a reference to various stages in a career which starts at the Age of Qualification, which is designated Q.; Parkinson says:

'Q. is to be understood as a technical term. It does not mean that a man at Q. knows anything of the business he will have to transact. Architects, for example, pass some sort of examination but are seldom found to know anything useful at that point (or indeed any other point) in their career.'

67. I am thankful that, when opening his dictionary to single out a profession for the purpose of embellishing his remarks with some pointed levity, Professor Parkinson did not open the page containing the word 'accountant' instead of 'architect'.

68. It has been said that business concerns have taken on newly-qualified accountants to head their accounts staff and have been distressed at their lack of practical experience in organization, presentation of facts, staff control, accounting machine programming and installation. This is said to reflect adversely on the designation of a chartered accountant who is presumed to be aware of all these things

in his training. But nobody thinks any less of the medical profession because a newly-qualified doctor has not the experience of an older practitioner. Experience must be acquired the hard way and five years (and certainly three) are not sufficient to make a man proficient in every aspect of industrial requirements.

69. The important thing is that the young man must realize his own limitations.

70. In the immediate post-qualification period further training may not appeal to him. I have no doubt that if he stays with a professional firm they will encourage him in the acquisition of greater experience, although, naturally enough, that will be directed towards the professional experience required as one of their senior assistants. If he intends to look to industry for employment then he must plan his experience himself and surely he is by then old enough to do so.

71. In my opinion the man who seeks industrial responsibility would do well to spend a few more years in a practising office after obtaining his qualification. Professional responsibilities will then be undertaken which make those of a 'fifth year man' seem small. The broader aspects of a client's business must then appear even if they never did before. One should begin to find one's feet and gain a confidence based on experience rather than textbooks.

72. All this is in the hands of the individual who is in a world where textbooks abound and more lectures are provided than he can attend. What he makes of his first few years as a qualified accountant is largely in his own hands and this applies both to further theoretical studies and, particularly, to practical experience.

## In Industry

73. Those accountants who go to small industrial concerns may still have to make their own way. Training comes from self-discipline. They must learn the business and study the organization, apply their own experience to the problems of mastering their accounting responsibilities, establishing suitable controls – in short, laying a foundation of good basic accounting practice. Having established a good foundation, for which professional training should have equipped him adequately, then comes the time to set about meeting the requirements of the management.

74. It is no use expecting that the management will necessarily know what their requirements are, and so the accountant must himself consider the worth and the form of forecasting and budgeting, costing in its various forms, financial and operating statements and any similar products from his accounting department which may assist the management. This work may have to be based on theoretical knowledge but practical experience has to start some time. The fact that it is a small business and that he is the only

qualified accountant may mean that he grows up with the business and in a small concern, provided one does not allow oneself to be overwhelmed with detail, it is at least easier to see the whole picture. The process of trial and error in the implementation of new ideas is not so lengthy nor so costly as it is in a bigger unit.

75. A young qualified man should be quite well equipped to make a good start in a small industrial concern. If he is prepared to learn there is no reason why he should not make real progress in that assignment, with the help not only of the experience he will acquire day by day but also of the immense amount of good advice available to those really seeking knowledge and new ideas.

76. Accountants who go into a larger concern must first and foremost impress on themselves that they must learn how the business operates industrially, commercially and administratively. It may later become part of their duties to criticize the way the company works and to produce facts and figures to show how it could work more efficiently, but they will not endear themselves to their colleagues, nor enhance their reputation, if they criticize or attempt to advise without full knowledge of the subject. In a large concern it takes a long time to appreciate the operations as a whole and they will not find themselves entrusted with major responsibilities until they have shown a proper understanding of the business. I have already referred to the frequent desire of young qualified accountants to avoid contact with the basic accounting records and to advance immediately into work of direct managerial assistance. They may even be encouraged to do so by a large concern which wishes to fill urgently a vacant post of some semispecialized nature, but I am in no doubt that a spell in the section devoted to basic accounting or a spell with the internal audit should contribute to a more rapid understanding of the business and its organiza-

77. Keeping the accounts has been referred to as sitting at the cross-roads of the business; there are few quicker ways of getting to know what is going on if one keeps one's eyes and ears open. But knowing what is going on is still not enough: if you are going to work as a team you must know how the other man works and what his aims and problems are, and unless you can know enough to work as a team you cannot give a proper accounting service related to 'what should be going on' and 'what will be going on', in addition to recording the past and (I hope) the present.

78. In my experience it has been found most rewarding to run, over a period, a series of talks given by senior men in each department who speak on their work and responsibilities and encourage subsequent questions and discussion. Another excellent training scheme is a residential course of, say, two or three weeks' duration, held for senior men drawn from different functional departments. At these courses

talks on company policy and operations are given and those attending are encouraged to question and discuss these matters with the speakers. Discussions can be aided by asking the course-members to find solutions to operational problems which have been written up as 'case studies' for that purpose. All this helps to give the background and also produces lines of thought from which constructive ideas may emerge. It is, of course, a procedure made necessary by the large scale of operations, but I particularly welcome it as an opportunity for mixing the accountants with their colleagues in the operating departments.

79. Just as changing one's employment from one small industrial company to another gives one added experience so changes of appointment within a large concern achieve the same thing. But this takes time and the training programmes of a large industrial concern which I have mentioned above are really designed to speed up something which would otherwise be a much more lengthy process: namely, the emergence of a trained accountant with an all-round understanding of the business and with knowledge of both the administrative processes and of the individual personalities with whom he has to work or correspond.

80. I must not forget to mention the smaller but important things such as the ability to present figures clearly and to write good reports. Criticism and advice from seniors is important in this and, if one leaves a practising office without having attained facility in these things, one will soon have one's errors pointed out and especially so in the larger industrial concern.

81. In the small business, therefore, the accountant makes his own way and learns by experience and by his own efforts and research. He meets a personal challenge to succeed almost on his own and he may have to set his own standards to measure his own success.

82. In the larger concerns he has the challenge of size and the complications of a large organization in addition to the responsibility of a particular assignment. While the conscientious man will always seek knowledge on his own account the larger organizations normally expect to pay some attention to helping the young employee to gain the experience he needs for his greater efficiency.

#### Conclusion

83. I am conscious that no revolutionary proposals have been made in this paper. I have a feeling that the reader will assume, therefore, a large degree of satisfaction and complacency with the present state of training. On the contrary, I must remark that in my own experience we do not find a large number of young qualified accountants of suitable experience and quality ready to join an industrial organization.

84. You may be interested to know that in London in 1961 we interviewed ninety-seven qualified men who had applied for accounting posts. To nineteen of these we made offers and in fourteen cases our

offers were accepted. It would be wrong to suppose that all seventy-eight of the candidates to whom we did not make offers failed to match our requirements; in some cases, no doubt, we did not match their requirements and there were a variety of other reasons. Nevertheless, it is unsatisfactory to have to record that there were many who were thought, on interview, to be lacking in some respect. We do not expect candidates to be completely trained for our requirements and it would be an unusual case if a man were found to have exactly the experience we hoped to obtain: what we do look for, however, is the inquiring mind and a mental attitude which we judge will quickly absorb the requirements of a new job and merge them with a satisfactory level of present training.

85. It is of interest to us, therefore, to find out how narrowly or widely he has viewed his past work, how much he thinks he knows or will admit he has to learn and whether he has that type of personality which will enable him to work as one of a team.

86. I would ask articled clerks to remember that they have more to do than pass examinations and they should make the most of the excellent opportunities they have for observing how businesses are run and how the accounting procedures are, or perhaps fail to be, designed to meet the requirements of the management.

87. I would ask principals to encourage articled clerks to consider the aims as well as the procedures of accounting in commerce or industry. I say this not solely for the purpose of obtaining better candidates for industrial appointments but because I suggest that the profession as a whole would be advised to pay increasing attention to the needs of management in its search for operating efficiency.

88. Within industry the senior accountants must meet their responsibilities for training their younger assistants. Just as practising members recognize their responsibility for bringing up the future membership of the profession so should accountants in industry recognize their duty to further the education of their younger colleagues, both qualified and unqualified, in their accounting organizations.

89. The reason why this address is little more than a review of the subject is because I feel that the facilities for training are all there: what is needed is some stimulation for their greater use and unceasing efforts to ensure that the profession continues to attract individuals of high quality. Business life, whether in practice or in industry, cannot be set out like an examination syllabus and it is necessary for each one of us to realize the challenge and opportunities which we face. Sometimes we may be guided but more frequently it is in our own hands and is a reflection of our personal qualities to assess the requirements, to realize our limitations and to seize our own opportunities for further education.

(Concluded.)

# Machines and Men

# FIFTIETH NATIONAL BUSINESS EFFICIENCY EXHIBITION

In a world where speed and space have become dominant factors, machines necessarily play a leading part and today there is no department of life unaffected by the products of the ingenuity and inventiveness of the machine-men. In the office a revolution that began with the appearance of the first typewriter proceeds faster and further each year and while the difficulties of any real communication between man and man are the constant theme of novelists, playwrights and poets, in the severely practical sphere of industry and commerce, machine language has become a commonplace, keeping management and employees, factory and office, in closer touch than they have ever been before. The tasks of the white collar worker are constantly being lightened and his (or her) routine changed by

The tasks of the white collar worker are constantly new mechanical aids whereby speed and accuracy can be guaranteed and fatigue largely eliminated. Since scarcity of labour rather than redundancy is the problem in most offices, the one-time prejudice against mechanization has largely disappeared and it is normally welcomed when it is accepted that it does away with dull repetitive work and gives the satisfaction of knowing that a job has been well done.

## Which Machine?

But machines which can perform so many varied functions cannot of necessity be cheap and it is to the professional accountant and cost accountant that the business man turns for advice in selecting the equipment most suitable and economical for his particular purpose. The installation of a sing machine requires the consideration of many factors, human, mechanical and financial and one of the great attractions of the Fiftieth National Business Efficiency Exhibition is the opportunity it gives to see the latest developments, to compare the wide range of products and to discuss problems with experts.

## **Largest Exhibition Yet**

Over 160 firms are participating this year in the Exhibition which is to be opened next week by Alderman Sir Frederick Hoare, the Lord Mayor of London. The exhibits cover every type of machine from large electronic computers suitable for a bank to a simple duplicator for use in the small office. Demonstrations will be given of many of the machines. We refer on other pages to some of the latest comers to this field, but it is not possible, of course, for reasons of space, to do more than mention a very few of the multifarious machines on view. Improved designs in office furniture that make for a more comfortable working life can also be inspected.

# Financial Computing Services

A NEW FIELD FOR E.D.P.

CONTRIBUTED

VER the past decade, the electronic computer has successfully demonstrated its ability to perform all kinds of routine office work and to provide what is popularly described as 'management information'. Now it has begun to move, with equally promising results, into the more specialized fields of accountancy and actuarial work. This, in turn, has begun to create an entirely new class of computer users – a class which already includes stockbrokers, insurance brokers, investment analysts, consulting actuaries, practising accountants, unit trust managers and merchant bankers.

In much of the work for which these specialists are responsible, a large number of arithmetical and logical operations has to be performed repeatedly on quantities of basic data which, although sometimes comparatively small, have none the less to be sifted from vast quantities of constantly changing data. Clearly, there are plenty of opportunities to exploit the computer's ability to 'memorize' complicated sets of instructions, exercise powers of discretion, create and maintain its own files of basic data, and produce printed reports and schedules in pre-selected formats.

At the simplest level, electronic data processing is used solely to eliminate repetitive manual tasks. But although this enables the user to achieve the

same results as before with less effort and expense, it is only the starting-point for more rewarding operations. The special value of electronic data processing lies in its ability to achieve much better results than before, and to uncover useful information which, for economic reasons, would otherwise have remained hidden. Because of the speed and versatility of the modern computer, it is now possible to analyse more widely and deeply; to produce more accurate and timely reports; and to give professional men even better opportunities to exercise the real 'arts' of their professions.

The number of professional and financial businesses which can afford to install their own E.D.P. equipment is, of course, limited—indeed, it was only about two months ago that a magnetic file computer was delivered, for the first time in Britain, to a firm of stockbrokers. For this reason, the new class of user owes its existence to recent advances in the field of computer service work.

# 'Off the Peg' E.D.P. System

The idea of performing such work on a service basis is not entirely new. Actuaries, insurance companies and stockbrokers were among the first clients of the electronic computing centres which began to emerge, somewhat hesitantly during the middle 'fifties, and since then a variety of jobs has been undertaken with reasonable, and at times outstanding, success.

This pioneering work has served two purposes. In the first place, the results of the more successful experiments have drawn attention to the opportunities opened up by electronic data processing. In the second place, the experience gained has enabled certain computing centres to develop services which, although finally tailored to meet individual needs, are based on an 'off the peg' E.D.P. system. Thus, the new opportunities have been brought within reach of businesses which have neither the resources nor the inclination to act as pioneers themselves.

Much of the experimental work has been concerned with arranging a satisfactory marriage between the expertise of computer programmers and that of the centres' new clients. Not unexpectedly, this has proved more difficult than in the case of general commercial work. Merely to 'automate' established methods is relatively simple; the real problem is in employing the full capabilities of the computer to set up new methods which, because of the limitations of conventional processing equipment, have not been seriously considered in the past.

Some clients and prospective clients have tried to bridge this gap by sending their own employees on computer courses and even programming courses. But most of them have taken the view that the initiative should come from the other side.

This has, in fact, happened. Whereas the early computing centres were essentially Jacks of all trades, it is now recognized that a considerable degree of specialization is called for.

The trend towards specialization was brought right to the surface last year when one of the main computing firms set up a centre in the City of London to deal exclusively with the work of stockbrokers and other City business houses. This centre is run as a 'stock exchange' service which uses a computer to obtain the best possible results for its clients, and not merely as a computing service which undertakes 'stock exchange' jobs. All members of its staff, from punch operators to programmers and systems analysts, are familiar with the specialized types of information passing through their hands; many of them have been recruited from merchant banks and stockbrokers' offices. There is also a data research section, the prime responsibility of which is to maintain a main data file of share facts and prices covering seventy different currencies. This information is permanently stored in the computer's memory and is thus immediately available to elients.

# **Investment Portfolios Analysed**

One of the first services established by the Centre enables investment analysts, unit trusts managers, company accountants and others to obtain regular analyses and valuations of investment portfolios. Based on the results of over three years' work for a merchant bank and a firm of chartered accountants, it is typical of the wholly practical facilities which are now being made available in this field.

Since the security data is already stored in the computer's memory, the client has only to supply details of the individual holdings in the portfolios for which he is responsible. This can be done in several different ways.

In the more sophisticated systems, the Centre assumes full responsibility for maintaining the portfolios, and the analysis and valuation reports are produced at the required times without effort on the client's part. Changes in holdings are notified to the Centre in the form of contract note copies, or even in the form of punched paper tape automatically created by the accounting machines on which the contract notes are prepared. The

second method has particular advantages, because it enables the computer operation to be fully integrated with the client's own record keeping. The tape, created as a wholly automatic byproduct of routine work, is verified by normal accounting checks and can therefore be fed straight to the computer without further attention from the client or from the staff of the Centre.

Where the volume of work does not justify the use of this method—or where an operation is started on a deliberately restricted scale—the client simply provides a written or typed list of the holdings in each portfolio. Alternatively, the changes in holdings can be marked on copies of the analysis and valuation sheets previously

prepared by the computer.

This service is now being used by a steadily increasing number of merchant banks and other business houses. Because it has been fitted into a standard framework, each client has to bear only a very small proportion of developing and running the system and maintaining the main data file. The complete system involves nine computer runs, but only in the last of these is it necessary for the programme to cater for individual requirements.

At the same time, the framework of the system is sufficiently flexible to accommodate many variations. Income and dividend figures can be calculated in any way that suits the client's needs; normally, they show the anticipated income based on information extracted from the latest reports of the companies concerned, but there is no difficulty in including such additional items as net yields and yield or earnings ratios. Similarly a variety of comparatives can be computed from the security data and from averages contained in the portfolio itself. The Centre is, in fact, planning to establish a 3,000-share index for the computation of yield or earnings ratios.

# **Preparation of Reports**

The analysis and valuation reports are prepared – again, in a wide choice of formats – by a specially developed system of computer-controlled lithographic printing (a section of a printed portfolio schedule is illustrated in the adjoining column). As the calculations are done, the results are printed straight on to lithographic plates, from which the required number of copies is immediately produced on equipment situated within a short distance of the computer. This system reduces printing costs, eliminates the delays which are bound to occur when reports are printed by letterpress at a different location, and

achieves a quality of reproduction which is much better than that normally associated with computer-controlled printers, and even better than some letterpress work.

The personal touch is not lost, since the computer can be programmed to insert such marginal notes as 'Not to be sold without reference to I.B.'.

For security reasons, the clients and individual portfolios are identified only by code numbers. As a further safeguard, visitors to the Centre are not allowed to approach the machines, although they can observe the work from behind a glass security panel.

# Calculation of Gilt-edged Yield Statistics

Another job which can now be done more efficiently by computer is the daily calculation of gilt-edged yield statistics. The first system of this type was put into operation about three months ago by a well-known firm of stockbrokers, and there is no doubt that other firms are preparing to follow their lead.

Every day the prices of British Government securities are punched into paper tape and combined with basic data stored in the computer's memory. The machine then calculates such things as accrued interest, flat-yield, redemption yield and grossed-up net yield, and also works out the effects of future fluctuations in price. Finally, 400 copies of the schedules are prepared by computer-controlled lithographic printing in time for them to be sent to the stockbroking firm's own clients in the evening post.

Because of the speed of the combined processing and printing operation, the brokers are able to provide up-to-the-minute information without effort on their part, and the investment analysts who previously did the calculations manually have been freed for other work.

These are only two examples of current developments in this new field of electronic data processing. Many other types of financial work are now being handled by computing centres, including the calculation of industrial share price indices (with results that are already familiar to the readers of certain daily newspapers), the preparation of dividends from share transfer data, the control of unit trust registers, and the preparation of certificates for block offers by unit trusts.

Now that a considerable amount of working experience has been gained, the pace of research into more advanced applications is accelerating rapidly. Some business houses are already cooperating with the staff of computing centres,

./

Typical portfolio schedule produced by the National Cash Register Company's Financial Computing Centre in the City of London, and printed by computer-controlled lithography. Although this portfolio maintenance, valuation and analysis service is based on a set of standard programmes—and draws on data permanently stored in the computer's memory—the results can be set out in any form that suits the client. In particular, the client can specify the formulae used to forecast income, yield and dividend figures.

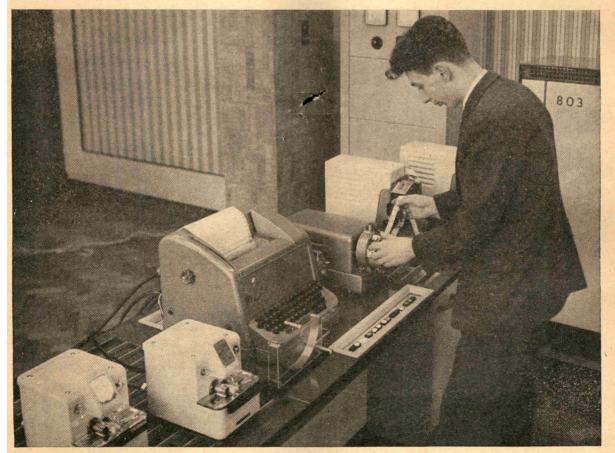

often under conditions of top secrecy, in the development of entirely new systems which will put to good use share market data gathered from all parts of the world. This work will eventually benefit a large number of firms – just as the early experiments in portfolio analysis and valuation have led to the setting-up of the standard services available today.

# Close Collaboration Required

It would be foolish, however, to paint too rosy a picture at this stage. The electronic computer is not a magic box from which all sorts of benefit can be extracted at the press of a button. Certain programming operations present serious problems; the first results are sometimes disappointing. Altogether, the development of further applications will call for very close collaboration between the computing centres and their clients – and for considerable faith and patience on the part of the latter.

Yet there is ample evidence that the pioneering work will be well rewarded. Its value (as well as its pains) were recently put into perspective by one of the partners in a small firm of chartered accountants which has made good use of electronic data processing in the field of trust accounting. Confessing that at times 'we regretted having ever started upon the operation', he explained that this was largely due to the fact that 'we were experimenting with an entirely new system'. Subsequent results had demonstrated that the cost of programming the work and running the computer was not high, and that the production of investment statements by computer was considerably cheaper than by conventional methods. His final verdict on the experiment was that his firm now look back at their manual investment records as relics of a former age.

Before long, the same verdict may be applied to many of the time-honoured methods that are now practised in City business houses.

At the N.C.R. Computing Centre. An analysed valued portfolio of an investment trust comes out of the computer in the form of punched paper tape.

# Auditing Magnetic Tape Systems - I

# RELIABILITY OF THE SYSTEM

by H. LA COSTA, F.C.A.

The special problems which face the auditor concerned with an electronic data processing system incorporating facilities for the use of magnetic tape are analysed and the reasons for the increasing application of magnetic tape are discussed. The first part of this article deals with systems reliability. The second part will examine general operating problems.

THE principles involved in auditing accounts processed on an electronic data processing system differ less than might be expected from those applicable to a manual system. Details of the audit programme are, of course, widely different.

Outside the computer itself the main factor affecting the auditor is the increasing tendency to integrate all phases of data processing. As discussed later, this involves special considerations which are not applicable even to the most sophisticated punched-card installation.

As far as the physical equipment itself is concerned - the so-called 'hardware' - the major difference to the auditor lies in the form in which based on the use of punched tape and punched cards. The increasing application of magnetic tape introduces a new medium which cannot be read directly by the auditor. This change in legibility poses practical problems, which need a basic grasp of the method of operation of magnetic tape equipment for successful solution. Looked at in another way, the same factors provide the potential defaulter with similar problems.

At present, electronic data processing systems with facilities for magnetic tape are relatively rare, particularly among those installed by firms of small to medium size, but the position is rapidly changing. Because of the consistent decrease in the costs of operating magnetic tape systems, magnetic tape facilities are now increasingly being specified as a necessary part of newly-installed electronic data processing systems. The greater availability of magnetic tape systems at service bureaux at economic rates has also encouraged more widespread application. This trend is likely to gain increasing momentum in the near future as the competitive qualities of this medium in terms of reduced operating cost, ease of handling, reliability and speed of processing continue to grow.

# **Operating Costs**

It is difficult to be precise on comparative operating costs, since much depends on figures which vary from manufacturer to manufacturer and even from application to application. Certain factors are, however, so much in favour of magnetic tape that even the most conservative estimate must show its advantages for applications involving these factors. It is perhaps not generally realized that, as compared with magnetic tape, the cost of storing an equivalent amount of data is six times greater on punched cards, from twenty to sixty times greater on random-access devices of the magnetic disc type, about 30,000 times greater on magnetic drums and from data are stored. Early computer installations were 150,000 to 600,000 times greater on magneticcore storage. This cost comparison is underlined by the fact that magnetic tape has a virtually unlimited life, whereas punched cards sometimes do not survive a single input to the computer.

Magnetic tape is also easier to handle for two reasons - compactness and procedural versatility. Firstly, a typical reel of magnetic tape, weighing little more than 3 lbs, can store some fifteen million characters; to match this capacity would require a mass of punched cards weighing over a quarter of a ton and occupying several hundred times the volume of the reel of tape. Secondly, magnetic tape can, by automatic processing, be read forwards or backwards, rewound or back-spaced, and used alternatively for writing and reading. By contrast, once a deck of punched cards has been loaded, it can only be read forwards unless the operator intervenes manually. This flexibility of magnetic tape adds substantially to the power and freedom of system design when procedures for dumping existing data and restoring the programme are required. The speed and ease of sorting traditionally claimed for punched cards and magnetic drums can moreover be substantially improved by the use of magnetic tape facilities.

# Reliability

Reliability is one of the most important qualities for the accountant. The reliability of magnetic tape has been the subject of a test recently undertaken by a computer manufacturer. The full test lasted for fifty hours, during which no maintenance of any kind was undertaken. In this time, 9,000 million bits (BInary digiTS) of data were read with an error rate of only one bit per 1,800 million, or per ten hours of running time. The total error of only five bits were entirely due to transients in the power system, which has since been redesigned to eliminate this source of possible error disclosed by this extended trial. The word 'possible' is used since, in practice, all readings would have been re-read and corrected by the Orthotronic system of error correction used by this manufacturer.

Physical examination of the magnetic tape after 100,000 passes disclosed slight burnishing. The actual wear was, however, so slight that the tape was still in good operating condition at the end

of this gruelling test.

388

Speed is another obvious advantage of magnetic tape. Speeds for reading and writing on present equipment commercially available range from 10,000 up to 200,000 decimal digits per second. Even higher speeds should soon be available, if called for by increases in the speed of computation by the central processor.

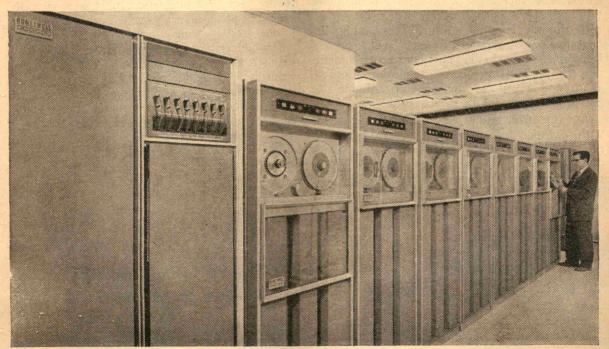

# Effect on Accountancy

With the increasing competitive claims of magnetic tape and the resulting advances in its use, the effects of using this medium upon the practice of auditing must be a matter of concern to the whole of the accountancy profession. What, then, are the difficulties caused and the opportunities created by the application of this medium?

At the outset, it must be stressed that the ability of electronic data processing equipment to handle data on a fully integrated basis leads inevitably to the intermingling of different activities. Whereas the auditor could, in the past, rely on separate functions to be handled separately, this is no longer true.

Any analysis of the effect on the accountant of using magnetic tape must therefore extend far beyond a mere consideration of tape handling.

Unquestionably, the greatest opportunity for fraud and error lies in the creation of source data in readiness for transcription on to magnetic tape. In this field, there is no realistic alternative to good auditing practice. Machine checks and factors of reliability can never replace a soundly designed auditing programme backed by a good system of internal controls. However, the relatively high cost of creating source data, coupled with the desire of computer manufacturers to provide equipment to 'close the loop of mechanization', has resulted in a concentration of effort

Because of decreasing operating costs, magnetic tape systems are increasingly being specified for new installations.

on this problem which should be of practical benefit to the auditor concerned with strengthen-

ing internal control.

Falsification or suppression of information is, for example, becoming more and more dependent on the availability of specialized and costly equipment, which is unlikely to be at the unsupervised disposal of potentially fraudulent personnel. By the same token, less and less original recording is being undertaken by ordinary clerks, thereby reducing markedly the opportunities for error. Cheques are increasingly being prepared by high-speed printers forming part of the electronic data processing installation. Special characters on these printers make the document suitable for direct transcription by character-recognition equipment to magnetic tape and for re-entry from the tape to the computer system. Virtually no intervention by human operators is required at any stage of cheque preparation or checking. Any auditor familiar with, say, I.M.R. 12-F Selfchek fount will concede the difficulty (if not impossibility) of altering the characters while still retaining a readable document. The auditor who finds this system in use may safely re-apportion the weight of auditing effort so that increasing attention is devoted to those areas which are relatively less well protected.

# **Error-correcting Codes**

This built-in interlocking protection can be further reinforced by incorporating an errorcorrecting code within the information on the document itself. The best error-correcting codes cater not only for error-detection but also for full error correction. Some codes are naturally more powerful than others and the auditor will wish to acquaint himself with the power of the particular system in use. An example of facilities available with a good code is given by the Honeywell system of Orthotronic control mentioned earlier. With this system, it is not necessary to revert to an earlier point in the programme or even to have access to the correct information. Mis-read information can be correctly regenerated by analysis of the additional check digits transmitted with the original information. The arithmetical processes involved in the calculation of these errorcorrecting check digits are an integral part of the computer programme and are not directed from outside. While it is not impossible to find out the details of the error-correcting system, the investigation involved is beyond the ability of personnel without special training in this field. Even should the method be detected, physical

To assist the auditor, information stored on magnetic tape can be freely duplicated at low cost compared with other systems.

alteration of the basic information requires a further physical change in the error-correction check digits. Since these error-correction check digits may be some distance from the basic information, the need for such a change renders the task of the prospective defrauder doubly difficult.

The incorporation of an error-correcting code offers a further advantage from the viewpoint of are auditor. Often the use of this code, with its content of redundant information, substantially increases the ability of the optical scanner to accept mis-scanned or defaced information and to regenerate lost or damaged data without interruption or rejection of the document. Clearly, the auditor must confirm for himself the efficiency of the regeneration process if he is to be satisfied about the correctness of the information accepted by the electronic data processing installation. This confirmation can be effected by careful study of the logic of the system and by further testing of results by sampling and statistical analysis. A user of electronic data processing has stated that document rejection rates of between five and 10 per cent commonly accepted by industry in scanning operations has been reduced to 0.2 per cent by using the error-correction process discussed above. This reduction is naturally of considerable benefit both to the auditor and to the systems designer. The error-correction process should, however, be clearly understood and carefully evaluated in relation to a particular application, so that demands on it are not inadvertently pushed beyond practical limits.

# Service to Clients

## CONTRIBUTED

URING the First World War, interest in cost accounting was aroused and this continued to expand very slowly between the two wars and spread into budgetary control and other forms of management accounting. The further impetus to this interest provided during the 1939–45 war has been continued since and has resulted in tremendous strides in the development of new techniques. Accountants both in practice and in industry, and indeed management in general, have become increasingly aware of the science of management and of the advantages to be gained by the use of accountancy services within industry and commerce and from the accountancy practice.

Development along these lines as management consultants is a natural extension of the accountant's profession and it is only the tardiness of practitioners which has enabled other organizations, perhaps less qualified, to establish what they imagine to be a new profession. Surely the client should turn to his own accountant for such advice and the accountant should be equipped to provide it or to advise where it can be obtained? As well as the traditional office and accountancy services, such as budgetary control, cash budgeting, costing (in its many forms), stock control and production control, management accounting covers management problems of a general nature, such as functional organization.

# Providing a Book-keeping Service

One service which the practising accountant could and should be in a position to give is the provision of book-keeping services. It is true that many accountants, in dealing with clients whose records are incomplete, carry out a complete office service in producing accounts from original documents. It is true also that in many cases the accountant starts from an intermediate stage (very often a trial balance) and carries out the rest of the work of producing the accounts. But there is an extension to this service.

For the small and simple business (e.g. a single retail shop) which is under the personal control of the proprietor, no elaborate accounting system is necessary and a simple set of records designed by the accountant or even a standard ruled account book is sufficient and will provide the necessary information from which the accountant

can prepare financial accounts and tax computations and, at the same time, will produce current information to enable the proprietor to assess progress being made.

At the other end of the scale, the large concern can afford to employ specialized staff in all the appropriate functions including one or more qualified and experienced accountants, together with the appropriate clerical staff and the necessary mechanical assistance.

In between these two are the medium-sized concerns who, for too long, have been unable to benefit from the recent great strides in techniques and mechanical book-keeping. These represent a very high proportion of the total number of businesses and although they normally have a clerical organization of some sort, for reasons of capital and labour costs this is all too often quite inadequate or disproportionately expensive.

# Some Advantages

In many such cases, not only does the book-keeping side fail to provide a proper service to help general management to carry out its function, but it very often hinders general management and, in fact, becomes a 'nuisance department'. The client often finds that he is wasting time in the accounting department or elsewhere because of it – time which could be better spent in dealing with sales and technical problems. The practising accountant can well supply machine time and keep these records for his clients.

The more enlightened manager of such a company is already aware of the fact that to be free of the responsibility of the book-keeping department is to his advantage and the practising accountant, having set up the proper organization to deal with the accounting routine, can be supplying a service which is welcomed whole-heartedly.

The advantages of the service include:

- (a) freedom from concern in relation to routine problems
- (b) freedom to concentrate on sales and technical problems
- (c) reduction in overheads by freeing space used for accounts office
- (d) benefits arising from employment of better qualified and/or more experienced staff whose variety of experience is a continuing benefit
- (e) more economic employment of clerical labour (f) advantages of use of machines where appropriate.

The provision of the more expensive equipment such as computers and punched-card installations nay be out of reach of the practising accountant. If this is so he can make use of the bureaux established in most cities. This gives advantages over the client going direct to the bureaux. In he first place the accountant can provide a complete service based on a comprehensive and ntimate understanding of the client's business and his requirements. In the second place, he can be flexible both with regard to timing of operaions and to costs. In the third place he can levise the best method of carrying out a job vithout being tied down to an existing machine et-up. Lastly, the audit programme can be nodified in the light of the arrangements made for he execution of the detailed work on the financial and other records of the client's business.

At the same time, in providing such a service he professional accountant must organize this part of his practice on the proper lines and with the appropriate sense of urgency to ensure that it remains competitive with outside organizations and really gives the client a service which is quick, accurate and economical.

The sort of work which can be included is almost unlimited and has to be decided with the nanagement of the business in each case. The nore common work is likely to be personal and mpersonal ledgers and the work ancilliary hereto (including payment of suppliers' accounts

and impersonal items, analysis, etc.), stock control, production control, wages and other forms of remuneration, etc. An essential part of the service is ensuring that each part of the work is being done in the best possible way.

# Variety of Machines

Choosing the machinery and systems appropriate to the maximum number of clients is, of course, an important matter and one where great advantages can be obtained in cost. Many clients would not be in a position to make full use of a machine and, therefore, its use would be uneconomic, whereas by combining the requirements of several clients, the accountant can have a variety of machines as considered necessary.

Just what machines should be used is something that has to be decided in each case and continually reviewed. Many present-day book-keeping machines are so sophisticated in their application that sometimes sight can be lost of the training necessary. If continued difficulty is found in obtaining highly qualified operators, then the advantage of using a particular machine can be completely cancelled out. However, by keeping the posting procedures as simple as possible consistent with the minimum information required, it is possible to maintain a high standard of accuracy and no great difficulty is encountered if emergency operators are nired.

The Monroe President accounting machine in operation at a small practitioner's office. This machine – of the large capacity full keyboard type – can be programmed to do a variety of routines, including ledger work and wages calculations. The method of changing from one programme to another by virtually dialling a number is an attractive feature because of its simplicity.

# Office Equipment on Show

# SOME EXHIBITS AT THE BUSINESS EFFICIENCY EXHIBITION

The fiftieth National Business Efficiency Exhibition opens next Tuesday at Olympia and continues until October 10th. Many entirely new machines as well as revised and improved models will be on display and while it is impossible to mention them all we call attention on these pages to some of the exhibits. With 164 firms participating, the exhibition will be the biggest yet staged in Britain.

#### Computers and Calculators

HE latest Addo accounting machine, the Class 8000 Model has all the features of the Class 7000 with the added versatility of a typewriter keyboard. This enables narration to be part of the accounting or recording procedure and such applications as the preparation of cheques and traders' credits and the recording of names on payrolls are now possible. Model 4541 is a printing calculator which shows the workings of each calculation printed clearly on the tally-roll. A second register accumulates quotients, products or simple products as required, and the machine includes a constant factor lock for multiplication of several amounts by a constant factor, negative multiplication, discount and mark-up keys, credit balance, non-add and correction key. The newest add-listers are Models 148 and 148E, the latter being electrically operated and having a zero

Addo Ltd, 47/51 Worship Street, London EC2 (Stand 104).

Additions to the range of British Olivetti a accounting machines are the Audi 402St and Aua. 413St, providing fully mechanized accounting for all normal accounting routines and an automatic proof of pick-up. The 413St is designed for superautomatic mechanization of more complex accounting routines. With its dynamic memory and high degree of accessibility it has even greater flexibility than the 402 Model. The RP50, RP60 and RP70 data collectors are on show for the first time also. Their basic features are the capture of data encoded on the Olivetti six-channel square-hole punched paper tape and their flexibility; between them the three models can accommodate all possible data applications.

British Olivetti Ltd, 30 Berkeley Square, London WI (Stand 63).

The Sterling Computronic is an all-electric accounting machine which enables invoices and other business records to be calculated and printed directly in pounds, shillings and pence. CRAM is a unique Card Random Access Memory developed for use with the NCR 315 Computer, its basis being a plastic card 14 in. × 3½ in. on which up to 21,700 alpha-numeric characters can be recorded. The cards are stored in cartridges, each cartridge holding 256 cards, representing a total capacity of over five and a half million characters, and any item can be located, processed by the 315 and up-dated in about one-fifth of a second. The NCR 390 electronic data processing system sorts, summarizes, compares, makes decisions, calculates, accumulates,

The National Sterling Computronic

up-dates balances, modifies its own programme and controls peripheral equipment electronically. The NCR Input Preparation Unit for the first time enables information for computer processing to be listed, punched and verified in one high-speed operation.

National Cash Register Co Ltd, 206/216 Marylebone Road, London NW1 (Stand 110).

The IBM 1401 Data Processing System designed for installation in banks, is basically a card system with 12,000 positions of core storage, 800 cards a minute input, 250 output, and 600 lines a minute printed output. Peripheral equipment includes the IBM 1412 magnetic character reader/sorter, capable of working off-line as a document sorter and on-line as direct input to the computer; an IBM 1011 paper tape reader provides direct input to the system.

IBM United Kingdom Ltd, 101 Wigmore Street, London W1 (Stand 92/98).

The Facit CA2–16 carries out every type of calculation with a minimum of keyboard operations. It can transfer from both the products and quotient registers and on the depression of a single key both transfer and multiplication take place automatically. The quotient register can be used as a store and individual products of the order of  $(a) \times (b) \times (c)$  can be produced, noted and stored and added to or

subtracted from the quotient register without any repeat settings on the keyboard. It can also square any number automatically. The *Bandatronic* electric sterling calculator is an arithmetic unit connected up to six typewriter units each working independently. According to the type of work to be done the arithmetic unit is programmed to multiply quantities in units, dozens or singles at a dozen price, or tons, cwts, quarters at a price per ton, the result being automatically typed out. It calculates discounts of all types. The typewriter units being independent can operate simultaneously on the same or different routines.

Block & Anderson Ltd, Cambridge Grove, Hammersmith, London W6 (Stands 91 and 99).

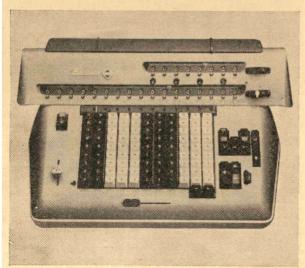

The new electronic range of Adler Accounting Machines consists of the Factura 3 and 300, which are printing calculators. The Factura 3 is based on an Adler electric typewriter for input and output of figure work, combined with a Walther mechanical calculator contained in the pedestal of the desk unit in which the machine stands it enables decimal calculation of invoices and extensions covering multiplication, addition and subtraction. The 300 works on the electronic principle for addition, subtraction and multiplication.

T. S. (Office Equipment) Ltd, 140/148 Borough High Street, London SE1 (Stand 147).

A Madas 20BTZG five-register automatic calculating machine with storage register is shown by Muldivo Calculating Machine Co Ltd, equipped with some new features, including automatic round-off. Automatic squaring is now standard on all the automatic models shown and the squaring operation has been simplified. The company is celebrating its Jubilee Year and is exhibiting some of the machines which it has marketed since its inception as well as the latest productions.

Muldivo Calculating Machine Co Ltd, Dorset House, Salisbury Square, London EC4 (Stand 2).

A desk calculator, the *Badenia Var*, with an electric magnetic transfer is an entirely new development enabling figures to be transferred at the touch of a

Badenia Var desk calculator

button from any position in the carriage instantaneously to the right position on the keyboard, or if desired to the memory register also. The number of digits to be transferred can be pre-selected. This system is combined with an electric memory key which allows figures to be recalled to the keyboard from the memory register, the product register, or the quotient or multiplier register repeatedly, without re-setting.

Badenia Calculators Ltd, Lion House, Red Lion Street, London WC1 (Stand 46).

The 6010 Electronic Desk Computer, designed for high-speed computation as well as descriptive alphabetical information, can make over 750 additions in one second – 45,000 a minute. A versatile machine, it will accept input from punched tape, edge-punched cards, tabulating cards, auxiliary input units or the keyboard of the Friden Flexowriter, which is an integral part of the computer. It is compact, will work unattended and can be used for a wide range of accounting applications. The Collectadata 30 enables data to be collected and transmitted from the factory shop floor to a central data processing unit. It permits both badge and punched-card reading and offers foolproof facilities for recording employee time and attendance.

Friden Ltd, 93 Blackfriars Road, London SEI (Stands 78 and 148).

(Stands 70 and 140)

In addition to their own products, Ultra Electronics Ltd are exhibiting the Eichner Tronictyper and Tronictyper Programmat and a new Notatronic invoicing machine made by the Eichner Organization of Frankfurt-am-Main. Their own exhibits include an electric Invoice Writer, which is a configuration of a typewriter with an electronic arithmetic unit which works out the extensions and aggregations and automatically types them. The Datawriter is an automatic typewriter unit with paper-tape reader and punch, operated by feeding tape through the reader or in reverse, and also provides data which can be fed into a computer.

Ultra Electronics Ltd, Western Avenue, London

W3 (Stand 133).

A '550' Plan has been devised by the Monroe Calculating Machine Company particularly for businesses employing manual book-keeping methods or having orthodox book-keeping machines due for replacement. It includes a Monroe 166B200 Book-keeping Machine ready programmed for customers' sales ledger, purchase ledger and payroll, plus a machine stand with two side extensions, a selected posture chair for the operator, free stationery for many months' needs, one or two ledger trays and a set of index guide cards.

Monroe Calculating Machine Co Ltd, Bush House, Aldwych, London WC2 (Stand 108).

Two 'second generation' electronic computers, the I.C.T. 1301 and 1500 are fast, powerful and versatile data processing systems. The 1500 is being shown with magnetic and perforated paper tape input and output. Among the punched-card machines exhibited are the 1039, a new eight-channel tape to card converter and a new key-punch with a slim-line alphabetical keyboard.

International Computers and Tabulators Ltd, Gloucester House, 149 Park Lane, London W1 (Stand 21/57).

jamming. Small, portable and lightweight, it is manufactured by Tech. Panel Co Inc.

Punched Card Accessories Ltd, 58 Victoria Street, Westminster, London SWI (Stand 169).

The Wade International Add-lister is a simple hand or electrically operated machine. The simplified keyboard makes all types of calculation easy and the paper roll is standard size and easily loaded. It is capable of entering and totalling £99,999,999 195 11d and the positive balance is printed in black and the credit in red.

B. M. J. Beaucourt Ltd, 27 Chancery Lane, London WC2 (Stand 65).

ANITA is a fully electronic desk adding calculator which silently produces figures at electronic speed and is the only pre-set calculator with direct addition and subtraction. Answer figures are large and illuminated. It has automatic decimal pointing.

Sumlock Comptometer Ltd, 39 St James's Street, London SWI (Stand 103).

The centre of the machine section of the Remington Rand stand is devoted to the *Univac 1004* punched card data processing system. A scale model and a film of its operation are being shown.

Remington Rand Ltd, Remington House, 65 Holborn Viaduct, London EC1 (Stand 109).

# Continuous Stationery

COMBINING the operations of decollating and stub-trimming printed sets of continuous forms, the Decotrim has a stub-trimmer as an integral part of the decollator with a built-in variable speed motor, and will trim stubs of  $\frac{3}{8}$  in. to  $\frac{7}{6}$  in. widths from forms of up to 12 in. deep and 18 in. wide at up to 300 ft. per minute. The decollating unit separates forms and carbons at up to the same speed, refolding forms into tidy packs ready for further use and furling waste carbon paper on to a split roller. The Sten-C-Label will cut address stencils at the same time as address panels of docket sets are typed or printed. It is easily affixed to all forms of docket sets before processing and then detached and used with a special squeeze-feed applicator.

Lamson Paragon Ltd, Paragon Works, London E16 (Stand 88).

A new economic system of continuous interfold stationery is provided for all standard typewriters by the *Repeat-O-Rite*. The stationery is fed into the machine in the usual way, the typed information is easily pulled through by using the new style *Klip-Bar*, plus a carbon pocket that will give at least fifty clear copies without touching or changing carbons, and when the form is torn off the next is already in position interleaved with carbon. The *Rocker-Box* can be attached to the carriage of a typewriter and holds the stationery in constant relation to the typing position, however fast the carriage movement.

James Wilkes Ltd, Bilston, Staffs (Stand 68).

A hand-operated Davis Burster/Deleaver enables forms to be deleaved and burst in a single operation, eliminates carbon handling, adjusts for any sized form at the touch of a finger, and takes stacks up to 10 in. thick at one loading. If forms are fed in crooked they are automatically straightened; crumpled or wrinkled forms are separated and the machine carries on without

# Communication Systems

TWO models of the Bulmerette dictating machine are available, a portable and a mains. The portable is a battery operated tape-machine, the tapes and spools being interchangeable with most of the popular dictating machines. It provides full remote control from microphone, eighty-eight minutes recording time, operation direct from car battery, built-in preamplifier, and volume control, and weighs only  $6\frac{3}{4}$  lbs. complete. The mains model has the same features but can be used from the mains. It can be fitted with two rechargeable power units which are automatically charged when the machine is in use. It incorporates a fast forward control to enable the typist to get into the tape quickly when the first letter to be typed is not the first to have been recorded.

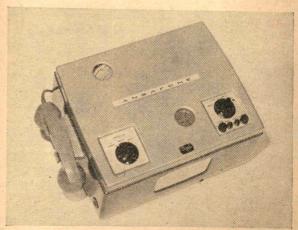

Bulmers Business Machines Ltd, Empire House, St Martin's-le-Grand, London EC1 (Stand 165).

The *Travel-Master* is a small lightweight portable recorder for on the spot dictation away from the office. It takes four hours' recording and the batteries are charged overnight by a trickle charger. It records on the standard Dictabelt medium so that standard Time-Master transcribing machines can be used. The *Time-Master Model TA* 6 is a new dictating machine for general office use providing permanent dictation that cannot be erased or changed, full visibility for quick place finding; easy mailing, filing and handling. The *TBJ6 Transcriber* is a companion model.

Dictaphone Co Ltd, 17/19 Stratford Place, London W1 (Stand 151).

The *Ansafone* answering and recording machine can be used as a long distance dictating machine from any telephone at any time, making possible the exchange of written memos with the speed of the telephone and accuracy of the written word.

Ansafone Ltd, Camberley, Surrey (Stand 34).

Ansafone telephone answering and recording machine.

The rols dictating machine uses a new recording medium in the form of a broad roll of magnetic film, providing eight and a half hours dictating time, on which the recording is made horizontally and vertically. Controls are on the hand microphone, and the recording head automatically reverses as it reaches each side of the film. When a piece of dictation is complete the portion of film is guillotined by a simple mechanism and a filing margin automatically provided, so it is immediately available for the typist. The machine is easily transportable and has a number of accessories which extend its usefulness.

Block & Anderson Ltd, Banda House, Cambridge Grove, London W6 (Stands 91 and 99).

The Edas Director is a loud-speaking telephone instrument that can be connected to an automatic telephone exchange having named key-calling for twenty extensions and touch button dialling for other services and extensions. The loudspeaker can be controlled and is fitted with an amplifier microtelephone for secret conversations. Edas Executive is a desk pad with thirty rectangular touch button controls for connecting to any automatic desk telephone. It can be arranged for named button calling for thirty extensions, or alternatively for twenty extensions and ten touch-buttons with key sending figures 1-o. A completely automatic telephone ordering system, the Ordermatic, enables one person to handle three telephones, thus overcoming the problem of staffing an order office at peak times.

Shipton Automation (Sales) Ltd, Africa House, Kingsway, London WC2 (Stand 102).

A new centralized dictating system – Aga Type 2 Teledictation – can be operated through a private automatic exchange (PAX), a private automatic branch exchange (PABX) or a separately wired circuit, with basically the same equipment. It can take from one to six machines and occupies very little floor space. The dictator can start or stop a machine, play any part of his dictation back, mark corrections or insertions on the index strip on the machine and call the typing supervisor. The Agavox Model 2 Dictating Machine is completely controlled from the microphone. Though only 3 in. high it incorporates a number of protective devices to prevent mis-operation. It uses a twelve-minute flexible plastic disc with a minimum life of 20,000 recordings.

Aga Dictating Machine Co Ltd, 146 New Cavendish Street, London W1 (Stand 119).

The Centrum T-3 low-cost three-point transistor intercom is unusual because the master station has been reduced to the same size as the small sub-stations. It measures only 7 in.  $\times$  5 in.  $\times$  3 in. but gives excellent voice-production, and very fast intercommunication. It is particularly useful for professional offices and small businesses.

Centrum Electronics Ltd, Terminal House, Grosvenor Gardens, London SW1 (Stand 122).

### Addressograph and Data Recorder

A MACHINE combining the normal Addressograph transcribing methods with mechanical punched card accounting functions is the *Class 9300* Addressograph. In a single operation constant repetitive

The New Aga Type 2 Teledictation Unit.

data are reproduce-punched into eighty-column tabulating cards, additional common information is gangpunched, and each card is clearly imprinted with as many as ten forty-character lines of pre-verified parrative interpretation as well as ancillary legend. Up to 1,500 written lines can be accurately transcribed and up to 6,000 card columns of punched numeric data reproduced every minute. The 12-62 Data Recorder should be of great assistance in the collection of small weekly hire-purchase instalments. All relevant details will be embossed on a plastic strip fixed in the cover of each customer's pay-book and the retailer has only to place this strip in the Data-Recorder and take an impression on to a three-part carbon receipt, which provides the customer's receipt, retailer's record and advice to the finance company.

Addressograph-Multigraph Ltd, Maylands Avenue, Hemel Hempstead, Herts (Stand 62).

# Cheque Protectors and Signers

NEW range of cheque protectors and signers offer security against forgery, and the machines are available in electrical or manually operated models. An adjustable gauge provides positive registration for all sizes of cheques and dividend warrants in single or continuous form, and cheques can be written to the value of £99,999 198 11d. Live indelible ink shreds the amount to be written in clear, unalterable figures. The cheque signers provide security features — a tamperproof counter and three locks, an overload safety locking device controlled by a micromatic setting for exact cheque thickness, a sealed-in, non-reset counting device which counts only when each cheque is printed with the signature plate in place.

Acral Ltd, Sentinel House, Southampton Row,

London WC1 (Stand 9).

# **Duplicating and Printing**

THE new Gestetner System-matic Offset machine is designed for the complete automation of off-set systems. A complete printing cycle may be programmed on the control panel, where controls in logical sequence direct all operations automatically and offer a preselected option of blanket cleaning and drying at the start of run, end of run, between runs or deletion from cycle altogether. Two-machine versatility conversion from automatic to manual operation can be achieved at the touch of a switch.

Gestetner Duplicators (B.S.O.) Ltd, Gestetner House, 210 Euston Road, London NW1 (Stand 23/36).

Among the new OMAL productions are the Copyrex R5, a hand operated spirit duplicator with an auto-tank feed to give clean handling and operation. Photocopiers Models 33 and 34 have auto-sac chemical filling and produce copies within ten seconds. The Omalith Litho-plate maker is designed for quick production of a litho plate from an original by photocopy process and deals with originals up to 13 in. × 21 in. The 490 DF (double foolscap) gives quality printing results yet is simple enough to be operated by a junior.

Office Machinery Ltd, Omal House, 169 Tottenham

Court Road, London W1 (Stand 67).

The Verifax Witness A 3 copier makes copies as large as 14 in. × 18 in. and is therefore particularly useful for offices handling both standard size and larger documents. The Kodak Ektalith method is a new way of producing simply and quickly, and at low cost, paper masters from which thousands of copies can be made. The Recordak Micro-film Camera, Model A.H.5, will copy originals up to 20 in. × 30 in. on to 100 ft rolls of 35 mm film, and the Recorder Reader Printer makes a print of any document on 16 mm microfilm with push button ease.

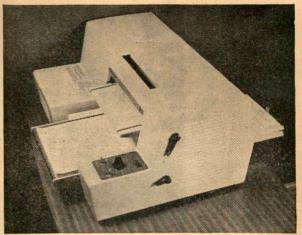

Kodak Ltd, 246 High Holborn, London WC1 (Stand 18).

A spirit master capable of producing 300 copies from any reasonable original is the *Orlid Fotospirit*. It gives complete accuracy of registration between original and new master, and is clean and simple to operate. Electronic control of exposure prevents waste of materials. Two new spirit duplicators are capable of laminating documents, route cards, etc., with a dirt and tear resistant film. The *D230 MTA* feeds airmail paper at 125 copies per minute.

Bulmers Business Machines, Empire House, St Martin's-le-Grand, London EC1 (Stand 165).

The all-dry Thermo-fax process is now extended by a companion unit to produce copies from originals in colour, whether single sheets, books or magazines, and from hand-written documents in any ink. No chemicals are required and the original document, placed in *Model 48* with a sheet of film, takes about twenty seconds exposure. The *Encore-Automatic* is an all-electric desk-top copying machine which produces twenty-five copies a minute. It is only necessary to insert the original, set a dial for the number of copies, and press a button

Minnesota Mining and Manufacturing Co Ltd, 3M House, Wigmore Street, London W1 (Stand 28).

Thermo-fax Encore-Automatic Copying Machine.

The Multimatic Copier, which is available in three models, eliminates the mixing and handling of fluids and can be ready for use in less than five seconds. It gives black on white copies of written, typed, printed or drawn in any colour ink originals, and exposure time is only two seconds. The Bullseye is a baby portable machine that fits into a briefcase and is automatic in action. There is no tank and no liquid but sufficient fluid for instant operation is released by pressing vacuum sealed capsules. The Anson B-Line range of dyeline copiers is new to the British market. Each machine has its own unique features and Models 280 and 275 are designed specifically to reduce costs of large-scale documentary systems. Models A4000 and A3000 and A1000 B-Line Duet are all desk-top machines, the last named being two machines in one, the bottom section housing dual exposure lamps, the middle section the developing unit and the top section the photocopy unit.

George Anson & Co Ltd, Solway House, Southwark

Street, London SEI (Stand 31).

The Azoflex Model 135 is a combined printing and developing apparatus designed especially for medium-sized businesses and for copying engineering drawings. The original is fed into the machine with Azoflex diazo paper, after exposure the original and exposed paper are automatically separated and the latter fed into the developing section which is synchronized with the printer. After development the copies are dried and delivered on to a receiving tray at either end of the machine as required. The machine can maintain a high output with the minimum of effort.

Ilford Ltd, Ilford House, 133/135 Oxford Street, London W1 (Stand 155).

# Duplicating

DEVELOPMENTS in electrophotographic automatic copying include the Ozafax 20, a table-top unit which produces up to twenty copies a minute, either as single copies from a series of originals or multiple copies from one original, from black and white or coloured originals. The Ozafax 19 is a fast

automatic enlarger making 18 in. × 24 in. or 12 in. × 18 in. enlargements from 35 mm unperforated microfilm mounted on aperture cards. Copies are produced at a speed of six per minute automatically guillotined to standard size and stacked. Programming is done by plain punched leader cards which the machine reads to indicate how many copies are required. A table-top copier working on photographic principles is the Ozajet, incorporating both exposure section and continuous processor. An operating keyboard of two dials and five keys enables copies to be made from any original at the rate of ten a minute.

Özalid Co Ltd, Langston Road, Loughton, Essex (Stand 60).

A display of individual but complementary Pitney-Bowes machines brought together to form a single integrated flowline of operations, ending with the sealing and franking of mail, shows how economics can be effected in the post room. Among other exhibits are two hand-printers: *Model 150*, which is about the size of a desk telephone, is specially useful for repetitive work, and *Model 6* has been designed for the small user. *Model 90* high-speed embossing machine is equipped with a finger-tip controlled electro-magnetic embossing mechanism. It has the complete alphabet in capital and small letters, two sets of numbers and a full range of punctuations and standard abbreviations.

Pitney-Bowes Ltd, 175/176 Tottenham Court Road, London W1 (Stand 107).

# **Typewriters**

TYPEWRITER of advanced design embodying many technical improvements is the *Imperial 70*, among its special features being a removable carriage and platen and the provision of five carriage lengths. The carriage can be lifted out with half-finished workstill in it and be replaced by a different carriage length for a more urgent job. An interchangeable platen roller enables the correct grade of hardness to be used, and a new key lever gives a fast and sensitive touch. The keyboard has forty-two characters and many other symbols and characters, e.g. medical, mathematical, literary, are available.

Imperial Typewriter Co Ltd, East Park Road, Leicester (Stand 144).

The Olivetti 84 is an all-electric typewriter with several features giving the possibility of a 20 per cent higher typing output. It includes repeat forward and back spacing, repeat typing on eight symbols, interchangeable carriages, the choice between a single-bar tabulator and an eight-key sterling tabulator, the option of carbon ribbon attachment and fully integrated carriage controls.

British Olivetti Ltd, 30 Berkeley Square, London W1 (Stand 63).

### Furniture and Safes

THE latest Mobinet Ledger Trolley has been modernized in style. Both upper and lower parts are enclosed and can be secured by one lock. Two sizes are available with internal widths of 24 in. and 30 in. and both can be fitted with built-in ledger tray fitments, if required. A Postal Distribution Trolley accommodates about fifty foolscap files, has an overall height of 39 in.,

length  $3\frac{1}{2}$  in., and width 18 in. with a full-length slide tray. A trolley for the collection and distribution of parcels has two compartments 11 in. high  $\times$  36 in. long  $\times$  18 in. deep, with mesh surrounds on three sides and open on the 36 in. side. It also has an upper container.

Mobinet Co Ltd, Heneage Street, Brick Lane, London Er (Stand 69).

Special anti-blowpipe and drill resisting armour cast in one piece and an improved automatic device giving protection against explosives are features of the new Duplextra Safes. The thickness of the door has been increased and the locking mechanisms and boltwork revised. They are available in two qualities and five sizes with various arrangements of key and/or keyless locks. The Card-a-Matic Filing Machine is fitted with twelve platforms each with six trays of eighty-column punched cards, accommodating a total of about 120,000 cards. The number of platforms may be varied and the trays made to suit various widths. The machine is electrically operated and takes the shortest route to any platform.

Chatwood-Milner Ltd, 58 Holborn Viaduct, London EC1 (Stand 123).

The latest range of *Flushline Chairs* are solidly built from tubular steel, lightweight and easy to carry. They have moulded latex cushioning, self-positioning back rests and simple height adjusters. They are made in nine models and six colours.

/ Roneo Ltd, 17 Southampton Row, London WCr (Stand 59).

# **Binders and Files**

THE Hatton Binder is primarily a transfer binder to take sheets 11 in.  $\times$  8½ in. punched at 8 cm. The grained and varnished brown board covers are fitted with a positive locking mechanism which can be fitted also to larger covers. The 6 in. long posts have a diameter of  $\frac{3}{10}$  in. To meet the demand for a suspension filing folder fitted with a clip to hold unpunched papers the Tri-clip will fit on to standard foolscap, quarto and double capacity foolscap folders and will grip one hundred sheets of paper as easily as one. The Vetro personal File has been redesigned with a drop front giving easy access to folders, and a flat-lying handle which improves the appearance of the file.

Percy Jones (Twinlock) Ltd, Chansitor House, Chancery Lane, London WC2 (Stand 105).

The Multicard vertical, visible card-recording system covers all requirements from simple indexing to complex records. The cards are arranged in rows across the width of the unit, with up to fifty titles visible at a glance. When a card is removed a V-shaped opening remains so that it can be easily replaced, and accuracy is ensured by an automatic our signal. The system is equally suitable for hand or machine posting and it can be expanded or contracted as required. A single M20 unit will house almost four thousand cards but occupies less than 3 sq. ft of floor area.

Roneo Ltd, 17 Southampton Row, London WC1 (Stand 59).

# Weekly Notes

### COLLECTING THE RATES

EVEN if the uncertainty of individual ratepayers regarding their prospective rate charge after April 1st next still remains, there is no doubt that for the ratepayers of England and Wales as a whole, the aggregate rate payment will rise. In a plain-spoken address to the 1962 conference of the Rating and Valuation Association, Mr J. Eyles, F.S.A.A., F.I.M.T.A., Borough Treasurer of Preston, reminded his audience that between 1951-60 local authority debt had risen by 150 per cent and that the annual rate collection had more than doubled. The expansion of local authority activities and not least rising costs and salaries would ensure the continuance of this trend.

Despite this, the speaker showed that in ten out of twelve randomly selected boroughs the weekly rate bill for 70 per cent of all households was less than 15s per week. Bearing in mind the services and benefits provided for this meagre outlay, the ratepayer had small cause for complaint. For a small minority, such as some old-age pensioners, Mr Eyles, conceded that there might be hardship, but this was for the Government to alleviate, not the ratepayer. The speaker's undoubtedly strong case would have been even more convincing if the majority of citizens did not feel that not all chief officers in local authorities were as economy-minded as their financial colleagues, while for others it seems that local councils all too often consider expenditure merely in terms of electoral advantage.

'In an age when any sum over £ 10 is regarded as a hire-purchase matter . . . it is quite unreasonable for treasurers to expect payment in one or at most two instalments,' declared Mr Eyles, who is anxious to provide facilities for some system of P.A.Y.E. collection and advocates a scheme whereby large local employers might co-operate in deducting a weekly sum for rates and paying the sum over to the authority at halfyearly intervals. For the employer who is short of working capital, Mr Eyles shows that such a scheme could save the former a substantial interest payment on alternative borrowings. His proposal also has the merit that it would not need Parliamentary sanction. Whatever one's views on it, however, the fact remains that unless local authorities are to be burdened by heavy rate collection costs and conscientious ratepayers burdened by the written-off arrears of those less conscientious, some scheme on the lines proposed by Mr Eyles will be necessary before long.

# PRIME MINISTERS ON E.C.M.

THE communiqué issued last week at the end of the Commonwealth Conference of Prime Ministers and dealing mainly with British entry into the European Common Market probably represents as large an achievement for Mr Macmillan as he ever expected to bring off. Getting there, however, may have been a more arduous exercise then he bargained for. The British point of view was assisted by the fact that the Prime Ministers were more outspokenly critical in public than they were in private and also because none of them offered a coherent, carefully prepared alternative.

Two main objectives were reached from the British point of view. First, no new specific commitments for the next round of negotiations at Brussels have had to be accepted from the rest of the Commonwealth. Second, no second Prime Ministers' conference to approve the final terms has been agreed

upon.

Mr Diefenbaker, Prime Minister of Canada (and one of the most adamant critics of British entry into E.C.M.), said after the conference that future meetings should be held 'if that seems satisfactory'. This does not amount, however, to insistence that another formal conference is desirable. None of the Commonwealth Prime Ministers have been enthusiastic about Britain's application but in the end they have in varying degrees accepted the idea that this country needs the E.C.M. for its own economic progress and that therefore the rest of the Commonwealth must become used to the idea.

## ROYAL COMMISSION ON THE PRESS

THE Report of the Royal Commission on the Press¹ under the chairmanship of Lord Shawcross (and with Professor Robert Browning, M.A., Ll.B., C.A., Professor of Accountancy at Glasgow University, as one of its four members) was published last week. Its findings are critical both on the efficiency of the industry as a whole and on the question of concentration of control.

Inefficiency in the industry is underlined, particularly on various forms of feather bedding, and the report considers that the lack of foreign competition is a major cause of swollen costs. It does not consider that outside intervention will be of any use in increasing efficiency, however. It views the Press in this context as just one more industry where progress and eventual success must depend on good management and good labour relations.

The Commission, it will be recalled, came into existence at the time of public disquiet over the fight to acquire Odhams and over the closure of the *News Chronicle*. It sees the death of newspapers as inevitable if their enterprise and management is not of a sufficient level to secure survival. All newspapers are to some

<sup>&</sup>lt;sup>1</sup> Royal Commission on the Press 1961-62 Report. H.M.S.O. Price 13s.

extent caught up in the vicious circle of keeping prices down to secure circulation which sells advertising space on which they depend in varying degree, and there is no sign of a formula to change this state of affairs.

On future amalgamations and on ownership of both newspapers and television interests they are much more sure of what they think should happen. They favour legislation to reform and strengthen the Press Council and they would prohibit newspapers from having a controlling interest (but not an investment interest) in television.

### REPORT OF THE PUBLIC TRUSTEE

THE fifty-fourth annual report of the Office of the L Public Trustee for the twelve months ended March 31st, 1962, shows a deficit of £23,344. Expenses amounted to £685,181, an increase of £45,062 over the finally ascertained expenses (£640,119) for the previous year. Receipts increased by £43,952 to £661,837.

During the year, 461 new cases of a total value of £7,108,441 were accepted, being thirteen more in number and £639,580 less in value than those accepted during the previous year. The average value of trusteeships was £22,845 compared with £16,895, and of executorships £10,934 compared with £16,869. The average acceptance fee dropped from Lioi to £88 and the percentage of cases under £5,000 in value was 51.5 per cent as against 55 per cent. The number of cases completely distributed during the year was 882 compared with 736 for the preceding year with an average value of £13,232 compared with £12,078. The total value of estates completely or partially distributed was £15,289,514, compared with  $f_{12,026,032}$ .

# This is My Life

by An Industrious Accountant

CHAPTER 139

E'VE just had a luncheon party to celebrate the arrival of our new wing at its penultimate stage - the completion of the roofing programme. Our directors came, of course, some with wives, also the architect and the builders and some sub-contractors who did the steelwork, wiring and so on. At the tail-end of the list was our young cost accountant, who had done some really good studies on the spreading of the overheads over the various floors; he's still rather unsophisticated so I felt that attendance at the occasion would be good for him.

There was naturally some hilarity at the cocktail stage. One of the sub-contractors, a big, somewhat raucous-voiced, hard-bitten fellow, had started his celebrations early; he was drinking whisky like water and barking over-loud greetings to all and sundry. He was particularly effusive to our deputychairman, who had handled the building contracts, and even that tough character was showing signs of

embarrassment.

Always the helpful type, I detached Raucous tactfully on the excuse of filling his glass again. He put his arm heavily round my shoulder and explained what a good chap the deputy-chairman was, 'Always been a real good pal to us, he has,' he rumbled. 'Gone out of his way to help us.' He gulped hugely at his glass and slopped some of his drink on my coat, much to my annoyance. Being helpful doesn't always pay off. I dried the liquid with my handkerchief, observing

him with some distaste. He noticed my expression and promptly reciprocated.

'Not like some of you so-and-so's, always finding fault with our accounts,' he sneered. 'He doesn't fuss over trifles, he's a good friend to us. Yes, and we're good friends to him, too; we know which side our bread's buttered; we've treated him so-and-so well.' He chuckled with a quick change of mood. 'We know who hands out the contracts, we know how to butter his bread, too.'

He went on tauntingly about accountants not knowing how to look after themselves, poor mugs, with an unmistakable innuendo of directorial bribery. I realized that Costs was listening with startled eyes and decided to stop the rot quickly. Our deputy-chairman's reputation must be protected.

You've talked enough to justify a slander action. Moreover, you're lying,' I said curtly. Costs took a deep breath; his faith in human nature was restored with a surge of relief. He cocked his chin in fiery style. 'Shall I take over, sir?' he asked. Raucous suddenly realized that he'd gone too far; he pulled himself together with an obvious effort, brows lowering and chin trembling. 'You fools can't take a joke,' he muttered venomously. 'I said nothing out of line.' He turned away and was gone.

I nodded dismissal to Costs; but esprit de corps can be expensive; Raucous has good friends at Court as I realized when I overheard the deputy-chairman's wife accosting the sub-contractor later. 'Such a lovely present, Wilson, but you really shouldn't, you know,' she said. 'We'll thank you properly later this evening.'

The unemotional deadpan technique is safer and more prudent, of course, when dealing with hostility, but at heart I prefer Costs' loyal reaction as being more appropriate for accountants.

# Finance and Commerce

# Centenary

THE 1962 accounts of A. F. Stoddard & Co Ltd, of Elderslie, Renfrewshire (the subject of this week's reprint), mark the centenary of this Axminster and Wilton carpet-making business – 'a very special occasion'. Employees have received a gift of Premium Bonds based on length of service. Shareholders have a 2½ per cent Centenary Bonus 'despite the drop in profits', and are reminded that even on the reduced earnings, the increased distribution is still rather more than twice covered.

So far as sales were concerned, it was a peak year which produced 'just over £7½ million'. Costs were the great problem, rising faster than sales, and 'the battle for the foreseeable future is likely to be one of keeping costs down no less than keeping sales up. Unfortunately, in the year to date, turnover has not been maintained, though costs have so far been held':

Overseas conditions are causing concern. Canada has put up its protective duty from a net 22½ per cent to 37½ per cent, which 'must further adversely affect sales of carpets to Canada' although the Canadian subsidiary is still expected to provide a modest surplus of about 5 per cent on the sum invested. America has raised the duty on Wilton carpets from 21 per cent to 40 per cent 'to our great surprise, and quite contrary to what we understood to be American official policy'. And there is no easement in exporting to Australia, New Zealand or South Africa. But, all in all, 'we should, unless some marked change in fashion occurs, be able to look forward to fairly steady though not necessarily very profitable trade'.

# Turnover

Sir Robert A. Maclean, the chairman of Stoddard, is worth quoting in his reference to the publication this time of a sales figure. Having given the 'just over £7½ million' figure, he continues: 'I would here make the point that it is not intended to disclose in all future statements the actual turnover for the year under review, as your directors consider that it would not be in the best interests of the company to do so. It is realized that this figure is of interest to shareholders and its occasional disclosure seems appropriate as an indication of long term trend.'

One can understand the reasons that presumably lie behind the decision but, nevertheless, it is regrettable, because it runs against the tide of public opinion. Apparently, publication of turnover will depend on how long it takes to discern a long term trend – especially if it is downward. It would be very

human to delay publication for just another year in the hope that the turn will come, and if, as and when it does come, to wait for just another year to see if the new direction is maintained.

This sort of information loses its value unless it is provided regularly.

### **Statistics**

Omitted from the Stoddard reprint is the company's 'Group Statistics for the years 1953–1962'; space hardly permits. But the layout deserves a mention. The first half gives profits and distribution; the second half gives a short summary of capital employed and how it is represented by ordinary capital and reserves, with total, followed by the preference, minority holders, reserve future taxation, and debenture.

There seems to be a trend developing. Profit for year before taxation, which can be seen in the reprint as £431,829 to compare with £630,115 in 1961, and in the group statistics to go back to a peak of £788,450 in 1960. The decline puts quite a new complexion on the earnings percentage on the ordinary, which has come down from 71.4 per cent (distribution 12½ per cent) in 1960 to 54.8 per cent (distribution 12½ per cent) in 1961 to 32.6 per cent (distribution 15 per cent) in 1962.

# No Arithmetic

SHAREHOLDERS in Friary Meux Ltd, the brewers, are asked to note the 'new look' given to the balance sheet. 'The Board feel that this form of presentation which is common practice in many companies, will commend itself to you. Net assets are shown without the necessity for arithmetic as in the past.'

The new form runs down on the left from fixed assets to net assets before deducting loan capital, and on the right shows how the net assets total of £10,580,867 is represented by future taxation, loan capital, share capital and reserves and surplus. In reality, it is the standard balance sheet form with liabilities and assets in reversed positions and with current liabilities and provisions shown as a deduction from current assets.

But 'without the necessity for arithmetic as in the past'. Which takes this column back quite a long way to where it 'came in' with the urge that balance sheets could so easily dispense with need for arithmetic if only the items and figures were set out in a rational manner.

Long campaigning — 'long', because it is extraordinary what conservatism had to be overcome — has produced the present-day form of accounts. In those early days — incredible as it may seem to the present younger generation of accountants — capital subscribed and undistributed profits (before the year's appropriations) were separated by all the other items on the liabilities side. And the balance sheet meant nothing until the arithmetic was done.

# A. F. STODDARD AND COMPANY LIMITED AND SUBSIDIARY COMPANIES Consolidated Balance Sheet as at 31st May 1962

### A. F. STODDARD AND COMPANY LIMITED

# **NOTES ON THE ACCOUNTS**

These notes form part of the Consolidated Accounts of the Group and are given to conform with the requirements of the Companies Act, 1948

1. Commitments for Capital Expenditure not provided for in these accounts are

A. F. Stoddard & Co. Ltd. Subsidiary Companies

£8,777 (1961, £62,000) £31,638 (1961, £45,100)

- The financial year of the Canadian Subsidiary Company ends on 31st March and for administrative convenience it is proposed to make no change in this date.
- Canadian currency has been converted into Sterling at the rate of \$3.061 to £1 Sterling.
- Contingent liabilities in respect of Bills discounted are as follows:-A. F. Stoddard & Co. Ltd. Subsidiary Companies £27,032 (1961, £12,794) £634 (1961, nil)
- The aggregate Emoluments of the Directors of A. F. Stoddard & Co. Ltd, amounted to £59,042 (£69,716), being Directors' Fees £900 (£816), other Emoluments including Pension Fund Contributions £55,395 (£66,153) and Pensions of Past Directors £2,747 (£2,747).
- The sum of £12,000 has been transferred from Provision not now required towards the cost of the history published to mark the Centenary of the Firm.

# CITY NOTES

THE now familiar pattern of a rampant giltedged market and a docile and drifting market in ordinary shares has continued this week. Attention concentrated on the gilt-edged rise has tended to obscure the fact that the equity markets flatly refuse to have anything to do with discounting the presumed economic re-expansion which the Chancellor is expected to attempt to induce.

Normally at this stage of the proceedings after the lapse of twelve months following a crisis Bank rate and attendant restrictions, the equity market is thinking optimistically in terms of new growth; but not now. The only bright spot in equities has been the performance of new issues. Heavy oversubscription of new share offers has been followed by impressive premiums in early dealings.

This is a decided bull point for the New Issue Unit Trust whose offer of two million units at 5s has just closed. The offer follows the success of the New Issue Permanent Investment Company, and like that company, the Unit Trust will specialize in a portfolio of new shares through offers, placings, rights issues and the like. The new trust usefully fills a gap in the specialist unit trust ranks.

# Reviews

# Costing and Efficiency in Hospitals

by Charles Montacute, LL.B., D.P.A.(LOND.), F.I.M.T.A., F.H.A. (Published for the Nuffield Provincial Hospitals Trust by the Oxford University Press, London. 25s net.)

Seldom is a new book on a difficult and complex subject as stimulating, challenging, and as readable as this one. It is a timely attempt to evaluate the value of costing in the hospital service and to consider what changes are necessary to develop the present system, introduced by the Ministry of Health in April 1957, to the end that it may function more effectively in the attainment of greater efficiency. It shows a welcome awareness of the defects of the present system both as to its scope but more particularly to the manner in which it is operated and its results used, and the author sets out his conclusions and opinions - based on 144 replies to a questionnaire and visits to sixty-four hospital authorities and twenty-two official bodies and professional associations - with great clarity.

Mr Montacute complains that the value of the present system is lessened because it is regarded more as a financial exercise than as a constructive aid to managerial efficiency. To be effective, costing cannot fail to devote a short chapter, perhaps twenty pages be regarded as a thing apart; as a technique merely to provide masses of statistics. It is an integral part of management and must be accepted as such. On the controversial subject of cost units, he advocates more emphasis being placed on 'cost per case' as against 'cost per in-patient week'. Both these units, of course, have their advantages and disadvantages for the purpose of inter-hospital comparisons.

A topic which will certainly divide chief financial officers into two camps is that of oncost or indirect expenditure. Mr Montacute is an advocate of nonreallocation of such cost. Further, he proposes the abandonment of the terms 'direct expenditure' and 'indirect expenditure' and the substitution therefor of 'treatment expenses' and 'non-treatment expenses'. It will be appreciated that the change suggested is, however, not merely a substitution of terms.

The author rightly draws attention to the relationship which should exist between costing and work study. Claims by advocates of the latter that with the development of this aid to greater efficiency the necessity for costing will disappear, show a lack of appreciation of the objectives of these two techniques. They are, in fact, complementary and the development of the one automatically leads to the development and greater potentiality of the other. Handicaps to costing in the hospital service are the absence of yardsticks by which to measure operating efficiency, and the lack of a means of quality evaluation or

appraisal. These are both extremely complex subjects, but it may be expected that standard costs may ultimately fill the first gap, and a medical 'audit', such as is now carried on in America, the second.

It is to be hoped that this book, which must be read patiently and indeed painstakingly, will lead to a clearer understanding and appreciation of hospital costing and its objectives on the part both of hospital committees and their staffs, for the fact has to be faced that hospital costing has yet to be effectively 'put over'.

# **Direct Standard Costs for Decision Making** and Control

by WILMER WRIGHT (McGraw-Hill Publishing Co Ltd, London. 54s 6d net)

Many years ago an economist pointed out that the price of an article was its cost plus a reasonable reward for the risk taken in producing it. As virtually all costs then were 'direct' no one found it necessary to point out that cost could be calculated in different ways, or that a 'reasonable reward' was an elastic concept. Cost accountants set about finding the one and business men were happy to fix the other, and the only reasons for business failure were acts of God and the moral turpitude of the proprietor. However, about eighty years ago fixed costs started to grow in size and importance, rendering the full unit cost calculation more and more inappropriate, and today no self-respecting cost accounting textbook would of five hundred, to the technique of 'direct' or marginal costing.

Mr Wilmer Wright's book belongs to that set of publications which has tried in recent years to restore some balance to the subject of cost accounting by exploring the inadequacies of full unit costing and demonstrating the more practical methods of 'direct' costing. His purpose is therefore polemic and he carries the argument a stage further by showing how 'direct' costing can be married with standard costing to provide a powerful control-system and sound accounting data upon which to base decisions and

with which to plan.

Although some cost accountants may find it hard to believe that there are others who can exist without the Byzantine intricacies of four-way overhead variance analysis, direct standard costing is used in a number of manufacturing businesses in Britain as well as in the U.S.A. Perhaps the advantage which they gain from it explains the conspiracy of silence which veils their activities. Mr Wright draws upon many years of experience as a consultant in this field to enable a wider public to share the same satisfaction.

He explains the fixed/variable analysis of costs which underlies the technique, using an effective, if simplified, little business story, and calls the former 'period' and the latter 'direct' costs. He demonstrates graphically the profit/volume relationship and introduces the useful concept of 'margin of safety' (the percentage by which sales volume can fall before a loss is incurred). The basic principles of full standard costing are reviewed succinctly and the greater part of the remainder of the book is devoted to flexible budgeting, responsibility accounting, standard setting for labour, materials and expense and direct costing reports to management. The book concludes with useful short chapters on product pricing, and other areas of decision which direct costing can serve.

It is the author's avowed intention to convince 'operating and financial executives' of the need for direct costing, and the straightforward style and slight bulk of this volume will certainly not repel them. On the other hand, Mr Wright is more concerned with selling an idea than with developing a theory. It is a good idea and its dissemination is a valuable service rendered, but much more careful theoretical analysis is required if the opposition is to be won over completely. The terminology is confusing - indirect labour can be a 'direct' cost (p. 103) - and the distinction between 'direct' and 'controllable' cost is not made in relation to responsibility centres. The acute problem of work in progress within a cost centre is not mentioned, nor is the application of the technique in businesses where the only true variables are raw materials and salesmen's commission. Difficult areas of costs, like maintenance, fringe benefits and auxiliary cost centres are given nothing like sufficient. treatment, and activity level is mentioned rather than discussed. Perhaps the book's faults arise from a failure to hit the right level of instruction, for in some places it presumes considerable knowledge of costing and in others spells out elementary procedures at great length. Nevertheless, it is well ahead of any other publications in this field presently available in Britain, and should be on every student's shelf - to be read after he has passed his Finals.

# Chorley and Tucker's Leading Cases on Mercantile Law

Fourth edition, by LORD CHORLEY, M.A., J.P., and O. C. GILES, LL.M. (Butterworth & Co (Publishers) Ltd, London. 32s 6d net.)

After having used this book one wonders how students ever manage without it. The very nature of mercantile law seems to make a good case book essential; but this is more than just a good case book, for it uses the cases to explain the law rather than contenting itself with stating the facts and leaving the reader to draw his own conclusions.

That this fourth edition of Chorley and Tucker was overdue (the previous edition was published in 1948) is demonstrated by the inclusion of eight additional leading cases. The editors have taken the opportunity of including a section on 'Trade associations and restrictive practices', and they have also improved the section on company law, which must (in the continued absence of a good case book devoted to this subject) be particularly welcome; though in

looking for the old familiars one is surprised not to find Foss v. Harbottle. It also seems dangerous to state in the subsection given to dividends that 'losses suffered during the financial year in respect of fixed capital need generally not be taken into account when determining profits'. The decisions in Lee v. Neuchatel Asphalte Co and Verner v. General & Commercial Investment Trust seem slender bases on which to make such an assertion.

Apart from this, however, and a certain disappointment at the very brief section accorded to hire-purchase, one can only express delight that an up-to-date edition of this excellent book has at last appeared.

# The Administration of Deceased Estates in South Africa

by DAVID SHRAND, M.COM., F.S.A.A., C.A.(S.A.). (Legal & Financial Publishing Co (Pty) Ltd, Cape Town. 578 6d.)

The author of this ambitious work is lecturer in executorship at the University of Cape Town and he has been assisted by an official of the Master's Office, Cape Town, and by two advocates practising in this subject in Cape Town. Following 244 pages of exposition, including, of course, the problems of estate duty, and the provisions for relief from double duty, there are appendices setting out verbatim the relevant statutes and the relevant international agreements concerning double death duties. The book is attractively printed and bound.

# A Guide to Operational Research

by Eric Duckworth, F.R.S.S., A.I.S. (Methuen & Co Ltd, London. 20s net.)

While the growing importance of operational research as a management tool is evident from the literature on different aspects of the subject which has appeared, most of the writings – for full appreciation – has tended to require more mathematical training than many executives possess. This little book by Mr Duckworth, however, is free of this particular defect. The exposition is good and the reader is taken carefully through each stage of the various techniques, such as stock control and queuing theory, in such a way that the principles are made clear.

This is not a book for those who wish to learn how to work in an O.R. team; it is intended to explain to non-mathematicians the sort of problems which O.R. can help resolve. The accountant or executive who reads this book will at least understand what his O.R. colleagues are talking about.

### Quality Control in the Office

by P. N. Wallis, F.C.A., F.S.S., A.M.B.I.M., A.C.I.S. (Current Affairs Ltd, 319 High Holborn, London WC1. 305 net.)

The last war accelerated the use of quality control as a production technique in a wide range of manufacturing industry. While two major studies have

been produced in the United States discussing the application of quality control to auditing and clerical procedures, this is the first book encountered by the reviewer to be written in the United Kingdom. The author's thesis is to appoint a controller who, on the basis of continuous sampling in all departments, from copy typists to ledger clerks, should be able to detect errors at an early stage. Readers will differ as to their understanding of the author's exposition and proposals, but at least one reader would have preferred a fuller treatment of the principles underlying quality control as applied to office work before starting on the author's proposals for different sections and functions.

# The Economics of Wages and the Distribution of Income

by D. J. ROBERTSON (Macmillan & Co Ltd, London. 21s net.)

As the title suggests, this book falls into two distinct but related parts. It is intended for the second year economics student who is not, on the whole, well provided with literature on the labour market. In fact, there is a good deal of useful information clearly expounded which will appeal to any one who is interested in what is virtually Britain's major economic problem at the present time. Professor Robertson's book deserves a wider readership than it may get.

The Editor does not necessarily agree with, or hold himself responsible for, the opinions expressed.

# End of Gourley?

SIR, — With reference to the leading article in your issue of September 8th, discussing the case of *Parsons v. B.N.M. Laboratories Ltd*, I have a point to put forward which may be of interest. Might this really be a case of exemplary damages where the Court is concerned with assessing the extent to which the defendant should be punished rather than the extent to which the plaintiff should be compensated.

If this view is acceptable, it is logical enough that the defendant should not be let off lightly merely as a result of the rather fortuitous effects of the Income Tax Acts. It is consistent with the rule that decisions of higher Courts can be differentiated but not altered.

Yours faithfully,
London SW5. W. F. WEAVER.

[We do not share this view since in Gourley Lord Goddard observed that damages which have to be paid for personal injuries are not punitive. They are simply compensation, a point borne out by the fact that, where damages are payable for wrongful dismissal, the award reflects the reduction in the scale of the plaintiff's loss which results when he has secured other employment for himself – Editor.]

# **Entertainer: Formation of Company**

SIR, - I am interested in the observations of 'Certint' in your issue of September 15th. Whether the transactions are those of Y. or of the company must be a question to be decided from the facts and in particular from the available evidence.

If the arrangements between the publisher are with the company, then clearly any receipts from this source must be receipts of the company and not receipts of Y. If, on the other hand, the arrangements with the publisher are made directly with Y., receipts will be income personal to him, and this is so even if he may have paid them into the company's bank account. Although a contract between Y. and the company to the effect that Y. would not do any outside work would never be enforced against him, the contract that is of importance is the contract between the publisher and either the company or Y.

It is suggested, therefore, that for the future such contracts should be made between the company and the publisher on the basis that the company will contract to ensure that Y. provides the songs required by the publisher.

Yours faithfully,

TOPTEN.

# Is this the Limit?

SIR, - We recently received from a Government department a letter which quotes their reference as 20270000032A(135)

It's the limit – or is it? Any advance from other readers?

Yours faithfully,

LONGSUFFERING.

# STUDENTS' COURSE AT OXFORD

One-hundred-and-ninety-nine students attended the autumn residential course of the London Chartered Accountant Students' Society held at Balliol and Jesus Colleges from Thursday, September 20th to Sunday, September 23rd, under the chairmanship of Mr W. K. Wells, B.A., F.C.A.

The first speaker, Mr W. G. N. Miller, M.A., secretary of the Association of Unit Trust Managers, dealt in broad outline with unit trusts. He was followed on Friday by Mr E. P. J. Lunch, F.C.A., chief accountant of the Port of London Authority, who gave an interesting insight into the business knowledge necessary to enable the industrial accountant to be useful and effective in his function of providing for his directors, financial information and guidance in reaching decisions on problems of policy. In the afternoon Mr John Garnett, director of the Industrial Welfare Society, gave a vivid and challenging picture of the nature of the actual problems which management had

to meet and the many implications and consequences of their decisions. He emphasized the human factors present in most management decisions and the importance of giving full weight to these considerations.

On Saturday Mr J. G. Green, M.I.P.R., public relations officer of Willesden Borough Council, showed in non-technical language just how surprisingly broad are the functions of the local authorities.

On Sunday after morning service in the Chapel of Balliol College conducted by the Dean, students heard a thought-provoking talk on 'Anglo-American relations', by Professor Arthur Newell, M.A., senior lecturer of British-American Associates.

The activities of the course extended from o a.m. until midnight and after, but there was time also for guest-night dinners on Thursday and Friday evenings.

On Saturday a number of students in the course organized a race for punts and a dance to provide relaxation from a full time-table of work and discussion.

At the Oxford week-end course: Front Row (left to right) Mr M. D. P. Dinan, B.Sc. (Group leader); Miss A. Eastick (Secretariat); Lt-Com. A. C. E. Higgins, D.S.C., A.C.A., A.C.W.A., R.N. (Member of Committee); Messrs W. K. Wells, B.A., F.C.A. (Chairman of the Course); E. P. J. Lunch, F.C.A. (Lecturer); R. J. Carter, B.COM., F.C.A. (Secretary of The Chartered Accountant Students' Society of London); N. M. G. LeBlanc, D. J. V. Endicott (Members of Committee).

Second row: Messrs W. A. Honey (Group leader); D. C. Kelleher (Assistant Secretary of The Chartered Accountant Students' Society of London); J. B. D. Ireland, J. H. Crowhurst, B.A., K. S. McPherson, A. J. Shields (Group Leaders).

Third row: Messrs N. A. Lane, B.A.(ECON.), J. R. S. Boas, B.A., J. K. Wakefield, N. Gowlland, J. M. Phillips, B.A. (Group leaders).

Back row: Messrs P. J. Mortlock, B.A. (Group leader); W. J. H. Everitt, B.A. (Member of Committee); P. M. Duffell (Group leader); and a member of the Course.

# Notes and Notices

### PROFESSIONAL NOTICES

MESSRS P. B. BISHOP & Co. Chartered Accountants, announce that their address is now Finsbury Court, Finsbury Pavement, London EC2. Their telephone number is unchanged.

Messrs Midgley, Snelling & Co, Chartered Accountants, of Ibex House, Minories, London EC3, announce that as from October 1st, 1962, they have admitted into

partnership Mr E. J. WADLEY, A.C.A.

MESSRS WHINNEY, SMITH & WHINNEY and MESSRS C. HERBERT SMITH & RUSSELL announce that they have agreed to amalgamate their practices in Birmingham as from October 1st, 1962. The combined practice will be carried on in the names of Messrs Whinney, Smith & WHINNEY and MESSRS C. HERBERT SMITH & RUSSELL from their present addresses until suitable premises are available.

# **Appointments**

Mr T. Burrow, A.C.A., has been appointed special director (finance) of Willenhall Motor Radiator Co Ltd.

Mr A. W. John, O.B.E., F.C.A., finance member of the National Coal Board, has been appointed chairman of the Board's new Coal Products Division.

Sir Archibald Hope, Bt, O.B.E., D.F.C., B.A., F.C.A., has been appointed chief executive of Napier Aero

Mr A. C. Webster, c.A., has been appointed a

director of Unijute Ltd.

Mr I. R. Williams, A.C.A., and Mr M. J. Chittock, A.C.A., have been appointed group accountant and management accountant, respectively, of Hoveringham Gravels Ltd.

# BOARD OF INLAND REVENUE New Controller of Stamps

The Board of Inland Revenue have appointed Mr Alfred Albert Ernest Ellis Ettinghausen to be Controller of Stamps and Registrar of Bank Returns, with effect from October 1st, 1962, in succession to Mr D. Neish, I.S.O., who is retiring.

### SURTAX: RELIEF FOR EARNED INCOME

A useful booklet, Notes on Reliefs for Earned Income (No. 701), has been issued by The Board of Inland Revenue explaining the method of calculating the deductions in respect of earned income provided for surtax purposes by section 14 of the Finance Act, 1961, and setting out examples.

# THE DUBLIN SOCIETY OF CHARTERED **ACCOUNTANTS**

# **New President**

Mr Ronald Patrick Joseph Smyth, F.C.A., senior partner in the firm of R. P. J. Smyth & Co, Chartered Accountants, of Dublin, was elected President of The

Dublin Society of Chartered Accountants at the Society's recent annual general meet-

Educated at Presentation College, Dublin, Mr Smyth was admitted to membership of the former Society of Incorporated Accountants in 1931 and elected a fellow in 1943. He became a fellow of The Institute of Chartered Accountants in Ireland following integration.

activities Mr Smyth retains

Outside his professional Mr R. P. J. Smyth, F.C.A.

an old interest in rugby football, and is a swimming and golf enthusiast. He has also written a play which has been broadcast.

Other officers of the Society elected for the ensuing

year are as follows:

Vice-Chairman: Mr R. R. Caldwell, F.C.A.

Hon. Secretary: Mr R. Carroll, A.C.A., 7 Fitzwilliam Place, Dublin 2.

Hon. Treasurer: Mr R. I. Morrison.

Assistant Secretary and Librarian: Miss E. A. K.

Jenkins, (MOD.)B.A.

Committee: Messrs G. Buttanshaw, F.C.A., R. R. Caldwell, A.C.A., P. A. Duggan, F.C.A., R. I. Morrison, F.C.A., C. D. Shannon, F.C.A., R. P. J. Smyth, F.C.A., C. G. Walker, A.C.A., F. C. W. Winkelmann, M.A., A.C.A.

### **Annual Report**

The annual report of the Committee for the year ended April 30th, 1962, records an increase in ordinary members during the year of fifteen, bringing the total to 415; in addition, 148 new student members were enrolled, bringing the total student membership to 330.

Regular luncheon and evening meetings were held during the year and among the eminent speakers who addressed members were the Earl of Longford and Mr C. J. Haughey, F.C.A., Minister for Justice.

Meetings of the industrial and administrative group were well attended and informal luncheon meetings were held each month. The report notes with gratification that the average attendance at these meetings showed a considerable improvement. The annual

MOTOR — FIRE — CONSEQUENTIAL LOSS

dinner of the group was attended by the President of the Institute and guests from the Belfast and Munster

Societies were also present.

The first residential conference to be organized by the Society in the South of Ireland was held in Tramore, Co. Waterford, in October last, and was attended by forty-six members of the Dublin and Munster Societies representing both practice and industry. Two films loaned by The Accountant were shown, illustrating lives of chartered accountants in Canada, and C.P.A.s in the United States. Two papers were presented: 'Evaluation of internal control of trading concerns—The use of questionaires', by Mr A. D. Paton, C.A., of Glasgow, and 'A consideration of internal control', by Mr Kenneth Boyce, A.C.A., of Belfast. The report expresses satisfaction in that the conference set a fine example for future occasions.

Other activities of the Society during the year included the annual golf meeting held at the Grange Golf Club and the annual dance at The Gresham Hotel

attended by over 450 members and guests.

# THE CHARTERED ACCOUNTANT STUDENTS' SOCIETY OF LONDON

### Next Week's Meetings

The first London meetings of the autumn lecture session of The Chartered Accountant Students' Society of London will be held during next week.

Programmes have already been posted to members, and during the session detailed announcements of the activities during the following weeks will appear in *The Accountant*.

Monday, 5.30 p.m. at the Institute, Moorgate Place, EC2.
Lecture on '400,000 limited companies', by Mr W. B.
Langford, M.B.E. (Registrar of Joint Stock Companies).
Chairman: Mr J. A. Jackson, F.C.A. (Vice-President of the Students' Society).

Tuesday, 5.30 p.m. at the Institute. Opening lecture for Mechanized Accounting Course, by Mr Dudley W. Hooper, M.A., F.C.A. (chief organizing accountant, National Coal Board).

6 p.m. at The Students' Club, 41 Beak Street, Wr. "The Punters' monthly meeting.

Wednesday, 7.15 p.m. at Reading: lecture on 'Income tax - personal computations', by Mr R. B. Moss, F.C.A.

Thursday, 6.15 p.m. at The Students' Club, 'The Taverners' annual general meeting.

Friday, 5.15 p.m. at the Institute. Introductory course lecture on 'How to study', by Mr R. J. Carter, B.COM., F.C.A. (Secretary of the Students' Society).

Students are reminded that the Library and Study Room at Spencer House, South Place, EC2, are open on Mondays to Fridays from 9.30 a.m. to 5.30 p.m. The Study Room is available in the evening by prior arrangement.

# THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting of the Accountants' Christian Fellowship for Bible reading and prayer will be held at 1 p.m. on Monday next, October 1st, in the vestry of St Mary Woolnoth Church, King William Street, London EC3. The scripture for reading and thought will be 1 Peter, Chapter 2, verses 7 to 10.

### SEVENTY-FIVE YEARS AGO

From The Accountant of October 1st, 1887

From a leading article

The Accounts of the Corporation of London

As it is of course in matters of form that the accounts appear to us to be in some respects susceptible of improvement, a few words of explanation as to the manner in which they are at present made up seem desirable. The body of the accounts is prefaced by what is termed "an Abstract Account of the Chamberlain in account with the Corporation of London, in respect of the produce and expenditure of the City's Estate." This abstract shows very succinctly and clearly the amount received and paid under various heads during the year, the respective folios on which the details making up the totals will be found, being given to facilitate reference. The detailed account of receipts and expenditure, (being purely and strictly a cash account) follows. Lastly is given what is described as "a balance statement of the liabilities and assets of the Corporation on the 31st December, 1886 (exclusive of the value of the Corporation Estates)."

As an abstract of cash received and paid, the first statement leaves nothing to be desired, either as to form, wording, or its position in the volume. It has always seemed to us the preferable place in these matters to let abstracts and summaries precede rather than follow the detailed statements.

An ordinary ratepayer or business man is much more likely to understand accounts of this nature if at the outset he sees a clear and concise summary of the figures, than if he is at once met (as he would be in this case) with eighty folios of detailed matter, a casual reading of which would be more likely to confuse than to enlighten him. . . .

# Action Now?

THE recent buoyant state of the gilt-edged market is in marked contrast with the flagging equity market, not least since a number of leading companies have reported interim results rather better than expected. It is clear, however, that a reduction of the Bank's official discount rate cannot now long be deferred; a view fortified just recently by the release of part of the clearing banks' special deposits with the Bank of England. By itself this increase in the clearing banks' liquid position will not exert any special stimulus on the economy; the banks are currently well able to meet any requests for loans.

The trouble is that the low level of current loan requests reflects the uncertainty evident among the business community about the present deflationary phase through which the economy is passing. The City columns of *The Times* and *The Guardian* have both stressed the need for an expansionist policy if the present stagnation of industrial output is not to be intensified. The decline in capital investment within the private sector makes all too clear the absence of optimism in many industries about the immediate future, just as the small but significant increase in unemployment must be a matter of concern for the Government. This deflationary situation is not peculiar to the British economy, American business has not expanded according to expectations, nor is there so much talk nowadays of the West German economic miracle as full employment dominates the Ruhr.

It would not be difficult to stimulate the economy with new injections of consumer spending; the 10 per cent surcharge could be removed, purchase tax reduced, hire-purchase terms modified, investment allowances increased. Mr Maudling may make several of these changes soon. It would be idle to pretend, however, that such a stimulus to the United Kingdom economy would not generate the seeds of renewed cost-push inflation, but there is a good deal more slack in the economy than for many years past for such increases in spending to be matched by higher production. Nevertheless, the risks inherent in such a policy for the United Kingdom balance of payments remain.

It is almost three months since Mr Maudling became Chancellor of the Exchequer and the time has now come for a change in the deflationary policy initiated by his predecessor in office more than a year ago. Further, the growing expectation of tax reductions will tend to depress current sales of consumer durables and motor-cars at home; this fact alone strengthens the clear need for an early declaration of policy from the Chancellor. Unfortunately, it is not only the timing of the announcement that is difficult, it is the content of the announcement.

# Short-term Gains — XIII

# COMPANY REORGANIZATIONS

AST week we moved from losses on shares to the special problems associated with bonus and rights issues, and the elaborate provisions in paragraph 10 of the Ninth Schedule to the Finance Act, 1962, designed to solve them. This paragraph is directed to protecting the holder of shares from being treated as acquiring bonus or rights shares at the date of actual acquisition, instead of at the date he acquired the original shares, which in the Government's view is fairer. The new holding, represented by the bonus and rights shares (or debentures), together with such of the original shares as remain, is treated as being the same asset as the original shares. If he sells part of the new holding within the statutory time limit, measured from the date of acquisition of the original holding, then for Case VII purposes it is necessary to compute the 'cost' of the part sold. For this purpose, paragraph 10 (5) directs that the total original cost is to be apportioned by reference to market value at the date of disposal.

# Example

X. buys 200 ordinary shares for £400. There are bonus and rights issues, involving the payment of another £100 and leaving X. the owner of 100 'A' shares and 300 'B' shares at a total cost of £500. He sells 50 'A' shares at the market value of £3, the 'B' shares being then worth £1 10s each. Total market value at date of sale is:

					10
100 'A' at £3	••	• •	• •	• •	300
300 'B' at £1 10s	• •	• •	• •	• •	450

The proportion of 50 'A' shares is thus  $-\frac{150}{750}$  1/5th. The assumed cost of the 50 'A' shares sold is therefore one-fifth of £500, i.e. £100. The Case VII profit, before expenses, is therefore £50 (£150—£100)

Paragraph 10 (6) deals with provisional allotments of bonus or rights shares. As originally drawn, it reads as follows: '(6) Where a person is provisionally allotted any shares in or debentures of a company, and disposes of the rights to them without accepting the allotment, this paragraph (i.e. paragraph 10) shall apply as if the allotment had not been provisional and the rights disposed of had accordingly been shares in or debentures of the company, and as if the consideration to be given for the shares or debentures were a liability attaching to the rights.'

Normally, of course, the allotment of pure bonus shares is not made provisionally. Rights issues are arranged on the footing that the rights will be of value, but in the event the shares may have fallen so low by the time the provisional allotment is made that the rights are worthless. Now paragraph 31 (c) of the White Paper said:

'(c) If a person buys "rights" and sells them, or the shares taken up, within six months, this is a transaction of acquisition and disposal involving Case VII liability."

THE ECONOMIC SECRETARY TO THE TREASURY introduced an amendment and confessed to the House of Commons at the committee stage that the drafting of paragraph 10 (6) was inadequate. It was completely recast to deal with two anomalies arising from the original draft. The statement in the White Paper was wrong, because if a taxpayer bought rights, then exercised them (i.e. took up the shares) and then sold them, the six months would not have begun to run until he took up the shares. The amendment cured this by providing that the rights are to be treated as actual shares or debentures. Another anomaly which the amendment deals with is the case of a person who receives a provisional allotment in right of his own shares, and then sells the old shares without selling the rights. If he did this after taking up the rights, then the rules as to apportionment in paragraph 10 (5) would apply. But the original Bill was so worded that if he sold the old shares before exercising the rights, the rule about apportionment did not apply; hence the amendment. The rights under the provisional allotment are treated as shares or debentures, and

£750

<sup>1</sup> Cmnd. 7170.

any consideration to be given for those shares or debentures in exercise of the rights is treated as a liability attaching to these notional shares.

The redemption of 'redeemable share capital', is not a reduction of capital for the purposes of paragraph 10. If such share capital is redeemed (otherwise than by the issue of shares or debentures, and otherwise than in a liquidation) the shareholder is to be treated as disposing of it at the time of redemption (paragraph 10 (7)). In a sense all share capital is redeemable, but presumably the draftsman is concerned here with what are usually known as redeemable preference shares, i.e. shares which can be redeemed without application to the Court.

If the ordinary shareholder in companies, public or private, is to be protected from Case VII liability wherever the company has a reorganization or reduction, then there is perhaps still more reason to protect the holder of securities, particularly Government securities, from the consequences of conversion. Perhaps exhausted by the labour of drafting paragraph 10, the draftsman provides laconically in paragraph 11 (1) that the earlier paragraph is to apply to the conversion of securities as it applies to the reorganization or reduction of a company's share capital 'wit any necessary adaptations'. One can foresee a good deal of argument as to what are proper adaptations, and whether they are necessary. Neither 'conversion' nor 'security' is precisely defined, but there are directions in paragraph 10 (3) as to what these words 'include'. Thus 'security' includes any loan stock or similar security of any Government or public or local authority anywhere, or of any company. It will be recalled that under section 16 (1) 'company' includes a body corporate. Perhaps the most delectable part of the definition is the statement at the end that a security is a security 'whether secured or unsecured'. 'Security' is an unfortunate choice of words in these circumstances and is no doubt a result of the mental confusion that exists as to the precise difference between (i) a secured obligation as a contractual chose in action, (ii) a piece of property of any kind which can be used as security for a debt (by giving a mortgage or charge on it), and (iii) a security in the sense of the piece of paper which is either negotiatiable or is evidence of some right to money. 'Conversion of securities' includes:

- (i) a conversion of securities of a company into shares in the company; and
- (ii) a conversion at the option of the holder as an alternative to redemption for cash.

It will be recalled that under paragraph 10 (4), any capital distribution is to be treated as the proceeds of a disposition of an interest in the shares. This principle is excluded from a conversion under paragraph 11 if it satisfies the conditions laid down by paragraph 11 (2). Instead, the distribution is to be treated as having reduced the consideration given for the original securities. The condition to be satisfied is that the conversion must be on an exchange effected under an arrangement carried out under section 2 of the National Loans Act, 1939; additional consideration being given to the holder of the converted securities.

Paragraph 12 is directed to giving paragraph 10 protection to a shareholder where shares or debentures in company A. are exchanged for an issue of shares or debentures in company B. (paragraph 12 (1)). The paragraph is headed 'company amalgamations' but the word 'amalgamation' does not occur in it. However, paragraph 12 does not apply to an exchange as defined above unless the exchange is part of what we may call an exchange amalgamations, i.e. where one of the conditions laid down in paragraph 12 (2) is satisfied. We may enumerate these alternative conditions as follows:

(i) company B. has control of company A.; or (ii) company B. will have control of company A.

in consequence of 'the' exchange;

(iii) company B. issues the exchange shares or debentures in exchange for *shares* as the result of a general offer made to:

(a) members of company A.; or

(b) any class of them; the terms of the offer (when first made) being such that if they were satisfied then company B. would have control of company A.

The offer at (iii) is none the less general if it is made with exceptions for persons 'connected with' company B. We have already dealt with the definition of 'control', which appears in section 16 (1) of the Finance Act, 1962. Condition (ii) is curious; it refers to the exchange made by the person sought to be taxed under Case VII. But his holding may be too small to have any such consequence as is required by (iii); only by lumping his exchange with the exchanges of his fellow shareholders does company B. gain control.

This seems to be another defect in drafting, and it is to be hoped that the Revenue will not take the point. Perhaps it would have been better not to introduce paragraph 12 at all, rather than to divide into sheep and goats, on not very clear principles, the people who exchange their shares for other shares.

Paragraph 12 (1) directs that paragraph 10 shall apply to an exchange amalgamation 'with any

necessary adaptations as if the two companies were the same company and the exchange were a reorganization of shares capital'. Here again these are signs of mental exhaustion in the draftsman. Since an exchange amalgamation concerning two different companies is a very different thing from a reorganization of the capital of a single company, one can foresee numerous disputes as to what adaptations are necessary or even suitable.

# Setting-up Business in Western Germany

# TAX CONSIDERÁTIONS

by R. J. NIEHUS, Wirtschaftsprüfer, Düsseldorf

THE establishment of the European Common Market with the United Kingdom negotiating for association or perhaps full membership, the Common Market countries are becoming more and more attractive for British companies.

One of the important factors to be evaluated before making a decision as to where to set up business in the Common Market area is the incidence of taxation. Accordingly, what follows is an outline of the taxes that become payable upon the formation of a company or a branch in Western Germany.

# Company v. Branch

The formation of a company involves the investment in Western Germany of a fixed amount of capital which cannot be remitted to shareholders prior to liquidation of the company. The company's liability is limited to this capital and - at least in principle – cannot be carried through to the shareholders. The company pays 51 per cent on profits retained and 15 per cent on profits distributed. In addition, a capital withholding tax has to be paid on the gross amount of dividends which, according to section VI of the British-German Double Taxation Agreement, in case of a British shareholding company is 15 per cent as compared to 25 per cent regularly payable by a German shareholder. According to section XVI of the agreement, the British recipient shareis entitled to tax relief comprising the capital withholding tax and an equitable part of the tax on income paid by the company on the profits distributed to the British shareholder. The loss carry-over is available for five years.

A branch has no fixed or even minimum capital. Its liabilities are those of the foreign parent company. This means that a creditor of the branch, after having exhausted all legal remedies in Germany in respect of a lack of assets there, may take the matter to the United Kirage m and sue the parent company.

In the case of a branch, no split income tax rate is available, all profits being subject to a rate of 49 per cent, while the capital withholding tax does not become due on profits remitted to England. A branch is required to maintain its own set of books in Germany and is entitled to a loss carry-over for five years, as is the case with a company.

It would appear from these brief characteristics that, at least as far as taxation is concerned, a foreign subsidiary company has a decided advantage over a branch. However, there is one possibility which may make it advisable first to form a branch. Experience proves that it is not uncommon for a foreign establishment to sustain losses in Germany during the first years, and in some cases it has been impossible to absorb the losses through intervening profits during that period. If this is contemplated it might well prove to be advantageous, provided it is permitted by the legislation of the foreign country, to have the loss of the German branch absorbed by the parent company. After the branch has become established and profitable, then it could be transformed

ر

into a separate legal entity in order to enable it to benefit from the tax advantages outlined above. In this connection it may be noted that to the extent to which capital transaction tax has been paid on the assets transferred on formation of the branch, no further tax on them becomes due on incorporation.

Authority by the foreign exchange control agency to set up business in Germany is no longer required, either in case of a company or for the opening of a branch establishment. The articles of association must be attested before a notary public as is also required for the registration application of the branch.

# **Types of Company**

There are two types of company in Germany, AG (Aktiengesellschaft) and GmbH (Gesellschaft mit beschränkter Haftung). The two types are dealt with in turn below.

# (1) AG (Aktiengesellschaft)

This is the appropriate form if a relatively large amount of capital is required, because the AG is the only German corporation authorized to have its stock listed on the stock exchange and to raise capital by issuing shares to the general public.

The main reasons for the preference which the GmbH has enjoyed over an AG are that there is less necessary formality regarding formation and administration, and that publication of financial statements (balance sheet and statement of income) is not obligatory as is the case with an AG. An AG requires a board of supervisors, onethird of which must be labour representatives, whereas in the case of a GmbH such a board is only necessary if the company employs more than 500 people.

An AG is obliged to publish an annual report to stockholders, in which it must comment upon unusual or important items appearing in the balance sheet and profit and loss statement, and in which it has also to describe briefly the development of the company's business during the past year.

The minimum capital stock of an AG is Dm.100,000, of which 25 per cent must be paid in before incorporation. In practice, the capital of German AGs, however, invariably is far higher.

c. The AG acts through the Vorstand (board of managers); the Aufsichtsrat (board of supervisors); and the Generalversammlung (stockholders' meeting).

The Vorstand directs the day-to-day business of the company, while the Aufsichtsrat is elected

by the shareholders to exercise a direct supervisory function over the Vorstand. The Vorstand together with the Aufsichtsrat is responsible for preparing the annual financial statements which thus become final and cannot be changed by a vote of the stockholders. The stockholders' meeting may vote only on the question of the distribution of the amount of profit as shown in the balance sheet. As distinct from many foreign corporate laws, a member of the Aufsichtsrat may not serve on the board of managers or vice versa. There must always be a clear distinction of duties and responsibilities between the two. One-third of the Aufsichtsrat must be representatives of the company's employees, and elected by the employees. The financial statements of the corporation must be audited by a German Wirtschaftsprüfer and be published in the Federal gazette.

For the formation of an AG, five 'incorporators' are required, who may be either companies or individuals. The share capital is divided into shares, the minimum amount of each unit being Dm.100.00; each share unit one vote unless ruled differently in the articles of association. All shares must be subscribed for prior to formation of the company. Whereas shareholders are not personally liable for the debts of the corporation, the 'incorporators' have a personal liability until all shares, which may be bearer shares or registered shares, have been paid up in full.

Generally speaking, the incorporation proceedings in the case of an AG are more complicated than those for a GmbH. The 'incorporators' have to draw up a separate report on the incorporation proceedings. The incorporation process as such must be examined by the Vorstand and the Aufsichtsrat and must also be audited by a Wirtschaftsprüfer. Special rules apply if the share capital has not been paid for in cash but in other assets, in which case the Wirtschaftsprüfer must certify as to the correct valuation of these shares.

# (2) GmbH – Gesellschaft mit beschränkter Haftung

The GmbH is the second form of separate legal entity available for commercial purposes in Germany, the shareholders of which cease to be liable to the creditors of the company as soon as they have paid up their capital subscription. In prior years, an AG was considered to be more 'refined' than a GmbH; in recent years, however, even the big and well-known firms have almost all adopted this form.

The legal structure of a GmbH is simpler than

that of an AG. The GmbH acts through its manager(s) (Geschäftsführer) and shareholders' meeting which approves the financial statements and decides on the distribution of profits. The meeting also discharges the managers from their responsibilities and obligations vis-à-vis third parties. The articles of association may stipulate that certain acts of the managers shall require the prior approval of the shareholders.

A board of supervisors (Aufsichtsrat) is not mandatory in case of a GmbH. As previously stated, however, such a board must be formed if the total number of employees exceeds 500, in which case again one-third of the seats on the board must be filled by labour representatives.

As is the case with an AG, all shareholders of a GmbH may be foreigners and may exclusively reside outside Germany. Also all managers of either an AG or a GmbH may reside outside Germany, though in practice at least one of them lives in Germany in order to ensure the proper functioning of the company. The nationality of general managers is of no consequence.

For the formation of a GmbH, only two 'incorporators' are required, both of whom may be represented by a proxy before a German notary public. After the company has been formed, all shares may be held by one shareholder. The minimum capital of a GmbH is Dm.200,000, one-fourth of which must be paid up prior to incorporation. No share certificates are issued in the case of a GmbH, accordingly, the GmbH is the appropriate form if the number of shareholders shall remain relatively small and if the transfer of shares is to be restricted from the start.

# **Branches**

A branch establishment requires a permanent address, a name under which to do business, and a manager. As in the case of a company, a branch must be registered in the public register of companies. The registration application must be signed by a person authorized to represent the foreign parent company vis-à-vis third parties.

The registration procedure for a branch sometimes is more complicated than that of a company. The judge at the registry Court, in the interests of the future creditors of the branch, must make sure that the foreign parent company does actually exist as such and that it has a certain amount of liable capital. Accordingly, it is necessary to have the charter and/or the articles of association of the foreign company translated into German. This may sound easier than it really is; in practice, this always involves additional requests

from the judge for elucidation of certain passages.

The manager of the branch, provided internal rules do not forbid this, may appoint *Prokuristen* (persons with full power of attorney to represent the branch in respect of third parties). The authority of these *Prokuristen* may be limited to the area of the branch, i.e. Germany, or also to other countries where either the branch and/or the parent company are doing business.

# **Incorporation Tax**

The incorporation tax amounts to 2.5 per cent and is computed on the value of the assets contributed by the shareholders. If the shares are paid for in cash, it goes without saying that the value of the assets is identical with the amount of cash paid for those shares. The assessment may become somewhat more difficult, however, if the consideration is not in cash but in other assets (machinery, stocks, patents and trade-marks, land and buildings). The law concerning incorporation or capital transaction tax rules that the tax authorities must levy this tax on the actual value of the assets paid as a consideration for the shares, and not on the nominal amount of shares if agreed upon between shareholders. Especially in cases where there may be one shareholder only, the nominal amount of capital may be definitely lower than the current value of the respective

Whereas the judge at the registry Court is concerned only with the fact that the assets must at least be equal to the nominal amount of the latter, the tax authorities naturally want to levy the tax on the real value which, as explained above, may be higher. In case of doubt, especially if trade-marks, patents and other intangibles are involved, it may be wise to appoint an official valuer. His opinion may then serve the tax authorities as a basis for the assessment of capital transaction tax.

# Substitute Capital

In order to catch up with investors who have tried in the past to avoid part of the incorporation tax of 2.5 per cent by fixing the nominal capital of a company lower than was actually required from a standpoint of sound financing, with the consequence that subsequent financing of the company had to be made through loans, the law provides that all loans, directly or indirectly extended by shareholders and which may be regarded as 'substitute capital', shall also be subject to a capital transaction tax of 2.5 per cent.

The term 'substitute capital' allows of many-

interpretations, and the whole relevant clause of the law is an open invitation to negotiate with the tax authorities on its meaning and exact application. In practice, the tax authorities in such a case always try to invoke the fiction of a 'prudent and sound business man'. They argue that a prudent and conservative business man would not have financed the company through loans but rather through capital; therefore, the loans in question must be regarded as substitute capital and consequently subjected to a 2.5 per cent capital transaction tax. As a 'rule of thumb', they have adopted the ruling that the aforementioned 'prudent and conservative business man' would finance his fixed assets and a part of his inventories through shareholding capital so as to avoid the danger that the lenders may suddenly recall their money and leave his business without a firm financial basis. Actually, this ruling was developed by the Supreme Tax Court before the war and has been upheld ever since. There have been recent attempts to have section 2, subsection 5 of the capital transaction tax law, which deals with the 'substitute capital' problem, ruled null and void by the Supreme Constitutional Court on the grounds that it was too loosely worded and too flexible to give the taxpayer the support he is entitled to under the constitution vis-à-vis the authorities; all these attempts so far have failed Naturally, there are many cases in practice where it can easily be proved that the aforementioned rule, according to which the capital of the company must at least be equal to the book value of fixed assets plus one-third of inventories, is entirely unrealistic. It would be beyond the scope of this article to discuss all the details in this connection, however, and as stated above, there is always the possibility of negotiating with the tax authorities as to the portion of shareholders' loans which may be regarded as 'substitute capital'.

# **Branches and Capital Transaction Tax**

As regards the assessment of a branch for capital transaction tax, there is a decided difference. The capital transaction tax law stipulates that all capital remitted from abroad, whether in the form of cash or in kind, is subject to tax, regardless of whether used for the acquisition of fixed or of current assets. However, merchandise actually sold by the foreign company to the domestic branch at regular credit terms does not come under this rule.

In general, it would appear that as far as capital transaction tax is concerned, a branch might well be worse off than a company. However, following negotiations mainly with Swiss and United States representatives, it has been ruled that branches formed in Germany by companies of certain foreign countries, including Great Britain, are treated as though they were separate legal entities regarding capital transaction tax. In other words, capital remitted from Great Britain to the branch for the acquisition of current assets is not subject to capital transaction tax of 2.5 per cent, provided the long-term capital placed here already covers fixed assets and one-third of current assets of the branch.

# Shares Taken Over by the Trustees

Sometimes a foreign investor decides not to appear as a shareholder at all. A trustee subscribes to the shares and holds these for the foreign investor. It is perfectly in order under German law to bind the trustee by a voting agreement so that at a shareholders' meeting he can cast his votes only as directed by the foreign investor.

As far as the tax authorities are concerned, however, it is always advisable to disclose to them the trusteeship agreement. Consequently, it is not the trustee but the real investor who is liable for the corporation tax. Similarly, it is the real owner for whom the capital withholding tax is being withheld and who has to pay annually the net assets tax on the value of the shares.

### **Expenses**

# (I) Notary's fees

The notary public is authorized to charge the following fees as listed in his official rate tables:

Fee for		Fee for		
registratio	n n	otarization	C	apital
applicatio	n .	of articles	of c	ompany
Deutschma	rks De	eutschmarks	Deut	schmark <b>s</b>
212.50		850.00	25	00.000,0
400.00		1,600.00	50	00.000,0
587.50		2,350.00	75	00.000.00
775.00		3,100.00	1,00	00.000.00
775.00	I	16,000.00	2,00	0,000.00

Plus turnover tax of 4 per cent, clerical charges, and postage.

# (2) Court fees

For the registration of the articles, the Court will charge approximately the following fees:

Capital of company	Fee		
Deutschmarks 250,000.00 500,000.00 750,000.00 1,000,000.00	Deutschmarks 425.00 800.00 1,175.00 1,600.00		
		2,000,000.00	3,050.00

Plus approximately Dm.50.00 to Dm.100.00 for publication in the local newspaper as named by the Court.

# Auditing Magnetic Tape Systems – II

# OPERATING PROBLEMS

by H. LA COSTA, F.C.A.

HE first part of this article considered the the reasons for the increasing specification of electronic data processing (E.D.P.) systems with facilities for the use of magnetic tape. This trend raises a number of new problems for the auditor. The problem of security was discussed in the previous part; other operating problems are considered in this concluding part.

# **Direct-input Equipment**

One link in the chain of mechanized data handling is provided by the direct-input equipment. The principal operation (usually a receipting operation at a cash desk) now generates as a by-product a magnetic tape, punched tape or even a printed roll capable of being read by character-recognition equipment. The prime requirement of the equipment is to provide the customer with a correct receipt of the transaction. Proceeding from this requirement, various hardware devices are incorporated to prevent secret and illegal use of the equipment, including suppression of at minimum expense. individual transactions. The subsequent trans cription of data for magnetic tape operation requires the minimum of human intervention. For example, part of the data (customer number, stock record, etc.) can be picked up automatically at the point of recording from a token also prepared automatically by centralized equipment.

Incorporation of all data on a single tape or roll eliminates possibility of loss of individual records. The chance of other types of error is also minimized by the small number and simplicity of the remaining operational requirements.

From the viewpoint of the auditor, the centralization of the accountancy function is not an unmixed blessing. In general, it facilitates a division of effort and responsibility between outlying operating centres, where the source data are created, and a centralized accounting department, where all further processing takes place. This process is assisted by the speed and economy of opération inherent in the use of magnetic tape. The traditional objection that centralization injures local service to the customer loses much of its force when viewed in the light of the benefits to be derived from the ability to apply the power and economy of a central magnetic tape

installation to all the work from peripheral stations. Customer service nearly always benefits from increases in economy and accuracy of data presented to management. Very often the local service is speedier too, even when taking into account the longer lines of communication.

# **Strengthening Internal Control**

As noted in the first part of this article, magnetic tape provides the cheapest means of holding data on a large scale. The low cost of storing information (about £20 for fifteen million characters) provides the auditor with the opportunity to recommend procedures to strengthen internal control. Information can now be freely duplicated, even at the expense of logical redundancies being thereby introduced, without having to worry too much about cost, since this will anyway be very low. It is therefore possible to complete input data from information in magnetic tape storage,

An example from an invoicing procedure will make this point clear. In the particular application, a customer master record is normally created. Considerations of speed and cost of input have, in the past, curtailed the information carried on each customer to the minimum possible. With magnetic tape, these considerations do not have the same strength. It is now reasonable to hold for each customer, as part of his master record, a price schedule relating to the goods in which he deals together with a record of volume of trading in these goods in the past. External pricing would be eliminated, and to the accuracy of machine pricing is added the possibility of widespread feasibility checks on, say, quantities ordered in the light of past experience. Only transactions failing these feasibility checks would require further scrutiny.

In all the foregoing techniques, additional length of computer programme is involved which, but for the use of magnetic tape as a backing store, would be prohibitively costly. In particular, without magnetic tape, the additional section of the programme would compete with the main programme for the use of the core store,

both for the storage and working areas.

# **Batch-processing**

For all but the most extensive core storage machines, the need for the computer installation to perform additional functions (such as print-out) leads inevitably to fragmentation of runs, unless batch-processing can be achieved through the provision of magnetic tape. Batch-processing is a technique for treating the entire batch of programmes for the day as a unit. Breaking down one computer set-up, setting up afresh for a new programme, and checking test data manually, are therefore virtually eliminated. Since the transition from programme to programme is largely automatic, immunity from operating errors can effectively be guaranteed. Significant savings in operating cost are also achieved, since more work can be done in less time. Savings are particularly marked if many files are stored on each reel, since the tedious process of cycling up and identifying the correct file, or programme, is largely eliminated.
